In the course of 1950 the amount of talent shown by established and younger writers was impressive. Aubrey Menen's *The Backward Bride*, for instance, shone the light of her innocence into existentialist and other dark places. But case-histories of schizophrenics continued to appear and the accent, on the whole, was on misery.

(L. Ps.)

**Poetry.**—The year 1950 is likely to be remembered as one in which two poets achieved remarkable success in the theatre. Both in London and in New York city T. S. Eliot's *The Cocktail Party* was received with a paean of praise; and a second paean no less loud was raised for the work of Christopher Fry. In reading *The Cocktail Party* or *Venus Observed* one is struck by the difference of style between the two poets: Eliot relies on subtlety of rhythm to carry his lines which are in simple unadorned colloquial language; Fry, upon a fantastic extravagance of artificial language which it yet remains possible to speak naturally. It says much for the vitality of poetry and the drama that two artists of such entirely opposite styles should be so successful.

The year also saw the re-issue of the full *Collected Poems* of W. B. Yeats, which had been unobtainable for nearly ten years. Yeats's poetic life spanned nearly 50 years, and for many the work of his old age is the finest of all. Another poet of genius, not greatly his junior, was Walter de la Mare, who was writing

poetry of a new power, concentration and tranquillity. His latest collection *The Inward Companion* contained at least half a dozen poems which would rank among the finest he had written. Among the younger poets George Barker in his *News of the World* showed a definite advance; promise became fulfilment.

Among other works Roy Campbell's *Collected Poems* showed what an outstanding contribution he had made to the literature of the second quarter of the 20th century, as did W. H. Auden's *Collected Poems*. Robert Gittings' *Wentworth Place* was a work of remarkable and sustained quality. Other memorable works were *Underworlds* by Francis Scarfe; *The Swarming of the Bees* by John Heath-Stubbs; and *The Mongrel and other Poems* by Ronald Duncan.

**Entezam, Nasrollah** (1900– ). Persian diplomatist, was born in Tehran, Iran. He graduated in law at the universities of Tehran and Paris and began his career in the ministry of foreign affairs in 1918. Between 1926 and 1929 he was secretary to the Iranian legations in Paris, Warsaw and London. He represented his country at the World Economic conference in London in 1933. From 1934 to 1938 he was chargé d'affaires at Berne, Switz. On his return to Iran he became director of the political department of the ministry of foreign affairs. In 1942 he was appointed grand master of ceremonies at the shah's palace and the following year became minister of health. Subsequently he held office as minister of posts and telegraphs, minister of transport and, in 1944–45, minister of foreign affairs. Entezam represented Iran at the San Francisco conference in 1945 and from 1947 was permanent Iranian representative to the United Nations. On Sept. 19, 1950, he was elected president of the U.N. general assembly by 32 votes of the 59 valid ballots.

**Entomology and Plant Quarantine, Bureau of:** see AGRICULTURAL RESEARCH ADMINISTRATION.

**Epidemics.** There were no pandemics in 1950. In the United States, reported cases of diphtheria, measles, Rocky mountain spotted fever, scarlet fever, smallpox, tularaemia and typhoid fever were fewer than in any of the years 1945–49. However, there were more cases of acute infectious encephalitis and whooping cough than in any of the preceding five years.

Influenza was prevalent in the United States, but less so than in the 1947 epidemic. A moderate rise in pneumonia cases followed. The Influenza Information centre at the National Institute of Health, London, in its second year of operation under the Influenza Study program of the World Health organization, reported that type A (especially A prime) was responsible for the outbreaks in 20 states, the District of Columbia, Hawaii and Puerto Rico. Hawaii, California, Wyoming, Illinois, Georgia and Pennsylvania were affected in Dec. 1949 and in the following January. The principal outbreaks reported later were in the Atlantic seaboard states. Influenza apparently spread northward from Washington, D.C., to Philadelphia and New York city. In many instances a variety of agents was common. The U.S. naval training station at Great Lakes noted sporadic type B infections early in the year. Later an epidemic of A prime affected 15% of the personnel.

Plague in man is rare in the United States. It occurs usually in the western part of the country following exposure to infected wild rodents. The first epizootic in cottontail rabbits was dis-

covered in investigating the source of a case of human plague in New Mexico. Cottontail rabbits must now be considered a potential source of human infection.

In 1950 poliomyelitis was more prevalent than usual in the United States. Great Britain, heavily attacked in 1949, was again heavily attacked in 1950. Epidemic proportions were attained in Australia, the Philippines, France and the Belgian Congo. Germany, Israel and Mexico were affected more than usual. Some countries with severe outbreaks in 1949 had no abnormal rise in 1950.

This was true of Iceland, Sweden, Mauritius Island, Japan and New Zealand.

Smallpox was endemic in Indonesia, China, Korea, Arabia, Burma, India and Pakistan. A small outbreak of black smallpox occurred in Jalisco, Mex. Chile had a large number of cases, fortunately of the mild variety, alastrim. Considerable interest was aroused by the epidemic in Glasgow, Scot. Twenty-one cases occurred following the arrival of an infected Hindu sailor. The rapid dissemination of the disease emphasized the necessity of constantly maintaining a high level of immunity by vaccination.

India and Pakistan continued to represent main foci of cholera. Plague was widespread in India. An epidemic of bubonic plague, which later became pneumonic, was reported from southwest Kwantung province, China. Epidemic typhus afflicted Afghanistan and Japan and murine typhus struck Korea. Yellow fever was prevalent in Bolivia.

Interest continued to be centred in the Cocksackie group of viruses, or C virus, described by G. Dalldorf in the faeces of two children at Cocksackie, N.Y. The illness in the children resembled paralytic poliomyelitis. This group of viruses, many of which are serologically distinct, differs from the poliomyelitis group in that it is not pathogenic for rhesus monkeys and causes severe destructive lesions in the striated muscles of suckling mice and hamsters. The mice and hamsters may or may not have encephalomalacia.

Diseases caused by C virus include those resembling paralytic and nonparalytic poliomyelitis, epidemic myalgia or pleurodynia, aseptic meningitis, "three day fever" in Louisiana and summer gripe. Inapparent infections also occur but probably not as commonly as with the Lansing strain of poliomyelitis virus. The virus was found also in Delaware, Connecticut, Rhode Island, Pennsylvania, Texas, Canada, England and Denmark and was apparently widespread. Some of its manifestations resemble those of poliomyelitis closely; the clinical picture, including pleocytosis in the cerebrospinal fluid, the presence of the virus in the human nasopharynx and its persistence in the faeces, the finding of the virus in flies and in urban sewage and the predilection of the disease for the summer months. In some poliomyelitis epidemics the peak of nonparalytic disease occurs earlier than the peak of paralytic disease. There is evidence that sometimes C virus may be at least partly responsible for this. It differs from poliomyelitis in that it causes a lower case fatality rate, a higher proportion of nonparalytic cases and has less tendency to attack adults. The incubation period was definitely described as a result of laboratory infections and one human transmission experiment.

In these instances it was generally two to five days, less than that of poliomyelitis.

The part C virus plays in clinical poliomyelitis is obscured by the fact that patients may excrete both viruses simultaneously, and then one must determine which of the viruses is causing disease. Its role in other diseases demanded extensive investigation.

**Eriksen, Erik** (1902– ), Danish prime minister, was born at Brangstrup, island of Fyn, Den. on Nov. 20. He was manager and proprietor of his own ancestral farm. Educated at an agricultural college, from 1927 he took an active part in the Liberal (Agrarian or *Venstre*) party's youth organization and was national chairman from 1929 to 1932. He was elected a member of the *folketing* (lower chamber) in 1935 and was afterward repeatedly re-elected. In 1941 he was elected deputy speaker. In May 1945 he joined the Buhl coalition cabinet as minister of agriculture and fisheries and retained this portfolio in the Kristensen Liberal cabinet (Nov. 1945–Nov. 1947). When the Hedtoft Socialist cabinet was in power (Nov. 1947–Oct. 1950) Eriksen led the Liberal opposition in the *folketing*. Shortly after the elections of Sept. 5, 1950, he formed a Liberal-Conservative coalition cabinet which was approved by the king on Oct. 28.

**Eritrea.** A former Italian colony of east Africa, Eritrea is situated on the Red sea between Ethiopia (south) and the Anglo-Egyptian Sudan (west). From 1941 it was under temporary British administration pending a decision on its future. Area (British official est.): 48,350 sq.mi. Pop. (1949 est.): 1,086,300 including 21,432 Italians. The inhabitants in the north-western part of Eritrea are akin to the Beni Amir of the Sudan and in the central plateau to the Amhara of Ethiopia. Language: mainly Tigrīña and Tigré. Religion: roughly half Christian (Coptic rite) and half Moslem. Capital, Asmara (pop., 1949 est., 117,000 including 17,000 Italians). British chief administrator, Greville Drew.

**History.**—In Oct. 1949 the general assembly of the United Nations passed the problem of Eritrea to a commission comprising the representatives of five nations with instructions to examine the question on the spot and recommend a solution. Its visit to Eritrea stirred up political passions and was marred by acts of brigandage and political terrorism, and racial riots in Asmara, in which many were killed and wounded. The commission failed to agree upon either a solution or the facts, and its report, presented in June 1950, revealed the same distinct cleavage of opinion which had previously bedevilled the problem. Three of the five members advocated some form of union with Ethiopia: two were in favour of a federation and one recommended incorporation. The other two recommended independence after a period of ten years' trusteeship. Discussion in the "Little Assembly" produced no answer to the question. When the general assembly met at Lake Success in October, there was by then a marked appreciation of the danger of delay and of the need for an urgent compromise solution. A form of federation between Ethiopia and Eritrea, under the sovereignty of the Ethiopian crown, with a wide measure of autonomy for the Eritrean people and safeguards for the Italian community, was proposed. The federation was to become effective, with the help of a U.N. commissioner, by Sept. 15, 1952. It was accepted by both Italy and Ethiopia and received the support of many Latin-American republics which had championed Italy's interests. It was adopted by an overwhelming majority of the general assembly in December. The solution did not fully satisfy the desires of any political

faction, but it went a long way to meet them and earned a favourable reception in the country. The solution had the result of bringing about a reconciliation between Ethiopia and Italy and ending their long enmity. (F. E. St.)

**Economy.**—Budget (1948–49, actual): revenue £2,188,939; expenditure £2,257,600. Foreign trade (1949): imports £3,114,300; exports £2,261,900. Roads (1949): 780 mi. Railways (1949): 228 mi. Ships entered at Massawa (1949): 792,761 net registered tons.

**Estonia.** From Feb. 24, 1918, to Aug. 6, 1940, when it was annexed by the U.S.S.R., Estonia was an independent republic. The U.S., British and other governments, however, did not recognize the annexation. Area: 18,357 sq.mi. Pop.: (1939 est.) 1,134,000, (1950 est.) 1,200,000. Nationalities (1939 est.): Estonian 88.2%, Russian 8.5%, German 1.5%, others 1.8%. Religion (1939 est.): Lutheran 78.2%, Greek Orthodox 19%, others 2.8%. Chief towns (pop., 1939 est.): Tallinn (cap., 146,400), Tartu (60,100). Chairman of the presidium of the supreme soviet of the Estonian S.S.R. in 1950, August M. Jakobson; chairman of the council of ministers, Arnold T. Veimer.

**History.**—The tenth anniversary of what was described as the proclamation of soviet power in Estonia was celebrated with typical propagandist fervour. The most remarkable and inherently tragic change which occurred in Estonia during the decade was the decrease in the number of Estonians living in the country from 998,000 to 684,000, according to independent estimates. If the official estimate of total population were true, it would be necessary to assume that the Russification of Estonia by the purely physical methods of mass deportation of Estonians and their replacement by Russians was already well advanced. *Sovetskaya Estonia*, a Tallinn Russian-language daily newspaper, had already the largest circulation in the republic. Arnold Raud, minister of education, advised all teachers and professors to learn Russian so that it might become to an increasing extent the language of instruction. Applying the Stalin view of philology to local conditions, *Rahva Hääl*, organ of the Estonian Communist party, in October attacked teachers and writers guilty of treating the Russian language "contemptuously" by using derivatives from the Finnish language. The infiltration of Russian words into the Estonian language was an obvious conclusion.

The amalgamation of smaller collective farms into bigger ones, started in the Soviet Union at the beginning of 1950, was also enforced in the Baltic states, and a Russian, F. Komarov, was in charge of the operation in Estonia. In an article in *Izvestia* of July 21, Veimer claimed that more than three-fourths of the peasant homesteads were organized in collective farms. Agricultural production, it was announced in July by Ivan G. Käbin, secretary of the Estonian Communist party, exceeded the prewar level, but industrial production was not satisfactory.

On Oct. 4 was promulgated a decree abolishing the former districts and communes and dividing the country into 39 *rayons*—administrative units of the soviet type. At the elections of March 12 to the supreme soviet of the U.S.S.R. 798,330 (99.82%) out of a possible 799,776 electors cast their votes: Estonia elected 4 members to the council of the union and 25 to the council of nationalities. (See also LATVIA; LITHUANIA.)

**Education.**—(1949) Elementary and secondary schools: pupils 156,000; University of Tartu: students 2,700, teaching staff 70.

**Finance.**—Budget (1950 est.): revenue 1,039,248,000 roubles, expenditure 1,019,648,000 roubles.

**BIBLIOGRAPHY.**—A. Kaelas, *Human Rights and Genocide in the Baltic States* (Stockholm, 1950); K. M. Smogorzewski, "The Russification of the Baltic States," *World Affairs* (London, Oct. 1950). (K. Sm.)

**Etching.** Interest in the art of etching continued active in 1950 in all countries where it was practised to any appreciable extent. Among the factors which contributed to this were the conditions of contemporary life favouring the small picture in homes which offered less and less space for display or

storage, and the low cost of an etching compared with that of a painting or a piece of sculpture, an economy made possible by the fact that, the etched plate being susceptible to multiplication in printed form, the artist can afford to sell an impression for far less than he could were it unique, and at the same time be as well compensated as any other artist for his investment of time, labour and creative ability.

If the number of artists working in the medium of etching in 1950 was proportionately less than was the case in such other fine print media as wood engraving and lithography, it was, as heretofore, because etching is, technically speaking, the most difficult and exacting of all forms of pictorial expression. It is therefore practised less by artists working in other fields and is less subject to the influence of new forms of approach.

Although there is no reason to doubt that a few surviving etchers of the German school continued to work in 1950, the conditions that had existed in that country since the conclusion of World War II precluded the possibility of their art becoming known to the rest of the world, and much the same may be said, though for differing reasons, of the Netherlands, Belgium and the Scandinavian countries, despite the fact that some significant work appeared in all of them.

Hungary boasted two outstanding figures in the field of etching, Nandor Varga and Julius Komjáti, the latter closely associated with England by ties of exhibitions and residence. Both of these published work during the year.

In Italy interest and creative activity were concentrated more upon the relief and planographic media, though the young Italian artist Antonio Music executed a few plates that earned him recognition.

In France, always a stronghold of art and a country which has produced many of the world's greatest etchers, the tendency of graphic artists in recent years to favour other media, notably line engraving and lithography, especially in the realm of book illustration, was maintained in 1950. However, such established etchers as Michel Ciry, Gérard Cochet, Pierre Dubreuil, Edouard Georg, Robert Lotiron and Jacques Villon not only published new work but were active exhibitors both solo and in groups, as well as in the large exhibitions of the Société des Peintres-Graveurs Français and the *Salons*.

There was no marked change in the character of etching in England, bulwark of traditionalism, in 1950. Its most representative and important print society, the Royal Society of Painter-Etchers and Engravers, held its annual display of the work of its members, including such long-established and outstanding etchers as S. Van Abbe, W. D. Brokman-Davis, John Copley, Paul Drury, Martin Hardie, W. Westley Manning, Malcolm Osborne, D. I. Smart, Robert Spence and Leonard R. Squirrell, working in pure etching, dry point or a combination of both. Others active in the field were Winifred Austen, Charles Bartlett, Eileen Buckton, Katharine Cameron Kay, W. Fairclough, H. Andrew Freeth, Anthony Gross, Norman Jones, Percy Lancaster, John Nicolson, Marion Rhodes, Sara Sproule, C. W. Taylor, Eric Taylor, Harold Thornton, Murray M. Tod and Leslie M. Ward.

In the United States, the widely varying backgrounds of the country's population, the great distances between its centres and the receptivity of its people to change are all reflected in the work of its artists. Whereas the older nations of the world have long established their traditions of art, a truly American tradition is still in the formative stage. Yet there as elsewhere, the art of etching has changed less than has any other form of art expression. Among the leading etchers whose work appeared in the two great national print exhibitions sponsored in 1950 by the Society of American Etchers, Gravers, Lithographers, and Woodcutters and by the Library of Congress, as well as in the many smaller ones all over the country, were Niels Y. Andersen,

Will Barnet, Ture Bengtz, Theresa F. Bernstein, Isabel Bishop, Cornelis Botke, Charles M. Capps, Federico Castellon, John E. Costigan, Stephen Csoka, Frederick K. Detwiller, John Heagan Eames, Ralph Fabri, Ernest Freed, Isaac Friedlander, Sue Fuller, Arthur W. Hall, Stanley W. Hayter, Eugene Higgins, Morris Henry Hobbs, Irwin D. Hoffman, Alfred Hutty, Philip Kappel, Gene Kloss, Armin Landeck, Mauricio Lasansky, Jeannette M. Lewis, Martin Lewis, Helen A. Loggie, Luigi Lucioni, William Meyerowitz, Helen Miller, Kiehl and Xtian Newswanger, Roi Partridge, Andre Racz, Charles B. Rogers, Ernest D. Roth, Carl M. Schultheiss, Donald Vogel, Reynold H. Weidenaar, Charles A. Wilimovsky and R. W. Woiceske.

A very active school of etching exists in Canada, where Sybil Andrews, Isabel Cleland, Patricia M. Harvey, I. Mackinnon-Pearson, Ernst Newmann, Lloyd Scott, E. B. Sisley and W. J. Wood produced work of a high degree of excellence in 1950.

Only scattered examples of the etcher's art appeared in Spain, Mexico and the South American republics, interest on the part of the graphic artists of all these countries seeming to have been centred on the planographic and relief media. (J. T. Ar.)

**Ethiopia.** An independent empire of northeastern Africa, Ethiopia is bounded north by Italian Eritrea (from 1941 under British military administration), west by the Anglo-Egyptian Sudan, south by Kenya, southeast by Italian Somaliland and east by British and French Somaliland. Area: *c.* 350,000 sq.mi. Pop. (Dec. 1950 est.): 10,000,000, but the ruling race, the Amhara, numbers about 2,000,000. Language: Amharic, the official language; also Tigriña, Tigré, Galla, Somali, etc. Religion: Christian (Alexandrine) 57%; Moslem 17%; pagan, etc., 26%. Chief towns: Addis Ababa (cap., *c.* 250,000); Harar (*c.* 45,000); Dessie (*c.* 35,000); Dire-dawa (*c.* 30,000).

Ruler: Emperor Haile Selassie I; prime minister: Bitwoded Makonnen Endalkatchou.

**History.**—During the year 1950 the government's attention continued to be focused on Lake Success where the United Nations general assembly was expected to reach a final decision concerning Eritrea (*q.v.*). Ethiopia objected to the decision taken in Nov. 1949 by which the Italians returned to Italian Somaliland (*q.v.*) as the administering authority. But the decision taken in Dec. 1950 to form a federation between Ethiopia and Eritrea was received with satisfaction.

For the first time since 1941 Italo-Ethiopian reconciliation seemed feasible.

Friendly and co-operative relations continued with neighbouring governments. The demarcation of the frontier between Ethiopia and French Somaliland was completed early in 1950, and that of the Ethiopia-Kenya boundary began at the end of the year. Ethiopia agreed to receive 171 displaced persons and their families; the first party of these arrived in August.

A factor of major economic importance was the granting of a loan of \$7,000,000 to Ethiopia by the International Bank for Reconstruction and Development in Sept. 1950; \$5,000,000 of this was earmarked for road construction and maintenance, and the rest for the creation of a new development bank. The Ethiopian government would have certain conditions to fulfil in connection with the service of the loan and the raising of additional capital for development projects. To meet these obligations they had, it was understood, mortgaged the revenue from gasoline taxes and other sources and furthermore reduced their note issue cover in gold, silver and foreign "hard" currencies from 75% to 25%, increasing thereby their currency circulation.

During 1950 the government completed the construction of a new reinforced concrete bridge over the Blue Nile, on the main route from the capital to Gojjam province, but their resources were unequal to the greatly needed general overhaul of the roads

ETHIOPIAN STUDENTS at the Tafari Makonnen secondary school in Addis Ababa receiving instruction in 1950 from a Canadian physics teacher, one of nearly 300 foreign teachers assembled from abroad by the Ethiopian government

built by the Italians.

The Ethiopian government was eager to encourage the investment of foreign capital in industry. On Feb. 28, 1950, a statement appeared in the *Official Gazette* to the effect that, in the case of enterprises financed from abroad which were deemed by the government to be beneficial to the country, freedom would be granted from the payment of profit tax for five years from the date production began; customs duties would not be charged on imported machinery; and facilities would be accorded for remittances abroad of funds to cover dividends, interest and the amortization of capital. (C. SA.)

**Education.**—Schools (Aug. 1949): elementary 407, pupils 52,965 (including 5,964 girls); secondary, pupils 1,079 (including 804 in Addis Ababa). Teachers: 1,615 Ethiopian and 286 foreign. There were 228 students abroad, mostly supported by the government. During the year ended Aug. 31, 1949, Eth. \$10,530,806 was spent on education.

**Finance and Banking.**—Budget (1947): balanced at Eth. \$58,000,000. Monetary unit: Ethiopian dollar. Exchange rate: Eth. \$2.53 = U.S. \$1.00.

**Foreign Trade.**—(Year ending Sept. 10, 1950): imports Eth. \$73,500,000, exports Eth. \$75,900,000; (year ending Sept. 10, 1949): imports Eth. \$90,900,000, exports Eth. \$77,200,000.

**European Coal and Steel Pool:** see EUROPEAN UNION.

**European Economic Cooperation, Organization for:** see EUROPEAN RECOVERY PROGRAM.

**European Payments Union:** see EUROPEAN RECOVERY PROGRAM; EXCHANGE CONTROLS AND EXCHANGE RATES; INTERNATIONAL TRADE.

**European Recovery Program.** As the five-year Marshall program of European recovery approached its mid-point, the council of the Organization for European Economic Cooperation (O.E.E.C.), in its second interim report issued on Feb. 2, 1950, noted that in 1949 the total output of the member countries was 25% above the 1947 level and exceeded the pre-World War II level in all countries except west Germany and Greece. During 1950 the O.E.E.C. area raised its industrial production by a further 13%. The O.E.E.C. took major steps toward freeing intra-O.E.E.C. trade of quantitative and monetary restrictions, while U.S. support of the program came into increasing competition with de-

mands of the Korean war and rearmament.

On Feb. 20 the original request for \$3,100,000,000 for the 1950-51 program of the Economic Cooperation administration (ECA) was pared by Administrator Paul G. Hoffman to \$2,950,000,000; he also requested authorization to use a part of the new funds to support creation of a multilateral European Payments union (E.P.U.). In joint hearings, Feb. 21-27, before the U.S. house committee on foreign affairs and the senate committee on foreign relations, Hoffman stressed the importance of raising European productivity and promoting European economic integration. Having rejected proposals to cut the ECA program drastically, the senate committee recommended on March 21 provision of \$3,100,000,000, including \$150,000,000 in unexpended funds, approved earmarking up to \$600,000,000 for E.P.U. and condemned unreasonable restrictions on imports of U.S. goods. On March 22 the house committee reported out a bill which similarly earmarked \$600,000,000 for E.P.U. and also set aside \$1,000,000,000 for the export of food and raw material surpluses accumulated under the domestic farm price support program.

On March 29 the house voted to withhold ECA assistance from the United Kingdom as long as the division of Ireland continued but withdrew this provision March 31. The house bill authorized an ECA program of \$2,850,000,000, and this amount was incorporated in the senate bill, passed on May 5, after rejection of proposals for a sharp reduction of ERP and for inclusion of a \$50,000,000 loan for Spain.

The joint bill which emerged from the conference committee authorized ECA to use up to \$600,000,000 in counterpart funds as well as \$600,000,000 in new funds to support the proposed E.P.U. It also earmarked \$200,000,000 for insuring private U.S. investments abroad against loss through expropriation or confiscation, instead of the \$150,000,000 requested by ECA and the \$300,000,000 approved by the house. The conference bill, providing for an ECA program of \$2,850,000,000, was passed by the house on May 23 and by the senate on May 25, and was signed by Pres. Harry S. Truman on June 5.

In late July the senate appropriations committee recommended reducing the ECA fund from \$2,850,000,000 to \$2,392,000,000. On July 31 the senate raised this to \$2,450,000,000 and authorized expenditure in 1950-51 of unused balances amounting to \$277,000,000. Passed by the senate on Aug. 4, the omnibus appropriations bill was sent to conference with the house, which had not yet passed a bill of its own. The ECA total of \$2,527,000,000, agreed upon in conference committee on Aug. 24, was approved by the house on Aug. 25 and by the senate on Aug. 28, and the omnibus bill was signed by President Truman on Sept. 6. Debates on the third year of ERP had been marked by bitter disputes over Communist advances in China and over the extent and cost of rearmament. At the end of September ECA Administrator Hoffman resigned and was succeeded by William C. Foster (*q.v.*).

In early October ECA announced a top priority for the economic rehabilitation of western Berlin, seriously handicapped by soviet-imposed transportation obstacles and by earlier removals of industrial equipment. On Dec. 13 it was announced that allocations of ECA aid to the United Kingdom would be suspended from Jan. 1, 1951. The U.K. foreign exchange position had improved greatly as a result of the significant increase in exports following the devaluation of sterling and the rapid growth in dollar sales of raw materials. During the second half of 1950 ECA allotments to the U.K. had totalled only \$175,000,000, of which \$150,000,000 were offset by sterling grants made by the U.K. to other members of O.E.E.C. ECA deliveries previously authorized for purchase of industrial equipment would continue into 1952, in the amount of about \$200,000,000. The

U.K. thus became the first recipient country able to dispense with ECA assistance.

The O.E.E.C. was strengthened as the principal instrument of European collaboration in the recovery program. Under U.S. urging the O.E.E.C. council decided to appoint a continuing rather than a rotating chairman and on April 4 elected Netherlands Foreign Minister Dirk U. Stikker to this post for one year. At that time the council also elected seven countries—Belgium, Denmark, France, west Germany, Iceland, Turkey and the U.K.—to the executive committee, directed the full council with representation of ministerial rank to convene every two months, and abolished the consultative committee of 11 foreign ministers. It also appointed a subcommittee to confer with representatives of the Council of Europe concerning co-operation between the two bodies.

On May 18 the Canadian, French, U.K. and U.S. foreign ministers recommended closer association of the U.S. and Canadian governments with O.E.E.C. but assigned to the North Atlantic Treaty council (N.A.T.C.) primary responsibility for economic and financial problems arising from rearmament. Beginning July 6 Canadian and U.S. representatives sat with the O.E.E.C. council, without vote.

The relation of O.E.E.C. to the North Atlantic rearmament program remained unresolved. At the council session of June 2 Secy.-Gen. Robert Marjolin urged the O.E.E.C. countries to effect a selective replanning of their investment programs on a co-operative basis in order to meet the cost of rearmament while continuing to build up their basic economic potential. On Oct. 6-7 the council also considered the growing stringency in raw materials and the renewed pressure of inflation, and on Dec. 2 it stressed its own responsibility to "initiate measures of international co-operation" for the control of the supply and prices of raw materials. In these problems the roles of O.E.E.C. and N.A.T.C. remained unclear, especially after the French, U.K. and U.S. governments announced the appointment of a three-power committee to recommend measures for regulating

the supply of raw materials. (See also NORTH ATLANTIC COMMUNITY.)

The O.E.E.C. continued its efforts to liberalize trade among its members. During 1949 intra-O.E.E.C. quantitative restrictions had been removed from 50% of the trade of the area, and on Jan. 31 the council agreed to eliminate by July 1 similar quotas which still regulated a further 10% of O.E.E.C. trade. It was unable, however, to solve the problems presented by state trading and dual pricing. A substantial part of U.K. imports were regulated by bulk purchasing on government account and thus escaped from control by O.E.E.C. agreements for liberalizing private trade; the U.K. felt unable to abandon these arrangements, which it considered an essential part of its recovery plan. In the U.K. and west Germany coal was sold cheaper at home than for export, despite protests of coal-importing countries over the competitive disadvantage thus imposed on their industries. The council was successful, however, in bringing about a partial relaxation of controls over intra-O.E.E.C. invisible trade; this relaxation, announced on May 11, facilitated payment for shipping, insurance, tourist trade and banking services, which together were equivalent in value to about one-third of the commodity trade within the O.E.E.C. area.

In June Chairman Stikker presented far-reaching proposals for the complete elimination of quantitative restrictions on intra-O.E.E.C. trade. He urged that quotas affecting 75% of the 1949 trade be removed by the end of 1950; that quotas on the remaining 25% be eliminated gradually on an industry-by-industry basis; and that the O.E.E.C. countries establish a European integration fund which would pay part of the cost of modernizing less efficient but viable plants and would pay compensation for plants closed by the abolition of protection through quotas.

No action was taken on this program for complete integration, but on Oct. 26-27 the O.E.E.C. council approved the elimination of quotas from a further 15% of intra-O.E.E.C. trade by Feb. 1, 1951, thus raising the proportion of liberalized

**GIANT SHIPMENT** of artificial fertilizer purchased with ECA funds being unloaded at Pusan on the southeastern coast of Korea in 1950

trade to 75%. In view of west Germany's stringent foreign exchange position the council allowed the latter to wait until Feb. 28 before notifying O.E.E.C. whether it could remove quotas from 75% of its trade; since the Netherlands, Denmark and Turkey were delivering more than 25% of their exports to west Germany they received a similar extension to April 30, 1951. The question of the "hard core" of quotas covering the remaining 25% of intra-O.E.E.C. trade remained in abeyance, being overshadowed by problems of the cost of rearmament, stringency of raw materials and renewed inflationary tendencies.

The development of a relatively free O.E.E.C. trading area received an important impetus from the creation of a European Payments union, which replaced the previous Intra-European Payments scheme. Recommended by ECA in Dec. 1949 and approved in principle by O.E.E.C. on Jan. 10, the E.P.U. was designed to do away with the system of periodic bilateral balancing of payments in intra-O.E.E.C. trade and to establish the more elastic device of a periodic multilateral settlement of net debits and credits among the member countries. Between January and June many obstacles to the creation of a freer system were encountered and gradually surmounted. The U.K. was especially anxious to safeguard the effectiveness of the sterling bloc, which provided the payments mechanism of a large part of world trade, and to protect its economic system against a renewal of the uncontrolled drain of gold and dollar reserves such as that which had preceded and precipitated the devaluation of the pound sterling. On the other hand, some continental countries held large amounts of sterling which they could convert into other currencies only after bilateral agreement with the U.K. At one stage the U.K. proposed to remain outside of E.P.U.; at another, it offered to join E.P.U. and to provide its quota of credits to the E.P.U. pool, but to forego the right to borrow from the pool in return for retaining the right to extend its system of bilateral agreements on transfers of sterling holdings. The final agreement included a number of important safeguards desired by the U.K. As a further safeguard, the ECA agreed to indemnify the U.K. in ECA credits for the loss of dollars which might arise from the use of their sterling balances by net debtors to settle their deficits with E.P.U. Finally, by mid-June a compromise was reached between O.E.E.C. and the sterling bloc by which sterling could be used by sterling creditors to offset their debits to E.P.U., but the amount of sterling to be held for other clearing purposes could be determined between them and the U.K.

Among other issues which had to be settled was that of the relations of lending countries and borrowing countries to the credit pool of E.P.U. Taking as a base the total value of its 1949 trade with O.E.E.C. countries, each member would be entitled to borrow up to 10% of this sum from E.P.U. without transferring gold or dollars; it could borrow another 5% under obligation to repay in gold or dollars within six months. In turn a creditor country could lend to E.P.U. up to 5% of its 1949 turnover without transferring gold or dollars and could lend a further 10% by providing one-half of the additional credit in gold or dollars. When one country had loaned 15% of its credit quota to other member countries, the latter would be free to apply discriminatory measures against its goods in order to redress the balance of payments, and when a creditor country had loaned more than 20% of its credit quota it would be free to leave the E.P.U. and to make trade and payment agreements outside of it. Most of the member countries would advance their credits to E.P.U. from the counterpart funds, which were created through the sale of ECA goods for local currency and which were controlled jointly by the national government concerned and the ECA.

This arrangement met with strong objection from Belgium.

Unlike most of the O.E.E.C. countries, whose potential contributions to the E.P.U. credit pool would be fully covered by counterpart funds, Belgium might have to finance such advances out of its own budget, thus stimulating inflation and worsening its ability to compete in foreign trade. These objections were met on June 17 by the O.E.E.C. council, which also set the duration of E.P.U. at two years and made provision for the problem of chronic debtors and creditors and for the settlement of existing foreign-exchange debts.

On July 7 the council approved the final arrangements for E.P.U., which came into force retroactively from July 1, and the agreement was signed in Paris on Sept. 19 by representatives of 18 European countries and of ECA. Switzerland's membership was completed on Oct. 25, through legislative action. On Sept. 19 E.P.U. also elected a management board of seven members, including an ECA representative without vote, and appointed the Bank for International Settlements at Basle, Switz., as its agent. E.P.U. received a working fund of \$350,000,000 from ECA, which also set up a special fund in counterpart currencies to aid members of O.E.E.C. which encountered special payments difficulties. The E.P.U. credit pool, based on the value of intra-O.E.E.C. trade in 1949, amounted to \$3,950,000,000. From this pool each country received a credit quota, based on its 1949 trade turnover with other O.E.E.C. countries, and on which it could draw to the percentages and under the arrangements described above. In percentages of the global credit fund the quotas were assigned as follows: Austria, 1.8; Belgium-Luxembourg, 9.1; Denmark, 4.9; France, 13.2; west Germany, 8.1; Greece, 1.1; Iceland, 0.4; Italy, 5.2; Netherlands, 8.3; Norway, 5; Portugal, 1.8; Sweden, 6.6; Switzerland, 6.3; Turkey, 1.3; sterling area (exclusive of Iceland which, for other purposes, is part of the sterling area), 26.9.

By November the E.P.U. faced its first crisis, brought on through west Germany using up, in three and one-half months, E.P.U. credits assigned for an entire year. After an investigation of the German payments difficulties the west German government agreed to adopt measures designed to increase taxes, exports and credit controls and to decrease imports, and on Nov. 28 the E.P.U. management board assigned a supplementary credit of \$120,000,000 to it, while ECA gave further assistance to its economy. If successful in the face of new problems of rearmament, shortages of raw material and revived inflation, E.P.U. was expected to eliminate many uncertainties and barriers created by the previous system of bilateral clearings and iron out many seasonal and short-term fluctuations in intra-O.E.E.C. trading.

During 1950 the future of the ECA-O.E.E.C. program was subjected to careful stock-taking. The O.E.E.C. report of Feb. 2 pointed out that even if O.E.E.C. exports to the U.S. and Canada could be increased by 50% between 1950 and 1952 and imports from the dollar area could be reduced, as estimated, by 23.5%, there would still be a \$1,000,000,000 gap in the 1952-53 foreign trade of the O.E.E.C. area. The report emphasized that redressing this imbalance in trade between the two areas was complicated by a number of longer-range trends, including the decline in U.S. imports of raw materials from European-controlled areas, the administrative complexities of U.S. tariffs, the protection of U.S. shipping and the displacement of European by U.S. exports in Latin-American markets. In response to this and other suggestions the U.S. government undertook a thorough review of the administration of import tariffs, and efforts were made to make importation procedures simple, uniform and expeditious.

On March 25 Sen. Arthur H. Vandenberg urged the importance of a new study of the international economic problems which

would follow the expiration of the Marshall program in 1952. On March 31 President Truman appointed a commission, headed by Gordon Gray, former secretary of the army, to study these problems and to make recommendations designed to "assure ourselves that our own policies are those which will serve best to reinforce our economic strength and that of the other free nations of the world."

Issued on Nov. 12, the Gray report noted that the attainment of an adequate level of rearmament would postpone the termination of U.S. economic assistance to Europe and recommended that the U.S. extend dollar aid to support military production within Europe, in addition to supplying a part of the military equipment directly from U.S. production. It urged that special attention be devoted to strengthening O.E.E.C. and E.P.U. as instruments for developing an integrated European economy, for promoting intra-European trade and increasing the flow of European exports. It concluded that the healthy development of the world economy required raising the annual export of U.S. capital to \$600,000,000 or \$800,000,000. It emphasized the need of expanding the ECA's program of technical assistance in order to raise the productivity of European industry and agriculture and thus to enable Europe to carry the burdens of rearmament without lowering standards of living. (See also EUROPEAN UNION; INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT.) (P. E. M.)

**European Union.** The organization of a political, economic and military unity of the European nations which share a common tradition and way of life had started hopefully in 1949 but in 1950 suffered a setback. Many plans were drawn up and committees formed without, however, leading to concrete achievements. The concept of European unity was not new in 1949. On May 17, 1930, Aristide Briand, then French foreign minister, suggested to the League of Nations a plan for a federal European union. Winston Churchill (*q.v.*), then prime minister of Britain, proposed in June 1940 a Franco-British union. During World War II the concept of European unity gained ground in the discussions of the underground movements which often propagated the slogan "Liberate and federate." After the war, it fell to private organizations to propagate the creation of institutions for European co-operation. The International Committee for the Coordination of European Unity Movements called a congress at The Hague, the Netherlands, in May 1948 which demanded the convening of a European consultative assembly.

From the beginning there were two opposite concepts about the way to proceed toward union. The one was voiced by the British and the Scandinavians who advocated the organization of Europe by means of a network of agreements and pacts among the governments which would later be followed by a comprehensive organizational structure. This piecemeal approach by experiment and experience was opposed by the "logical" continental school, led by the French, who insisted from the beginning on a constitution in which the rights and duties of the supranational and of the national bodies would be clearly defined. Finally a compromise was reached and on Jan. 28, 1949, the foreign ministers of the five nations united in the Brussels pact (Britain, France, Belgium, Netherlands, Luxembourg) invited Italy, Ireland, Denmark, Norway and Sweden to join them in drafting a statute for the Council of Europe which was signed in London on May 5, 1949. Its aim was "to achieve greater unity between its members for the purpose of safeguarding and realizing the ideas and principles which are their common heritage and facilitating their economic and social progress." The Council of Europe in its first meeting in Strasbourg, France, from Aug. 8 to Sept. 9, 1949, decided to invite Greece, Turkey and Iceland to participate.

This movement toward European unity received its impetus from the threat which the expansion of communism after World War II presented to all European nations alike. Their survival according to the traditions of western civilization which had originated and developed among the nations of the Council of Europe seemed to demand their unity in order to increase their political strength and their economic well-being. The United States, deeply concerned about the survival of western civilization on which its own culture was built, and about its security against Communist expansion, encouraged the economic and military union of Europe. The encouragement and even pressure by the United States became stronger in the year 1950. Within the Council of Europe, however, little progress was achieved on account of the disagreement between its two organs, the Committee of Ministers and the Consultative assembly. Only the Committee of Ministers could act to realize the aim of the organization, but it could do so only through the form of recommendations to the member governments (military matters were outside the competence of the council). On the other hand, the Consultative assembly could only discuss and express opinions on matters which were referred to it by the Committee of Ministers or which had been approved by the committee for inclusion in the agenda of the assembly.

The year 1950 witnessed a struggle between the assembly and its wish to acquire a responsibility of its own and the Committee of Ministers which wished to hold the assembly in check. The General Affairs committee of the assembly under the chairmanship of Georges Bidault, French prime minister, met in Strasbourg on March 21, 1950, and suggested the creation of an executive committee which would be composed in equal numbers of members from the Committee of Ministers and the assembly. This executive committee would have as its task the co-ordination of the two organs and the supervision of the realization of their decisions. Some days later, at the end of March, the Committee of Ministers met in Strasbourg and accepted in principle the creation of a joint committee to study means of ensuring the efficient co-operation of the two organs of the Council of Europe. The decisions of the Committee of Ministers fell far short of the expectations of the friends of European union. The committee instructed experts to study the possible extension to the member states of the multilateral convention on social security adopted by the signatories of the Brussels pact, and the political and juridical questions connected with the various proposals of the assembly for a European treaty on human rights.

More important was the decision of the Committee of Ministers to invite the governments of the German Federal Republic and of the Saar to become associate members of the Council of Europe. The German Federal Republic would be entitled to send 18 members to the Consultative assembly (as many as France, England and Italy) while the Saar would send 3 members (as many as Luxembourg). The Saar legislative assembly accepted the invitation on April 27, and on May 9 the Council of Ministers of the German Federal Republic in Bonn unanimously recommended to the *bundestag* the acceptance of the invitation. On June 15 the *bundestag* voted by a roll call with 220 for and 152 against acceptance, with 9 abstentions. Chancellor Konrad Adenauer greeted this decision, declaring, "Germany's road to Europe is now open"; the Social Democrats led by Kurt Schumacher opposed acceptance, as did the rightist Nationalists and the Communists. The Social Democrats, however, accepted membership in the German delegation to the second session of the Consultative assembly which met in Strasbourg on Aug. 7, 1950.

In this session the assembly adopted again a series of resolutions to strengthen its own authority and thereby European union. It requested each member state to appoint a minister of European affairs to handle matters related to the Council of

Europe and it demanded that assembly resolutions be submitted to the various national parliaments for consideration. Other resolutions called for tighter links between the Council of Europe and the Marshall plan's Organization for European Economic Cooperation (O.E.E.C.) and between the European organizations and the North American nations, the United States and Canada. The strong feeling for pooling the resources of Europe and creating a common military and economic authority was evident throughout the discussions. The Committee of Ministers was blamed for its failures to act and for its "clinging to overhanging branches of the tree of sovereignty while the stream of time rushed on beneath them." Paul Reynaud of France suggested the appointment of a war minister to unite European defense preparations. Winston Churchill in an address on Aug. 11 stressed on the one hand the British point of view that "the progress of building up a European parliament must be gradual, and roll forward on a tide of facts, events and impulse, rather than by elaborate constitution making. We are not making a machine, we are growing a living plant." On the other hand he showed himself much more favourable to European union than the British Labour party government. He stressed that "there is no revival of Europe, no safety of freedom for any of us except to stand together, united and unflinching." He proposed that "the Assembly, in order to express its devotion to the maintenance of peace and its resolve to sustain the action of the Security Council of the United Nations in defense of peaceful peoples against aggression, call for a unified European army subject to proper European democratic control and acting in full cooperation with the United States and Canada." An eventual European defense authority and a unified European army were, after many discussions and against the opposition of members of the British Labour party, endorsed by the assembly on Aug. 28 by 69 to 19 votes, with 2 abstentions.

The assembly dealt also with the proposal advanced by the French foreign minister Robert Schuman to pool the steel and coal resources and production of western Europe. It endorsed this plan by 73 votes with 32 abstentions, mostly members of the British Labour party and Scandinavians. An amendment by British Conservative members that a "renewed effort should be made by all the governments concerned to find a basis for an agreement which will enable all the principal coal- or steel-producing countries of Europe to participate fully in the scheme," was also accepted. While this point of a unified authority for European steel and coal production remained hotly debated, two other proposals met no opposition. It was unanimously approved to set up a European supreme court to enforce the Convention of Human Rights in all member states. The European Human rights charter consisted of 68 articles, of which the first 20 defined the fundamental freedoms. The proposed court would consist of one judge of each member state, elected by the Consultative assembly for a nine-year term from a list submitted by member governments. The assembly also voted its support for a European social security code which would raise benefits in each member state to an equally high level.

The debate whether to create an outright European federation or whether to adopt the British method of a functional approach was brought to a temporary conclusion at the meeting of the assembly in Strasbourg in Nov. 1950. The decision followed on the whole the British line of setting up specialized authorities under the assembly for economic, social and cultural matters of interest to all the member states. The first two specialized authorities envisaged were those for European transport and agriculture.

The British won adherents for their opposition to a European superstate not only among the Scandinavians but also among the Benelux countries and many continental Socialists.

The Consultative assembly voted also on Nov. 24 to recommend the immediate creation of a European army which would include German units.

Substantial progress was achieved in the field of a constructive approach to economic integration through the reduction of tariffs and the elimination of other barriers to trade, especially between France and Italy. The worsening of the international situation in 1950 shifted the emphasis from European economic recovery to the equipment of European defense forces, or rather to an attempt to balance these two necessary ends. The overriding problem of the allocation of the European economic resources and of United States help to these goals brought about in 1950 a closer linking of the strategy of the Marshall plan and of the North Atlantic treaty. By the middle of 1950 the powers of the Brussels pact had, after the lapse of two years, hardly made any progress whatsoever in rearmament, and their unified command established in Fontainebleau, France, under the British Field Marshal Viscount Montgomery of Alamein, remained largely a paper organization. A further step was envisaged by the Netherlands foreign minister Dirk U. Stikker, who was also political conciliator of the European Marshall plan organization. He called in June for the creation of a balanced collective economy through a European integration fund, similar to the balanced collective armed forces projected for the North Atlantic community. Elimination of trade barriers would create in the economic structure of the various countries temporary adjustment problems which could be solved by credits from the integration fund to permit either the modernization of inefficient plants or the creation of more suitable industries after the removal of tariff protection or the re-education and reallocation of labour.

The most promising single economic integration project, however, was the French proposal, advanced by Schuman for a pooling of coal and steel production. The six governments of France, Germany, Belgium, Italy, Luxembourg and the Netherlands declared themselves ready to join such a plan. The British government, however, rejected the suggestion of its own participation. In a communiqué of June 3 the British government declared that it had welcomed the French initiative of May 9 and was fully alive to its far-reaching importance for improving Franco-German relations, with beneficial effects for western Europe as a whole. While the French government suggested an international conference of the countries willing in principle to pool their coal and steel resources and to set up a new high authority whose decisions would be binding on the governments concerned, the British suggested a slower and more cautious approach of preliminary discussion and exploration. The British Labour party hesitated to enter into any commitments with other European nations which would impair Britain's commonwealth relations or jeopardize the planning and controls deemed essential for the maintenance of full employment in Britain.

In spite of this British reluctance, the six other nations met in conference in Paris on June 20 to discuss the details of the plan. As a concession to the British the French announced through Jean Monnet (*q.v.*), the principal author of the Schuman plan, that the decisions of the high authority to be created would be subject to parliamentary as well as judiciary review. He proposed a common interparliamentary assembly, chosen by the parliaments of the participating countries, to review the work of the authority annually in public discussion. Thus a democratic control on an international scale would be achieved. It was also suggested that the authority should make an annual report to the assembly of the Council of Europe which should draft recommendations after hearing delegates from nonpool nations. Similar pools should be established among other nations for various purposes, such as an agricultural pool. By the end of

1950 the coal and steel authority had not yet been created, but the negotiations seemed well on the way. They faced the difficulty of drawing up a clear picture of how the merger should be attained while allowing a wide scope for flexibility in its application.

The events of 1950 made it more and more clear that the military and economic strength needed for the survival of western civilization could not be found in a European union but only in the wider framework of an Atlantic union which would include the United States and Canada. Such a union would also attract closer British co-operation than would a purely European union. While the measures proposed for a European union remained in 1950 largely on paper, more concrete and definite steps were taken towards the realization of an Atlantic union. The Council of the North Atlantic Treaty organization which included the United States, Canada and ten western European nations, approved a mutual defense plan on Jan. 6. On Jan. 27 Pres. Harry S. Truman proclaimed the North Atlantic joint defense plan in effect, and eight European nations signed arms aid pacts for military assistance. These countries were Belgium, Denmark, France, Italy, Luxembourg, the Netherlands, Norway and the United Kingdom. The Military committee of the North Atlantic Treaty organization, consisting of the chiefs of staff of the pact nations, met in The Hague, the Netherlands, at the end of March under the chairmanship of Gen. Omar N. Bradley of the United States and approved an integrated defense plan. This military integration found a parallel in the establishment of a European payments union under the Economic Cooperation administration. The 17 governments represented in the Marshall plan council decided to make their currency interconvertible, thus removing the payments difficulties that had blocked intra-European trade. This decision of July 7 paved the way toward replacing bilateral arrangements by a multilateral system.

The French, who were the prime movers for the creation of a European union, were also the first to go officially beyond the European area and to suggest, in a speech of Premier Georges Bidault in Lyon on April 16, the establishment of an Atlantic high council for peace. The French government proposed the new authority as the logical continuation and unification of previous undertakings—the Brussels pact, the organization of Europe and the foundation of the Atlantic community. Europe was still in the formative stage; in French opinion it was necessary to enlarge its perspectives to Atlantic dimensions in order to promote its progress. "Our present need to be America's partner, partners of the United States and Canada, in the planning of common projects, must bring about the progress of Europe itself," said Bidault. "Our idea is not to dissolve within an enlarged community the European body now in process of formation, but to make it possible for Europe to take its place within that community while retaining its own originality and integrity, just as the separate nations that make up Europe would retain theirs." Within such a unit, Bidault insisted, the spirit of unity and freedom must develop to such a point that economic co-operation could be conceived without any suspicion that one country sought to supplant or exploit another. The union must be binding in good times and bad through contracts freely entered into and the realization of a common interest. On April 26 Schuman explained that the Atlantic high council for peace would be an agency of co-ordination between all the countries of the Atlantic zone, between all the countries of the west and between the various existing organs.

The French government proposed in a memorandum of Aug. 17 a simplified structure for organizing and financing the collective military efforts of the Atlantic nations and the appointment of a supreme Allied commander. The multiplicity of organizations, sometimes working at cross-purposes, was under-

ROBERT SCHUMAN, French foreign minister, addressing delegates meeting in Paris in June 1950 to discuss plans for a pooling of western European coal and steel resources; present were representatives of France, the Benelux nations, Italy and Western Germany

mining the effectiveness of the rearmament program. The North Atlantic council went a long step in that direction when it agreed on Sept. 26 to establish at the earliest possible moment an integrated force under centralized command, which would be adequate to ensure the defense of western Europe. The supreme commander should have sufficient delegated authority to ensure that national units allocated to his command were organized and trained into an effective integrated force in time of peace as well as in the event of war. He would be supported by an international staff representing all nations contributing to the force. In pursuance of this goal the foreign ministers and secretaries of defense of the North Atlantic nations agreed in a joint meeting in Brussels, Belgium, on Dec. 18 on the details of the establishment of the integrated armed force and approved the principle of the eventual participation of the German Federal Republic in such an army. The five Brussels treaty powers decided on Dec. 20 to merge immediately their defense organization with the new Atlantic setup. Gen. Dwight D. Eisenhower was appointed supreme commander of the Atlantic forces. In a corresponding development a defense production board for the 12 North Atlantic treaty nations was to be set up in London which would appoint an Atlantic defense production director with a staff of experts chosen from various countries without regard to nationality. In this way, by the end of 1950, a concrete union of the western nations was slowly emerging. (See also EUROPEAN RECOVERY PROGRAM; MIDDLE EASTERN UNITY; NORTH ATLANTIC COMMUNITY.)

**Events of the Year:** see CALENDAR OF EVENTS, 1950, pages 1-16.

## Exchange Control and Exchange Rates.

Despite stringent control of imports most countries had experienced increasing difficulties in balancing their dollar accounts in 1949 and had been forced to liquidate substantial holdings of gold and dollars. In 1950 the situation was very different. Although U.S. financial assistance declined, many countries, and particularly the sterling area, added to their reserves of gold and dollars at an accelerating rate, while the United States gold stock declined steadily from its postwar peak of \$24,771,000,000 (Aug. 1949), to reach \$23,153,000,000 at the end of Nov. 1950. The reduction in the volume of foreign imports from the dollar area was attributable in part to higher levels of industrial and agricultural production abroad and also to the more stringent control of dollar imports into the sterling area since the summer of 1949. Furthermore, the recovery of U.S. business activity, the rise in raw material prices following the beginning of the Korean crisis, and the nascent rearmament program contributed to the expansion of U.S. demand for foreign goods and services. But there was no doubt that the widespread currency devaluations which took place in the fall of 1949 were also an important cause of the substantial improvement in the balance of payments positions of most countries.

Nevertheless, the improvement in the world economic balance did not give rise to any marked trend toward the relaxation of restrictions and the elimination of bilateral trading arrangements, and stringent exchange controls were still widespread throughout 1950. The drastic limitation of dollar imports into the sterling area in 1949, for example, remained in full effect. By the end of the year, however, signs were not wanting that some modification of this restriction was contemplated. Furthermore, action had been taken to relax import restrictions in Canada, progress had also been made in the liberalization of intra-European trade and payments, and some countries, such as France, Italy and the Netherlands, had taken steps to encourage private capital imports by assuring reasonable facilities for the retransfer of earnings and capital.

With the effects of the 1949 devaluations still working themselves out, it was not surprising that changes in exchange rates were far less numerous or far-reaching in 1950 than in 1949. Such alterations as did occur were on the whole minor and represented adjustments on the part of individual countries to special problems confronting them.

Indeed, some of the changes made, for example, in the multiple exchange rate structures prevalent in Latin America were purely technical and did not materially affect the systems of trade control in operation.

**United States.**—As was indicated above, the "dollar gap" was a much less serious problem in 1950 than in 1949. The strengthening of the international economic position of the nondollar world was reflected in the U.S. balance of payments. Imports into the U.S. increased with the rising trend of business activity, while U.S. exports were lower, not only because foreign countries were unable to finance a larger volume of purchases, but also because their own production continued to rise. The total U.S. surplus on current account (goods and services) declined from \$6,500,000,000 in 1949 to an annual rate of \$1,900,000,000 in the first nine months of 1950. Indeed, in the third quarter merchandise transactions came into approximate balance, while the surplus on goods and services shrank to an annual rate of less than \$300,000,000, the lowest rate since 1937. Although part of this was seasonal, it also served as a dramatic indication of the extent to which both market demands and the terms of trade were

undergoing fundamental shifts in favour of countries other than the United States.

The improvement in the position of foreign economies was also evident from the way in which their dollar deficits were financed. Despite large-scale U.S. aid, they had had to draw heavily on their gold and dollar assets to cover their dollar deficits in the period before the devaluations of Sept. 1949. In the year following these currency realignments, foreign countries utilized for the purchase of goods and services only about a quarter of the \$4,300,000,000 of financial aid made available to them by the U.S. government, and, partly as a result of foreign short-term capital movements into the U.S. in the latter part of the year, they were able to increase their gold and dollar holdings by almost \$4,000,000,000, \$3,200,000,000 through transactions with the United States and the remainder through new gold production.

**Canada.**—The improvement in the position of Canada was especially dramatic. Though controls on imports from the United States were relaxed and purchases of U.S. goods increased markedly in the second quarter of 1950, Canadian gold and U.S. dollar holdings rose steadily. The Canadian dollar, quoted in the free market in New York at a discount of 10% in Dec. 1949, appreciated steadily, almost reaching par with the U.S. dollar in June. As speculation on a possible revaluation of the currency mounted, short-term capital flowed into Canada in ever-increasing volume until by the end of September the country's holdings of gold and short-term U.S. dollar assets stood at U.S. \$1,790,000,000, an increase of \$800,000,000 in a year, three-quarters of which had taken place in only four months.

To cope with the inflationary threat which this massive movement of capital brought, the Canadian government suspended the fixed official rate of the Canadian dollar on Sept. 30 and allowed its exchange value to fluctuate in accordance with free market operations. At the same time it greatly relaxed the emergency controls over imports from the U.S. Thereafter the exchange rate hovered around 1.05 Canadian dollars per U.S. dollar compared with the previous fixed par value of 1.10. To prevent the possible emergence of broken cross rates between the U.S. dollar, the Canadian dollar and sterling, the Canadian Exchange Control board stood ready to buy or sell sterling for U.S. dollars at the official rates of 2.79875 and 2.80125 U.S. dollars per pound sterling.

**Latin America.**—The use of complicated exchange control systems composed of licences, multiple-rate structures (often including mixed effective rates resulting from the application of different rates to specified percentages of export proceeds) exchange taxes, certificates, and free markets for specified transactions continued widespread in Latin America. These aimed chiefly at securing sufficient foreign exchange receipts and regulating imports in such a way as to obtain an adequate volume of necessities, restricting luxuries, and sometimes protecting local industries.

The technical positions of many currencies were strengthened by the improvement in their terms of trade after the European devaluations of Sept. 1949 and accentuated by the rise in commodity prices following the outbreak of hostilities in Korea. Nevertheless, modifications in the exchange regulations and rate structures in use in 1950 were rather more numerous than in most other areas. The monetization of the increased export proceeds contributed in no small measure to the persistence of inflationary conditions which in turn increased the demand for imports. In some countries this was restricted by certificate exchange-rate systems or by the imposition of taxes and surcharges levied on purchases of foreign exchange, particularly if they were to be used for the import of luxuries. In other countries technical changes were made to simplify systems which

had become unnecessarily complex, but these could hardly be said to represent a general trend toward that unification of exchange rate structures for which the International Monetary fund was striving. No country using exchange controls removed them completely in 1950, nor did any of those operating without controls introduce such measures. Toward the end of the year, however, there was evidence in some countries that import and exchange restrictions were being relaxed to allow for the stockpiling of various goods expected to become scarce as the rearmament programs of the U.S. and western Europe progressed.<sup>7</sup>

Mainly in order to bolster the weakening market position of some of its export products and at the same time to increase production of them by raising their peso prices, the Argentine government devalued the peso on Aug. 29, 1950, by 24%-36% for exports, depending on the previous rate applicable, and by a somewhat smaller percentage for imports. At the same time the exchange control system was simplified considerably, the number of effective rates being reduced from nine to three. The preferential selling rates of 3.73 and 5.37 and the basic buying rate of 3.3582 pesos per U.S. dollar were consolidated into a single new rate of 5.00 pesos per U.S. dollar applicable to the major exports and imports of fuels. A single rate of 7.50 pesos to the dollar, used for nonregular exports and essential imports not granted exchange at the 5 peso rate, replaced the basic selling rate of 6.09 pesos per dollar and the preferential buying rates of 4.83 and 5.73 pesos per U.S. dollar. Finally the auction selling rate of 12.53 pesos, used for imports of luxury goods since July 1950, was abolished and the free rate, formerly pegged at 9.00 pesos to the dollar, allowed to find its own level. This rate, which fluctuated around 13.65 pesos per U.S. dollar in the subsequent months, was applicable to export goods not readily marketable abroad, to luxury imports and also to authorized nontrade remittances. As before, the granting of permission to buy foreign exchange for imports was dependent on their country of origin as well as on the category of goods.

Various changes amounting to a depreciation of the currency were made in Bolivia. Up to Feb. 27, 1950, the official buying and selling rates of 42.00 and 42.42 bolivianos per U.S. dollar respectively were applicable to specific percentages of all export proceeds and to all essential imports. For specified percentages of mineral exports and imports of semiessentials lower rates of 55.50 and 56.05 bolivianos were used, while luxury imports and most financial transactions were conducted at the free market rate of more than 100 bolivianos to the dollar. Thereafter slight changes were made by lowering the intermediate rate to 60 bolivianos per dollar and changing the categories of goods to which the various rates applied. In April the 42 boliviano rate was abandoned and a new par value of 60 bolivianos to the dollar announced. The new buying and selling rates of 60.00 and 60.60 bolivianos were applied to specified percentages of foreign exchange proceeds of tin exports,

to the proceeds of basic quotas of other exports, and to most imports, specified financial payments and all government transactions. All other permitted foreign exchange operations were carried on at the free rate of 100 bolivianos to the dollar, a rate which was, however, held stable by central bank intervention. The exchange surcharge of one boliviano per U.S. dollar levied on all private foreign exchange transactions remained unchanged.

A major part of Bolivia's export earnings is derived from the sale of nonferrous metals, notably tin, produced mainly by foreign-owned enterprises. The exchange rates applicable to exports of these as well as the percentages of the foreign exchange proceeds required to be surrendered to the monetary authorities had been a subject of long-standing controversy. On Nov. 1, 1950, a new arrangement was made permitting tin exporters to retain 40%-42% of their export proceeds—a lower proportion than before—and requiring them to turn over the remainder to the authorities at the official buying rate of 60 bolivianos per U.S. dollar.

Various changes were made in the rather similar system in effect in Chile. On April 17, 1950, a new set of official rates was announced, substantially similar to those temporarily in effect since Jan. 10. The preferential selling rate of 25.10 pesos per U.S. dollar, used only for newsprint imports, and the commercial buying and selling rates of 43.00 and 43.10, applicable to export proceeds not sold at lower rates and to the majority of imports, were abolished, the latter being replaced by rates of 60.00 and 60.10 pesos per dollar. The government buying and selling rates of 19.37 and 19.47 pesos continued to be applicable to that proportion of the major mining companies' export proceeds equivalent to their local currency production costs and to designated government nontrade remittances. Similarly the official buying and selling rates of 31.00 and 31.10 were retained for certain additional peso requirements of the mining companies, for varying proportions of the exchange proceeds of certain other exports, for varying percentages of essential imports, and for some nontrade payments. The new commercial

#### Exchange Rates of Selected Countries

Note: Includes only currencies regularly quoted in New York during 1949. Averages of certified noon buying rates in New York for cable transfers. In cents per unit of foreign currency, corrected to two decimal places. The rates listed are mostly official rates regulated by strict systems of exchange control.

buying rate was applicable to the remaining peso requirements of the mining companies, to the remainder of those export proceeds part of which had to be surrendered at 31.00 pesos to the dollar, and to the proceeds of most minor exports.

The corresponding buying rate was used for exchange requirements for which exchange was partially granted at the 31.10 peso rate and for the total exchange requirements of all other imports. In addition the free rate, which fell steadily from 98.80 pesos to the dollar in January to 86.55 in November and was used for some nontrade transactions, and the gold rate of 140 pesos applicable to exports of newly mined gold and imports of certain luxury goods remained in effect.

The multiple rate structure used in Colombia continued to include a number of mixed effective rates resulting from the combining of official and certificate rates and also from the rates of tax imposed on most private purchases of foreign exchange. In 1950 certain modifications were made in these taxes. Prior to July 10, 1950, private imports had been conducted at the official rate plus taxes of 10%, 16% or 30%, depending on the category in which they were classified. Thereafter all imports and certain specified nontrade remittances allowed at the official selling rate of 1.96 pesos were subject to a tax of 4%, giving an effective rate of 2.038 pesos to the dollar. The certificate rate, which fluctuated around 3 pesos per dollar, was applicable to certain luxury imports and to designated financial remittances on which additional taxes ranging from 6% to 30% were also levied. Only government transactions and a few nontrade transactions were permitted at the official selling rate without tax. Certain imports, primarily industrial equipment, took place at mixed effective rates lying between the official and certificate rates. Exchange proceeds from most exports continued to be surrendered to the authorities at the official buying rate of 1.95 pesos. Those from certain minor exports were sold at the prevailing certificate rate while gold producers continued to receive

special premium rates. On April 1 the system was significantly changed. The official selling rate became nominal, and a tax of 10% was levied on preferential imports and specified nontrade remittances, the only transactions to which the official rate was henceforward applicable. All other payments were made at the free rate—which fluctuated between about 8 and 9 colones per U.S. dollar during the remainder of the year—to which was added a surcharge ranging from 10% to 100% of the official selling rate, depending upon the nature of the transaction.

Early in December the par value of the Ecuadorian sucre was changed from 13.50 to 15.00 to the dollar and a considerable simplification of the rate structure announced. The new parity was made applicable to most imports and all but minor exports. Luxury imports were still restricted by taxes of 33% to 44% levied on import permits, but these duties were to be transferred to the customs tariff system as soon as possible. Most nontrade transactions continued to be conducted at the free rate which then stood at close to 20 sucres per U.S. dollar.

The introduction of exchange certificates at the end of 1949 had inaugurated a multiple rate system in Nicaragua. Exporters received payment for 80% of their foreign exchange earnings at the official rate of 5.00 córdobas per U.S. dollar and 20% in negotiable certificates which were purchased by importers of designated luxury goods who received no foreign exchange allocation at the official rate. On July 12 the certificate rate was made applicable to all imports, but on Oct. 20 the entire system was abolished. Use of the official rate was limited to government transactions only and to 20% of the total foreign exchange receipts. Most imports and nontrade payments were made at a rate of 7.00 córdobas to the dollar, with surcharges of 1 and 3 córdobas per dollar respectively on imports of semiessentials and luxuries. Twenty per cent of all export proceeds were to be purchased by the authorities at the official rate and the remainder at the 7.00 córdoba rate, thus giving a uniform effective buying rate of 6.60 córdobas per U.S. dollar.

A slight change in Paraguay's multiple exchange rate structure was brought about on April 11, 1950, by the introduction of a series of taxes ranging from 2% to 10% levied on purchases of foreign exchange by private individuals for imports of semiessentials and luxuries as well as for nontrade transactions.

**The Sterling Area.**—For the sterling area 1950 was a year of stable exchange rates. With the exception of the devaluation of the Icelandic krona by no less than 42.5% on March 20, no significant changes occurred. That change was primarily a delayed adjustment to the changed outlook for the fish exports to the United Kingdom. Hitherto the effects of a deteriorating market had been cushioned by the payment of subsidies to exporters. When the collapse of the market in the spring of 1950 would have rendered the continuance of this system an unbearable burden on a budget already out of balance, the opportunity was taken to abandon it and seek the restoration of equilibrium, internal as well as external, by lowering the external value of the currency.

Controversy continued throughout the year concerning the future of the Pakistani rupee—the only sterling area currency not devalued in Sept. 1949—while the possibility of the revaluation of the Australian pound was widely discussed, particularly after the spectacular jump in wool prices in the fall.

The 1949 devaluation of sterling had been intended to cope with the dollar problem, and indeed the improvement in the sterling area's dollar balance in 1950 was remarkable. A net gold and dollar deficit of \$962,000,000 in the first half of 1949 was transformed into a net surplus of \$220,000,000 in the first half of 1950. Aided by European Recovery program grants and loans and drawings on the Canadian credit amounting in all to about \$1,000,000,000, the central gold and dollar reserves stood at

"BY JOVE!" a cartoon by Justus of the *Minneapolis Star*, published in 1950

\$2,756,000,000 on Sept. 30, 1950—more than twice as high as at the time of devaluation—and were still rising. Because of this improvement, ERP aid to Great Britain was suspended as of Jan. 1, 1951.

The role of the exchange rate adjustment in this transformation cannot of course be isolated. In the nine months following devaluation the improvement was almost entirely the result of a reduction of 31% in the sterling area's dollar imports. Since a cut of only 25% had been agreed upon at the Commonwealth Finance Ministers' conference of July 1949, devaluation, which increased the prices of dollar goods to sterling area buyers by 42%, probably was effective in reducing dollar import demands. In the same period sterling area exports to the dollar area increased modestly in dollar value, a change no doubt associated with the rising trend of economic activity in the U.S. as well as with the lower dollar prices ruling for many products after devaluation. Only part of the change, however, is traceable to movements in trade with the dollar area. The remainder resulted mainly from the cessation of gold losses to Belgium, Switzerland and other countries outside the dollar area and from semi-speculative movements of funds, including acceleration and postponement of sterling payments and receipts. These changes were also associated to a significant degree with the strengthening of sterling. In any case, by the middle of 1950 the sterling area had apparently achieved at least a temporary balance in its dollar accounts even apart from U.S. assistance and speculative capital movements. Moreover, that equilibrium had been reached without the help of the spectacular rise in certain sterling area raw material prices which took place after the outbreak of hostilities in Korea.

The position of the United Kingdom itself was less satisfactory. True, wage rates and the cost of living rose by only about 2% in the year after devaluation—less than in the corresponding period before—despite a rise of 25% in import prices. Furthermore, at least in the first half of the year, the increase in national income was apparently sufficient to permit the rate of net investment to be maintained and that of both government spending and private consumption to be increased so that even the limited anti-inflationary measures announced by the government were never severely tested. But the increase in the surplus on current account from £16,000,000 in the first half of 1949 to £52,000,000 in the first six months of 1950 was very modest and resulted entirely from a rise in net earnings on invisible account. The visible trade deficit rose from £43,000,000 to £108,000,000 (f.o.b. basis) because the expansion in the volume of British exports was far from sufficient to compensate for the sharp deterioration in the country's terms of trade—partly a consequence of devaluation. In dollar terms the U.K. deficit with the dollar area was \$428,000,000 less than in the first half of 1949, but this change was entirely the result of a fall in imports and a sharp improvement in nontrade earnings. The value of exports to the dollar area actually declined slightly.

A large part of the rise in the sterling area's gold and dollar reserves was attributable to the stronger position of its overseas members, including the colonies. In the first half of 1950 the sterling area other than the U.K. recorded a dollar surplus of \$220,000,000 compared with a deficit of \$177,000,000 in the corresponding period of the previous year. Rising raw material prices must have raised this surplus substantially in the second half of the year. Part of the improvement was brought about by restriction of dollar imports, and since the U.K. was unable to increase its exports to the other sterling area countries by an equivalent amount, the increase in the gold and dollar reserves in London was almost matched by a rise in the U.K.'s short-term liabilities to various countries in the sterling area, such as Australia, New Zealand, Malaya and the African colo-

nies.

Restrictions on transfers from the sterling area to Belgium and Switzerland were eased in accordance with the provisions of the European Payments union, while currency movements between London and the Scandinavian countries were virtually freed in December. Toward the end of the year the Union of South Africa—which does not participate in the sterling area dollar pool—announced the broad principles of a liberal licensing policy to be adopted for dollar imports in 1951. The proposed relaxations were to operate so that within the limits of its total current income of hard and soft currencies, South Africa's imports would be thrown open to world-wide competition. Discrimination would take place only to the extent that capital inflow from soft-currency countries exceeded the capital inflow from hard-currency countries.

The discriminatory dollar import policy of the rest of the sterling area, however, was not modified. Within the framework of the General Agreement on Tariffs and Trade, consultations took place on this point in November, and opinions were expressed that because of the stronger position of the sterling area, a cautious relaxation of hard currency import restrictions would be feasible in the cases of Australia, Ceylon, New Zealand and the United Kingdom. The governments of these countries took note of the views expressed, but no action had been taken by the end of the year.

**Continental Europe.**—On the continent of Europe, as in the sterling area, 1950 was a year of comparative exchange stability despite the increasing threat of renewed inflation, first through sharply rising raw material prices and, toward the end of the year, through the anticipated effects of rearmament. A very significant step toward the liberalization of intra-European payments took place in September when the European Payments union was set up within the framework of the European Recovery program. At the same time measures were taken progressively to reduce quantitative restrictions on intra-European trade and payments. Unlike its predecessor, arrangements through which deficits and surpluses between pairs of countries had been settled bilaterally, the European Payments union was fully multilateral, providing for the offsetting of such bilateral balances and the settlement partly on credit and partly in gold, of the net surpluses or deficits with the union. In the first five months of its operation (July-November) the United Kingdom and France built up strong creditor positions with the union. Germany, on the other hand, ran an unexpectedly high deficit, exhausting its credit facilities and making gold payments of more than \$100,000,000 to the union from which it had also to receive special assistance.

In 1950 the external position of France improved substantially, the over-all balance of payments deficit of the franc area falling to \$168,000,000 in the first half of 1950 compared with \$483,000,000 in the corresponding period of 1949. Within Europe, France became a substantial creditor and received about \$40,000,000 in gold in the first five months of the operations of the European Payments union. These changes brought a notable return of confidence in the franc, and in the course of the year several steps were taken toward the liberalization of dealings in foreign exchange. Restrictions on the import and export of bank notes were greatly eased as were the regulations relating to the retransfer both of foreign capital invested in France and of earnings from it. The number of currencies traded in the free market was increased and the scope of forward exchange operations extended.

The position of some countries which had devalued by a substantial amount in 1949 was less fortunate. The Netherlands and Denmark in particular were hit by the deterioration in their terms of trade, while the stability of the Finnish currency con-

tinued to be threatened by domestic inflation. The position of the Belgian franc—which had been devalued by only 12% in 1949—was relatively weaker than in the previous year. The gold and foreign exchange reserves of the Belgian National Bank declined steadily and, influenced also by scare buying after the outbreak of hostilities in Korea, had dropped by \$200,000,000 between Aug. 1949 and Nov. 1950. Apart from the continuing surplus with the Netherlands, Belgium's strong European creditor position of 1949 practically disappeared. To discourage speculative purchases of foreign currencies and protect the National bank's reserves, the use of imported Belgian bank notes was limited in October to payments within the Belgian-Luxembourg Economic union, and forward exchange operations in all currencies except the U.S. and Canadian dollars were suspended a month later. In contrast, the position of the Swiss franc and the Italian and Turkish lira, which did not devalue in 1949 or did so by a relatively small percentage, remained relatively strong.

In 1950 successive steps were taken in Austria to lower the external value of the schilling and to unify the existing multiple rate structure. Through Jan. 25 exporters were required to surrender 40% of their exchange proceeds at the basic rate of 14.40 schillings to the dollar and could either sell the remainder at the premium rate of 26.00 schillings or use it to purchase imports. Effective Jan. 26 the latter practice was limited to specific quotas established for each exporter so that the great bulk of export transactions were conducted at an effective rate of 21.36 schillings to the dollar. From Oct. 5 all commercial transactions were conducted at the 21.36 schilling rate. The basic rate, hitherto applicable to essential imports, was abolished, while the premium rate, hitherto also used for luxury imports, was confined to certain nontrade transactions, notably tourist expenditures.

The new zloty introduced into circulation on the occasion of the drastic Polish currency reform at the beginning of November formally contained 0.222168 grains of fine gold, which placed it at par with the soviet rouble and gave an exchange rate of 4 zlotys per U.S. dollar compared with the previous effective rate of 400 old zlotys to the dollar. However, this rate, like its predecessor and others in eastern Europe, had little influence on the volume or direction of the country's foreign trade, which was largely conducted by state-owned agencies at prices negotiated by agreement and generally corresponding to world market prices.

Spain continued to operate a multiple exchange rate system arranged to give the advantage of a low peseta cost to imports of raw materials and other necessary imports and higher rates to the less essential products and exports whose local costs were relatively high. Until October there were 11 fixed buying rates ranging from 10.95 to 28.47 pesetas per U.S. dollar and 12 fixed selling rates ranging from 11.22 to 39.47 pesetas to the dollar. On Aug. 1 a free exchange market was introduced through which financial transactions and a few trading operations were effected. After Oct. 18 the number of official rates was reduced somewhat, but various mixed effective rates arose as a result of the purchase and sale by the authorities of proportions of exchange proceeds and requirements which varied according to the goods exported or imported.

**Middle East.**—Only minor changes, motivated by local conditions, were made in exchange rates and regulations in the middle east in 1950. Because of the large foreign exchange income from oil royalties Iran had not devalued the rial in 1949. In the course of 1950, however, various changes were made in the certificate system in operation, the net effect of which was to depreciate the rial for most other private transactions. The official selling rate of 32.5 rials per U.S. dollar remained in

effect for government transactions and transactions with the Anglo-Iranian Oil company but was not applicable to sugar imports after Jan. 8, 1950. Exporters other than the Anglo-Iranian Oil company received, in addition to rials at the official rate, negotiable certificates in the amount of 100% of their exchange proceeds, which they sold either directly or through authorized banks to importers or others authorized to purchase exchange on presentation of a certificate for an equivalent amount. The central bank also dealt in certificates, and the rate for them was held stable at around 7.50 rials throughout the year, giving an effective certificate rate of about 40 rials to the dollar. From July 24 this rate was applicable only to essential imports—amounting to about 60% of the total—and to all export proceeds not used or sold by the exporter within four months. In order to discourage foreign exchange hoarding, exporters selling their exchange proceeds within 4 months—later increased to 16 months and subsequently reduced to one year—could take advantage of the more favourable fluctuating rate obtainable in the free market in which importers of nonessentials had to purchase exchange.

At the end of November all transactions were channelled through authorized banks and the free rate stabilized at 48.75 rials per U.S. dollar.

Mainly because of the continued high level of imports an exchange crisis developed in Israel in the summer. To cope with it taxes ranging from 2% to 6% were imposed on exchange sales for purposes other than the import of essential goods.

In 1950 the monetary systems of Syria and Lebanon became, formally at least, more independent of one another. For a time the Lebanese pound was quoted at a 7%–15% premium above the Syrian pound, although the latter remained officially of equal value. In addition, as from March 1950, the respective exchange control systems to which transactions with third countries were hitherto subject were also applied to transactions between them.

Most transactions continued to be conducted through the free market where the pound sterling was traded at a discount which became progressively smaller as the year passed.

**Far East.**—Despite disturbed economic and political conditions in many countries, exchange rates and regulations remained relatively stable. As China came completely under Communist control, exchange transactions with the rest of the world dwindled. In the Philippines 1950 saw the working out of the exchange control system introduced at the end of the previous year. The most characteristic feature of the free markets existing in various far eastern countries was the steady rise in sterling, which was close to par by the latter part of the year.

The only changes of major significance took place in Indonesia, where monetary and financial conditions had continued unstable after the country's independence had been achieved at the end of 1949. In an effort to cope with the balance of payments disequilibrium a new certificate system was introduced on March 13, 1950, which aimed at increasing exports and in particular at curbing imports. Exchange for authorized transactions continued to be bought and sold by the authorities at the old official rates of 3.79 and 3.81 guilders per U.S. dollar. However, in addition, exporters received a certificate expressed in guilders equivalent to 50% of the exchange sold, while importers were required to present a similar certificate equal to the full guilder equivalent of the amount of foreign exchange required. Dealings in certificates were carried on through authorized banks, and since the price was maintained at 1.99 buying and 2.00 selling, the effective buying and selling rates were 7.56 and 11.43 guilders per U.S. dollar. **Existentialism:** *see* PHILOSOPHY.

**Exploration and Discovery.** The year 1950 saw considerable activity in the field of discovery and exploration. The various expeditions included more and more scientific studies, and numbered in their personnel many specialists in particular branches. In general, the scientific results of such expeditions are worked up and published in the recognized journals, and often are not available until a long time after the expedition has returned. Hence it is possible to report in this article only the fields and regions covered during 1950, and to outline the problems studied.

In the antarctic, the Norwegian-British-Swedish antarctic expedition of 1949–52 conducted extensive explorations in Graham Coast and Queen Maud Land. This expedition, led by Capt. John Giaever, was financed, supported and staffed by experts from several countries. Extensive work in glaciology, climatology, meteorology and topographic surveying was in progress. The expedition's radar expert, G. de Q. Robin, and glaciologist, C. W. M. Swithinbank, made a seismic profile more than 20 mi. long across the shelf ice over Maudheim bay, measuring the thickness of the ice and the depth of the water below the ice. They found that the shelf ice is hinged at the shore, and rises and falls gently with the tides. A belt of crevasses near the active "hinge" was studied carefully. The meteorologists had the aid of the latest devices, including the rawinsonde, which not only transmits temperature, humidity and pressure measure-

ments by radio automatically from a free balloon during its rise, but also provides measurements of the wind direction and speed at each altitude traversed. Thus, a complete picture of the structure of the atmosphere was being obtained in this region.

The expedition planned to remain in the field for at least two more years. The supply ship would bring new scientists each year, and take back those whose work was completed.

The French expedition to Adélie Land was making progress. The ship "Commandant Charcot," under the scientific director Andre Liotard, carried the expedition which planned to spend a year on the antarctic continent. It was studying geodesy, geography, meteorology, climatology and hydrology. It was being closely co-ordinated with the French expedition to Greenland, the two undertakings together making up the Expéditions Polaires Françaises, which were being operated as a unit by the explorer Paul-Émile Victor.

The northern portion of the expedition manned an observing station on the Greenland ice cap, in about the middle of the cap, during the 1949–50 northern winter.

Further arctic exploration was carried out by Henry B. Collins, Jr., of the Smithsonian institution of Washington, D.C., who made archaeological studies on Cornwallis Island. The meteorological reconnaissance flights of the U.S. air force planes from Alaskan bases were continued, and led to the discovery of curiously shaped ice islands which seem to be imbedded in the polar ice cap and drift with it.

In carrying out aerial mapping near Hudson bay, a circular lake was discovered. It was thought that this might be a large meteor crater, and this possibility was being investigated by V. B. Meen of the Royal Ontario Museum of Geology and

**ANIMIST FRESCO** bordered by sacred serpents adorning a mud wall in Tikapur, Nepal, photographed during a scientific expedition and published in 1950. The shy inhabitants were allowed to look through the camera's view finder before being photographed; the woman at right smoked a water pipe

Mineralogy, Toronto, Ont., Can.

The schooner "Blue Dolphin," under the leadership of Commander Donald B. Nutt, carried out another year's reconnaissance program off the coast of Labrador. The work of the expedition included bathythermograph observations, water and bottom sampling, hydrological survey and marine biological studies.

Alexander Wetmore, secretary of the Smithsonian institution, again spent some time in eastern Panama and western Darien, studying the primitive Indian tribes in a nearly inaccessible region.

The Oxford University Exploration club sponsored an Oxford university expedition to Persia (Iran) in 1950, which proceeded from Tehran to Kerman, and there made an ecological survey of the Kerman basin, together with a land-utilization map and a specialized study of the fauna and of the underground water supply.

The Roncador-Xingú expedition, sponsored by the Brazilian government to obtain information about the interior of Brazil and to make the first moves toward opening up this region for settlement, penetrated further into the vast region between the Tocantins, the Xingú and Madeira rivers. It had done much aerial mapping, established contact with native tribes, constructed airfields in the jungle and discovered possible routes for ground parties to follow. Much medical work had also been carried out.

The British royal research ship "Discovery II" conducted an extensive cruise through the southern Indian ocean, the South Pacific and the Antarctic ocean. Extensive oceanographic work was done, taking ocean bottom samples, making seismic profiles and studying ocean currents and meteorology in this region.

Paul Zahl, on an ornithological expedition sponsored by the National Geographic society of Washington, D.C., discovered the breeding ground of the scarlet ibis in southern Venezuela.

Thorkild Jacobsen, dean of the division of the humanities, The University of Chicago, conducted an expedition to Mesopotamia, and found tablets at Nippur, including the law code of Hammurabi.

W. D. Johnston, Jr., led the U.S. Geological museum expedition to Thailand, and made a study of the mineral deposits in the interior of that country.

The third Danish expedition to central Asia, under Prince Peter of Greece and Denmark, operated in 1950 between Malabar and southern Tibet, and made anthropologic and ethnographic studies in addition to securing an extensive motion-picture record of local customs. The expedition sought to trace some of the customs from the plains of India into the Pamirs, and to obtain records of how customs change as the altitude and economic structure of the region varies.

The University of Puerto Rico expedition to Venezuela, under the leadership of Ventura Barnes, reached the upper Orinoco river and made an extensive collection of plants, birds and reptiles. Other expeditions operating in this region were led by William Phelps, Jr., who specialized in ornithology and botany, and Nicol Smith, who made a motion-picture study of the newly discovered Angel falls, highest waterfall in the world.

Sponsored by the Geographic Society of Chicago, Carveth Wells led an expedition to Pakistan and Kashmir.

Thomas Gilliard, of the American Museum of Natural History in New York city, led an ornithological expedition to the Territory of New Guinea, and ascended Mt. Hagen and Mt. Wilhelm, on each side of the Wahgi valley, in the highlands in the western part of the territory.

The American Geographical society of New York city continued its program of glaciological research during 1950. Maynard Miller conducted studies of the Juneau ice field in Alaska,

obtaining data to be compared with that previously obtained in Patagonia. It was hoped that much would be learned about the advance and recession of glaciers and that clues would be found to long-period climatic changes on the earth.

Wendell Phillips of the American Foundation for the Study of Man, led the Arabian expedition for the study of archaeology, palaeontology and geography to the western part of the Aden Protectorate.

A British North Borneo zoological expedition included Dwight Davis, curator of vertebrate anatomy, and Robert F. Inger, assistant curator of fishes, of the Chicago Natural History museum. Alexander Spoehr, curator of oceanic ethnology of the same museum, made studies in the Marshall Islands in Micronesia, and obtained extensive records of the life of the people and of the changes in customs resulting from contacts with European and American cultures. Philip Hershkovitz, assistant curator of mammals in the same museum, collected specimens in south-eastern Colombia.

Underseas exploration during 1950 made notable strides as new techniques for obtaining 50- or 60-ft.-long cores of ocean bottom material came into extensive use. An expedition directed by Maurice Ewing of Columbia university made many core and sampling tests in the western part of the North Atlantic, and concluded that the region between the mid-Atlantic ridge and the east coast of North America contained large areas where the material of the ocean bottom had been carried down and deposited from the surrounding land. The mid-Atlantic ridge was also further studied.

A new underwater camera gave successful photographs of the ocean bottom and the fish and plant life there, at depths of several miles.

In the Pacific it was found that the Cape Johnson deep, off the Mindanao trench, measured 34,440 ft. The previously reported deepest place, the Emden deep, was resurveyed, and the earlier measurements there were found subject to considerable correction.

A joint Scripps Institution of Oceanography and U.S. navy expedition found that a ridge called the "mid-Pacific mountains," 1,000 mi. long and 100 mi. wide, extends from Wake Island to a point near the Hawaiian group. A number of submerged mountains 14,000 ft. high are in this ridge.

The exploration of the upper atmosphere continued, without any new records being established during 1950. Experimental step-rockets were fired, consisting of a large rocket of the V-2 type with a smaller "Viking" type in its nose. In previous tests it had been shown that vertical firing by this means would get the smaller rocket to altitudes considerably higher than those attained by the larger component. During 1950 the tests were not vertical, but out at an appreciable zenith angle, to secure horizontal travel. Several experimental firings were made. No new records were claimed, but the equipment was believed to have operated successfully, and horizontal distances of several hundred miles were thought to have been covered.

Ballooning was also carried out. Several balloons of the single-cell plastic envelope type attained altitudes of more than 100,000 ft., and remained at top altitudes for some hours. Such balloon flights were launched from the Caribbean area, from the midwestern United States and from Canada. Latex-type balloons were also flown from various stations in the United States and Canada, as well as from some points in Europe. These flights usually carried equipment weighing up to 150 lb. for special studies, as for cosmic ray observations. They were in addition to the routine flights conducted by the various meteorological services in which weather data were measured.

**Export-Import Bank of Washington.** Created in 1934, the bank was made a permanent independent agency of the U.S. government by the Export-Import Bank act of 1945, approved July 31, 1945. Its purpose is not only to facilitate the financing of U.S. exports, but to assist in financing development projects in foreign countries which will increase their productive capacity, step up their exports, thereby improving their foreign exchange situation and making them better suppliers of materials and goods needed for import into the U.S. Its financing is generally limited to the dollar cost of U.S. materials, equipment and services required for development projects in foreign countries.

The bank is empowered to lend to U.S. exporters and importers and to private entities in other countries as well as to foreign governments. It finances specific export and import transactions on application of U.S. exporters and importers where the nature of the risk involved is such that private credit cannot be obtained and when, in the opinion of its board of directors, there exists reasonable assurance of repayment. It also arranges, in favour of foreign purchasers, credits which are available on equal terms to all qualified U.S. exporters for financing the sale of U.S. export staples such as raw cotton.

The total amount of loans authorized by the bank from the time of its establishment in 1934 approximated \$5,078,600,000 at the end of 1950. Disbursements during 1950 were approximately \$199,918,971.82, and repayments during 1950 were approximately \$160,018,494.40. Outstanding loans of the bank totalled \$2,219,485,750.94 at the end of 1950. (S. Sp.)

**Exports:** see AGRICULTURE; INTERNATIONAL TRADE. See also under various countries.

**Eye, Diseases of.** Cortisone, a hormone of the adrenal cortex (Compound E), and ACTH, the pituitary adrenocorticotrophic hormone, were found to have a profound effect in the control of ocular inflammations. These drugs block the inflammatory and exudative phases of the anaphylactic protein reaction, of the bacterial allergic reaction and of the focal reaction produced by the subcutaneous injection of tuberculin. Cortisone was used topically and systemically while ACTH was administered systemically only. The drugs appeared beneficial in cases of nongranulomatous iritis, sympathetic ophthalmia, tuberculous choroiditis, sclerokeratitis and disciform degeneration of the macula secondary to subretinal haemorrhage. The drugs did not benefit syphilitic interstitial keratitis, retrolental fibroplasia or juvenile Coats's disease.

Additional ocular diabetic changes were reported. Conjunctival aneurysms were studied and divided into two groups: the diabetic type was round, purple, had sharp borders and at times was attached to a vessel; the nondiabetic type was a dilatation of a vein, often seen near areas of inflammation and in old people. The diabetic aneurysms were found in 14% of apparently normal persons and in 55% of the diabetic patients. Aneurysms were found more frequently in diabetic patients with retinopathy than in patients without retinopathy.

Asymmetric exophthalmos was investigated by studying 177 cases and 100 normal persons. The Hertel exophthalmometer was used for all measurements and 22 mm. was established as the upper normal limit, and 2.5 mm. or less difference between the two eyes was considered normal. Neoplasms caused the exophthalmos in 44% of the cases, while 25% was attributable to

exophthalmic goitre. The amount of asymmetry was not of great value in determining the aetiology of the exophthalmos. However, a high amount of asymmetry favoured a tumour and asymmetry of more than 7 mm. was uncommon in exophthalmic goitre.

Aureomycin, an antibiotic obtained from the mould *Streptomyces aureofaciens*, was tolerated by the eye when used in 0.5% solution of the borate form and in 1.25% solution of the ethylene diamine form. Aureomycin injected into the vitreous produced considerably more damage than did penicillin or streptomycin. Locally instilled aureomycin penetrated the normal cornea poorly but penetrated an abraded or inflamed cornea more easily. Systemically administered, the drug became distributed throughout the eye, the more vascular the tissue, the higher the concentration of aureomycin. Aureomycin had a large spectrum of antibiotic activity, including staphylococcal, pneumococcal, streptococcal, influenzal and *Pseudomonas aeruginosa* infections. It also appeared beneficial in epidemic keratoconjunctivitis and trachoma.

The biochemical systems of the eye were studied extensively by a number of workers. The synthesis of glycine into glutathione and then into lens protein was studied by culturing lenses and following the progress of radioactive carbon. The observations suggested that the glutathione and protein of the lens are being continuously synthesized. Spectrophotometric analysis of rabbit and bovine lenses suggested that either cytochrome C is absent or present in quantities less than 20 gammas per gram. The oxygen uptake of the lens was inhibited by cyanide, therefore some enzyme system containing a heavy metal, possibly copper, was postulated.

**Facsimile:** see RADIO; TELEGRAPHY.

**Fairs and Exhibitions.** Fairs and exhibitions, which have made their greatest development in the United States and Canada, reached a new high in attendance and popularity in 1950. The more than 2,200 county, district and state fairs of the U.S. and the provincial exhibitions of Canada were attended by more than 65,000,000 people, who spent an estimated \$250,000,000 for entertainment and merchandise. In the educational line, the exhibition and demonstration of improved methods of agriculture and livestock raising, home economics, labour-saving machinery, youth projects and everything pertaining to farm life was carried out in 1950 on a more extensive scale than ever before. Leading manufacturers of everything used on the farm and in the farm home spent large sums of money on exhibits and demonstrations. Thousands of members of 4-H clubs and Future Farmers of America exhibited their work in competition for substantial prizes; and in the adult classes the exhibits of high-grade cattle, sheep, hogs, horses, poultry and other livestock reached an all-time high. Entertainment was of the same general character as in previous years—a carnival midway, elaborate grandstand shows featuring musical revues and circus acts, harness racing, auto racing and auto thrill shows—but with the addition of many entertainers famous in radio and the theatre. At many of the larger fairs elaborate historical revues and pageants were presented.

Topping all fairs on the North American continent was the Canadian National exhibition at Toronto, with an attendance of 2,723,000 in 14 days. In the United States, the Texas state fair

EXHIBIT of the European Travel commission at the first U.S. International Trade fair which was held in Chicago, Ill., during the summer of 1950

at Dallas recorded an attendance of 2,176,519 in 16 days, and the Los Angeles county fair at Pomona, Calif., drew more than 1,000,000 attendance in 17 days. The Minnesota state fair, St. Paul, drew 905,563 in 10 days; the Wisconsin state fair, Milwaukee, 721,781 in 10 days; the Indiana state fair, Indianapolis, 600,630 in 10 days, and most of these and other state fairs set new all-time records for attendance. The first U.S. International Trade fair was held in Chicago, Ill., in Aug. 1950. It attracted a public attendance of about 350,000 and about 25,000 buyers; 47 countries were represented. Another Chicago event, the Chicago fair, held on the lake front June 24–Sept. 4, counted 1,700,000 paid admissions. The Texas state fair presented the stage show *South Pacific* and drew a gate of more than \$375,000. The auditorium on the Indiana state fair grounds was used to present the Sonja Henie ice show and other attractions throughout the year. Most fairs are subsidized by the state, which appropriates a large share of the money offered as premiums to exhibitors of agricultural and home products. But for the greater part of their income, the fairs depend upon gate admissions, which range from 25 cents to \$1.00, and revenue from the midway and grandstand attractions and the sale of exhibit space to manufacturers and dealers. Most of the 1950 events showed a profit.

(NA. G.)

**Great Britain.**—The year 1950 saw the 29th British Industries fair, again held at Olympia and Earls Court, London, and at Castle Bromwich, Birmingham. There were 3,038 exhibitors; 19,005 overseas visitors, nearly 2,000 more than in 1949; 113,102 home buyers; and 73,540 public visitors. Two regular exhibitions were again held in 1950: the *Daily Mail* Ideal Homes exhibition at Olympia and the annual display of the Society of British Aircraft Constructors at Farnborough.

**Agricultural Shows.**—The show of the Royal Agricultural society of England was held in July at Kidlington airfield near Oxford. The total attendance for the four days was 122,236, compared with 186,678 at Shrewsbury in 1949. The Royal Norfolk Agricultural show was held at Anmer park on the royal es-

tate at Sandringham. The total livestock entry of 1,951 was a record. In two days the attendance was 69,872. The Royal Counties show was merged in 1950 with the Sussex county show and the combined show was held at the seaside resort of Bognor Regis, Sussex; the attendance was 64,223. The Bath and West and Southern Counties show, held at Castle Bromwich, had only 72,207 visitors in 1950 compared with more than 122,000 at Bristol in 1949 and 162,000 at Cardiff in 1948.

**Germany.**—The two leading spring shows in Germany again gave signs of their importance to European trade. The Leipzig fair attracted 7,500 exhibits, 750 of which were from western Germany, making the fair the largest there since World War II. An entire pavilion was devoted to products of the U.S.S.R. There were 4,000 exhibitors at the Frankfurt fair in western Germany later in the same month. About 28% of the exhibits were foreign.

**Finland.**—The fourth of a series of great national fairs was held from Sept. 30 to Oct. 15, the first three having been held in 1925, 1930 and 1935. A new exhibition hall was built and almost the whole of Finnish industry was represented.

**Italy.**—The traditional Milan fair and Fiera del Levante at Bari were well supported. More than 40 countries took part at Milan in April including many eastern European states. The U.S.S.R. was not represented because of a disagreement on the allocation of space.

**France.**—Among the important exhibitions in France were the international fairs at Lyons in April and at Paris in May and the motor and cycle shows in Paris.

**Falk Foundation, The Maurice and Laura:** *see* SOCIETIES AND ASSOCIATIONS.

**Falkland Islands.** A British colony and dependencies. The colony consists of two main islands, East and West Falkland, and about 200 smaller islands in the South Atlantic. Dependencies: (1) South Georgia (four whaling stations) with South Orkney and South Sandwich, and (2) South Shetland and Graham Land. Colony, area: 4,618 sq.mi.; pop. (1949) *c.* 2,000 white, almost all of British descent, predominantly Protestant. Capital and only town, Stanley (pop. *c.* 1,200). Area of dependencies: 3,063 sq.mi.; pop. *c.* 400. Governor in 1950, Sir G. Miles Clifford.

**History.**—The Colonial Development corporation's two projects for a sealing industry and for establishing a freezing plant for mutton were the most important developments in the Falkland Islands in 1950, though the phenomenal rise in the world wool prices also promised increased prosperity for the farming industry. In May two Auster aircraft purchased by the government were put into service, and since there are no roads outside Stanley the people living in the settlements had for the first time an alternative means of transport to the horse.

On two occasions the Argentine government pursued its century-old claim to the Falklands, first by a resolution in the senate reaffirming the claim, and subsequently by applying Argentine internal telegraph rates on messages sent to the Falklands and their dependencies. The Falkland Islands Dependencies survey continued its work in the antarctic, and after two years the base at Stonington Island was relieved on Feb. 10 by the supply ship "John Biscoe."

**Finance and Trade.**—Currency: pound sterling. Budget (est. 1950): colony, revenue £189,725 and expenditure £186,734; dependencies, revenue £129,806 and expenditure £102,864. Trade (1949): imports £295,467; exports, including re-exports, £428,946. Principal exports: wool, tallow and whale oil (dependencies).

(K. G. B.)

**Family Income:** *see* CENSUS DATA, U.S.

**Famines:** *see* FOOD SUPPLY OF THE WORLD.

**Far Eastern Commission:** see JAPAN.

**Far Eastern Unity.** Two contrasting and at times conflicting aspects of policy in the field of far eastern unity were observed during the year 1950. The threat of Communist aggression was felt acutely by almost every state in the far east at one time or another, but there was no general agreement upon the means of meeting that threat. Some governments, especially nationalist China, Republic of the Philippines, Thailand and Australia, openly favoured some sort of regional defensive alliance. Others, chiefly India and Indonesia, voiced strong objection to any specific commitment that would involve an alignment in one or another ideological camp.

This difference was reflected primarily in attitudes toward the Chinese Communist regime at Peking. Burma and India recognized that regime in Dec. 1949 and Indonesia followed suit somewhat later. Thereafter it became the Indian position that such recognition was the logical and realistic course and that a settlement of problems such as the status of Korea or Formosa could not be reached unless and until the Chinese Communists were admitted to the United Nations. This point of view accounted for the Indian reluctance to support strong measures in Korea, expressed primarily in abstentions in the United Nations, in spite of the fact that India had joined in condemning the original North Korean aggression.

On the other hand, India's recognition of Peking made it possible for the Indian delegation at Lake Success, headed by Sir Benegal Rau, to take the lead in exploring possibilities of contacts with the Chinese Communists in the search for a peace formula. Thus India headed a group of 13 Asian and Arab states that offered a resolution in the general assembly calling for the naming of a committee to search out the ground for a ceasefire.

The differences in point of view were illustrated by the fact that when this same group drafted a second resolution calling for the simultaneous discussion of a variety of far eastern problems, including the status of Formosa and the admission of the Chinese Communists to the United Nations, the Republic of the Philippines sharply dissociated itself from the action. The Philippine delegation aligned itself clearly with the United States position which was that the Korean situation must be stabilized before these other problems were broached. In that connection it was significant that the Philippines and Australia were the only far eastern states that had sent substantial military or naval contingents to Korea, although offers of help had come from nationalist China and Thailand.

This difference reflected divergent opinions as to the proper role for any grouping of Asian states. The Philippines, Australia and Thailand had expressed their willingness to join in the formation of a strong regional alliance involving common defense commitments. Such an alliance would be openly anti-Communist in character. Moreover, both Pres. Chiang Kai-shek of nationalist China and Pres. Syngman Rhee of the Republic of Korea had voiced their support for such an alliance during the preceding year. The United States had promptly disavowed support for such a program, presumably on the ground that alliance with Chiang could involve war against Communist China. A similar view was expressed several times in India.

The Indian position, and the Indonesian, was that there might and should be some sort of spiritual rather than physical unity among the Asiatic peoples, but that it must not take on any aspect of an alliance nor must it be directed against any group or any idea. Implicit in this approach was the hope that the Asian states, headed by India, might form a "third force" in the ideological struggle between the Soviet Union and the western democracies. There were indications late in the year that this hope had been

somewhat dimmed in India by the Chinese Communist invasion of Tibet and by the evidence of Communist penetration in neighbouring Nepal.

When the Philippines took the lead, early in the year, in efforts at regional *rapprochement* it was necessary, therefore, to compromise these differences. The compromise restricted the scope of regional meetings and made the possibility of advances toward real unification somewhat remote. Nevertheless, exploratory efforts were continued and some progress was made.

Elpidio Quirino, president of the Philippines, had issued an invitation in the summer of 1949 to Asian nations to meet in conference in the Philippines early in the next year. The work of translating this invitation into an international meeting and of planning and directing such an enterprise was entrusted to Brig. Gen. Carlos P. Romulo who was then president of the United Nations general assembly and subsequently was made Philippine foreign minister. General Romulo had long been an advocate of some sort of far eastern federation at any level that could be achieved and had been an eminent spokesman for both the Asian and "small nation" members of the United Nations.

General Romulo was obliged to work diligently and persuasively to overcome the apprehensions of some of the invited nations. It was not until it had been made plain that there would be no prior commitments involved and not even an agreed preliminary agenda that it was possible to announce that the conference would be held in Baguio, Philippine mountain resort, during the last week in May. President Quirino and General Romulo had indicated from the beginning that this was to be a meeting at the government level to explore the whole field of common interest. It was the first conference of such a character to be proposed and there was therefore an obvious tendency on the part of some governments to go slowly.

Those that participated, with the Philippines, were Australia, Ceylon, India, Pakistan, Thailand and Indonesia. Their delegations were headed by J. W. Burton, secretary of the Australian department of external affairs; R. G. Senanayake, parliamentary secretary to Ceylon's ministry of external affairs; Sir Ramaswami Mudaliar, Indian delegate with the rank of ambassador; Nazir Ahmed of Pakistan; Luang Bhadravadi, envoy extraordinary and plenipotentiary of Thailand; and Ali Soebardjo, Indonesian delegate with the rank of ambassador. A large Philippine delegation was under the chairmanship of General Romulo.

The first plenary session was held on May 26 and meetings continued for five days. It was decided that political matters should be considered by the conference only in a committee of the whole, while two subcommittees were named to make draft reports in the economic and the social and cultural fields. The reports of these subcommittees were subsequently adopted with enthusiasm by the entire body and incorporated in its final resolution. A draft Declaration of Principles in the political field was submitted to the committee of the whole by the Philippine delegation on May 29. This draft, with the proposal that some permanent body be set up further to explore the possibility of regional unification, went too far to meet the approval of some delegations and provoked the most spirited debate of the conference. The political draft was finally revised by a subcommittee to include only material upon which there could be no disagreement.

In the discussions it was evident that some of the nations were wary of any political commitment that might involve an identification with one or another ideological group. At the opening session, for example, the Indonesian delegate, Soebardjo, stated: "It is to our interest and that of our neighbours that we refuse to take sides with this or that nation or group of nations."

Within the limitations set by such an attitude the results of the conference were regarded by its members as significant and

impressive. The first objective as stated by General Romulo, who was made permanent chairman of the conference by acclamation, was to become better acquainted and to embark on a task of friendly and co-operative exploration. This was fully accomplished. The meetings were held in an atmosphere of cordiality and enjoyment. The final act was adopted in complete unanimity.

The recommendations of this final resolution fell into three groups: political, economic, and social and cultural. In the political field it was agreed that regional consultation should be carried on through normal diplomatic channels and within the framework of the United Nations. The emphasis upon diplomatic channels was important because at the time of the conference there was as yet no interchange of representatives among all the participating states. While the idea of some permanent organization was not accepted it was agreed in principle that there should be joint action among the countries of the region for specific purposes at specific times. The New Delhi Asian conference on Indonesia was cited in the discussion as a precedent. Such action, it was indicated, would be within the organs of the United Nations and other international organizations.

In the economic field the conference made four recommendations. First, it was agreed that the Asiatic nations should play a part in the fixing of fair and stable prices in world markets for their export products. In the past the market prices of raw material products such as copra and abaca had been fixed by the buyers rather than by the producers. Second, the conference urged the early conclusion of bilateral trade agreements among the Asian states, coupled with the possible establishment of multilateral clearing arrangements. Third, the delegates recommended government encouragement of the interchange of technical personnel and information. In this connection it was urged that the governments also take advantage of facilities to be offered by countries outside the region. This was an obvious, if oblique, reference to the Point Four program. Fourth, it was recommended that the governments undertake a co-operative study of their development plans so as to integrate some efforts and to take advantage of possible specialization in certain areas.

In the social and cultural field the recommendations of the conference covered a wide range. The delegates were firmly agreed on the need to promote social well-being in the area and they called upon their governments to take a variety of steps that they regarded as necessary. First on their list was the campaign against illiteracy. Second only to that was the fostering of cultural and social programs designed to support peace and international understanding. A related recommended project was the establishment of international study centres and cultural institutes, coupled with the growth of public libraries and the translation of classics of each country into the languages of the others. Likewise it was urged that the exchange of books, periodicals and all sorts of information be facilitated. In this cultural exchange, as outlined, were included also the movement of specialists and technicians and the organization of art exhibits, concerts, radio broadcasts and athletic tournaments. Finally, this phase of the ultimate act of the conference touched on social services and recommended legislation relative to public health and nutrition that would improve material well-being.

The agreement upon the need for such a program was complete. The conference did not, however, create any regional bodies to effect its co-ordination but left the initiative as well as the direction of effort to the several governments. It was apparently felt that the levels of prior accomplishment in the different states were so diverse that a uniform mode of procedure would be impossible.

If there was some disappointment because more firm decisions were not reached by this conference there was also a satis-

fied conviction that deep friendliness had been expressed and that important, if limited, progress had been made. This feeling was summed up by General Romulo in his comment on the final resolution that he submitted in his third progress report on May 29. He said:

"The document speaks for itself. It proposes no final solutions for the complex and difficult problems of our region. It contains no earth-shaking declarations. But it is epoch-making in a very significant sense. It is the first official declaration of its kind emanating from a conference of representatives of the free states of south and southeast Asia which, in itself, is a milestone in the history of the region. The spirit of cordiality and free understanding breathes through this document. Our nations have come together, not in defiance nor in anger, but solely out of a desire to know each other better and to seek effective solutions for our common problems.

"This achievement of the conference is wholly in keeping with the spirit of Asia and its peoples. It constitutes, to paraphrase the remark of President Quirino during the opening day of the conference, 'no miracle of achievement.' Viewed, however, against the background of the conditions that have obtained among our peoples in the region for many centuries, this document is more than a mere statement of familiar principles. It is a triumph of initiative, courage and understanding, and I am certain that succeeding generations will consider it in this light as the beginning of a major historical development in Asia."

The development that General Romulo had in mind must have been the closer integration of Asiatic peoples that he had so often urged. The year 1950 showed the trends in that direction that were apparent at the Baguio conference. It showed also, however, some of the cleavages in belief and policy that made such an integration difficult.

The common danger was recognized to a degree by most of the Asian states. Common means of defense against it were not found.

One reason for that failure quite obviously lay in the difference in political structures involved. General Romulo remarked pointedly that the conference at Baguio was a meeting of the "free" states of south and southeast Asia. Indochina and Malaya were thus significantly omitted in spite of the fact that the most imminent danger in the area was the danger to Indochina and that the economic co-ordination of the region without the conspicuous contribution of Malaya would be difficult if not impossible.

This difference in structures was pointed up even further by the Indonesian delegate at Baguio when he declared that the only proper basis for unified action in Asia would be a commitment to "anticolonialism" and "anti-imperialism." Manifestly, such a commitment would not apply to Australia, to the Philippines or to Thailand and could hardly be stretched to cover India, Pakistan, Ceylon or even Indonesia itself. What could have been meant, therefore, was only that far eastern unity should be approached by opposition to the French in Indochina and to the British in Malaya.

The Baguio conference, as a whole, took a more constructive tone, but this viewpoint limited the degree to which it could approach effectively political problems that affected the area as a whole.

A further obstacle to unity does not appear to have been discussed in detail at Baguio although it made itself felt at different times during the year in several of the east Asian states. Almost every one of those countries represents what is called a "plural" society. The diversities in India and Pakistan are well known, but in other Asian states there are also significant and differing minority groups. Thus Thailand was made acutely aware

of the presence of a large and influential Chinese community and received admonition from Peking about its treatment. In Malaya there was evidence that localized terrorist activities had at least some connection with Chinese Communist planning and direction. Moreover, there was severe Moslem rioting in Singapore in December, touched off by a court case involving the disposition of a Dutch child who had had Moslem foster parents and had been married, at 13, to a Moslem.

The Netherlands resisted Indonesian demands for the annexation of western New Guinea at least partly on the ground that the indigenous Papuans were not ethnically and culturally part of the Indonesian group.

Thus governments representing many differing peoples sought a common ground of interest. Their progress was slow. Their efforts, however, gave ground for hope to those who felt that far eastern unity was morally and politically desirable. (See also MIDDLE EASTERN UNITY.) (Ro. A. S.)

**Farm Co-operatives:** see FARM CREDIT ADMINISTRATION.

**Farm Credit Administration.** Farmers and farmers' co-operatives in the United States and Puerto Rico in the year ended Dec. 31, 1950, obtained more credit from the institutions and associations operating under the supervision of the Farm Credit administration of the U.S. department of agriculture than in any year since it was organized. The number of farmer borrowers and the number of borrowing farmer co-operatives increased; the amount of money invested by farmers and farmers' co-operatives in this co-operative credit system was the largest since it was organized; and the reserves of the system were increased substantially in the year.

The co-operative Farm Credit system operates through 12 district offices and through local co-operative associations. Farmers obtain short-term operating credit from 500 local production credit associations, and long-term farm mortgage credit through 1,200 local national farm loan associations. Each farmer-borrower owns stock in his association equal to 5% of his loan. Farmers' business co-operatives deal directly with the bank for co-operatives of the district in which the co-operative is located or, in the case of a co-operative of large regional scope, with the Central Bank for Cooperatives. Each borrowing co-operative owns stock in the bank for co-operatives from which it obtains its loan.

Farmers and farmers' co-operatives obtained loans from the associations and institutions operating under the supervision of the Farm Credit administration totalling \$1,900,000,000 in 1950 compared with \$1,700,000,000 the previous year. Credit needs of farmers and their co-operatives in the year remained high.

Farmers obtained 43,122 farm mortgage loans amounting to \$206,000,000 through their national farm loan associations and federal land banks. This compares with \$182,000,000 and 39,522 loans in 1949. At the end of 1950 they were using 308,021 land bank loans totalling \$946,000,000, the largest amount in any year since 1945. Funds used to make these loans were obtained by the sale of consolidated farm loan bonds to investors. The bonds are not guaranteed as to principal or interest by the United States government.

Farmers obtained \$1,076,000,000 in credit from their 500 production credit associations in 1950. The number of loans was 288,082. This compares with \$956,000,000 and 287,443 loans in 1949. The production credit associations in the year again increased their membership from 454,774 to 461,571.

At Jan. 2, 1951, 176 of these associations were completely member-owned compared with 116 on Jan. 2, 1950, and 52 on

Jan. 2, 1949.

Farmers' marketing, purchasing and business service associations obtained \$402,000,000 in operating capital, facility and commodity loans from the 13 banks for co-operatives in 1950 compared with \$383,000,000 in 1949. The Central Bank for Co-operatives sold \$30,000,000 of 3-year, 1½%, collateralized debentures to obtain money to make longer-term loans. This was the first sale of debentures by the Central bank. These debentures are not guaranteed as to principal or interest by the United States government.

The 12 federal intermediate credit banks, the principal sources of loan funds of the production credit associations and of part of the loan funds of the banks for co-operatives, as well as of certain types of privately financed credit institutions, made loans and discounts in the year totalling \$1,627,000,000 compared with \$1,589,000,000 in 1949.

These funds were obtained principally through the sale of consolidated debentures to investors. These debentures also are not guaranteed as to principal or interest by the United States government.

Farmers and farmers' co-operatives in 1950 increased the amount of their capital stock ownership in their co-operative credit system. Farmers and farmers' co-operatives owned \$148,000,000 in capital stock in Farm Credit institutions and associations on Dec. 31, 1950, which compares with \$138,000,000 on Dec. 31, 1949. Farmer-borrowers own all the capital stock of the national farm loan associations and the associations own the capital stock of the federal land banks except a limited amount owned by direct borrowers. The capital stock of the 12 federal land banks totalled \$60,000,000 on Dec. 31, 1950, compared with \$58,000,000 the year previous. Farmer-members of production credit associations owned \$71,000,000 in capital stock of their associations, compared with \$65,000,000 on Dec. 31, 1949. Government capital in these associations declined from \$22,300,000 at the end of 1949 to \$15,700,000 on Dec. 31, 1950. Farmers' co-operatives increased their capital in the 13 banks for co-operatives from \$15,500,000 on Dec. 31, 1949, to \$16,600,000 on Dec. 31, 1950.

Besides supervising a nation-wide co-operative credit system through 12 district offices, the Farm Credit administration supervision also includes activities in connection with the Agricultural Marketing act revolving fund and the liquidation of commissioner loans held by the Federal Farm Mortgage corporation. It also has a co-operative research and service division which conducts research and service activities helpful to farmers' business co-operatives. (I. W. D.)

**Farmers Home Administration.** More than 121,000 farmers who could not obtain needed credit from other sources borrowed from this agency of the United States department of agriculture in the first ten months of 1950, and about 170,000 others who had borrowed previously continued to receive individual guidance from local supervisors in planning and carrying on sound farming operations.

The greatest demand was for operating credit for livestock, machinery and other essentials. Through October, 86,157 operating loans were approved in the amount of \$76,029,804. Nearly all were five-year adjustment loans to enable farm families to reorganize and adapt their work to changing conditions and to aid veterans and other young farmers make a good start in agriculture.

A smaller proportion of operating loans than in any other year were made for seasonal needs.

The same trend was evident in the farm-ownership program in which 1,101 farmers borrowed federal funds to buy, enlarge or develop economic units and 2,038 were similarly assisted by

private loans insured by the Farmers Home administration. A larger percentage of these 40-yr. real estate loans than ever before were used for readjustment of farming patterns through enlargement or improvement of inadequate units.

The direct farm-ownership loans, limited almost entirely to veterans, totalled \$10,393,783. Insured loans advanced by banks, insurance companies and other private lenders amounted to \$15,651,047.

In the new farm housing program begun late in 1949 the agency extended credit of \$26,539,910 to 5,849 farm owners to build or repair homes and farm buildings. Small grants of \$117,060 also were made to 265 owners of small farms who urgently needed assistance in making emergency housing repairs for health and safety.

Housing loans were subject to government credit controls put into effect Oct. 12 to prevent inflation and conserve building material for defense purposes. After that date a loan could not be made for the full amount needed for construction or repair of a farm dwelling, if the amount was more than \$2,500. Also, the 33-yr. maximum repayment period was shortened to 25 yr. for loans between \$2,500 and \$7,000, and to 20 yr. for loans exceeding \$7,000.

Western offices of the agency made water facilities loans to 1,080 individual farmers and 19 farmers' associations in arid and semiarid areas for installations to furnish water for farmstead use and irrigation.

Emergency credit was extended in areas designated by the secretary of agriculture to aid about 26,900 farmers who suffered production losses because of flood, drought, blizzard or similar disaster.

A special congressional committee studying the problems of low-income farm families recommended additional aid through supervised loans for production and farm purchase. (D. B. L.)

**Farm Income:** see AGRICULTURE.

**Farm Population:** see AGRICULTURE; CENSUS DATA, U.S.

**Fascism.** The year 1950 marked the rebirth of fascist currents and organizations in Germany and Italy. In Germany it was represented by several groups of which the strongest was the Socialist Reich party. It appealed to the concept of a "socialism" as opposed to a "plutocracy" represented by the United States, and to the expansionist traditions of the German reich. Another group was the Brotherhood or Brüderschaft organized by former S.S. officers. They wished to rebuild Germany as the strong core of a united Europe independent from the U.S.S.R. as well as from the United States. A Fighting Group of German Socialists was organized at Brunswick in 1950 to act as a guard for extreme nationalist meetings. Common to all these movements was the conviction that German National Socialism succumbed not because its ideas were wrong but because its leaders were not equal to the task. Another group, the German Reich party openly approved Hitler's anti-Semitic "solution." The Deutsche Volksbewegung—Sammlung zur Tat (German People's Movement—Union for Action) developed a program which was as near to communism as to fascism; the one thing characteristic of these movements was their contempt for western democracy and for the German Federal Republic of Bonn.

In Italy the Italian Social Movement, which had six members in the chamber and one in the senate, publicly declared itself neofascist. This Movimento Sociale Italiano propagated the return to the one-party state and to the corporative society. Its official organs clamoured for the return of all former Italian colonies including Ethiopia and for an aggressive foreign policy, hostile equally to communism and to the Anglo-American democ-

racies. The Italian government decided at the end of 1950 to ban the neofascist movement.

In France fascism had so far found no organizational basis but was represented by a few weeklies and monthlies, among them *Aspects de la France* and *L'Indépendance Française*. In Portugal the old semifascist order remained unchanged. The fascist control of Spain, established in 1939 by Generalissimo Francisco Franco, continued in its deep-seated opposition to western democracy, especially to Britain and France, and in its longing for a revival of Spanish imperial greatness.

A different kind of fascism was cultivated by Pres. Juan D. Perón in Argentina. Peronism was praised in Argentina as a movement for social justice which had the wide support of labour and had enhanced the prosperity of the country. On the other hand, greatest emphasis was put on Argentinian extreme nationalism; individual liberty in the democratic sense was little valued and the "imperialism of gold," meaning United States capitalism, was violently attacked.

Thus fascism in 1950 represented a wide variety of different movements, united only in their rejection of democracy as understood in the Anglo-American countries. (H. Ko.)

**Fashion and Dress.** Women's clothes were seldom prettier or more generally "wearable" than they were in 1950. The end of 1949 had found fashion apparently headed for a large-scale revival of the 1920s, but this rather extreme trend modified itself greatly. Some silhouettes of the flapper age remained, but they were so modernized as to be hardly detectable.

One of these was the chemise dress. In its 1950 form, this was a dress cut straight and fairly tight from the armhole to the flank, without a waist; the woman created her own waist, as high or low and as tight or loose as she wanted it, by means of a belt. This feature made the chemise a wearable dress, easy on difficult figures, and it was popular in the couture as well as in budget dress departments and in both day and evening versions. These latter dresses usually had stiff flares near the hem line, which were termed Spanish flounces or "trumpet" skirts.

Another feature of 1950 fashions that persisted from the 1920s revival was sleevelessness. Sleeveless dresses were worn for all four seasons of the year. Women liked them because of the easy fit they gave through the shoulders. Sleeveless blouses were also worn and, for evening, harness tops that were hardly more than yokes around the neck.

These harness tops were often in velvet. Velvet was one of the chief reasons why 1950 was such a pretty year in fashion. Always flattering to a woman's complexion, it was lavishly used by designers, particularly cotton velvet (velveteen). There were tailored velveteen suits and dresses for day, short dinner dresses in pretty colours of velveteen such as Parma violet, velvet ball gowns and dominoes, and evening separates that combined velvet with fabrics like tulle and stiff cotton lace. The short, swingy little odd jacket in black velveteen became a best seller, as did the velvet pump and the velvet belt.

An abundance of transparent fabrics also added to the atmosphere of prettiness in 1950—organdies and chiffons in white and pale colours and sweet sherbet tones were worn both day and evening. At night gray tulle was often seen, in every shade from mist to gunmetal.

Other fashions of 1950 included stoles—lengths of matching fabric which were used to wrap gracefully the shoulders of dresses, wool dresses as well as more formal dresses. There was also a trend toward longer hair; the short crop began to give way to more feminine coiffures, and a few chignons (knots of hair at the nape of the neck) were seen. Eyes were outlined with pencil and mascara to make them seem larger. This fashion, so

Left: **FABRIC AND COLOUR SCHEME** popular in 1950: velvet, used even in tailored suits, and black used with white

Below: **THE SPANISH INFLUENCE** in 1950 fashions included matador hats, boleros, braid, ball fringe, jet, and Spanish reds and yellows

Below: **THE SUIT LINE** of 1950 showed a swing to the tailoring of the 19th century riding habit, with spare shoulders, high notched lapels and narrow sleeves

Below: **THE STOLE**, a popular 1950 accessory, was used as an adjunct to street wear as well as to formal evening dresses such as this one of red satin

quickly and completely adopted that it was featured even in the big news weeklies, took on rather amusing aspects, and women with the new made-up eyes were referred to as "doe-eyed."

In suits and coats 1950 was notable for tailoring. The suit of the year was the tailor's suit, with a straight skirt and a jacket tailored as strictly as the jacket of an old-fashioned riding habit, with high, notched lapels, narrow sleeves, high armholes and vents at either side or in the back. More redingotes were seen—sharply fitted single-breasted coats with notched lapels and vented skirts.

In Paris there was a definite trend toward tunic coats and flared three-quarter coats. However, the loose, fleecy topcoat continued as popular as ever, in bright colours as well as a very dark banker's gray.

The most fashionable colour scheme of the year was black and white, used day and night, winter and summer, and in either proportion—black with white accessories, or white with black accessories. There was a big wave of Spanish colours, like a rich yellow or ruby red worn with accents of black. This Spanish influence was also felt in the widespread use of ball fringe, jet and passementerie, and many hats were of Spanish inspiration, resembling those worn by matadors.

Hats continued quite small in 1950—pillboxes, toques and tiny berets—although there was a noticeable forward movement in the way they were worn.

Little fashions that "caught on" during 1950 included: patent leather, which was used all year round for shoes, bags and belts; accessories in two textures of leather or fabric, and two colours (even satin spectator pumps for the evening); fox furs, which had a big revival; and rhinestone jewellery, big, glittery and frankly fake, which was worn from the morning on, on tweed suits as well as on lace evening dresses. (See also FURS.)

(C. SN.)

**Faulkner, William** (1897– ), U.S. novelist, was born on Sept. 25 in New Albany, Miss. He attended high school at Oxford, Miss., and after serving with the British royal air force during World War I, he returned to Oxford to attend for two years the University of Mississippi. He served for a time as a newspaper reporter in New Orleans, and subsequently remained in Oxford for virtually his entire literary career, leaving only for such rare trips as one he made to Europe, a few to Hollywood to supervise the filming of his novels, and visits to his publishers in New York. Ironically, his work is perhaps least known in the deep south about which he so often wrote. His works include *Sanctuary*, *The Marble Faun*, *As I Lay Dying*, *Sartoris*, *Go Down Moses*, *The Hamlet*, *Light in August*, *Absalom, Absalom!* and *Intruder in the Dust*. In Nov. 1950 Faulkner was awarded the Nobel prize for literature, held over from 1949 when no prize was given in this area because the Swedish academy had failed to agree on a candidate.

**FBI:** see FEDERAL BUREAU OF INVESTIGATION.

**Federal Bureau of Investigation.** Established in 1908 as a permanent investigative arm of the United States department of justice, the FBI is engaged in two general fields of activity—general investigation and security. Its general investigative duties require the collection of evidence relating both to violations of the federal criminal laws over which it has jurisdiction and to certain types of civil litigation in which the government is a party in interest.

By presidential directives, the FBI is charged with co-ordinating the investigations of espionage, sabotage and general internal security matters.

During the 12-month period ending June 30, 1950, there were 8,921 convictions in all types of cases investigated by the FBI. This represented a 6% increase over the same period in 1949. Convictions resulted in 96.9% of all FBI cases brought to trial, and sentences imposed totalled 21,102 years, 2 months and 29 days, plus four life terms.

A total of 6,097 fugitives in FBI cases were located during the year, including 2,745 deserters and Selective Service fugitives.

Returns to the taxpayers in the form of fines, savings and recoveries in FBI cases totalled \$36,152,576 during the 1950 fiscal year. Renegotiation act claims adjusted in favour of the government in cases investigated by the FBI amounted to an additional \$55,162,900.

Substantial increases in convictions during the 1950 fiscal year over the preceding 12 months occurred in a number of the various crime categories investigated by the FBI: for violation of the federal kidnapping statute 61%; federal extortion statute 35%; interstate transportation of stolen property 20%; National Bank and Federal Reserve acts 59%; National Bankruptcy act 80%; White Slave Traffic act 62%; and frauds against the government 114%. There was also an increase from 3,625 to 3,933 in convictions for violations of the interstate transportation of stolen motor vehicles or aircraft statute; and 10,581 stolen automobiles were recovered in these cases investigated by the FBI.

By presidential directives issued in 1939 and 1943 and restated on July 24, 1950, by Pres. Harry S. Truman, the FBI was charged with the responsibility of protecting the internal security of the nation against subversive threats and foreign agents. Other special security responsibilities concern applicant and employee investigations arising from congressional enactments or executive directives especially calling on the FBI to secure facts pertaining to security, character and loyalty of applicants for employment in and employees of the executive branch of the government.

In these investigations, the FBI is strictly a fact-finding agency and does not attempt to evaluate the information or to recommend action to be taken on the basis of information gathered through investigations.

Included in the special security category are those investigations made in connection with the Atomic Energy Act of 1946, the federal employees' loyalty program and special applicant investigations for the department of justice and other government agencies.

In addition to its investigative responsibilities, the FBI acts as a central service organization to all constituted law enforcement authorities in the nation. Co-operative services provided by the FBI include aid in connection with identification, laboratory examinations, training and crime record matters.

The identification division of the FBI received 2,338,254 fingerprint records during the 1950 fiscal year, bringing the total number on file to 114,356,747. There were 12,168 agencies contributing fingerprint data.

The FBI laboratory during the 1950 fiscal year conducted more than 100,000 examinations. These included those for the FBI itself, for other federal agencies and for nonfederal law enforcement organizations in every state in the nation as well as in the territories. These scientific examinations were performed pursuant to 23,462 requests involving 86,008 individual specimens.

Three sessions of the FBI National academy were conducted during the 1950 fiscal year. The 172 graduates brought the total number of graduates from the academy to 2,196 officers, representing each of the states of the United States and every territorial possession as well as a number of foreign countries.

In order to make professional law enforcement training available to entire departments and to police officers who were unable to attend the FBI National academy, the FBI participated in

2,979 local police training schools during the 1950 fiscal year. (See also CRIME; JUVENILE DELINQUENCY; POLICE; SECRET SERVICE, U.S.) (J. E. H.)

**Federal Civil Defense Administration:** see ATOMIC ENERGY.

## Federal Communications Commission.

The improvement and expansion of television absorbed a major share of the commission's attention during 1950. On Oct. 11, after a lengthy hearing, the commission approved the field sequential system of colour television developed by the Columbia Broadcasting system, in preference to systems proposed by Color Television, Inc., and the Radio Corporation of America. The commission found that the CBS system was the most satisfactory from the standpoint of texture, colour fidelity and contrast, that the receivers and station equipment were simple to handle and that this equipment had been successfully tested in widely diversified circumstances.

Commercial broadcasting of colour by CBS was scheduled to begin on Nov. 20 but was postponed when a special three-judge court in Chicago issued a temporary restraining order. On Dec. 22 the court upheld the commission's decision but ruled that the temporary restraining order was to remain in effect until April 1951 or until dissolved by the supreme court.

The ban on new television station construction, effective since Sept. 1948, was expected to remain in force until decisions on other phases of television were issued sometime in 1951. During the year, the commission heard extensive testimony on the feasibility of vastly increasing the potential number of stations by adding 42 channels in the ultrahigh-frequency band. These, added to the 645 stations provided for in the existing allocation of 12 channels in the very-high-frequency band would make possible, from an engineering standpoint, 2,245 metropolitan stations and 1,000 lowpower community-type stations. Educational leaders testified on their requests for the allocation of television channels for noncommercial educational broadcasting. The commission was scheduled to hear testimony on its proposed allocations to specific communities over the nation early in 1951.

Two subscriber television experiments were carried on. One was the Skiatron Subscriber-Vision system employing a punched decoder card. The other was the Zenith company's Phonevision, in which pictures are unscrambled for subscribers by the telephone company. A hearing was ordered on the request of the motion picture industry for special channels for large-screen theatre television.

As the year ended, there were 107 television stations on the air and 10,000,000 sets in use. The number of standard AM broadcasting stations in operation had passed the 2,200 mark, with more than 100 under construction and 300 applications pending. There were 90,000,000 AM receiving sets in use. There were somewhat less than 700 frequency modulation stations in operation and in the hands of the public approximately 7,000,000 sets capable of receiving FM.

A new five-year North American Regional Broadcasting agreement was signed by the delegates of Bahamas-Jamaica, Canada, Cuba, the Dominican Republic and the United States in Washington, D.C., in November. Provisions were made for adherence by Mexico and Haiti. It provided for the recognition of initial station assignments among the signatories and for notification procedures for additional and changed assignments, and established technical standards for the use of the broadcast band. The FCC and the department of transport of Canada concluded an agreement to co-ordinate assignments along the border in the very-high-frequency band to minimize interference possibilities

in land mobile radio operations. The Inter-American Radio agreement (Washington, 1949) accepted by the United States in June, concerns the use of frequencies of a regional nature.

There were several significant developments in the common carrier field during the year. The United States for the first time in its history became a party to the International Telegraph regulations which were revised at Paris in 1949. The Bell system began the construction of the final legs of a coast-to-coast microwave relay for television programs and telephone calls. Western Union completed its program of installing automatic switching centres in different parts of the country, to relay telegrams between cities without manual retransmission. The number of telephones in use in the United States grew from 41,000,000 to 43,000,000 with the Bell system reporting 750,000 applications on hand. (See also RADIO; TELEVISION.)

(W. Cy.)

## Federal Deposit Insurance Corporation.

The calendar year 1950 was the sixth consecutive year in which no depositor in an insured bank in the United States experienced a loss as a result of banking difficulties. During the year four banks with total deposits of nearly \$4,500,000 received advances from the Federal Deposit Insurance corporation which facilitated the merger of each bank with a solvent insured bank. Depositors in these banks were fully protected against loss.

At the close of 1950 the surplus of the Federal Deposit Insurance corporation amounted to about \$1,200,000,000, which had been accumulated from assessments paid by insured banks and from the return on the investments of the corporation. All the original capital stock had been repaid prior to 1949. The first of two equal instalments of repayment of interest on the capital stock was made during 1950 in an amount greater than \$40,000,000.

The contingent liabilities of the corporation as an insurer of bank deposits increased during 1950 with the increase in total deposits in the 13,600 insured banks and with the increase in maximum insurance from \$5,000 to \$10,000 for each depositor, effective Sept. 21, 1950.

The board of directors of the Federal Deposit Insurance Corporation was composed of Maple T. Harl, chairman, Preston Delano, comptroller of the currency, and H. E. Cook. (See also BANKING.)

**Federal Power Commission.** Natural gas was brought to New York for the first time in 1950 through the 1,840-mi. pipe line built from Texas by the Transcontinental Gas Pipe Line Corp. New England was assured of natural gas by the action of the Federal Power commission in dividing the territory between two companies, Northeastern to serve Springfield, Mass., and many other cities, Algonquin to serve Boston, Mass., Providence, R.I., and neighbouring areas. Michigan-Wisconsin's newly completed pipe line increased the gas supply of Detroit, Mich., and Milwaukee, Wis. Work was begun on the Texas-Illinois pipe line to augment Chicago's supply. St. Louis, Mo., and Kansas City, Mo., Colorado and Wyoming had their supplies increased. San Francisco, Calif., was to be served by a new line being built by El Paso Natural Gas Co. and Pacific Gas & Electric Co. Completing its line to Buffalo, N.Y., the Tennessee Gas Transmission Co. was to lay extensions to Massachusetts to supply Northeastern while Texas Eastern, owner of the "Big Inch" and "Little Big

Inch" pipe lines, would increase its capacity to serve Algonquin with gas for New England and to increase deliveries to the Appalachian area. Panhandle Eastern Pipe Line Co., Northern Natural Gas Co., Texas Gas Transmission, Consolidated Natural Gas, Southern Natural Gas Co., Mississippi River Fuel Corp., United Gas Pipe Line Co., Cities Service, the Columbia Gas System, Inc., and practically all the larger companies were extending lines and increasing system capacities in 1950 to meet the enormous demand for natural gas.

During the fiscal year ending June 30, 1950, the Federal Power commission issued 108 certificates of convenience and necessity authorizing construction of 6,188 mi. of pipe lines estimated to cost \$487,240,014. Since Feb. 7, 1942, when the certificate provisions of the Natural Gas act became effective, the commission had authorized 33,689 mi. of interstate pipe lines costing \$2,115,751,350. Natural gas revenues in 1950 reached \$1,363,000,000, the industry reported, a gain of 25% above 1949, and 14,894,000 customers used 3,500,000,000,000 cu.ft. of natural gas. More than \$1,000,000,000 was invested in new production, transportation and distribution facilities, plants and compressors.

Electric energy production reached an all-time high, mounting to the first 7,000,000,000-kw.hr. week in the seven days before Christmas. Public utility plants in the 12 months ending Nov. 30 produced 324,713,811,000 kw.hr., 11.8% more than in the 1949 period, the Federal Power commission reported. Industrial and railroad plants generated for their own use 58,000,000,000 kw.hr. the industry reported, estimating the United States' total output from all sources in 1950 at 386,000,000,000 kw.hr.

Electric companies reported installation of 6,700,000 kw. of new generating capacity. Some obsolete units were, of course, retired, but the Federal Power commission reported that, at the end of November, installed capacity in public utility service was 67,975,389 kw., while industrial plants had 13,937,672 kw., making total U.S. generating capacity 81,913,061 kw.

Practically completing its ten-year task of placing electric plant accounting on the basis of original cost, the commission proceeded steadily with the reclassification and original cost studies of natural gas companies under its jurisdiction. In this process the commission ordered approximately \$1,500,000,000 reduction in the capitalization and claimed costs of electric companies. Original cost determination of 11 major projects under federal license brought the total to 106. About 650 hydroelectric projects of all types with an installed capacity of 6,570,000 h.p. representing a cost of nearly \$1,000,000,000 had come under the commission's jurisdiction.

The commission, after extended hearings, denied the application of the New York state power authority to develop, with the province of Ontario, the hydroelectric power of the International rapids of the St. Lawrence river and recommended that the entire St. Lawrence seaway and power project be developed by the governments of the United States and Canada in accordance with the long-pending treaty which the senate had not yet ratified.

River-basin and power potentiality studies of projects proposed for construction totalled 155 during the year, including 110 co-operative investigations with the army corps of engineers and 45 with the bureau of reclamation. Five power-market surveys were published, as well as electric-system maps of the United States as a whole and by regions, and ten coloured state maps, the first of an all-state series. Rate reports showing electric bills paid in every city and town were issued, studies of power-plant costs and operating data, financial statistics and the monthly reports of power production and capacity on which the country depended for authentic official statistics.

Co-operating with other governmental agencies, state and federal, the commission took part in the activities of interagency river basin committees, the National Association of Railroad and Utilities Commissioners, joint international commissions, the World Power conference and meetings of other technical bodies in the United States and other countries.

The commission was reorganized in accordance with an act of congress vesting administrative duties in the chairman and providing that he be no longer elected by the commission but designated by the president. Commissioner Mon C. Wallgren, former governor of the state of Washington and earlier a United States senator, became chairman, succeeding Commissioner Nelson Lee Smith of New Hampshire, who was reappointed member for another five-year term. Commissioner Thomas C. Buchanan of Pennsylvania was elected vice-chairman for the remainder of 1950 and for the calendar year 1951. (J. W. JE.)

**Federal Reserve System.** During the year 1950 the federal reserve system took an important series of steps to restrain inflation and to facilitate adjustment of the economy to the needs of the new defense program.

Even before the Korean war, bank credit and monetary expansion had been resumed on a significant scale, and by June output and employment were at very high peacetime levels and prices had been rising for several weeks. Early in 1950 the reserve system began to make long-term bonds available to the market from its portfolio, and during the first six months of 1950 federal reserve holdings of restricted treasury bonds declined by \$1,400,000,000.

These sales of bonds by the system exerted some pressure on member bank reserve positions and contributed to some firming in long-term yields.

In a statement of policy issued on Aug. 18, the board of governors of the federal reserve system and the federal open market committee stated that they were "prepared to use all the means at their command to restrain further expansion of bank credit consistent with the policy of maintaining orderly conditions in the Government securities market" in view of an amount of credit expansion which was clearly excessive under existing conditions and the president's announcement in his midyear economic report that major reliance would be placed for the immediate future upon fiscal and credit measures to curb inflation.

On the same day, the board of governors approved an increase in the discount rate of the Federal Reserve Bank of New York from 1.50% to 1.75%. Discount rates were subsequently raised at all other reserve banks as well, in order to discourage borrowing by member banks of additional reserves to support further credit expansion.

Simultaneously with the federal reserve announcement and action to allow the upward pressure of interest rates in the market to express itself and to avoid supplying additional reserve funds to the market, the treasury announced a short-term refunding of about \$13,600,000,000 of securities maturing in September and October at terms somewhat less attractive than were then available on outstanding issues of comparable maturities. The system undertook to purchase freely the maturing issues involved in the treasury's refunding offering and took parallel action in making offsetting sales of other securities.

The federal open market committee continued its policy, against treasury opposition, of permitting a rise in short-term yields, narrowing the spread between long- and short-term rates and reducing the incentive to lengthen maturities, creating some uncertainty about bond prices, making short-term securities more attractive to nonbank investors, and as an inevitable concomitant making reserve funds less freely available to the banking system.

Under authority of the Defense Production Act of 1950, the board of governors reissued regulation W, controlling consumer credit, effective on Sept. 18. The regulation covered automobile instalment credits of \$5,000 and less and other instalment credits of \$2,500 and less. The limitations initially established were: down payments of at least one-third, and maximum maturities of 21 months for automobiles; down payments of at least 15% and maximum maturities of 18 months for appliances; down payments of at least 10% and 18 months maximum maturity for furniture and rugs. Later, effective Oct. 16, the regulation was substantially tightened in view of the continuing growth of bank credit as well as the unabated strength of the underlying inflationary forces.

The maximum maturity on instalment credits for automobiles was reduced to 15 months; the down payments on appliances were increased to 25% and on furniture to 15%; the maximum maturity on instalment credits for appliances and furniture was reduced to 15 months.

Effective Oct. 12, the board of governors issued regulation X, which established credit restrictions on conventional housing loans, with the concurrence of the administrator of the Housing and Home Finance agency. Companion restrictions on government-aided housing finance, on a basis conforming to those applied to other types of private credit, were announced by the administrator. The regulations called for down payments ranging from 10% in the \$5,000 and less price range to 50% at \$25,000 and more, with preference for veterans amounting in most cases to 10 percentage points. The regulations specified maximum amounts which could be borrowed, maximum maturities and minimum amortization requirements for extensions of credit on residential construction.

Effective Sept. 27, the board of governors inaugurated a program of guaranteed loans to facilitate the defense effort. Regulation V set forth the procedure and terms for such loans, whereby the federal reserve banks act as fiscal agents in connection with production loans guaranteed by the departments of the army, the navy and the air force and by other government procurement agencies.

On Dec. 29 the board of governors announced a general increase in reserve requirements on both net demand deposits and time deposits and for all classes of member banks, effective at various dates in Jan. 1951. The effect of this increase was to raise the required reserves of member banks by a total of about \$2,000,000,000. (See also BANKING; CONSUMER CREDIT.)

## Federal Security

**Agency.** Probably the most important event of 1950 for the Federal Security agency was the action of the congress in strengthening and developing the nation's social security system—the first major extension of the system since 1939. A measure signed

by the president on Aug. 28 extended coverage under old-age and survivors insurance to 10,000,000 or so more workers—principally agricultural and domestic workers and the self-employed—and increased average monthly benefits substantially. The amendments also increased grants to states for maternal and child health and child welfare programs and strengthened the public assistance program in many significant respects. Aid to dependent children was extended to include, within the maximum payment in which the federal government will share, an amount for the mother or other relative with whom the child is living. And federal aid was, for the first time, made available to the states to help provide for needy persons who are totally and permanently disabled.

New legislation in the field of education authorized federal grants for communities that have large amounts of federally owned property exempt from taxation or that are overburdened by a large increase in school attendance resulting from federal activities in the area.

In May 1950 the bureau of employees' compensation was transferred from the agency to the department of labour.

Throughout the year the work of the agency went steadily forward and many of the programs set new records of accomplishment. As of June 1950, the Social Security administration certified monthly benefits of almost \$61,000,000 under the old-age and survivors' insurance program. These benefits were paid to more than 2,700,000 persons—retired workers and their wives and dependent survivors of deceased insured workers. In the same month, payments to recipients of public assistance totalled \$197,000,000. Payments under state-federal programs went to 2,800,000 needy aged persons, 77,000 needy blind and almost 1,700,000 children in about 654,000 families; under state and local programs, 526,000 cases (approximately 1,100,000 persons) received general assistance.

ILLUSTRATION from *Love Is Not Enough* by Bruno Bettelheim, a 1950 report financed by research grant of the Federal Security agency on work in mental health at the Orthogenic school of The University of Chicago. Children and counsellors are shown in one of the dormitories of this residential institution for emotionally disturbed children

Of the \$22,000,000 available in the fiscal year for grants for maternal and child health and child welfare services, \$11,000,000 went to assist states and local communities to develop and provide health services for children and for mothers before and after childbirth; \$7,500,000 for services for crippled children; and \$3,500,000 for services for protecting and caring for homeless and neglected children and those in danger of becoming delinquent.

The office of vocational rehabilitation reported that 59,600 handicapped persons were fully rehabilitated to paying jobs under the state-federal system of vocational rehabilitation in the fiscal year 1950.

The continuing shortage of teachers and classroom facilities—particularly in the elementary schools—exerted heavy pressures on the office of education. Staff members worked with state school authorities in an effort to deal with the crisis. The primary fact-finding and advisory functions of the office were also carried forward.

The public health service continued to give technical and other assistance to state and local public health departments. It also administered federal grants totalling more than \$45,000,000 to states for general health activities, for the control of heart disease, tuberculosis, venereal disease and cancer, for mental health programs and for industrial waste studies. Under the hospital construction program the surgeon general approved federal grants totalling \$59,000,000. By June 30, 1,300 projects had been approved, 300 were in operation and 500 were under construction.

The National Institutes of Health carried on long-term research projects in various chronic and other diseases, and also administered grants and contract authorizations amounting to about \$14,000,000 to various universities and institutions, as well as to individual scientists, for special research projects.

The Food and Drug administration examined 75,680 samples of foods, drugs and cosmetics to check observances of the federal statutes and instituted 1,850 seizure, criminal and injunction actions in the federal courts for violation of the statutes. It also detained 7,375 imported products at ports of entry for failure to meet United States standards.

In August a conference on aging, sponsored by the agency, was held to explore the social and economic problems arising from the increasing proportion of older people to total U.S. population. In December the fifth decennial White House Conference on Children and Youth met to study problems of personal development.

Following the Korean crisis, all units of the agency began intensive studies of the relation of their programs to the requirements of national defense. (See also DRUG ADMINISTRATION, U.S.; PUBLIC HEALTH SERVICES; SOCIAL SECURITY; VOCATIONAL REHABILITATION, OFFICE OF.) (O. R. E.)

## Federal Trade Commission.

During 1950, the Federal Trade commission issued 106 formal complaints and 115 orders to cease and desist from violations of law. It approved 137 stipulations to discontinue unlawful practices and promulgated trade practice rules for 13 industries. Its staff made inspections of the labelling practices of thousands of wool products of manufacturers and dealers throughout the United States. Investigation of a carbon black export association was completed and recommendations were issued for the readjustment of its business to conform with the Export Trade act.

The commission completed a survey of the principal state laws regulating the insurance business.

The commission approved three reports presenting the results of such investigations. In "The Divergence between Plant and Company Concentration," the commission reported that there are

different patterns of economic concentration which suggest different types of public policy in dealing with them. It advised Congress, in a report on "Interlocking Directorates," that competition is threatened by interlocking relationships among directors of the 1,000 largest manufacturing corporations and by the interlocking relationships between these corporations and about 330 nonmanufacturing firms. A report on "International Cartels in the Alkali Industry" discussed the nature, extent and effect of international cartel agreements concerning baking soda, soda ash and caustic soda. The commission continued to report quarterly on the operating results of manufacturing corporations and published a comparison of profit rates before and after World War II in 25 selected manufacturing industries.

The year 1950 was marked by major changes in organization and procedures. In a reorganization reflecting Hoover commission recommendations, administrative management of the commission was vested in the chairman, former U.S. Sen. James M. Mead of New York, who was appointed by the president. A reorganization of the commission's internal structure to integrate its work by major purposes was completed.

In a program designed to expedite disposition of formal cases, the commission authorized its trial examiners to make "initial decisions" in the cases they hear. The effect was to make trial examiners an initial trial court from whose decisions appeals may be taken to the commission.

The year also brought several significant legislative developments. Congress amended the Clayton act to authorize the commission to stop corporate mergers through asset acquisition when the effect might be substantial lessening of competition or a tendency toward monopoly. The Defense Production act assigned to the commission, in conjunction with the attorney general, important functions designed to prevent, as far as possible, any impairment of the competitive system as a result of U.S. defense mobilization.

The penalty provision for violation of final commission orders was strengthened by amendment of the Federal Trade Commission act.

Members of the commission in 1950, besides Chairman Mead, were William A. Ayres of Kansas; Lowell B. Mason of Illinois; John Carson of Michigan; and Stephen J. Spingarn of New York. (J. M. Md.)

**Federated Malay States:** *see* MALAYA (FEDERATION OF) AND SINGAPORE.

**Fencing.** At the National Championships held in New York city June 9 to June 16, 1950, Norman Lewis of the Salle Santelli, New York, became the second American to win three successive national épée championships since Charles Tatham accomplished this feat in 1901, 1902 and 1903. Silvio Giolito of the New York Athletic club won his first foil individual championship, and the sabre title went to Tibor Nyilas of the Salle Santelli.

In the women's foil individual championship Janice Lee Yorke of the Faulkner School of Fencing of Los Angeles, Calif., defeated her teammate Polly Craus, the defending champion.

The New York Athletic club won the sabre team championship, while the Salle Santelli retained the épée team and three-weapon team titles, and the Fencers club of New York retained its Foil team championship.

The Faulkner School of Fencing of Los Angeles continued to dominate the women's field by taking the foil team title for the third straight time.

The Pacific coast championships were held in Los Angeles. Salvatore Giambra of the Olympic club of San Francisco won both the foil and sabre titles, and Gerard Biagini, also of the

Olympic club, won the épée title. Mrs. Muriel Bower of the Los Angeles Athletic club took the women's title. The foil team championship went to the Olympic club of San Francisco, the épée team and the women's team titles to the Faulkner School of Fencing of Los Angeles and the Los Angeles Athletic club won the sabre team championship.

In the midwest championships held at Columbus, O., May 20 and 21, Byron Krieger of Michigan again won both the foil and sabre titles, Donald Thompson of Illinois became the épée champion, and Paula Sweeney of Michigan, the almost perennial women's champion, was again successful.

The newly organized southwest section held its first championship at Galveston, Tex., on May 13 and 14. The foil championship was won by John Baird, the épée title by Walter T. Brown and the sabre by John Baird. All three were from Galveston. Betty Jean Fox of Houston captured the women's championship. The Buccaneers of Galveston won the foil and épée team championships, Rice institute won the sabre team and St. Joseph hospital of Houston won the women's team championship.

Fencing in intercollegiate circles was climaxed by the Intercollegiate Fencing association championship held in New York city March 17 and 18. Navy and New York university tied for the team honours in both foil and épée. Army took the sabre team championship and N.Y.U. the three-weapon trophy. Joseph Vera of Harvard won the individual foil, Thomas Stuart of Navy won the individual épée championship and Alex Treves of Rutgers defeated Hamilton Millard of Cornell in a fence-off for the individual sabre championship.

Intercollegiate fencing continued with the National Collegiate Athletic association championship in Detroit, Mich., on March 24 and 25. Robert Nielsen of Columbia won the foil title. Stuart of Navy took the épée championship, repeating the victory he had won in the Intercollegiate Fencing association match, and Alex Treves of Rutgers also duplicated his I.F.A. victory in the sabre.

(W. A. Dw.)

**Fertilizers.** The Food and Agriculture organization of the United Nations made a world-wide survey and report on fertilizers in 1950. No data were obtainable for the U.S.S.R., and the following figures and discussions do not include that country. The following tables from that report give figures by continents for the production and consumption of the three primary plant foods—nitrogen (N), phosphoric acid ( $P_2O_5$ ) and potash ( $K_2O$ ).

Table I.—Fertilizer Production and Consumption

(In terms of total plant nutrients; thousands of metric tons of N,  $P_2O_5$  and  $K_2O$ )

Continent	Production			Consumption		
	1948-49	1949-50*	1950-51†	1948-49	1949-50*	1950-51†
Europe . . . . .	6,193	7,078	7,790	5,791	6,418	7,124
North and Central America . . . . .	4,105	4,061	4,036	3,868	3,828	3,962

\*Preliminary. †Outlook. ‡Total may differ from sums because of rounding.

There was expected to be a reasonable world balance for the 1950-51 year. There would be some surplus production in Europe; North and Central America would be about in balance; the surplus production apparent in South America would be from Chilean nitrate of soda production; shortages were expected for Asia, Africa and Oceania.

International allocation of nitrogen was discontinued June 30, 1949, supplies having so nearly caught up with demand that allocation was no longer deemed necessary. The outlook for 1950-51 as to foreign trade in nitrogen is shown in Table III.

Table II.—World Nitrogen Production and Consumption

Total‡ . . . . .	5,130	5,631	5,053	5,648

\*Excluding ground rock phosphate. †Outlook. ‡Total may differ from sums because of rounding.

From 65% to 75% of the phosphoric acid used was in the form of normal superphosphate (16%–20%  $P_2O_5$ ). Most of the remainder was in the form of concentrated superphosphate (45%–48%  $P_2O_5$ ). Most superphosphates are produced by treating phosphate rock with sulphuric acid which in turn is usually made by burning sulphur. The United States produces about 90% of the world's sulphur. In 1950 known reserves were sufficient for about 20 years at existing rates of output. Consumption was exceeding production and above-ground stock piles were being depleted. (See also SULPHUR.)

Known world deposits of phosphate rock were sufficient for thousands of years.

In Table V is shown the production and consumption of potash, by continent, for 1948-49 and 1949-50.

Table V.—Production and Consumption of Potash

(In thousands of metric tons of  $K_2O$ )

Continent	Production		Consumption	
	1948-49	1949-50	1948-49	1949-50

Oceania . . . . .	1	1	8	17
Total . . . . .	3,257	3,719	3,281	3,603

In the United States consumption of fertilizers and fertilizer materials containing nitrogen, available phosphoric acid and potash in 1950 was estimated at approximately 16,000,000 tons, or slightly less than in 1949. Preliminary estimates for 1951 indicated that there would be obtainable from 10% to 15% more nitrogen and from 10% to 15% more potash than was used in 1950, providing there were no serious labour or transportation difficulties or emergency restrictions. Because of the sulphur shortage a reduction of 10% or more was indicated in the supply of superphosphate, which furnishes available phosphoric acid. (See also AGRICULTURE; TENNESSEE VALLEY AUTHORITY.)

**Finland.** An independent republic of northern Europe, Finland has an area of 130,159 sq.mi., including the Åland Islands. Pop. (census 1940) 3,695,617; (mid-1949 est.) 4,015,000. Capital: Helsinki (pop. Jan. 1, 1947, tax list figures) 358,195. Other principal cities: Turku (Åbo) 93,735; Tampere 93,665. Language and nationality: 90% Finnish, about 10% Swedish. Religion: Lutheran Christian. President 1950: Juho K. Paasikivi (re-elected for six-year term from March 1); prime minister: Karl August Fagerholm to March 1; after March 17, Urho K. Kekkonen.

The Åland Islands, a Swedish-populated archipelago belonging to Finland, lie to the southwest at the mouth of the Gulf of Bothnia. Area: 581 sq.mi. Pop. (tax list, Jan. 1, 1947) 22,787. Chief town: Mariehamn, pop. 3,239.

**History.**—The Tass news agency in Moscow announced on New Year's day 1950 that Foreign Minister Andrei A. Gromyko had accused the Finns of violating their treaties with the U.S.S.R. of 1944, 1947 and 1948. The issue involved about 300 "soviet war criminals" whom the Finns were supposed to hand over to the soviets but who were being hidden or allowed to escape under officially faked names and documents, according to the Russians. In succeeding weeks of careful investigation the list of 300 was reduced to a handful: some of the names were duplicates, some had long ago fled the country, some had been delivered, some were Finnish citizens. The charges were made obviously to frighten the Finns, and to hold them in line, and the attack came immediately before the presidential elections in Finland.

But the Finns were not easily frightened. The government continued to follow a vigorously correct policy. The electoral campaign proceeded without serious incident, and on Jan. 16-17 a clear majority of pro-Paasikivi electors was chosen. When the electors cast their ballots on Feb. 15 the 79-year-old president received 171 of the 300 votes, while Mauno Pekkala (the Communist candidate) got 67 and Urho Kekkonen got 62. Paasikivi, president since 1946, thus took office on March 1 for a new term of six years.

The Social Democratic ministry of Karl August Fagerholm resigned according to custom at the beginning of the new presidential term, and it took more than two weeks to form a new cabinet. Even then it proved impossible to obtain a majority government. The Social Democrats had had only 54 delegates out of the 200 in parliament. Urho Kekkonen at last built a coalition under his own Agrarian party leadership. He had wanted to include three Communists, but the parties would not accept this plan. The coalition formed represented the 56 Agrarians, 14 Swedish Peoples party and 5 Liberals. The 75 votes behind the cabinet were expected to be backed also by the 33 Conservatives.

A month after the new ministry took office negotiations began with the U.S.S.R. for a trade treaty. On June 13 Kekkonen signed the agreement in Moscow. The Finns yielded to the Russian demand for a five-year term, while for themselves they gained assurance that the soviet union would buy products which formerly the Finns had manufactured for reparations account, and for which they had made a heavy investment in factories. Thus the

agreement continued rather than changed the existing flow of commerce. Prices were to be determined annually at current world levels.

The Finnish markka suffered further in 1950 on top of the two devaluations of 1949. First came a special devaluation (Feb. 16) in relation to the rouble and east European currencies in general. Toward the end of the year strong pressure developed for another general devaluation for the purpose of correcting Finnish prices on the world market, and reflecting more accurately the markka's real purchasing power.

Wage demands did not wait for devaluation. In January a general increase of 7.5% was forced from the government. Early in May, however, a general strike again loomed on the question of wages and the cost of living; at the last moment Fagerholm as special mediator stopped the strike with an agreement for a 15% wage increase prior to a new pegging of wages to the price index. The government tried desperately to achieve stabilization, and on July 29 decreed a stop to price changes. But success was incomplete.

On Aug. 28 the metal workers began a long strike, which threatened to widen out into a general strike, called for Oct. 23. Only at the last moment did the workers decide not to carry through, and to accept only minor wage gains.

The Kekkonen government survived the crisis, at least temporarily. The Communist agitation was defeated, likewise for the moment.

The Åland Islands question arose because of a redrafting of the statute of 1922. The autonomy of the islands was to be preserved in any case, but the islanders insisted that the League of Nations guarantees of that autonomy be written into the statute. The Russians said that such guarantees no longer had validity, and must be dropped. The Swedes reminded the Finns that the original promises to the Åland people were pledged in a treaty between Finland and Sweden, in 1921, a treaty which also pledged demilitarization of the islands. Both items were still legally binding, said Sweden.

The Finns did not include mention of the League of Nations in the revised statute, but the other guarantees were not questioned.

**Education.**—Schools (1948): elementary 6,050, pupils 481,392; secondary 318, pupils 87,740, teachers 5,147; teachers' training 9, students 1,536, teachers 116; for adults 75, students 4,245, teachers 634; technical 459, pupils 26,121; universities (1949) 3, students 10,400, professors and lecturers 601; institutions of higher education 5, students 3,379, professors and lecturers 367.

**Finance and Banking.**—Budget: (1949) revenue 125,981,000,000 markkaa, expenditure 132,827,000,000 markkaa; (1950 est.) revenue 104,463,000,000 markkaa, expenditure 104,379,000,000 markkaa. National debt (July 1950) 137,369,000,000 markkaa. Currency circulation (Sept. 1950) 34,500,000,000 markkaa. Gold and foreign exchange (Aug. 1950) U.S. \$66,000,000. Bank deposits (Sept. 1950) 30,000,000,000 markkaa. Monetary unit: markka with an exchange rate of 231 markkaa to the U.S. dollar.

**Foreign Trade.**—Imports (1949) 66,278,000,000 markkaa, exports 65,606,000,000 markkaa, excluding reparations of 12,226,000,000 markkaa.

**Transport and Communications.**—Roads (1947) 36,641 mi. Licensed motor vehicles (Dec. 1949): cars 13,570; commercial 32,261. Railways (1949): 3,533 mi.; passenger journeys 43,000,000; freight net ton-miles 1,872,000,000. Shipping (July 1949): number of merchant vessels of 100 gross tons and more 319; total tonnage 493,970. Air transport (1949): passenger-miles 13,900,000; cargo net ton-miles 280,000. Telephones (1949) 302,104. Radio receiving set licences (1949) 662,000.

**Agriculture.**—Main crops (metric tons, 1949): wheat 324,000; barley 181,000; oats 725,000; rye 219,000; potatoes 1,047,000; sugar, raw value, 23,000; hemp and flax fibre 4,000. Livestock (March 1949): cattle 1,538,000; sheep 1,067,000; pigs 409,000; horses 402,000. Fisheries: total catch (1949) 65,700 metric tons.

**Industry.**—Industrial establishments (1947): 5,999; persons employed 249,936. Electricity production (1949) 3,480,000,000 kw.hr. Raw materials: steel, rolled (metric tons, 1949) 90,000; steel castings (metric tons, nine months, 1949) 7,500; copper (metric tons, 1949) 20,640. Forest products (1949): sawed goods 850,000 standards; cellulose 1,015,000 metric tons; mechanical pulp 146,000 metric tons; newsprint 382,000 metric tons; other paper 183,000 metric tons; boards and cardboards 104,000 metric tons; plywood 231,000 cu.m.

**Finletter, Thomas Knight** (1893— ), U.S. secretary of the air force, was born on Nov. 11 in Philadelphia, Pa. He studied at the University of Pennsylvania, where he received his bachelor's degree in 1915 and law degree in 1920, and practised law in New York city from 1920 to 1941.

From 1941 to 1944 Finletter served as an adviser to the state department on international economic affairs. He again came into public service in July 1947, when Pres. Harry S. Truman appointed him chairman of a five-man air policy commission to study aerial defense needs. The commission's report, "Survival in the Air Age," recommended a 70-group air force. In 1948 and 1949 Finletter served as chief of the European Co-operation administration mission to England. President Truman selected him to succeed W. Stuart Symington as air force secretary in April 1950.

**Fires and Fire Losses.** Losses by fire in the United States were 3.1% higher in 1950 than in 1949. The total was \$688,460,000, according to the National Board of Fire Underwriters, based on reports by member companies with allowance for uninsured and unreported losses. This amount was \$22,654,000 below the all-time high in 1948. Only the months of February, August and September showed losses below the corresponding months in 1949, and March produced the largest volume of loss, as it had for several years.

The outstanding fire loss of 1950 occurred May 19 from the explosion in South Amboy, N.J., and the resultant fires in South Amboy and Perth Amboy. Approximately 10,000 properties suffered damage exceeding \$10,000,000.

Aggregate fire losses in the United States had shown a constant upward trend since 1942, except for a slight drop in 1949. Even in that year the destruction amounted to \$667,536,000. Part of the loss increase might be accounted for by the increase in labour and material costs which affected all structures and their contents. Sound value, which is replacement cost less depreciation, had increased more rapidly than the percentage in-

crease in fire losses. (See also DISASTERS; FORESTS.)

**Fish and Wildlife Service:** see FISHERIES; WILDLIFE CONSERVATION.

**Fisheries.** The world catch of fish during 1950 was estimated to have exceeded 40,000,000,000 lb. Expansion of the fisheries continued in many areas throughout the world. In the Union of South Africa, an estimated 140,000 tons of pilchard and maasbankers were sent to reduction plants that virtually did not exist four years earlier. In Iceland, a number of large trawlers engaged for the first time in fishing for rosefish for use in the manufacture of fish meal and oil. Catches of approximately 1,000,000 lb. were made by several vessels in trips lasting only seven to ten days. Studies of the tremendous number of rosefish fry found in the waters of the North Atlantic led investigators to believe that this species is far more abundant than the better known cod and herring. While the rosefish had become the leading food fish taken by United States fishermen on the Atlantic coast, the European catch of this fish was still relatively unimportant.

The Mexican shrimp fishery continued to expand. New shrimp freezers were built, a large number of fishing craft were added to the fleet, a shrimp cannery was constructed and increased use was made of aeroplanes to fly shrimp to markets in the United States.

In May, Gen. Douglas MacArthur authorized mother-ship type tuna operations by the Japanese in waters which include the area in the United States trust territory around the Caroline Islands, the Marianas and the Marshall Islands. Two fleets of vessels operated in the equatorial tuna fishery in 1950. Both were highly successful. In Australia, rapid strides were made in developing a tuna fishery, and there was continued expansion of lobster fishery.

It was expected that the total 1950 Norwegian fish catch, consisting principally of herring and cod, would reach a new record of 2,785,000,000 lb.

Iceland suffered another of a series of disastrously poor herring seasons. Since most of the catch is used to produce salted

FLAMES ROARING through the psychiatric ward of Mercy hospital in Davenport, Ia., Jan. 7, 1950. Forty-one women, nearly all of whom were patients, died in the blaze

herring and herring meal and oil for export, the failure of the fish to appear in normal quantities seriously affected the economy of the country. During 1950, Russian fishermen, operating off Iceland, found herring considerably north of the grounds on which they were normally taken. Available information indicated that the Russian catch was the largest of any of the six nations participating in the fishery.

**Technical Improvements and Research.**—Increased use was made during 1950 of echo sounding equipment to locate and even to determine the species of fish swimming below the surface. It was found possible to study the behaviour of trawlnets operating on the bottom of the sea through the use of echo sounders. A German inventor designed a new fillet machine which, it was claimed, would permit four persons to fillet from 1,200 to 1,800 fish per hour. Both German and Russian inventors claimed to have developed methods for electrically catching fish without the use of nets.

Norwegian chemists reported development of a satisfactory method of producing albumin from fish and fish waste which does not retain the odour of fish. A Danish inventor perfected a floating trawl for use in taking fish at various depths between the bottom and the surface. In the United States, the packing of solid pack tuna was rapidly being taken over by specially designed canning machinery. The use of nylon nets continued to increase; it was demonstrated that, under certain conditions, nets made of this material were many times more effective than nets of cotton or linen.

Evidence of the increased interest of maritime nations in studying and developing the fishery resources available to their fishermen was shown by the number of large fishery research vessels built or converted for this purpose since World War II. The newest of these craft included the Union of South Africa's 200-ft. "Africana II," the United Kingdom's 175-ft. "Ernest Holt," Norway's 170-ft. "G. O. Sars," Denmark's 95-ft. "Jens Vaever," Iceland's 100-ft. "Maria Julia" and the United States 93-ft. "John N. Cobb." These craft, as well as most of an additional 27 research vessels known to have been outfitted for fishery research since 1945, were equipped with the most modern devices to facilitate the study of the ocean and its life.

Early in 1950, the Food and Agriculture organization of the United Nations began publication of a companion periodical to its *Fisheries Bulletin* entitled *World Fisheries Abstracts*. The publication, printed bimonthly in English, French and Spanish editions, is for the purpose of assisting persons engaged in the fishing industry, or in fisheries research, to keep informed of the latest developments in the fields of fisheries technology. (See also MARINE BIOLOGY; OCEANOGRAPHY.)

**Jurisdiction.**—The question of the jurisdiction of nations over the fisheries off their coasts continued to receive the attention of many governments during the year. In the North sea, the Baltic and the Gulf of Mexico and in other areas, foreign vessels were seized for fishing within waters claimed to lie within territorial limits of the nations off whose coast they were operating. However, despite the great interest in the problem, the scope of territorial waters was still far from settlement. Denmark and Great Britain, for example, claimed jurisdiction out to 3 mi. off the coast, Norway and Sweden to 4 mi. and Russia to 12 mi.

Other nations claimed jurisdiction out to the edge of the continental shelf and others all waters within a line 200 mi. off and parallel to the coast.

**International Fishery Conferences.**—The Indo-Pacific Fisheries council held its second annual meeting in Cronulla, Austr., in April. As a result of the meeting, arrangements were made for co-ordinating the work of the Pacific tuna investigations and for furthering the expansion of fish culture in the Indo-Pacific

region.

The International Whaling commission held its second annual meeting in Oslo, Nor., in July, where problems of whaling regulation and research were considered. Certain amendments to its schedule of regulations were approved and recommendations were issued designed to increase the amount of scientific research being conducted on whales.

The Inter-American Tropical Tuna commission, which was established in March 1950 by Costa Rica and the United States for the scientific investigation of the yellowfin and skipjack tuna and bait fishes in the eastern Pacific ocean, held its first meeting at Coronado, Calif. in July. Temporary headquarters were established at Los Angeles, Calif., a general program was adopted and arrangements were made to select a director of investigations.

The Gulf and Caribbean Fishery institute held its third annual session at Miami Beach, Fla. in November. Scientists, administrators, fish processors, fish dealers and fishermen presented papers and discussed problems dealing with biological and technological research, economies of the fisheries, gear development, exploratory fishing and related subjects.

The International Council for the Exploration of the Sea held its 38th annual meeting in Copenhagen, Den., in October.

**The United States Industry.**—The catch by United States fishermen in 1950 was somewhat larger than in the previous year, and was expected to total nearly 5,000,000,000 lb., making it the largest catch in history. The catch was made by about 165,000 fishermen, operating 10,000 vessels of five net tons and over, 45,000 motorboats and 35,000 other craft. Menhaden continued to be the principal species taken with respect to volume, with landings of about 900,000,000 lb. This was less than the record 1949 catch of these fish, which amounted to 1,073,000,000 lb. The California pilchard, which had held first place for many years until the disastrous decline following the 1945 season, yielded an estimated catch of about 700,000,000 lb., two and one-half times the low 1947 production, but still far below the 1935-39 average of 1,232,000,000 lb. The pack of canned pilchards, which are normally canned as "California sardines," was expected to reach about 5,000,000 cases, possibly a new record.

Landings of tuna and tunalike fishes and the canned pack of these fish broke all previous records. The pack of canned tuna and tunalike fishes produced from fish caught by United States fishermen, and imported frozen fish received principally from Central and South America and Japan, was expected to reach about 9,000,000 cases compared with 7,290,000 cases in 1949. The 1950 pack was the sixth successive record pack. In addition to the large domestic tuna pack, imports of canned tuna and tunalike fishes were expected to reach about 1,500,000 cases compared with less than 600,000 cases in 1949. While the market for canned tuna in the United States had increased phenomenally in recent years, it was unable to absorb the large 1950 pack and imports. Late in the year, California tuna canners notified fishermen that it would be necessary to suspend fishing until stocks were reduced.

The United States and Alaskan salmon pack, which totalled only 3,900,000 cases in 1950, was the smallest since 1921, when economic conditions prevented normal cannery operations. The small pack resulted from reduced runs of pink\*salmon in central and southeastern Alaska, the normal absence of these fish from Puget sound in even-numbered years, and the unexpected failure of the run of Fraser river sockeye salmon.

The Maine sardine industry had a good season and a pack of about 4,000,000 cases was canned. This was about 1,000,000 cases more than the previous year's production and was the largest pack in history. Rosefish continued to hold first place in the catch of food fish on the Atlantic coast; however, largely as a result of a two-month wage dispute between plant operators and

seafood workers at Gloucester, Mass., the catch was estimated to have totalled only 210,000,000 lb. compared with 237,000,000 lb in the previous year.

The Atlantic mackerel fishery continued at a low ebb, and the catch was even less than the small 1949 production. However, late in the year, unusually large quantities of these fish were found off New Jersey and fishermen made large catches for winter months.

Continued expansion of the shrimp fishery off the lower Texas coast, the discovery of important shrimp beds off Key West, Fla., and large catches of these crustaceans in the normally productive central Gulf of Mexico area resulted in a record shrimp catch in 1950.

The California catch of jack mackerel, which is used principally for canning, amounted to 108,000,000 lb. in the first ten months of the year compared with 33,000,000 lb. in the same period in 1949. In Alaska, the catch of herring totalled about 175,000,000 lb. compared with less than 40,000,000 lb. in the previous year. In 1949, many of the herring reduction plants failed to operate because of the low price for fish oils, which had declined from a peak of 24 cents per pound in 1948 to only 5 cents per pound in 1950.

The important shark fisheries developed in the past 20 years as sources of natural vitamin A were forced to cease operations under the impact of low cost synthetic vitamin A and large imports of cheap livers and liver oils. Fish-meal manufacturers were forced to compete with the new vitamin B<sub>12</sub> animal feed supplement derived from the manufacture of antibiotic products.

A total of 60,090 fur sealskins were taken on the Pribilof Islands during 1950 under the supervision of the United States government. This was 10,801 less than in the previous year. At public auction in St. Louis, Mo., in April and October, 55,497 dressed and dyed skins were sold for \$4,367,049—an average of \$78.69 per skin. This was \$20.55 per skin above the price received in 1949.

Late in 1950, a Defense Fisheries administration was established in the fish and wildlife service, of the department of the interior, to carry out the functions concerning the fishing industry vested in the secretary of the interior under the Defense Production act of 1950. The Defense Fisheries administration was given responsibility for encouraging production of fishery commodities to fulfil requirements for military, essential civilian and foreign needs. Activities in which the administration would operate included certain priority, allocation, claimant, requisitioning and other functions as related to fish production. Essentially the same activities were handled by the co-ordinator of fisheries during World War II. (See also CANNING INDUSTRY.) (E. A. PR.)

**Canada.**—On March 24, 1950, Canada signed a convention with the United States allowing reciprocal port privileges for halibut vessels, and on June 1 parliament approved the International Northwest Atlantic Fisheries convention for the development and protection of the fisheries resources of that area.

The federal government called a dominion-provincial conference on April 24 on the new fish inspection act, out of which came a joint federal-provincial working committee to unify government operations in the protection, inspection and development of fisheries. The federal fisheries department revamped its east coast administrative machinery, with the formal establishment of a conservation and development service, and an inspection and consumer service. Whitefish inspection was stepped up, and the Great Slave lake fisheries were more closely supervised to assure their perpetuation.

Canadian members of the Pacific International Salmon Fisheries commission urged extension of Canadian territorial waters to 100 mi. out to sea, instead of 3 mi., to provide greater control of offshore fishing. Reports that European trawlers were damaging

FISHERY WORKERS preparing shrimp for shipment in Key West, Fla., where the shrimp industry enjoyed a sudden expansion in 1950. Rich new fishing beds were being tapped by setting nets down at night to catch a type of jumbo shrimp which buries itself by day and feeds at night

Canadian trawlers' gear off the Grand Banks brought the Canadian government vessel "Cygnus" to the area to investigate.

After five years of research, scientists discovered surface-floating goldeye eggs in Lake Claire, Alta., which gave the first clue to the spawning habits of that threatened species. Canadian caviar was successfully produced in northern Saskatchewan. By cultivating suckers, Ontario fish scientists were able to increase food supplies of hatchery maskinonge and thus step up the number of maskinonge fingerlings for game-fish distribution.

FILMS OF 1950.—*It's the Maine Sardine* (U.S. Fish and Wildlife Service, Dept. of the Interior); *Salmon Story*, (Encyclopædia Britannica Films Inc.); *Story of Tuna* (Association Films, Inc.). (C. Cy.)

**Fishing:** see ANGLING.

**Flax:** see LINEN AND FLAX.

**Floods and Flood Control.** The U.S. flood control act, approved Sept. 6, 1950, provided \$421,627,150 for flood control work during the fiscal year ending June 30, 1951. The funds were classified as follows: flood control general, \$355,060,250; emergency fund, \$2,700,000; lower Mississippi river, \$61,400,400; Sacramento river, \$2,016,500; Mississippi river emergency fund, \$450,000. Of the flood control general fund \$337,494,750 was specified for new construction; \$2,900,000 for advance planning; and \$5,350,000 for preliminary examinations, surveys and contingencies. Exclusive of the lower Mississippi river and the Sacramento river, flood control construction was continued or begun on 101 projects in 33 states. The \$61,400,400 funds allotted the lower Mississippi river project were designated for work in seven states: Kentucky, Illinois, Tennessee, Louisiana, Missouri, Arkansas and Mississippi.

Congress also passed a supplemental appropriation act, providing \$2,900,000 for the flood control project at Albeni Falls, Ida., and a \$6,000,000 emergency fund.

RED RIVER FLOODWATERS coursing through a residential section of Winnipeg, Man., late in May 1950, when 17% of the city was under water

At the end of June 1950, approximately 290 flood control projects were in operation; 34 were new projects placed in operation. Reservoirs placed in operation during the fiscal year included the Cherry Creek reservoir, Colo.; Allatoona reservoir, Ga.; Lac qui Parle reservoir, Minn.; Edward MacDowell reservoir, N.H.; East Sidney reservoir, N.Y.; and the Heyburn reservoir, Okla. Major local protection projects placed in operation during the fiscal year included the projects at Riverdale, Mass.; Harrisonville and Ivy Landing, Drainage and Levee District No. 2, Ill.; Elkport, Ia.; Lacey Langellier, West Matanzos and Kerton Valley Drainage and Levee district, Ill.; Coal Creek Drainage and Levee district, Ill.; and Syracuse, N.Y.

Channel improvement of the Mississippi river proper was continued during 1950 at a number of places below Cairo, Ill. Additional levee construction authorized by congress brought the total system to about 3,000 mi. of levees. Completed levee construction totalled approximately 1,600 mi. of main-stem levees, extending from near Head of Passes, La., to Rock Island, Ill. Co-ordinated with the main-stem levees were 1,400 mi. of tributary levees, about 50% complete in 1950. Below Cairo work continued on river bank protection.

Revetment in place totalled approximately 200 mi. of river bank.

Damaging floods occurred on the Wabash river and lower Ohio river basin in Jan. and Feb. 1950, flooding approximately 3,000,-

000 ac. of agricultural land, and causing a total damage of approximately \$19,000,000.

A series of storms beginning in the lower Mississippi river basin in early January and continuing at intervals of from one to three days in various sections until the middle of Feb. 1950 caused flooding on the lower Mississippi river and its tributaries, the Red, Ouachita, Atchafalaya basins in Louisiana, and the Yazoo river in Mississippi. The flood was one of the greatest of record, with water at Cairo reaching the third highest stage of record, and at New Orleans the highest level since 1927. Principal damage resulted from evacuation of 16,500 people from the Birds point-New Madrid floodway from southeastern Missouri and minor levee breaks in the Red-Ouachita, Louisiana break-water areas. An estimated 1,470,000 ac. were flooded, with a total damage of \$17,159,000. Flood control works in existence prevented approximately \$700,000,000 damage.

In April and May 1950, the Red river of the north, in Minnesota and North Dakota, exceeded all previous flood records for this basin; five lives were lost, 1,127,000 ac. were flooded and total damage was \$32,670,000.

The unusual rapid melting of heavy snows on the upper James river basin in North Dakota forced 2,500 people from their homes, inundated approximately 50 city blocks in Jamestown, N.D., washed out 79 highway crossings and 1 railroad and caused a total loss of \$1,580,000. Passing down stream, the same flood caused approximately \$1,000,000 damage in South Dakota.

In April and May 1950, rapid snow melting and rainfall caused the Missouri river and its tributaries to flood, inundating approximately 250,000 ac. between Mobridge, S.D., and Leavenworth, Kan. The crest of the flood at Rulo, Neb., on April 30 set a new record of 21.6 ft. Total damage for the basin was \$19,776,000, with 572,000 ac. flooded, 23 towns flooded, 5,704 people evacuated and 1 life lost.

On May 9, 1950, a flash flood caused by 12 in. of rain in less than 4 hours in the Salt creek basin in Nebraska took a total of 22 lives and did \$9,000,000 property damage.

Damaging flash floods caused by intense rain occurred in West Virginia on June 25-26, 1950; 33 lives were lost and property damage totalled approximately \$5,000,000.

In Nov. 1950, warm, heavy rains softened the snow cap on the Sierra mountains between California and Nevada, causing the river valleys to flood. The Truckee river caused \$3,000,000 damages in Reno, Nev., and an additional \$3,000,000 to agricultural lands. In California, from the Yuba river in the north to the Kern river in the south, water flooded agricultural lands. At Marysville, Calif., 6,000 people were driven from their homes. The American river drove 500 families from their homes in Sacramento. Near Laton 1,000 people were made homeless and turkeys valued at \$100,000 were drowned. Total damage was largest in California's history; 9 lives were lost, 325,000 ac. were flooded and property damage was estimated at \$19,000,000. (G. HB.)

**Great Britain.**—There were no serious or prolonged floods in Great Britain during 1950. Further progress was made in the execution of control work previously planned: in particular, the River Great Ouse Catchment board installed an additional pump unit at the St. Germans pumping station which would make this station's output larger than any in the country, by draining an area of 178,000 ac. At Nottingham more than one-fifth of the protection scheme on either side of Trent lane was completed during the year; the cost, part of the River Trent Catchment board's five-year program amounting to £1,832,000, was estimated at £520,000.

**Coast Erosion and Protection.**—Considerable progress was made on sea defense works, largely as a consequence of the Coast Protection act, 1949. A scheme for a sea wall and groynes to protect the 70-ft. limestone cliffs near Seaham, County Durham,

estimated to cost £140,000, was submitted for the approval of the ministry of health. In Norfolk work was in progress at Sheringham, Cromer and Caister, comprising steel sheet piling and a concrete apron and toe to protect the existing sea walls.

New works were carried out at Herne bay and Whitstable in Kent, and a scheme was prepared for stabilizing a further length of cliff east of Herne bay, at an estimated cost of more than £300,000. Work was also being done at St. Margaret's bay and Folkestone.

The strengthening of the sea wall was continued at Seaford, Sus., and a scheme was prepared (cost estimated at more than £1,000,000) for the protection of Selsey, where the coastline had been eroded in places at the rate of 20 ft. a year. At Llandudno sea defense works (estimated cost £123,000) were begun on the west shore to repair 3,000 ft. of defenses that had been seriously damaged in severe storms during the past two years. The operations to protect the central part of the town and to rehabilitate the harbour works at Aberystwyth were completed at a cost of £80,000.

**Australia.**—For the second year in succession central Australia suffered severe floods. The Cooper creek near Lake Eyre was extended to a width of 2-3 mi., reached a depth of 25-30 ft. and flowed at a rate of 8-10 m.p.h. In Queensland many sheep were lost, and food had to be dropped from aircraft to graziers and flood-bound townspeople. Millions of pounds' worth of damage was done in many parts of New South Wales after torrential rains accompanied by a 90-m.p.h. cyclone caused the worst floods experienced in 50 years: a coastal strip 200 mi. long and 60 mi. wide, comprising rich dairy, banana and tomato country, became a series of lakes.

**Canada.**—After serious flooding in North Dakota, the Red river began on April 19 to rise to a dangerous level north of the U.S.-Canadian border and within six days reached a height of more than 44 ft. at Emerson on the frontier, 60 mi. south of Winnipeg. By May 7 there were expanses of water 14 mi. wide in some places; and on May 19, when the flood was at its height, it was estimated that 600 sq.mi. were under water. All towns and villages in the river valley south of Winnipeg were evacuated, and many inhabitants of isolated farms were rescued by the royal Canadian mounted police. An appeal was made on May 10 that as many women and children as possible should leave Winnipeg, whose population had been greatly increased by the influx of 40,000 refugees from the flooded rural areas; and about 110,000 people, out of a normal population of 350,000, left during the succeeding week.

The maximum depth reached at Winnipeg was 30.3 ft. The damage was estimated at about \$26,000,000, and nearly 10,000 houses in Winnipeg were affected.

**India and Pakistan.**—Flooding of the Kosi river and its tributaries was caused by heavy rain in August, and resulted in a major catastrophe in northeastern Bihar, India. Devastation affected more than 400 villages and involved 70% of the corn crop. The Bhagalpur division, embracing the flat country north of the Ganges, also suffered heavily. About 4,000 sq.mi. in the west Punjab, including several thousand villages, were flooded; road and rail links between Karachi and northern Pakistan were cut, and many other towns were isolated. The damage was estimated at approximately £35,000,000.

**Japan.**—Serious floods occurred in Japan as a result of breaks in the embankment of the Kokai river on the border of the Chiba and Ibaraki prefectures: 6,500 houses were damaged and 40,000 people rendered homeless; the flood waters extended over a width of nearly 2½ mi. (See also DAMS; DISASTERS; IRRIGATION; METEOROLOGY; SOIL EROSION AND SOIL CONSERVATION; TENNESSEE VALLEY AUTHORITY.)

FILMS OF 1950.—*Ohio River—Lower Valley*; *Ohio River—Upper Valley* (Academy Films). (J. KD.)

**Florida.** The extreme southeastern state of the United States, Florida, the 27th state, was admitted into the union in 1845. It is called the "Sunshine state" because of its sunshine, and the "Peninsula state" because of its peculiar outline. Its coast line, not taking into account the numerous bays and indentations, is greater than that of any other state, extending 472 mi. along the Atlantic and 674 mi. along the Gulf of Mexico. Area: 58,560 sq.mi., of which 4,298 sq.mi. are water surface; population (official 1950 U.S. census) 2,771,305, an increase of 873,891 or 46.1% over the 1940 census. The 14 largest cities with their population (preliminary est. 1950 U.S. census) are: Miami, 246,983; Jacksonville, 203,404; Tampa, 124,973; St. Petersburg, 95,712; Orlando, 51,826; Miami Beach, 45,541; Pensacola, 43,293; West Palm Beach, 43,053; Fort Lauderdale, 36,000; Lakeland, 30,846; Daytona Beach, 29,254; Tallahassee (the capital) 27,158; Gainesville, 26,577; Panama City, 26,248.

**History.**—The state elective administrative officers in 1950 whose terms expire in Jan. 1953 were: Fuller Warren, governor; R. A. Gray, secretary of state; Richard W. Ervin, attorney general; C. M. Gay, comptroller; J. Edwin Larson, state treasurer; Thomas D. Bailey, superintendent of public instruction; Nathan Mayo, commissioner of agriculture.

In the U.S. senatorial election of 1950 Rep. George A. Smathers of Miami was elected to succeed Sen. Claude Pepper who was eliminated in the Democratic primary in May.

Five amendments were added to the state constitution in 1950, three of which concerned matters of state-wide interest, and two of lesser interest. The first one provided for the establishment of juvenile courts; the second eliminated the state census of population; the third provided that each law enacted in the legislature should embrace but one subject and matter properly connected therewith; the fourth created an additional judicial circuit; the fifth provided for an additional county judge when the population of a county exceeds 250,000.

**Education.**—Enrolment in the public schools for the year 1949-50 through grades 1-12 was as follows: white, 371,102; Negro, 120,103; total 491,205. Kindergartens, white 2,893; Negro, 131; total 3,024. Junior colleges (grades 13 and 14), white, 1,300; Negro, 134; total 1,434. There were 1,401 elementary, 744 secondary public schools, 51 kindergartens, and 5 junior colleges in the state of which there were 787 white and 614 Negro elementary schools, 498 white and 246 Negro secondary schools, 49 white and 2 Negro kindergartens, 4 white and 1 Negro junior colleges. These schools had instructional staffs (exclusive of 189 supervisors) of 17,027 teachers and 767 principals, of whom 12,913 teachers and 628 principals taught in schools for whites and 4,114 teachers and 139 principals in schools for Negroes.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Florida disbursed for state welfare through the state welfare board \$49,849,486.53 in 1949-50. From grants by the federal government the state received in 1949-50 for old-age assistance \$20,087,898.20; for dependent children \$9,026,991.44; and for aid to the blind \$1,004,394.13; total \$30,119,283.77. Disbursements for old-age assistance were \$32,140,298.28; for dependent children \$13,629,651.86; and for the blind \$1,626,651.80; total \$47,396,601.94. Administration and other welfare services amounted to \$2,452,884.59. The unemployment benefit receipts were \$9,032,342.40 with net benefit payments of \$10,619,846.

The appropriations for various prisons and other institutions for 1950-51 were: the prison at Raiford \$1,077,450 with \$23,260 contingent fund; the prison farm at Belle Glade \$247,000; the industrial school for boys at Marianna \$376,728; the industrial school for girls at Ocala \$120,000 with \$600 contingent fund; the Apalachee Correctional Institution \$181,960 with \$8,000 contingent fund. The state also supports a state hospital for the insane at Chattahoochee, the Florida Farm colony for the feeble-minded at Gainesville, and the Florida School for the Deaf and Blind at St. Augustine. The appropriations for these institutions for 1950-51 carried the sums of \$5,070,311 with \$125,000 contingent fund; \$474,840 with \$101,280 contingent fund; and \$505,410 respectively.

**Communications.**—The total highway and street mileage in the state at the end of the year 1950 was 51,086 mi., of which 21,075 were paved and 3,946 were hard-surfaced with gravel or stone. Disbursements for the calendar year 1950 were \$39,566,899.74 for construction and \$8,987,250.72 for maintenance. The state road department's tentative budget for 1951 was \$90,411,651 for construction and \$7,033,547.67 for maintenance. Florida in 1948, the latest report available at the close of 1950, had approximately 5,000 mi. of railroads, exclusive of yard tracks.

**Banking and Finance.**—On June 30, 1950, there was a total balance in the state treasury of \$58,599,273.33 with outstanding warrants and ad-

justments of \$12,094,563.31. The state is constitutionally forbidden to incur a debt by borrowing except to put down insurrection and repel invasion. The constitution also prohibits the legislature from levying an income tax, forbids any state ad valorem tax on real estate and exempts homesteads from taxation by local taxing units up to the value of \$5,000.

On June 30, 1950, there were within the state 62 national banks with deposits amounting to \$1,291,445,000 and 135 state banks and trust companies with deposits of \$603,626,211.16, representing total deposits of \$1,895,071,211.16, a gain of \$211,870,242.44 in the fiscal year.

**Agriculture.**—The citrus production for the season 1949–50 and the estimates for 1950–51, respectively, were as follows: oranges (including tangerines) 63,500,000 and 65,800,000 boxes; grapefruit 24,200,000 and 31,000,000 boxes; limes 260,000 and 280,000 boxes.

The sale of truck crops including strawberries for the year 1949 was estimated at \$110,634,000.

On Jan. 1, 1950, the livestock resources of the state were as follows: 1,099,000 beef cattle and calves, 152,000 milk cows, 619,000 swine, 12,000 sheep, 23,000 horses and 28,000 mules.

#### Principal Agricultural Products of Florida

Crop	1950	1949	Average, 1939-48
Corn, bu. . . . .	9,968,000	8,983,000	7,527,000
Tobacco, lb. . . . .	22,700,000	25,063,000	19,157,000
Potatoes, bu. . . . .	5,664,000	5,428,000	4,150,000
Sugar cane, short tons. . . . .	1,267,000	1,164,000	904,000

**Manufacturing.**—In 1947, according to the census of manufactures, the latest report available, there were 2,807 manufacturing establishments in Florida. There were 701 food products plants employing 19,565 persons and having a total annual pay roll of \$42,976,000. Lumber, rough and dressed, mill work, furniture and fixtures, wooden boxes, pulp, paper and gum and wood naval stores employed approximately 25,000 persons in 656 plants with a pay roll of nearly \$50,000,000. Wood pulp and paper manufactured in Florida in 1948 were valued at approximately \$103,000,000. The eight mills in Florida in 1948 manufacturing pulp, paper and paper board employed about 6,000 persons in 1948, had a pay roll of approximately \$25,000,000, and used about 1,600,000 cords of wood, about one-half of it coming from Florida forests. Florida wood-pulp production in 1949 was 1,036,000 standard cords.

In 1947 about 700 saw mills cut 517,000,000 bd.ft. of lumber, and the Florida Forest service estimated that the 1950 lumber production would be around 600,000,000 bd.ft. The pulp wood cut was expected to total 1,200,000 standard cords or about 20% above that of 1949. The total estimated value of wood products for Florida for 1949 was about \$155,000,000.

In 1947, the latest report available, there were 74 plants manufacturing cigars in Florida with products shipped valued at \$45,901,000. These plants employed 8,613 persons and had an annual pay roll of \$13,085,000.

**Mineral Production.**—Florida has limited resources in minerals, but has large and rich deposits of phosphates, lime and limestone, and less extensive though highly valuable deposits of kaolin, and fuller's earth. The value of the state's mineral production for the year 1948 was \$53,877,000, the estimated value for 1949 was \$55,000,000, and the estimated value for 1950 was also \$55,000,000.

**FILMS OF 1950.**—*Exploring Old St. Augustine* (Cornell Associates). (A. N. P.)

**Flour.** Statistical data on civilian per capita consumption of wheat flour in the U.S. for the years 1935–49 indicated that after the end of World War II flour usage resumed its gradual prewar downward trend. Per capita consumption increased from 149.61 lb. in the year beginning July 1941 to a peak of 161.2 lb. in the following year. Per capita usage thereafter decreased to an estimated 135.6 lb. for the year beginning July 1949.

Paralleling the decline in per capita consumption of flour, there was a significant shift in the uses of flour. During 1949 and 1950 the trend from flour packed for home baking to the packaging of ready-mixed items and various prebaked breads, rolls and sweet goods grew in commercial importance. In the field of prebaked cereal products, the "brown and serve" bakery items came into outstanding prominence in 1949 and appeared to have found ready acceptance. Cake mixes, biscuit mixes, ready-to-bake biscuits and various prepared pancake, waffle and doughnut mixes accounted for a large and increasing utilization of soft wheat flours. An expanding cookie, cracker and sweet biscuit industry had also become a very large consumer of various grades of winter wheat flours.

Flour production statistics for the United States during 1950, with comparative figures for the past few years, are shown in the tables.

**Flour Technology.**—A survey of flours from 589 samples representing ten varieties of hard red spring wheats grown for four

Table I.—U.S. Wheat Flour Production for Aug. 1950, Aug. 1949 and the 12 months' average

Month and year	Production wheat flour (thousand cwt.)	Feed (all offal) tons	Capacity per 24 hr. wheat flour (thousand cwt.)	Wheat flour production in percent of capacity	Pounds of wheat per sack of flour	Flour extraction rate %
Aug. 1950 . . . . .	21,079	422,168	1,151	79.6	139.8	71.5
Aug. 1949 . . . . .	19,826	404,598	1,173	73.5	140.3	71.3
Average for 12 months preceding Aug. 1950	18,944	382,900	1,169	76.3	139.9	71.5

Table II.—U.S. Wheat Flour Production for Ten Leading States

State	(In thousands of sacks)				
	Aug. 1950	July 1950	Monthly average production 1949	1948	1947
Kansas . . . . .	3,178	2,962	3,057	4,260	4,344
Minnesota . . . . .	2,957	2,282	2,343	2,588	3,340
Missouri . . . . .	2,043	1,682	1,826	2,208	2,281
New York . . . . .	1,789	2,335	2,436	2,515	2,706
Illinois . . . . .	1,296	996	1,007	1,183	1,193
Texas . . . . .	1,230	1,140	1,222	1,634	1,801
Oklahoma . . . . .	1,014	963	896	1,096	1,192
Washington . . . . .	955	877	794	983	1,053
Ohio . . . . .	924	693	796	800	762
Nebraska . . . . .	559	529	481	666	710
All others . . . . .	5,134	4,511	4,671	5,328	6,076
Total, all states . . . . .	21,079	18,970	19,529	23,261	25,458

crop years under a wide range of climate and soil conditions was reported by C. C. Fifield of the U.S. department of agriculture. Differences in loaf volume as correlated with protein content indicated significant differences in the protein quality of the different flours.

The general use of chlorine dioxide as a bleaching agent, replacing nitrogen trichloride, proved generally satisfactory in terms of baking quality of the bleached flour. Chlorine dioxide appeared to be slightly less effective than nitrogen trichloride as a colour-reducing agent, but seemed to be substantially equal in its oxidizing or flour-maturing effects. The need for oxidation of flours in general appeared to be somewhat less, a result attributed by millers to new wheat varieties. There had been some increased usage of bromates, particularly in the treatment of the longer-extraction and clear-type flours. Other oxidizing agents, such as ammonium persulfate, received extensive testing by Aaron Arnold and Frans C. Goble, who found this material quite harmless to test animals even when fed at levels 200 times the amount which would be present in commercially treated flour.

Flour from the 1950 crop of hard southwestern wheat was evaluated by cereal chemists and commercial bakers who reported as follows: (1) the protein level was the same to slightly higher than the 1949 crop flour; (2) fermentation tolerances were good; (3) slightly less mixing time was required; (4) absorption had dropped 1% or 2%; (5) slightly less yeast food or diastatic malt or both was needed; (6) loaf volume was about the same as for the previous year's flour.

**Milling and Flour Handling.**—Pneumatic air-stream handling of flours and milling streams in flour mills had completely replaced conventional conveyor and elevator handling in several newly constructed mills in Great Britain and on the European continent. This method was meeting with some interest in the U.S. where a limited application of the air-stream method of handling was in use in many mills and elevators. This method of conveying millstocks had demonstrated an improvement in flour mill sanitation, especially with respect to the reduction of infestation in elevators, conveyors and other conventional flour handling devices.

Storage of wheat in inert gases (such as nitrogen and carbon dioxide) prior to milling indicated great promise toward the elimination of insects common to wheat.

Shipment of flour in bulk hopper cars combined with pneumatic unloading and bulk bin storage in larger bakeries had contributed substantial economies in flour handling as well as in

sanitation and reduction of flour losses. (See also BREAD AND BAKERY PRODUCTS; WHEAT.)

**Food and Drug Administration:** see DRUG ADMINISTRATION, U.S.

**Food Supply of the World.** The world in 1950 faced a new period of hostilities with its food situation in better order than at any time since the end of World War II. In a few sectors that had been regarded as burdensome surpluses a scant year before were now regarded as essential margins of safety in a troubled and uncertain world. More than that, the psychology and official action were reoriented in the direction of all-out food production, particularly of storables. In great contrast with the uneasy, if not actually dangerous, food situation of the world in the early part of 1948, the wide-spread favourable harvests of 1948 and 1949 were followed by still further expanded food supplies in 1950 in most major regions except the United States. Prospects for meeting the effective demand for food in the 1950-51 consumption year, short of all-out war, were brighter than in any of the preceding post-World War II years, although a large proportion of the world's population nevertheless would not be and had not been adequately nourished by some standards. Food rationing and other restrictions were widely relaxed or abandoned, though the meat ration was further restricted in the United Kingdom, and there was much concern about possible price ceilings on foods in the U.S. early in 1951.

The improved situation was not so much the result of extremely large crops in one or two areas (as had previously been true in regard to the U.S.) nor enormous outturn of one major crop, but rather a general improvement in many categories, but particularly bread grains, rice, sugar, livestock products and vegetables. Carryover grain stocks in the four principal exporting countries on July 1, 1950, were 74,100,000 tons, only slightly larger than the 73,700,000 tons of 1949, but about 70% larger than the small stocks of 1948. A very large part, 78% of the total, was in the United States.

Though crops were not very poor in any large area, famine, or near famine, returned to some parts of the world. A very bad drought situation in north China early in the year (deaths unofficially estimated as high as 10,000,000) was followed by floods in some sectors, but apparently the situation was greatly relaxed by summer and autumn harvests. The Danube basin, especially Yugoslavia, was hard hit by drought and the resulting near failure of the corn (maize) crop. Food aid to Yugoslavia,

KOREAN MOTHER with black market rice for sale. Although supposedly strictly rationed in 1950, rice was available in many South Korean villages, at a price

totalling nearly \$100,000,000 from the United States and some from the United Kingdom, was in process late in the year. Some neighbouring areas restored rationing. A serious situation in parts of India (where hunger and malnutrition are endemic, but which had partial crop failure locally in 1950) came to the attention of the public late in the year with a request for 2,000,000 tons of wheat from the U.S. in addition to grain sorghums previously arranged for. (See AGRICULTURE.)

The world food supply situation by commodities and areas is summarized in Table I.

**Bread Grains, Wheat and Rye.**—World bread grain production estimates for 1950 were set at 239,000,000 short tons, larger than the 233,000,000 tons of 1949 and above the average 229,000,000 tons of 1935-39. The world wheat crop, the best since World War II, was finally placed at 6,405,000,000 bu., a figure well above the 6,270,000,000 bu. of 1949 and substantially in excess of the 6,010,000,000-bu. average for 1935-39. The increase was widespread, many areas sharing the abundance. The Canadian crop was about 100,000,000 bu. larger than the 1949 harvest and 150,000,000 bu. in excess of the prewar average, but the quality was much damaged by early frost. The U.S. crop was the seventh consecutive crop of more than 1,000,000,000 bu. The European crop was slightly larger than that of 1949, and that of Asia substantially improved. The wheat crop of the U.S.S.R. of 1,110,000,000 bu. was near that of 1949, but below the 1,240,000,000-bu. average for 1935-39.

The world rye crop of 1950 totalled 1,665,000,000 bu., as compared with 1,715,000,000 bu. in 1949 and the 1,730,000,000-bu. prewar average (1935-39). The decrease was largely in Europe, that continent in 1950 producing 685,000,000 bu. compared with 710,000,000 bu. in 1949 and the 765,000,000-bu. prewar average. The rye crop of the U.S.S.R., where it is a major food grain, was indicated at 910,000,000 bu., compared with 950,000,000 bu. in 1949 and an 885,000,000-bu. prewar average.

Table I.—World Food Production by Commodities and by Areas Compared with Prewar

World average (excluding the U.S.S.R.) . . . . .	97	104	105	109

\*Preliminary estimate.

The favourable situation of bread grains gave preliminary promise at the end of 1950 of continuing. Near the end of the year early in 1951, and because of reduced production of corn in the U.S. However, a record carryover of corn in the U.S., plus substantial amounts of other feed grain supplies and a record hay supply per consuming animal, made the problem not one of any immediate supply deficit, but rather a question of whether feed supplies would continue to support the expanding trend in livestock population. In other words, there appeared the likelihood that the rapid buildup in livestock, particularly in the U.S. and western Europe, under a very favourable demand and price situation to producers, was about to overreach its support potential. The corn (maize) crop for the world amounted to about 5,285,000,000 bu., compared with a crop of 5,580,000,000 bu. in 1949-50 but much in excess of the prewar average of 4,750,000,000 bu. Other feed grains, oats, barley and grain sorghums, yielded abundantly in 1950. The world oat crop was estimated at 4,230,000,000 bu., an increase of 5% as compared with 4,020,000,000 bu. in 1949. Europe's 1,350,000,000 bu. was slightly less than in 1949 and about 15% less than the prewar average. The world barley crop was estimated at 2,430,000,000 bu., compared with 2,260,000,000 bu. in 1949 and nearly 100,000,000 bu. more than the prewar average.

**Feed Grains.**—Feed grains were not quite so abundant in 1950, largely because of drought damage to the Argentinian crop early in 1950, and because of reduced production of corn in the U.S. However, a record carryover of corn in the U.S., plus substantial amounts of other feed grain supplies and a record hay supply per consuming animal, made the problem not one of any immediate supply deficit, but rather a question of whether feed supplies would continue to support the expanding trend in livestock population. In other words, there appeared the likelihood that the rapid buildup in livestock, particularly in the U.S. and western Europe, under a very favourable demand and price situation to producers, was about to overreach its support potential. The corn (maize) crop for the world amounted to about 5,285,000,000 bu., compared with a crop of 5,580,000,000 bu. in 1949-50 but much in excess of the prewar average of 4,750,000,000 bu. Other feed grains, oats, barley and grain sorghums, yielded abundantly in 1950. The world oat crop was estimated at 4,230,000,000 bu., an increase of 5% as compared with 4,020,000,000 bu. in 1949. Europe's 1,350,000,000 bu. was slightly less than in 1949 and about 15% less than the prewar average. The world barley crop was estimated at 2,430,000,000 bu., compared with 2,260,000,000 bu. in 1949 and nearly 100,000,000 bu. more than the prewar average.

Exports of feed grains from the U.S. in 1949-50 were 9,669,000,000 lb., slightly larger than in 1948-49 and more than three times the prewar average. These exports were based primarily on the record corn supply and went largely to western Europe.

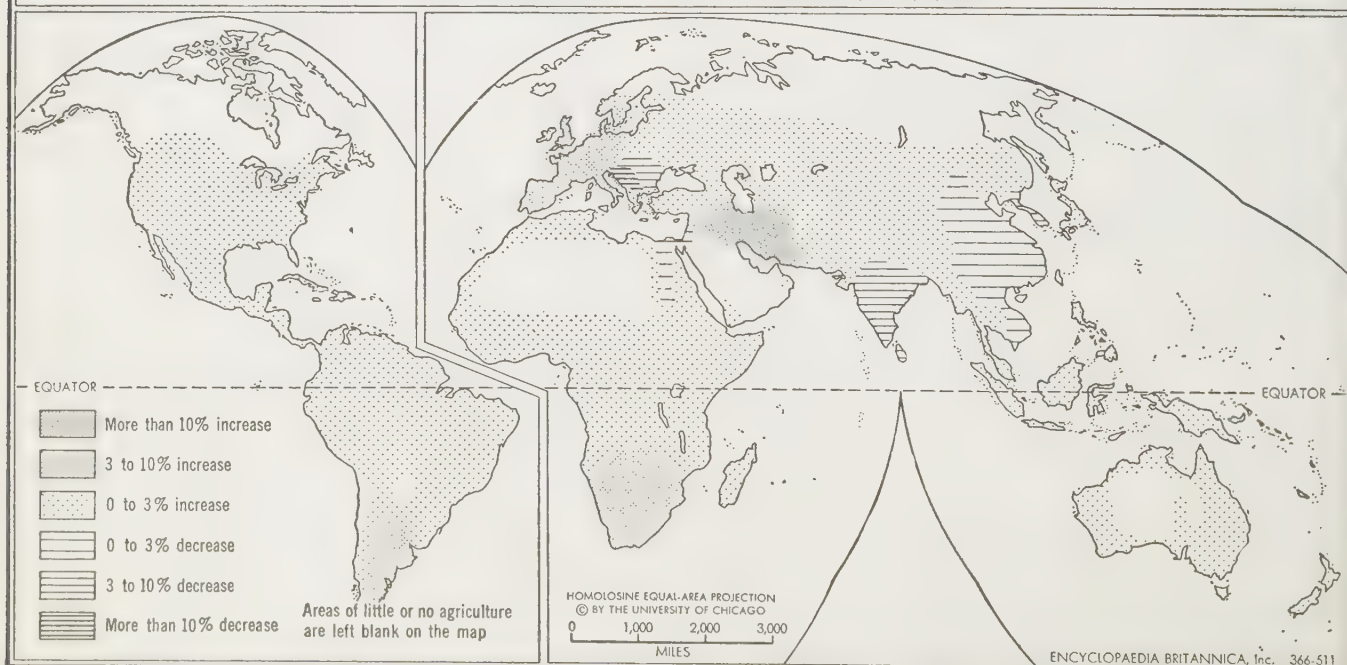

**Rice.**—The world's greatest food crop for direct human consumption, in terms of the number of people preferring that staple, is rice. In terms of total world production it regained prewar levels; the estimated crop was 343,000,000,000 lb. (paddy) in 1950-51, 3% higher than the 333,000,000,000 lb. of the previous year and slightly above the prewar period. Nearly 93% of production was in Asia. The U.S. crop of 37,971,000 bags (100 lb.) was 7% less than the record crop of 1949. There were higher per acre yields in China. Moderate increases were

forecast for Formosa, the Philippines, Thailand (Siam) and Pakistan. Japan harvested a good crop of 25,700,000,000 lb., but smaller than the large crop of 1949-50 and slightly below the prewar average. The Korean crop apparently was a good one and was mostly harvested in spite of war. Unsettled conditions in the main surplus-producing areas of southeast Asia apparently resulted in a reduced total, though the crop of Thailand was reported as favourable.

**Potatoes.**—The 1950-51 crop was about 8,580,000,000 bu., 6% more than the 1949-50 crop and comparable with the 8,764,000,000 bu. in 1948-49 and the 8,300,000,000-bu. average in the prewar years 1935-39. The European crop (excluding the U.S.S.R.), in particular, increased sharply to 4,860,041,000 bu., compared with 4,418,296,000 bu. in 1949, but was slightly below prewar. The U.S.S.R. crop was indicated at 2,850,000,000 bu., a little more than in 1949 and slightly above prewar. The Canadian crop, as well as that of the U.S., was again large, creating one of the major surplus problems of the year. In spite of a record low acreage in the U.S. the 1950 crop nevertheless was excessive by nearly 100,000,000 bu., and the government support program, though reduced to 60% of parity (90% in 1949) was expected to become by late spring 1951 a large and costly program. Under law existing at the year's end there would be no support of 1951 potato prices.

**Sugar.**—World production of centrifugal beet- and cane-sugar for the 1950-51 season was indicated at 35,380,000 short tons, raw value, 10% more than the record large crop of the previous year and about 22% more than the prewar (1935-39) average. In addition there was an estimated production of 5,700,000 tons of noncentrifugal sugar, mostly in Asia and South America. World beet-sugar production, largely in Europe, increased to 13,499,000 tons, compared with 11,625,000 tons in 1949 and 11,027,000 tons prewar. Meanwhile, world centrifugal cane-sugar production was 21,387,000 short tons, compared with 20,430,000 tons in 1949 and 17,310,000 tons prewar. Increases were rather general. Cuba increased to 6,300,000 tons from 6,126,000 tons in the previous year. Formosa, however, showed a decline, and the Philippines had not sufficiently reconstructed to be able to provide all the export quota to the U.S. Per capita consump-

### GENERALIZED ESTIMATES OF FOOD SITUATION BY AREAS, 1950-1951 AS COMPARED WITH PREVIOUS YEAR

tion continued highly divergent among the various countries, ranging from about 100 lb. per capita in the U.S. in 1950 to only a very few pounds per person for more than one-half the world's population.

**Meat.**—The meat supply situation was generally easier in 1950. Pork, poultry, high quality beef and fish especially were in more abundant supply. Lamb was relatively scarce. Total meat consumption per person in the U.S. was expected to approximate 145 lb., compared with 144 lb. in 1949, a record 155 lb. in 1947 and a prewar average of 126 lb. Lamb consumption, however, was only 95% of 1949, whereas chickens (103%) and turkeys were consumed at an increased rate, 22% above 1949. Numbers of livestock in the U.S., excepting sheep, had completed the declining phase of their cycle in 1949 and were expanding in 1950, hogs and beef cattle especially.

Because of generally improved feed conditions in 1949 and continuing favourable production in 1950, output of meat increased in most producing areas; Argentina and South Africa were hard hit by drought and Argentine meat exports, particularly to the United Kingdom, were cut back sharply in mid-1950. As a result, the British slashed thin meat rations to a very low level late in 1950. World cattle numbers, for beef as well as milk, were increased above the record 761,000,000 head at the beginning of 1949. Hogs, which in Europe are fed largely on potatoes and barley, along with poultry were increased in number. Meat exports from Canada, Australia and New Zealand continued in fair volume to western Europe, particularly to the United Kingdom.

**Fats and Oils.**—Expansion in the production of most kinds of fats and oils continued in 1950 with consequent easing of the supply situation. Prices turned much firmer after June. Although significant differences existed among areas and types, the over-all supply approximated the prewar level. On a per capita basis the supply continued below prewar, Germany and Japan being especially low with a consumption level about half that of prewar. Production of fats and oils in the U.S. was near the 1949 record level, but much dependent on the very large soybean crop; the cottonseed crop was only about two-thirds as large as that of 1949; hogs were marketed in larger numbers than in 1949 and at heavier weights. Palm oil and coconut oil also became available in larger amounts from tropical areas. The olive oil crop of the Mediterranean basin was a short one. As a result, world exports of this composite item were expected to be much the same as in 1949. Exports of edible fats and oils, including butter, from the U.S. were especially large, reaching a record of 1,122,000,000 lb. in 1949-50 as compared with the 186,000,000-lb. prewar average.

**Food Prices and Trade.**—Food prices, particularly those of food raw materials such as grains and fats and oils, which reached their postwar peaks in the free markets of the world early in 1948 and had subsequently declined sharply but irregularly, reversed the downward trend in early 1950 and after the Korean outbreak moved rapidly upward. Most products, however, did not reach the old 1948 highs. The over-all rise amounted to at least 10% and for a few items amounted to much more.

Because of cheapness, storability, availability and widespread acceptability, the bulk of food moving in world trade continued to be grains. In 1949-50 world exports of grain and grain products were about 35,800,000 metric tons, compared with 38,100,000 tons in 1948-49, which was the largest since 1931-32, but still less than the record 40,600,000 tons moved in 1928-29. Of the 1949-50 total, about 23,000,000 tons were bread grains. In 1949-50 (mostly from 1949 crops) grain supplies carried over at year's end in the four principal exporting countries increased substantially as compared with 1948-49. Exportable supplies

CONSUMER PRICES and retail prices of meat and of all foods in the U.S., 1935-50 (1935-39=100), based on bureau of labour statistics data for moderate-income families in 56 large cities (Source: Bureau of Agricultural Economics)

were in surplus compared with provisional import programs, a fact which is well-illustrated by the importing countries not taking their full quota of wheat under the International Wheat agreement, the price remaining at the maximum, though that was well below U.S. domestic prices.

Estimated exports in 1950-51 included about 11,000,000 short tons of sugar, of which about 80% came from the western hemisphere, compared with less than 50% before the war. World supply and demand continued in balance despite a record crop. Prices were rather sharply up compared with 1949, Cuban raws rising to a little less than six cents per pound.

Table II.—Supplies of Major Foodstuffs Entering World Trade

Commodity	(In millions of metric tons)				
	Prewar	1947-48	1948-49	1949-50	1950-51*
Cereals (excluding rice) . . . . .	29.4	35.0	38.1	35.8	34.0
Rice (milled) . . . . .	7.8	3.8	3.9	3.8	3.7
Fats and oilseeds (fat content) . . . . .	5.9	4.0	4.8	5.2	5.5
Sugar (raw basis) . . . . .	11.5	9.0	10.7	10.0	11.0
Meat . . . . .	1.9	2.0	1.9	2.0	1.8

\*Preliminary estimate.

**Food Situation by Areas.**—European food production in 1950 was significantly improved over the 1949 situation. The 1950 bread grain harvests averaged above the previous year, though the Danube basin harvests probably dropped below that of 1949. The corn (maize) crop was definitely hard hit by drought in much of eastern Europe, and the situation in Yugoslavia was reported as a serious one—outside aid from the U.S. and some European areas was supplied in substantial amounts. Potatoes and sugar increased, as did fats and oils, livestock and dairy products. Nevertheless, the domestic food supply of Europe in 1950 was still somewhat less than prewar levels, and population had increased. The major food item, bread grains, was near the prewar average. Domestic supplies of meat, dairy products and poultry were still low compared with prewar, but coming up. Nevertheless, the situation had relaxed sufficiently to permit decontrol of most rationing in most areas, though Yugoslavia and some other Danube basin areas reinstated rationing, and the United Kingdom reduced its meat ration sharply because of the reduction in imports from the Argentine. Stock piles of grain were increased. A disturbing feature was the extent to which the world import requirements of food, particularly into Europe, had come to depend so overwhelmingly on the vast but unstable production of North America. Efforts at Geneva, Switz., in November to secure larger quantities of grain from eastern Europe, as was the case in prewar days, were apparently largely unavailing, though the United Kingdom prior to the Geneva meeting executed a contract for 800,000 tons of coarse grains from the U.S.S.R. Western Germany again increased its production.

The food situation in the U.S.S.R. appeared to be not quite so favourable as in 1949, but 1950 was near the best of the postwar years. Root crops were favourable and livestock increased.

The 1950 grain crops of Japan were about as good as in 1949, and Japan, prior to the Korean outbreak, was faced with the largest grain carryover in its history, partly imported. The situation in China was less clear because of warfare as well as drought and floods early in the year. Natural conditions for the rice crop, the major cereal item of the diet, were believed to have been more favourable than in 1949. Civil disturbances in Burma continued to restrict the movement of the 1949 rice crop and the production of the 1950 crop. Supplies available for export from Indochina continued to be small, although some increase occurred in the Thai crop.

India had local food difficulties and late in the year was asking for import grains.

Food crops in the southern hemisphere, harvested during 1950-51, were more than average, particularly in Australia. Serious drought in the Union of South Africa and Argentina late in 1949 and early 1950 was relieved with probable favourable outturn of 1950-51 crops. Exportable supplies of dairy products had increased somewhat in Australia and New Zealand, and there were also moderate increases in meat supplies from some southern hemisphere countries.

The food situation, both as to production and consumption, was excellent in North America in 1950, partly because of large crop production but more because of an upturn in livestock and its products. Crops in the U.S. yielded about 132% of prewar (as compared with 152% in 1948), and livestock production was 141% of prewar. Canadian crops were larger than in 1949, though the quality of the abundant wheat crop was damaged by early frost; that country began to search for wider markets for its exportable foods, even in the U.S., in the face of a cutback in contracts with the United Kingdom.

**World Food Organization.**—The United Nations Food and Agriculture organization (F.A.O.) continued to occupy the centre of the international agricultural stage during 1950. During the year, Norris E. Dodd of the U.S. continued as director general. The permanent headquarters were to be moved to Rome, It., in 1951. The results of its world census of agriculture were not yet available, but it did publish a special survey of world agricultural land use which indicated that of a total area of 13,406,000,000 ha., 3,350,000,000 ha. were in some sense agricultural, 3,523,000,000 ha. were forests and 6,533,000,000 ha. consisted of wasteland and other. Of the agricultural areas, 1,217,000,000 ha. were classed as arable and the remaining 2,133,000,000 ha. as permanent meadows and pastures. Of the world's 2,352,000,000 total population, 1,377,000,000 were classed as agricultural.

**The International Wheat Agreement.**—The first of four years of anticipated operation under the agreement was completed Aug. 1, 1950. Actual purchases and sales thereunder amounted to 432,139,000 bu., more than half of the total moving in international trade during the year and compared with a quota of guaranteed quantities which was adjusted to 525,104,000 bu. when western Germany was admitted during the year. The price for the standard grade of wheat remained at the maximum of \$1.80 per bushel, and somewhat below prices otherwise prevailing in the world, hence the shortfall in actual takings as compared with guaranteed quantities was probably to be explained only in terms of shortages of dollars in some importing countries. The United Kingdom took practically its full quota. The U.S. exported nearly 163,000,000 bu. under the agreement, as compared with an adjusted yearly quota of 235,858,000 bu. and an effective quota (reduced mostly because of Germany's being a mem-

ber only part of the year) of 197,000,000 bu. An average export subsidy of 54 cents per bushel was required on wheat moving out of the U.S. under the agreement—to bridge the gap between maximum prices under the agreement and higher domestic support prices. The U.S. export quota for 1950-51 was 228,105,000 bu.; Canada's was 218,037,000 bu. The maximum price continued at \$1.80 per bushel; the minimum price dropped to \$1.40 per bushel.

At the year's end it appeared that export from the U.S. under the agreement was approximately up to schedule to move the full quota during 1950-51. (J. K. R.)

**Football.** Only two college teams playing a major schedule finished the 1950 football season with a perfect record, and neither Notre Dame nor Army was one of them. The two powers that had so rarely known defeat in recent years and that had been leading rivals for national honours season after season both came to the end of long sequences of invincibility.

Notre Dame, after going through 39 games without defeat, beginning in 1946, lost to Purdue and then was beaten three times more and tied once. On the final day of the season, as the Fighting Irish suffered their fourth setback, against a Southern California eleven that had been vanquished five times, disaster overtook Army for the first time in 29 games dating from 1947. A Navy team that had lost six of eight games perpetrated the most stunning surprise of the year by administering a thoroughly convincing licking to the heavily favoured cadets by the score of 14-2.

The defeat of Army, which had last previously been beaten (by Notre Dame) in 1947 and did not lose a game in 1944, 1945, 1946, 1948 or 1949, left Oklahoma and Princeton as the only two teams playing major schedules with perfect records for the 1950 season. Wyoming and Lehigh also won all their games and California, Clemson and the University of Miami (Fla.) went through without a loss, though each was tied once.

Oklahoma, which extended its winning streak to 31 games, was ranked first in the national poll of the Associated Press. The vote was taken prior to Army's defeat by Navy, and the West Point eleven was placed second. Then followed Texas, Tennessee, California, Princeton, Kentucky, Michigan State, Michigan and Clemson. The final poll of the United Press, taken among coaches after the cadets were beaten, rated the teams in this order: Oklahoma, Texas, Tennessee, California, Army, Michigan, Kentucky, Princeton, Michigan State and Ohio State.

The feeling was that Princeton did not receive its just deserts in either poll. It was the first Tiger eleven to finish with a perfect record since 1935. It won the Ivy league honours, defeated Harvard and Yale by record scores to become the second team in history to take Big Three honours for four successive years, and ousted Army as the winner of the Lambert trophy, emblematic of eastern supremacy.

Oklahoma retained the Big Seven championship. Texas lost only to Oklahoma, by a point after touchdown, and won the Southwestern conference title, and Tennessee was the victim of an early season upset as its only setback. California was tied in its last game by Stanford, and won the Pacific Coast conference crown for the third year in a row. Kentucky was on the verge of its first perfect season when it lost to Tennessee in the snow. It won the Southeastern conference title. Michigan State defeated Michigan and all other opponents except Maryland.

Michigan, with a comeback at the end of the season, nipped Ohio State for the Big Ten crown, defeating the Buckeyes in a snowstorm.

By winning the Big Ten championship Michigan qualified to go to the Rose Bowl at Pasadena. There, on New Year's day, it played California and defeated Lynn Waldorf's Bears by the

score of 14 to 6. In the Sugar Bowl at New Orleans Oklahoma and Kentucky were the opposing teams and the latter won, 13 to 7. Texas and Tennessee met in the Cotton Bowl at Dallas. Tennessee was the victor, 20 to 14. In the Orange Bowl at Miami, Fla., Miami and Clemson, both unbeaten but tied, clashed and Clemson won, 15 to 14. Washington and Lee, which won the Southern conference championship, played Wyoming in the 'Gator Bowl at Jacksonville, Fla., the decision going to Wyoming by the score of 20 to 7.

Ohio State's Vic Janowicz, a back, was voted the Heisman trophy as the outstanding player of the year. Following him in the poll were Kyle Rote of Southern Methodist, Vito (Babe) Parilli of Kentucky, Bob Reynolds of Nebraska, Bob Williams of Notre Dame, Leon Heath of Oklahoma and Dan Foldberg of Army. Janowicz and Foldberg, an end, were unanimous selections on the various all-American teams, as was Lewis McFadin, Texas guard. Also widely picked were Bob Gain, Kentucky tackle, Bill McColl, Stanford end, Jim Weatherall, Oklahoma tackle, Ted Daffer, Tennessee guard, and Williams, Rote and Reynolds, all backs.

Charles Caldwell of Princeton was voted the coach of the year by a big margin. Lynn Waldorf, California coach, placed second for the third successive season and Bud Wilkinson of Oklahoma was third.

There were no marked innovations in the technique of football. The two-platoon system was used a little more extensively. The T formation continued to be most widely used, but the single wing had a large following, including such teams as Tennessee, Michigan, Princeton, Michigan State, Ohio State and Pennsylvania.

**Professional Football.**—The All-America conference, after four years of operation, went out of existence at the end of the 1949 season and the National Football league had the field all to itself in 1950. With a 13-club circuit, including 3 of the defunct All-America conference, the old organization enjoyed a year of comparative financial success. The league was divided into the National and American conferences, instead of Eastern and Western divisions as previously. For the first time, a tie for first place resulted in both sections and a double play-off was necessary. The winners of these play-offs then met for the cham-

pionship of the league in what was referred to as the world series of football.

The New York Giants and the Cleveland Browns tied for first place in the American conference, and the Chicago Bears and the Los Angeles Rams tied in the National conference. The Browns were one of the three teams taken in from the All-America conference, the other two being the San Francisco Forty-Niners and the Baltimore Colts. The Browns had won the championship of the All-America conference the four years it was in existence.

The Giants defeated the Browns the two times they met during the regular season, marking the first time any opponent had done that to the Browns in their five years of operation. The first time, the Giants won by 6-0, which was the first occasion on which the Cleveland eleven had ever been held scoreless. In the play-off, at Cleveland, on a frozen field the Browns turned the tables on the Giants, defeating them 8-3 for the sectional honours. The Bears and the Rams met at Los Angeles in the National conference play-off and the Rams won by 24-14. In the final play-off between the two conference winners for the league championship, the Browns defeated the Rams 30-28.

Norman van Brocklin of the Rams, Marion Motley of the Browns and Doak Walker, rookie back of the Detroit Lions, won the top individual honours in the league. Van Brocklin was the leading passer, with 127 completions of 233 passes attempted, for a total gain of 2,061 yd. Otto Graham of Cleveland was second. Motley was the leading ground gainer, making 810 yd. in 140 rushes. Walker took scoring honours with 128 points.

**Canada.**—The Toronto Argonauts won the Canadian football championship for the eighth time when they defeated the Winnipeg Blue Bombers, 13-0, before a record Canadian football crowd of 27,100 in Toronto in the Grey cup East-West final. The game was played on a field of mud under difficult conditions.

The Argos, after finishing on top in their own league, the Big Four, earned the right to represent the East by winning from the Toronto Balmy Beach team, champion of the Ontario Rugby Football union. The Blue Bombers defeated the Edmonton Eskimos in the Western Canada union to qualify for the Grey cup play-off.

The University of Western Ontario Mustangs won the college championship for the second successive year, defeating the McGill Redmen in a play-off, 24-2, in Molson stadium at Montreal. College teams do not compete for the Grey cup.

United States players were more numerous than ever in Ca-

**PURDUE PASS** by Dale Samuels (extreme left) which gained 14 yards over Notre Dame in the first quarter of the game at South Bend, Ind., Oct. 7, 1950. Purdue won by a score of 28 to 14, giving Notre Dame its first defeat on the gridiron since Dec. 1945

nadian football. With the dissolution of the All-America conference in the United States and the end of the rivalry for players with the National league, numerous professional stars crossed the border to find places on Canadian teams. The number of "imports" allowed on a team was increased from five to seven and all the clubs took advantage of the change. All the major teams with one exception had United States coaches. Frank Clair, with the University of Buffalo in 1949, coached the Argonauts. The quarterback was Allen Dekdebrun, former Cornell university star.

The All-Canadian team was virtually all-American, but the Jeff Russell Memorial trophy, awarded to the player in the Big Four who best combines good sportsmanship with effective play, went to Canadian-born Dob Loney, centre of the Ottawa Rough Riders. Lindy Berry, former Texas Christian quarterback with the Edmonton Eskimos, was named the most valuable player in the Western Canada union.

FILMS OF 1950.—*Football Kicking Techniques* (Athena Films, Inc.) (A. DA.)

**Great Britain.**—*Association.*—The fourth World cup association football (soccer) tournament was decided in Brazil during 1950. England competed for the first time, but lost 1-0 to the United States and 1-0 to Spain and beat Chile 2-0. The championship was won by Uruguay, with Brazil second, Sweden third and Spain fourth. In international games before the visit to Brazil England had been lucky to beat Italy 2-0 at Tottenham, Portugal 5-3 in Lisbon and Belgium 4-1 in Brussels.

The Football league championship was won for the second year in succession by Portsmouth. The Glasgow Rangers won both the Scottish cup (for the third year in succession) and the Scottish league title. The Football Association (F.A.) cup was won by Arsenal for the third time. England and Scotland drew 0-0 in their amateur international and Oxford and Cambridge drew 2-2 in the university game. During the 1949-50 season, transfer fees rose rapidly; Preston North End paid the record sum of £26,000 to Sheffield Wednesday for E. Quigley, an inside forward, and Sunderland paid £30,000 to Aston Villa for T. Ford, a Welsh international centre-forward. (For association football in the U.S., see the article SOCCER.)

*Rugby Union.*—A Rugby union team drawn from all parts of the British Isles visited New Zealand and Australia in 1950. New Zealand won three of the four international games by 8-0, 6-3 and 11-8, after drawing in the first 9-9. In Australia the British team won the two international matches 14-6 and 24-3.

Wales won the mythical triple crown in 1950 for the first time since 1911 and also beat France. Wales beat England 11-5 at Twickenham and Scotland 12-0 at Swansea and then in the crucial match at Belfast beat Ireland 6-3. Finally, France was beaten 21-0 at Cardiff. Ireland drew with France and lost by the only try to England, but routed Scotland 21-0. England lost 3-6 in Paris and then was beaten 13-11 at Murrayfield, where Scotland had already beaten France 8-5.

The county championship was won by Cheshire for the first time.

*Rugby League.*—The 1949-50 Rugby league season was a notable one in many ways. Great Britain's touring team in Australasia won the first test at Sydney 4-2, but Australia won the second test at Brisbane 15-3 and the third test 5-3 at Sydney, winning the rubber for the first time since 1920. New Zealand won the two tests 16-10 and 20-13.

The Rugby League Challenge cup was won by Warrington, which beat Widnes 19-0 in the final at Wembley. The home international season resulted in England's beating Wales and France, Other Nationalities beating England and Wales, Wales beating France and France beating Other Nationalities. England was first on points average and France last. (LA. M.)

**Ford Foundation:** see SOCIETIES AND ASSOCIATIONS.

**Foreign Exchange:** see EXCHANGE CONTROL AND EXCHANGE RATES.

**Foreign Investments.** **United States Investments Abroad.**—The value of United States investments in foreign countries (and international organizations) was approximately \$32,700,000,000 at the beginning of 1950 and aggregated roughly \$500,000,000 more at the middle of the year. The flow of private and United States government investments abroad during the first half of 1950 was at a diminished rate compared with the volume of United States foreign investments made during 1949, although there were indications that an increasing volume of new investments was made in the second half of 1950. The growth in the total value of United States investments abroad during 1950, therefore, probably compared favourably with the rise of \$1,500,000,000 recorded for 1948.

The quarterly estimates of the balance of payments of the United States prepared by the United States department of commerce indicated that new investments and claims on foreigners of the United States government increased by about \$100,000,000 during the first half of 1950. The bulk of the growth in the value of United States assets abroad was, therefore, for the account of private organizations and individuals, as it was in 1949. In previous postwar years, the government had supplied 88% of the long-term capital loaned or invested abroad.

Data published by the same source showed that investments abroad in enterprises controlled in the United States (direct investments) continued to be the primary manner in which United States lenders invested abroad during the first half of 1950. Preliminary reports placed the outflow of direct-investment capital at about \$330,000,000 for this period. In addition, probably \$250,000,000 of foreign earnings were reinvested in such enterprises.

About \$200,000,000 of new foreign loans were offered to United States investors during the first six months of the year, as usual by borrowers whose credit standings were very high. In Jan. 1950 the International Bank for Reconstruction and Development went to the United States capital market for the second time in its existence and sold \$100,000,000 of securities, and Canadian provinces and companies placed a similar volume of obligations in the United States. However, in the aggregate, foreigners repaid United States lenders slightly more on outstanding indebtedness than they borrowed with new obligations, so that there was a small net withdrawal of United States portfolio funds from abroad.

*Private Direct Investments.*—Political and economic conditions in large portions of the world remained unfavourable for new investments and United States investors were generally cautious about placing their funds abroad. Such loans as were made went to preferred borrowers, as indicated, while the scope of direct investments also continued to be relatively narrow. Most of the capital going into the latter undoubtedly went into petroleum enterprises, as in earlier postwar years, although there were indications that new investments in other extractive industries, particularly mining, were growing in importance.

Because of generally continuing exchange difficulties and the consequent problems of remitting income to the United States, the United States firms which made sizable investments abroad appeared to be those who could market in the United States the products of their foreign operations and thus obtain dollars, those who wished to complete projects already started, and those who found attractive investment opportunities in countries that permitted dollar transfers to the United States of foreign earnings. Many of the highly industrialized countries and

petroleum producing areas were in the latter category.

Early in 1950 the United States petroleum industry expressed public concern over the future of its foreign investments. These were valued at approximately \$2,400,000,000 at the beginning of 1948 and had earned about \$600,000,000 during the same year. The industry feared that steps taken by certain foreign countries to combat a shortage of dollars would result in curtailed markets for foreign produced oil and in reduced dividend payments to the United States.

In their struggles to overcome a critical foreign trade situation, Great Britain and other countries were engaging in exchange restrictions and restrictive trade practices in order to close the gap between their dollar receipts and their dollar expenditures for foreign commodities. As part of its policy of limiting all imports to essentials, the United Kingdom had earlier curtailed oil imports from whatever source. This step was generally accepted as stemming from harsh necessity as long as it was applied to all importers.

However, early in 1950 the United Kingdom took action which deprived United States companies selling oil in the sterling area of prospective sales of 4,000,000 tons of the approximately 13,000,000 tons of United States oil marketed in this area. During the course of the year the potential loss of markets was substantially reduced as a result of agreements between the British government and United States oil companies whereby the dollar costs of oil produced abroad by United States companies would be reduced.

On the other hand, in Canada where exchange restrictions presented no serious problem to the petroleum industry, United States-owned enterprises were actively engaged in providing for increased production. This included the construction of a pipe line that would carry petroleum from the Alberta producing fields to the Great Lakes for eastern Canadian consumption. It was expected that with the completion of this line, in 1951, one-third of Canadian crude oil consumption would be provided by these fields.

Several underdeveloped countries made efforts during the year to attract United States direct-investment capital. Among these were three relatively small lands, Trinidad, Israel and Turkey. In March the Aid to Pioneer Industries act was passed granting income tax and customs concessions to new enterprises in approved fields in Trinidad. A change in British policy respecting investments in colonial possessions also took place. Previously, investments in British colonies could not be taken out or liquidated in less than ten years. In 1950 it was made possible to liquidate the full investment and income at any time and secure dollars, except for capital gains. While formerly capital investments in Trinidad were permitted if they resulted in dollar earnings or savings, they became permissible in 1950 if in the opinion of the authorities they would promote the economy of the colony. As a result, new capital was expected from the United States (and other countries) for a wide range of enterprises including a cotton textile mill, tourist hotel, flour mill, cement factory, knit goods and baking powder and yeast factories.

The Israeli government invited United States oil interests to visit that country for the purpose of establishing a large refinery and to explore the country's oil possibilities. The offer included offshore drilling in ad-

dition to the Negeb desert and other potential areas. Other enterprises were also asked to invest in Israel.

The Turkish government announced that foreign investors could transfer their Turkish currency profits back to the original currency of investment.

Other developments during the year included an invitation to United States businessmen to participate in the ten-year, \$1,000,000,000 plan for the development of the Belgian Congo. The British government also announced that it would sell part of its holdings of shares in African uranium and copper mines to a United States group. The object of these steps was to interest United States capital in the development of African territories.

*Other Private Investments.*—Several portfolio loans and investments were made to foreigners during the third quarter of 1950. The French government obtained a stabilization loan of \$225,000,000 in the United States. The republic of Panamá redeemed its outstanding long-term dollar debt with the issuance of \$10,500,000 of 3% bonds. The new bonds were reported to be secured by the irrevocable assignment by the republic of the annual remittance of \$430,000 by the United States for the use, occupancy and control of the Canal Zone under the treaty of 1936. Anticipating a rise in the value of the Canadian dollar, United States investors were reported to have made large investments in Canadian securities during the third quarter of the year.

*United States Government.*—The decline in long-term loans to foreign governments by the United States government from \$401,000,000 during the first six months of 1949 to \$93,000,000 during the same period a year later reflected primarily a decline of credits under the European Recovery program. Aid under this program was expected to be primarily in the form of outright grants and involve smaller credits after the middle of 1950. During the latter part of the year the Economic Cooperation administration indicated that a loan to Spain appeared imminent, following congressional approval for a credit of \$62,500,000. In May the Export-Import bank authorized a credit of \$125,000,000 to Argentina to assist that country in the liquidation of its past due commercial indebtedness to United States private and government exporters.

*Foreign Investments in the United States.*—The value of foreign investments in the United States aggregated approximately \$18,816,000,000 on June 30, 1950, or about \$1,200,000,000 higher than at the end of 1949. Preliminary data prepared by the United States department of commerce indicated that a further large rise took place in the third quarter of the year. Changes in other postwar years had been moderate, amounting, in 1949, to a rise of about \$500,000,000.

Increases in the value of foreign investments and claims on the United States during the latter part of 1949 and 1950 largely

reflected a pronounced improvement in the international financial position of many foreign countries. To a lesser extent, rising security prices in the United States contributed to the over-all increase in the value of foreign claims on that country. The improved position of foreign countries was noted in increased (short-term) foreign exchange claims of about \$590,000,000 on the United States and a reduction of \$232,000,000 in the gold stock of the United States in the first half of 1950, and resulted primarily from the following: (1) United States government aid (mainly under the European Recovery program) to foreign countries at an annual rate of more than \$4,500,000,000; (2) high imports into the United States resulting from the rising trend of business activity in that country; (3) the ability of foreign countries to shift their purchases from the United States to other countries (and thereby pay out fewer dollars); and (4) the devaluation of foreign currencies in Sept. 1949.

The recovery in foreign balances, which began in 1948 following large-scale aid to European Recovery program countries and which was interrupted during 1949 by the financial crisis of foreign countries, continued beyond the first half of 1950. During the third quarter of the year foreigners increased their banking balances and other short-term claims on the United States by roughly \$570,000,000 and United States gold sales to foreigners approximated an additional \$700,000,000, although not all of the increase in this quarter necessarily reflected economic recovery. During the first nine months of the year foreigners were thus accumulating dollars and gold from the United States at an annual rate of approximately \$2,800,000,000. In addition, foreign gold production during the year (excluding the U.S.S.R.) could have added close to \$800,000,000 to foreign exchange reserves.

The change in foreign short-term claims on the United States during the first half of the year was somewhat larger for foreign official institutions than for private organizations and individuals. The largest increase, one of about \$340,000,000, was for the United Kingdom. Lesser increases were recorded for France, the Netherlands, Switzerland and Germany. Italy and most of the remaining European countries showed declines (or only moderate rises) in their short-term United States assets. Latin-American countries generally reduced their United States banking assets in this period. The reverse was true for Asiatic countries, Japanese assets rising by about \$125,000,000 largely as a result of United States aid to that country.

During the third quarter of 1950 the increased United States short-term liability to foreigners reflected in part the counterpart of the movement of United States funds to Canada (and probably elsewhere) in anticipation of a rise in the value of foreign currencies in terms of the United States dollar. Such a movement was reflected in a rise in foreign holdings of United States dollar balances, given in exchange for the foreign currencies. Part of the rise in United States liabilities was accounted for by the \$225,000,000 stabilization loan to France by 25 United States banks which required that as collateral the French stabilization fund would deposit with the bankers funds or securities in amounts equal to the drawings on the loan.

However, the major portion of the improved dollar and gold position of foreign countries during the quarter was probably directly related to the receipt of

United States capital and to better economic conditions abroad. The dollar balances of Canada and Latin America rose by about \$505,000,000 and \$165,000,000 respectively, and while balances of the United Kingdom declined about \$165,000,000, it appeared that the British had utilized these and dollars earned during the quarter to purchase about \$580,000,000 of gold from the United States.

The increase in the value of foreign long-term investments in the United States totalled about \$600,000,000 during the first half of 1950. However, about \$215,000,000 of this rise reflected an increase in quoted market prices for the shares of United States corporations. About \$270,000,000 represented net purchases of securities issued by the United States government and the value of foreign-controlled enterprises in the United States rose by approximately \$120,000,000. Of the latter figure, approximately \$75,000,000 represented the plowing back of earnings of the United States companies and therefore involved no direct movement of foreign capital to the United States.

For several reasons, particularly because of foreign-exchange controls, foreign transactions in the stocks and bonds of United States securities were limited during the first half of 1950, as in 1949. In earlier years, countries in Europe and Asia had sold substantial amounts of such securities as a means of financing their balance of payments deficits with the United States. Since no large-scale liquidations of foreign holdings of United States securities had taken place during the critical second and third quarters of 1949, when foreign countries were in great need of dollars, it was generally assumed that certain foreign countries had exhausted their portfolio of dollar securities. The absence of foreign purchases of such securities during 1950, when both foreign reserves and security prices in the United States were rising, further indicated that foreign governments generally were exercising rigid controls over the use of dollars.

However, foreigners did purchase about \$270,000,000 of United States government bonds during the first six months of the year, as noted. The value of foreign holdings of United States securities increased further in the third quarter, mainly as a result of a 7% rise in share prices.

Although the reported volume of new foreign capital invested in directly controlled United States enterprises was small, several new ventures were initiated and plans for others were announced. Other large capital expenditures of enterprises in the United States controlled abroad were financed mainly from earnings of the United States firms which were not paid out to shareholders but which were used for further investment, and with funds borrowed in the United States.

In February the Office of Alien Property of the United States announced the revocation of general licence no. 32A under which limited remittances had been authorized from blocked accounts in the United States to persons within Bulgaria, Hungary and Rumania who were citizens or subjects of these coun-

tries and who were the beneficial owners of such accounts. The order was revoked in order to preserve, as far as possible, the blocked assets of these nationals, pending a United States government decision regarding the disposition to be made of the assets in accordance with the treaties of peace with the three countries. Subsequently it was stated that the unblocked United States assets of the nationals of these countries were not affected by the order.

Later in the year, it was announced that the United States government had agreed to pay three Swedish firms \$2,600,000 for their claims to the control of a United States company valued at about \$8,000,000. The government had contended that the shares, which it had seized under its powers in dealing with the enemy, were in reality German-owned but had been transferred by a German company to the Swedish firms with an option to repurchase them two years after the armistice. (See also EUROPEAN RECOVERY PROGRAM; EXCHANGE CONTROL AND EXCHANGE RATES; EXPORT-IMPORT BANK OF WASHINGTON; INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT; INTERNATIONAL MONETARY FUND.) (M. **Forests.** The Society of American Foresters observed its 50th anniversary in 1950. The golden anniversary meeting was held Dec. 13-16 in Washington, D.C., where the society was founded in 1900 by a small group of pioneer foresters under the leadership of Gifford Pinchot, then chief of the department of agriculture's division of forestry. At the 1950 meeting, a half century of growth of the forestry profession in the United States was reviewed and its future problems and prospects considered. In 1900 there was only a handful of American foresters; in 1950 the Society of American Foresters had a membership of more than 6,000 professional foresters. Courses leading to a degree in forestry were being offered by more than 30 American colleges and universities, and some 1,650 forestry degrees were conferred in 1950.

By executive order, Pres. Harry S. Truman in January established a water resources policy commission to "study and make recommendations to the President with respect to Federal responsibility for and participation in the development and conservation of water resources, including related land uses and other public purposes to the extent that they are directly concerned with water resources." Members of the commission were: Morris L. Cooke, Washington, D.C., chairman; Paul S. Burgess, dean, college of agriculture, University of Arizona; Lewis W. Jones, president, University of Arkansas; Samuel B. Morris, Los Angeles department of water and power; Leland Olds, former federal power commissioner, Washington, D.C.; R. R. Renne, president, Montana State college; and Gilbert White, president, Haverford college. The commission gave much attention to forests and forestry in their relation to water supply and control of runoff. Reports on forest conditions in the major watersheds were prepared by the forest service for its study.

Work began during the year on the rehabilitation of the vast Tillamook burn area in northwestern Oregon. Reforestation and development of this area was authorized by the state legislature through enactment of the Oregon Forest Rehabilitation act. More than 250,000 ac. of heavily timbered land in Tillamook county, Ore., was burned over in 1933 in one of the biggest forest fires of recent times. Much of the same area was

ravaged by fire again in 1939 and 1945.

The rehabilitation program called for ultimate expenditure of about \$10,000,000. A huge task of tree planting and seeding was involved, as well as intensified fire protection which would require the felling of millions of standing dead trees.

The U.S. congress enacted the Cooperative Forest Management act, which authorizes the secretary of agriculture to co-operate with state forestry agencies in providing technical services to private forest land owners and to processors of primary forest products. The new act amplifies and supersedes provisions of the Cooperative Farm Forestry act of 1937, under which the forest service of the department of agriculture was co-operating with a number of states in the employment of foresters to give on-the-ground technical assistance to small woodland owners. The technical services authorized in the new act are with respect to the management of forest lands, and the harvesting, marketing and processing of forest products. An annual federal appropriation of \$2,500,000 is authorized, but the amount paid by the federal government to any state cannot exceed the amount expended by the state for the co-operative program.

The congress also passed the Granger-Thye act to facilitate and simplify the work of the forest service. The act amended or repealed a number of acts under which the forest service had operated, and conferred certain additional authorizations. Most of the provisions had to do with administration of the national forests.

Four bills proposing the re-establishment of a civilian conservation corps were introduced in the congress during the year. These bills sought the conservation and development of the natural and human resources of the nation through the employment of useful public work. No action was taken on the bills before adjournment of the 81st congress.

The area of national forests and other conservation lands under administration of the forest service on June 30, 1950, totalled 181,204,638 ac. During the fiscal year 26,907 timber sales were made. The cut of national forest timber amounted to 3,501,937,000 bd.ft. A total of 45,428 ac. of national forest land, mainly areas denuded by past fires, was reforested during the year.

Bul. 1010. (C. E. R.)

**Canada.**—The forestry branch (created 1949) of the federal department of resources and development was active during 1950. It was organized (with federal 1950-51 grants in parentheses) into administrative (\$70,000), forest research (\$819,675), forest operations (\$61,290) and forest products (\$644,450) divisions. In addition, parliament granted \$211,080 to the eastern Rockies forest conservation board, established in 1947.

A United Nations report declared that Canada could double its output of forest products by systematic forest management and by opening 215,600,000 ac. of forest classed (in 1950) as inaccessible.

The most serious 1950 threat to Canada's forest wealth was the spruce budworm, which in the 1910-50 period destroyed an estimated 400,000,000 cords of wood, and which by 1950 infested some 200,000 ac. of Ontario-Quebec forests and was moving into New Brunswick. The main attack on the pest began with the opening in 1950 of a \$1,000,000 dominion laboratory of insect pathology at Sault Ste. Marie, from which 45 scientists undertook to infect the spruce budworm with a virus disease and thus make the insects kill themselves off.

A photographic survey was made of 165,000 sq.mi. of the

province of Ontario for the most detailed forest inventory ever undertaken in North America. A special research study was made of the yellow birch, Ontario's most valuable common hardwood, survival of which was problematical by 1950. Provincial nurseries distributed 20,000,000 young trees free during the year, and increased their capacities to an annual output of 60,000,000 trees. A professorship in forest entomology was set up at the University of Toronto. The provincial government set up a committee on forestry to advise the minister of lands and forests.

(C. Cy.)

**Great Britain.**—Because of heavy overfelling from 1939 to 1949, the total volume of timber licensed to be felled in Great Britain in 1950 was strictly limited.

During the year the Forestry commission offered special grants for the planting of poplars for timber production. The governments of France, Italy and Belgium had long encouraged poplar planting on suitable sites, particularly along river banks and roadsides. This considerably altered the general landscape, particularly in northern Belgium and in the Rhône valley in France but it appeared doubtful if plantations of poplars would ever be seen on the same scale in Great Britain.

The Dutch elm disease continued to spread over several southern and midland English counties during the year and induced the felling of much hedgerow timber. Disease-resistant varieties of elm were imported from the continent during the year.

The new Imperial Forestry institute at Oxford was opened by Princess Margaret in October.

**Commonwealth.**—A special forestry conference in Australia called attention to the need for a more adequate knowledge of the forest resources of the country. Aerial photography was increasingly used for the mapping of forest types, and research was continued in the identification of eucalyptus species from air photographs. Special protective measures against forest fires were introduced and public interest in fire protection was aroused by films and other methods of propaganda.

In both east and west Africa there was considerable progress during the year in the use and export of the lesser known secondary tropical hardwoods. This was largely the result of tests carried out by the Forest Products Research laboratory, at Princes Risborough, England, which convinced the timber trade that many of the new timbers could be marketed.

In Tanganyika the granting of large forest concessions for timber exploitation, under the strict condition that the areas would be completely regenerated, was one of the chief events of the year. The Colonial Development corporation acquired 30,000 ac. for a wattle-growing scheme which was expected to revolutionize the economy of that part of Tanganyika.

In Kenya a forestry commission was established with complete financial responsibility for developing the existing forests and for the planting of large areas of exotic species; and in Southern Rhodesia a comprehensive forest act was passed to facilitate the settlement and management of the forests.

Important developments in the opening up of new forest areas were recorded from British Guiana by the Colonial Development corporation and logging operations were started. The pine forests of British Honduras were put under more intensive operation and up-to-date machinery introduced to improve output.

**Europe.**—Because of the great damage done by bark beetles in central European coniferous forests in 1947–50, special efforts were made to limit the damage by felling the trees attacked and also to destroy or trap the beetles.

In Germany, reparation fellings were discontinued during the year in the western zones. Timber felling in the eastern zone during 1950 was restricted to 92% of the 1949 cut, and

the planting of 80,000 ha. was planned. Fast-growing poplars were used to a great extent and special nurseries were established for their propagation. Afforestation in Greece steadily increased during 1947–50 and 75 state-operated nurseries were established to supply the necessary transplants. Forty-five million trees were supplied from these nurseries during 1949 and 1950.

The planting of tree windbreaks was started on a large scale in the arid regions of southwestern Rumania to protect farmlands from wind erosion and roads and railways from snow drifts. A four-year plan was laid down and the training of the necessary experts was begun during the year.

A new type of mechanically operated cableway for timber extraction from mountainous forests was invented in Switzerland during World War II and was later widely used for softwood extraction in several European countries and in Canada. In 1950 a heavier type of machine was produced and at the end of the year this new "Wyssen" system was being installed in Africa. It was thought that it might enable extensive areas of tropical hardwood forests to be exploited which were formerly considered to be economically inaccessible.

**U.S.S.R.**—Aerial forest surveys had been much used for determining the extent, location and character of the vast unexplored forests of the U.S.S.R. and, up to 1950, about 410,000,000 ha. of forests had been covered by the surveys. The survey of the forests in the basins of the Mezen and the Pechora in the European part of the union was completed. Experiments to determine the possibility of large-scale planting of eucalypts for timber production and essential oils showed successful results in the Uzbek republic and an important three-year planting scheme was started.

**FILMS OF 1950.**—*Oklahoma Forestry* (Photographic Service Department, University of Oklahoma); *Spare That Tree* (Princeton Film Center); *Unto the Hundredth Generation* (National Film Board of Canada). (A. H. Ld.)

**Formosa** (TAIWAN or T'AI-WAN). Formosa is a large island in the western Pacific, separated from China to the west by the Straits of Formosa and from the Philippines to the south by the Bashi and Balingtang channels. Area 14,589 sq.mi., including Pescadores and neighbouring islands. Pop. (mid-1950 est.) 7,500,000, including Chinese nationalist troops and refugees from the mainland. The capital is Taipei (formerly Taihoku) (pop. 326,407 in 1940); other large cities include Kao-hsiung (formerly Takao) (152,265), Tainan (142,133) and Chi-lung (formerly Keelung or Kiirun) (100,511). Principal religions are Buddhism, Confucianism and Taoism. Governor, 1950: K. C. Wu.

**History.**—Formosa, the only territory remaining in the control of the Chinese nationalist government after the conquest of the mainland by the Chinese Communists, was converted into a nationalist military stronghold in 1949 and 1950. The capital of the nationalist government was moved to Taipei, Formosa's capital, on Dec. 8, 1949. To clarify the position of the U.S. government on the question of giving Formosa aid for its defense against the Chinese Communists, Pres. Harry S. Truman issued a statement on Jan. 5, 1950, which said that the United States would not interfere in any conflict between the Communist and nationalist governments and that the United States would not provide military aid to the nationalist forces on Formosa. As a result of the Communist invasion of the Republic of Korea, however, President Truman on June 27, 1950, ordered the United States navy to prevent any Communist attack on Formosa since it would endanger the security of U.S. forces in the far east. At the same time the president called upon the Chinese nationalist government to cease all operations against the Communist-held mainland. He also stated the U.S. government's position that "The determination of the future status of Formosa must await

FORMOSAN LABOURERS laying a new airstrip for Chinese nationalist defense needs in 1950. The Formosan airfield was originally built by the Japanese but was destroyed by U.S. bombers during World War II

the restoration of security in the Pacific, a peace settlement with Japan, or consideration by the United Nations."

**Education.**—In 1941 there were 1,000 primary schools with 12,076 teachers and 740,693 students; 6 normal schools with 225 teachers and 2,507 students; 4 colleges with 236 teachers and 1,385 students; and 1 university with 345 students.

**Finance.**—Upon taking over the administration of the island, the Chinese issued a special currency for Formosa, the Taiwan dollar, based on the former Japanese yen notes. In June 1949 a new currency, the new Taiwan yuan, was issued and the Taiwan dollar was eliminated. On Oct. 31, 1950, the total note issue was 223,000,000 new Taiwan yuan. It was reported that the gold and silver of the nationalist government's treasury was sent to Formosa during 1949. Revenues in 1949 totalled 80,000,000 new Taiwan yuan and expenditures totalled 74,000,000.

**Trade.**—Formosa's chief exports in 1949 and 1950 were sugar, coal, salt, cement, tea and fruits. The chief imports were raw cotton and machinery. In 1949 exports amounted to the equivalent of U.S. \$33,900,000, while imports totalled U.S. \$26,000,000, excluding Economic Cooperation administration aid. During the first eight months of 1950, exports totalled U.S. \$60,864,000, of which sugar represented U.S. \$52,714,000, and imports totalled U.S. \$51,749,000.

**Transportation and Communications.**—In 1946 there were 981 mi. of government railroads, more than 1,500 mi. of private railroads and 500 mi. of tramways; there were 10,000 mi. of roads of all types, of which 2,200 mi. were main highways. In 1939 there were 220 telegraph offices, 195 post offices and 123 telephone exchanges.

**Agriculture.**—Estimated 1950 agricultural production in metric tons amounted to: rice, 1,400,000; sugar cane 5,436,000; refined sugar and products, 613,000; tea, 14,000; pineapples, 49,000; bananas, 128,000; citrus fruits, 29,000; tobacco, 6,000; jute, 18,000; sweet potatoes, 2,350,000; and peanuts, 65,000. The cultivated area in 1949 was estimated at 2,055,000 ac. or 23% of the total land area.

**Industry.**—The island's chief industries, which were developed by the Japanese, are electric power, soda ash, cement, paper and textiles. Formosa has a few important natural resources—water power, coal, copper and petroleum. All important industries are government-managed. The hydroelectric potential of Formosa is 2,500,000 kw.; in 1950 an estimated 1,000,000,000 kw.hr. were generated. Estimated industrial production in 1950 in metric tons (unless otherwise stated) amounted to: coal, 1,630,000; cement, 400,000; chemical fertilizers, 60,000; cotton yarn, 2,155; and cotton cloth, 10,551,000 metres. (S. N.R.)

**Foster, William Chapman** (1897— ), U.S. administrator for economic co-operation, was born on April 27 in Westfield, N.J. He studied at the Massachusetts Institute of Technology, served as a pilot in the U.S. army air force in World War I, entered business and became president of the Pressed and Welded Steel Products Corp. of Long Island City, N.Y. He served as a civilian aid in the war department during World War II, and on Nov. 29, 1946,

was appointed undersecretary of commerce. In April 1948 he became deputy to William Averell Harriman, who was the U.S. special representative of the Economic Cooperation administration in Europe.

On May 31, 1949, he was named deputy ECA administrator, and when ECA Administrator Paul G. Hoffman resigned, effective Sept. 30, 1950, Pres. Harry S. Truman chose Foster to succeed him.

**Foundations:** see COMMUNITY TRUSTS; DONATIONS AND BEQUESTS; SOCIETIES AND ASSOCIATIONS.

**Four-H Clubs.** Membership in the 4-H clubs of the United States reached its highest point during 1950 with a total of 1,886,214 rural boys and girls. The number enrolled for the first time was estimated to be about 700,000. Of the total enrolment, about 320,000 were Negro boys and girls.

Percentage of completion of all 4-H projects undertaken also increased slightly to a record of 77.8 for the membership in all states, Alaska, Hawaii and Puerto Rico. Completion of a project consists in the performance of some farming or home-making activity according to latest scientific methods, in making reports to the club at regular monthly meetings on the methods being used and the progress noted, exhibiting the finished product at a local or county fair and submitting a written report on the project to the club leader at the end of the club year.

Paralleling roughly the increase in enrolment, the number of volunteer local leaders of 4-H clubs showed a similar increase. During 1940–1950, the number of older youth serving as local leaders of 4-H clubs had grown from 45,744 to 59,306, and the number of adult leaders from 108,798 to 192,244.

Projects in which at least 5% of all 4-H club members enrolled fell into 14 main headings: clothing activities, such as making or remodelling garments; food selection and preparation; home gardening; food preservation; home health; swine; poultry; home furnishings and room improvement; corn; dairy cattle; beautification of home grounds; beef cattle; home industries; and home management.

Interest of other countries in the basic principles of the 4-H club work conducted in the United States continued in 1950.

A number of state extension service 4-H staff members were invited during the year to visit other countries for the purpose of discussing methods of organizing and conducting agricultural and homemaking extension work groups of rural youth. Seventeen official leaders of rural youth groups, representing seven countries, spent five or more months in the United States on an "Open House" invitation of the co-operative extension service to study the functioning of the 4-H clubs and other rural youth extension programs. The 4-H clubs participated for the third year in the International Farm Youth Exchange project through which rural youth interested in rural-life activities live, on invitation, with farm families of co-operating countries during summer and autumn months in an effort to contribute to the development of an informed farm leadership of the future. The extension service of the U.S. department of agriculture is the co-ordinating agency for extension youth program participation. The 4-H clubs sent 42 representatives in 1950 and were hosts to 43 from other co-operating countries. (See also FAIRS AND EXHIBITIONS.) (M. L. W.)

**France.** A republic of western Europe, France is bounded north by the English channel, east by Belgium, Luxembourg, Germany, Switzerland and Italy, south by the Mediterranean sea, southwest by Spain and west by the Atlantic ocean. Area: 213,010 sq.mi., including the Mediterranean island of Corsica (3,367 sq.mi.) and small Alpine territories ceded by Italy in 1947 (273 sq.mi.). Pop. (Dec. 31, 1949, est.): 42,000,000. Language: French is almost universally spoken but there are also other regional languages or dialects: German, Breton, Flemish, Provençal, Catalan, Basque and Italian. Religion: mainly Roman Catholic with c. 1,000,000 Protestants and more than 230,000 Jews. Chief towns (pop., 1946 census): Paris (cap., 2,725,374); Marseilles (636,264); Lyon (460,748); Toulouse (264,411); Bordeaux (253,751); Nice (211,165); Nantes (200,265). President of the republic: Vincent Auriol (*q.v.*); premiers in 1950: Georges Bidault, Henri Queuille (June 30–July 10) and René Pleven (*q.v.*).

**History.**—When the year 1950 opened the main preoccupation of French public men was still the stabilization of national economy, which had almost been achieved, but the struggle with communism at home, which in the first half of the year took violent forms both inside and outside parliament, was from the start a powerful second preoccupation; in the course of the year it merged with the dominant one of peace and war. French foreign policy was marked by a series of initiatives for the creation of supranational forms of organizations either in connection with the North Atlantic treaty or with the Council of Europe. The anxiety of France to strengthen militarily both itself and the alliances of which it was a member was paralleled by its desire to avoid any step that might increase the danger of war.

In spite of these dominant preoccupations, France's governments had constantly to struggle to maintain their majorities, which were usually narrow. After the Communists left the government in the spring of 1947 all governments had to rely on a majority extending from the Socialists to the "moderate republicans" or Conservatives. The parties of this majority were necessarily preoccupied with the elections which could not occur later than Oct. 1951 and in which the Socialists would be disputing votes with the Communists, while the Christian Democrats (M.R.P.) would have to fight the right-wing Party of Republican Liberty and the Gaullists with their program of presidential government. The Socialists were necessarily concerned with wage levels, the right wing of the coalition with keeping down taxes.

The Bidault government's hope of getting a skeleton budget (that is, prescribing the maximum to be spent by each ministry)

through parliament by Jan. 1, 1950, had to be abandoned because of resistance to the government's proposals, and a "provisional 12th" was voted for January. This skeleton budget was passed by the meagre majority of 300 to 284 on Jan. 31; the detailed examination of credits for each ministry was left till later. The government struggled through with majorities of two and four and once with a drawn vote. Already a new difficulty loomed up; namely, the Socialist demand made on Jan. 6 for a second "non-recurring" wage bonus to make up for the fact that there was delay in passing the bill restoring collective bargaining. The government's decision that such a bonus should be spread over three months led to the Socialists' resignation from the cabinet on Feb. 3. This did not mean, their leaders stated, going over to the opposition, but the party abstained when faced with Bidault's repatched government, which therefore got a majority of only 225 to 185 on Feb. 7.

Similar problems, namely the rise in the cost of living and a demand for the regrading of officials' salaries, finally led the Socialists to vote against the government at the end of June. They did not participate in the abortive Queuille government against which they voted on the ground that the right was too strongly represented. The Socialists returned to office in the Pleven government which was formed after a mission for investigation and negotiation between the parties had been entrusted by President Auriol to Guy Mollet, the secretary-general of the Socialist party. This unusual method of preparing the solution of the crisis was adopted because the Socialists were responsible for successive crises, but a Socialist premier would not have been acceptable to other parties. Pleven accepted a salary-regrading scheme very close to the Socialists' demands and promised to loosen the deflationary screws.

**Electoral Reform.**—Proposals for electoral reform and the Catholic schools question were linked, since in both cases it was the M.R.P. which was at variance with its coalition partners. Flanked by two anticlerical parties, the Socialists and Radicals, the M.R.P. was unable to secure concessions interesting its Catholic supporters from either and considered that the Socialists ill repayed their solidarity with them in social reforms and nationalizations. Unable to force concessions in the Catholic schools question, the M.R.P. could at least block the demand for the abandonment of the present system of proportional representation. This system suited the Communists and the M.R.P. who together had a majority in the national assembly. The right wing of the coalition and the Socialists would have liked to see a return to something similar to the prewar single-member constituencies, with a second ballot whenever no candidate gained an absolute majority at the first. This system would be unfavourable to parties whose supporters were widely but often thinly spread in the country (M.R.P. and Communists), but it was the system that would most favour the centre of the assembly against its two extremes. The leaders of the M.R.P. tried to induce their followers to accept a compromise, but the backbenchers, knowing that theirs were the seats most threatened by Gaullists, were hard to persuade. Meanwhile the Radicals, a much smaller group but essential to any majority, insisted on the inclusion of electoral reform in the government's program as a necessary step to the reduction of Communist parliamentary representation. Paul Reynaud (right Independent) called it a matter of national defense.

**Communist Activities.**—Until the Communist party congress in April, the party's propaganda called on the workers to interfere with arms transport to Indochina, with the importation of arms and with their manufacture. To begin with, this propaganda had some notable results. Strike action in Marseilles delayed the departure of a troopship for Indochina during two days in January. On Feb. 14, 2,000 workers at Nice abandoned their

THE DONZÈRE-MONDRAGON power plant under construction in the lower Rhône valley, one unit of a giant hydroelectric project under way in 1950 to increase French power output to twice its pre-World War II level

jobs, concentrated on the port, rushed a police guard of 200 and pushed huge crates containing parts of a V-2 ramp over the quayside. (It was alleged they were to be sent to Yugoslavia whereas they were being sent to a practice range in the Sahara.) But the Communists did not control every port. The Cherbourg dockers declared their readiness to load and unload arms. In Marseilles the Communists soon lost control of the port workers. The government everywhere took energetic measures, reinforcing the port police and using troops to load and unload arms when the dockers refused. The new scale of penalties for sabotaging national defense rendered them more easily applicable. The first shipload of U.S. arms was unloaded at Cherbourg on April 13 without any hitch. About this time Communist activity suddenly took a new turn, being directed against newspapers that the party disliked, principally *Le Figaro*, and newsstands that sold them. This campaign also dwindled away. For the rest of the year Communist external activity was mainly directed to the "peace campaign."

On April 28 the French government dismissed Frédéric Joliot-Curie from his post of high commissioner for atomic energy because of his membership in the Communist party. On two occasions the French government took massive action against foreign Communists in France. In Dec. 1949 and Jan. and Feb. 1950 arrests of French citizens in Poland were made the occasion for expulsion of Polish Communists and dissolution of many Communist-controlled Polish organizations. In September 404 foreign Communists were expelled or (in the case of Spaniards who did not wish to go to soviet-controlled territories) assigned residence in Corsica and Algeria. A number of foreign-language Communist newspapers in Polish, Spanish and Armenian were banned. French planning to deal with the potential Communist fifth column was pushed ahead during the year. Jules Moch, minister of defense, told the assembly that as part of the mobilization of the gendarmery would have to be increased fourfold or fivefold.

*Foreign Policy.*—The year opened with a bitter dispute in progress between France and Poland about the arrest and expulsion of nationals and consular officials in the two countries. This was followed by the first grave diplomatic incident between France and the Soviet Union. Moscow recognized Ho Chi Minh (*q.v.*) as head of an independent Viêt-Nam. France protested vigorously by a note to the soviet ambassador, who sent it back by messenger boy. Schuman repeated the protest verbally to the ambassador in an interview lasting four minutes. That France was seeking means to improve its relations with western Germany, the natural corollary of worsening relations with the Soviet Union, was made evident by Schuman's decision to visit Bonn and Berlin. The moment chosen turned out to be one when Franco-German relations were at least superficially strained. The negotiations for a Franco-Saar economic agreement (*see SAAR*) were approaching their conclusion and German speeches on the subject aroused anger in France. Reassurances were received from Germany, but to Konrad Adenauer's suggestion of Franco-German union there was in many quarters an irritated and at best a cautious response, almost the least cautious being that of Gen. Charles de Gaulle. Schuman in a speech to his party's congress on March 27, though reserved, did not refuse to look along the road suggested by the German chancellor but said that political difficulties should not be concealed behind economic negotiations. The entry of Germany into the Council of Europe would facilitate understanding with Germany. The Saar should not constitute an obstacle. The Saar would have to be considered at the German peace conference when all factors including the will of the inhabitants would be taken into account. On the same occasion Schuman spoke of an Atlantic community in which joint economic and political agencies should supplement the North Atlantic treaty's too strictly military character. Proposals for the creation of such bodies were put forward in May at the meeting of the foreign ministers of Great Britain, France and the U.S.

On May 9, just before going to London for three-power conversations, Schuman suddenly announced a French proposal to

make a Franco-German war "forever" impossible and unthinkable, by submitting the two nations' steel and coal industries to a common authority, which would assure modernization, provision of coal and steel under identical conditions on a common market, development of exports and equalization of living conditions by levelling up. The proposal was open to all other nations who wished to join and it was obvious from the first that the proposal would not have been made without the strong hope that others would, especially Great Britain. There was great disappointment that Britain refused to accept the fundamental conception of a supranational authority. But the French government insisted that if Europe was to be united (and this was a step on that path) there must be some surrender of authority. The French Socialists were very much disturbed about the danger of a coal and steel pool without Socialist Britain. Nonetheless, a conference of France, Germany, Italy and the Benelux countries was opened in Paris on June 20 and negotiations were still proceeding with hope of success in December, although events greatly increasing the demand for steel made agreement with Germany more difficult. (See EUROPEAN UNION.)

When the Korean war speeded up rearmament, French ideas on supplementing joint defense plans with joint financial and economic plans came to the fore again. On July 25 Pleven said that the necessary expansion of France's national defense would need outside financing. France reiterated this need when in reply to the U.S. request to state its rearmament plans, it offered to produce 15 new divisions (20 in all) within three years.

The problem of how to include Germany in a western European defense scheme again brought France back to the European idea. Strongly opposed to the creation of a German national army, the French government drew up a plan, announced to the assembly on Oct. 24, by which the national military unit in Europe should be kept as small as possible (less than a division was the original conception), that a European general staff should be created under a European minister of defense, responsible to some assembly, perhaps that of Strasbourg, and administering a European defense budget. The spokesman of the Quai d'Orsay, interpreting this scheme, insisted that it meant that as far as its European territories were concerned France was prepared to surrender the identity of the French national army and merge its own general staff with those of other nations. It was not proposing to apply one measure to itself and another to Germany. Pleven argued that a German national army must be inspired by the ambition to reconquer eastern territories and have an influence on German policy. Its existence, a Socialist spokesman argued, must alarm the western Slavs. It would therefore endanger peace more than it strengthened defense.

The French proposals for a supranational authority of various kinds stemmed from a sense of relative weakness. The proposals for a European army, though they were to prove popular at the European consultative assembly, isolated France at the November conference of North Atlantic national defense ministers at New York city where it was represented by Moch. There began to be some anxiety that through its policy France was losing influence in the inner Atlantic councils, for which Moch was sharply criticized. The anxiety was all the greater because the desire was stronger than in either Great Britain or the U.S. to see that any possibility of negotiation that arose should be exhaustively examined for any hope, so long as rearmament was not held up in consequence. This coloured France's attitude both toward the soviet proposal for a four-power conference and toward the question of the 38th parallel in Korea. This attitude was due in part to the fact that its frontiers were still open to invasion and in part to the necessity of combating Communist propaganda which affected a much larger percentage of the population than in either Great Britain or the U.S. For this

"I'M THE NEW USHER," a 1950 cartoon published in *Franc-Tireur* (Paris), following debate in the French national assembly which ended in fist fights. Subject of the debate was a bill to outlaw sabotage strikes; it was subsequently passed on March 8

reason the visit of Pleven and Schuman to London before British Prime Minister Clement R. Attlee set off for Washington, D.C., was of great importance in French eyes since it provided evidence that on this occasion the French point of view was heard and indeed shared by one of the Allies.

On Oct. 27 France prolonged military service from one year to 18 months and abolished all grounds of exemption save strictly medical ones. Moch said that the aim was to have armed forces of 900,000 men in 1953, 10 divisions in 1951, 15 in 1952 and 20 in 1953. (See also FRENCH UNION; NORTH ATLANTIC COMMUNITY.) (D. R. GL.)

**Education.**—(1948-49) Total elementary schools 84,640, pupils 5,541,416; total secondary schools 947, pupils 420,003. Lower professional schools numbered more than 220 with more than 80,000 pupils in 1948. Higher education: state universities 17, students (July 31, 1948) 128,754. There were 10 other state institutions of higher education, 6 free (Catholic) universities and more than 80 state and private institutions of higher technical education.

**Finance.**—Budget: (1949 est.) revenue 1,440,800,000,000 fr., expenditure 1,870,000,000,000 fr.; (1950 est.) revenue 2,218,000,000,000 fr., expenditure 2,217,500,000,000 fr.; (1951 est.) revenue 1,975,000,000,000 fr., expenditure 2,615,000,000,000 fr. Public debt (Sept. 30, 1949): internal 2,662,900,000,000 fr., external 1,181,900,000,000 fr. Currency circulation (Dec. 1950) 1,511,700,000,000 fr. Gold reserves (Dec. 1950): 182,700,000,000 fr. Unit of currency is the franc. Official exchange rate (1950): U.S. \$1 = 350 fr.

**Foreign Trade.**—The value of imports and exports in millions of francs, for various years, was as follows:

	1938	1946	1949*	1950*
Imports . . . . .	46,068	234,042	921,794	1,072,850
Exports . . . . .	30,588	101,406	782,022	1,072,620
Adverse balance . . . . .	15,480	132,636	139,772	230

\*Including the Saar.

**Transport and Communications.**—Roads (1949) 715,170 km.; railways (1949) 41,130 km., including 3,630 km. electrified; passengers carried, monthly average (1949) 2,456,000,000 passenger-kilometres; freight carried, monthly average (1949) 3,420,000,000 ton-kilometres.

Navigable inland waterways (1948) 8,488 km.; cargo carried, monthly average (1949) loaded 2,794,000 metric tons, unloaded 2,852,000 metric tons. Shipping (Nov. 1950): merchant vessels 692, gross tonnage 2,905,703. Cargo in external trade, monthly average (metric tons, 1949) loaded 1,234,000, unloaded 2,969,000. Air transport, monthly average (1949) 82,100,000 passenger-kilometres, 3,300,000 ton-kilometres. Telephones (Jan. 1949) 2,232,336. Radio receiving set licences (1947) 5,728,000.

**Agriculture.**—Production for 1950 (metric tons): wheat 7,332,000; rye 591,000; barley 1,572,000; oats 3,215,000; maize 321,000; potatoes 13,000,000. Wine production in 1950 was 61,300,000 hl. Livestock (Oct. 1949): cattle 15,432,000; pigs 6,424,000; sheep 7,510,000; goats 1,282,000; horses 2,418,000. Foodstuff production (metric tons, 1949): meat 1,749,000; butter 183,000; sugar, raw value, 881,000; milk 125,000,000 hl.

**Industry and Production.**—Estimated total for 1950: coal 50,300,000 metric tons; gas 2,350,000,000 cu.m.; electricity 30,000,000,000 kw.hr.; pig iron 7,404,000 metric tons; steel 8,190,000 metric tons; cement 7,150,000 metric tons; motor cars 236,600; trucks 88,000; woven cot-

ton fabrics 170,000 metric tons; wool yarn 122,000 metric tons. The index of employment (1937=100) was 113 in 1950; the index of industrial production was 112.

**Franco, Francisco** (1892– ), Spanish army officer and statesman, was born at El Ferrol, Galicia, Dec. 4. He graduated from the military academy of Toledo in 1910. (For his early career, see *Encyclopædia Britannica*.) On the outbreak of civil war in July 1936 he became leader of the rebels. After a bitter three-year struggle, he emerged as the *caudillo y generalísimo* of Spain. During World War II, although his sympathies were pro-German and anti-soviet, he remained neutral. On June 7, 1947, the *cortes* passed unanimously the Succession act making Spain a nominal kingdom, confirming Franco in office as chief of the state for life, according him the right to nominate his successor and stipulating that the candidate to the Spanish crown must be at least 30 years old.

Speaking in May 1950 of the need to increase food production, Franco said that in many parts of Spain the climate made the breaking up of large estates impracticable. Irrigation was the key to the problem, and Spanish prosperity depended on the government's success in developing hydraulic power, the production of fertilizers and technical methods of cultivation.

In Sept. 1950, Franco received Antonio de Oliveira Salazar, the Portuguese prime minister, near La Coruña, and also spent some time with him in Portugal. Franco later visited the Canary Islands and the African colonies Ifni and Rio de Oro.

**French Equatorial Africa.** This federation of four colonies, described since 1946 as overseas territories of the French Union, is situated in central Africa. The southeastern part of the former German colony of Kamerun (Cameroun), under French trusteeship, is administered with French Equatorial Africa. Areas and populations (1946 census) are: Gabon, area 103,089 sq.mi., pop. 422,904; Middle Congo, area 132,046 sq.mi., pop. 631,151; Ubangi-Shari, area 238,224 sq.mi., pop. 1,065,390; Chad, area 495,752 sq.mi., pop. 2,011,494. Total 969,111 sq.mi., pop. 4,130,939. Cameroun has an area of 170,230 sq.mi. and a pop. of 2,819,000. In 1950 the total population was estimated at 4,346,000 including 17,440 Europeans (5,825 French); the population of Cameroun was estimated at 3,011,000 including 7,536 French. The natives are mainly Bantu but the northern savannah districts are peopled by semi-Hamitic semi-Negroid pastoralists. Religion: pagan, with Moslem communities. Chief towns: Brazzaville, capital of French Equatorial Africa (pop., mid-1949 est., 83,579, including 4,353 Europeans); Bangui (pop., 1948 est., 41,000); Fort Lamy (18,300); Libreville (12,600); Yaoundé, capital of Cameroun (pop., 1946 est., 50,000). High commissioner in French Equatorial Africa, Governor General Bernard Cornut-Gentile. Governors: Gabon, Pierre Pellieu; Middle Congo, Hippolyte Le Layec; Ubangi-Shari, Ignace Colombani; Chad, Charles Hanin. High commissioner in Cameroun, Jean Soucadaux.

**History.**—French Equatorial Africa, after long neglect, had begun by 1950 to develop its economy. There was a distinct increase in the exploitation of timber in Gabon, and of palm oil and palm kernels. As nine-tenths of the stock farming was concentrated in the Chad territory, it had not yet been possible to provide Ubangi-Shari and Gabon with normal supplies of meat.

Four hundred engineers and 20,000 native workers were employed in copper and oil prospecting in the Niari valley and Gabon respectively. In the first nine months of 1950 exports of coffee and cocoa exceeded the figures for the whole of 1949; the export of cotton increased by 15% and that of sisal was more than doubled. Notable strides were taken in the modernizing of Brazzaville and Pointe Noire, but there were complaints that Fort Lamy was being denied such benefits.

An increasing part in the affairs of the trust territory of Cameroun was taken by France during 1950, including the provision of 72% in weight of goods (55% in 1949) and 80% in value (75% in 1949) and the supply of 45% of sea transport (30% in 1949). Trial planting of cinchona by the experimental station produced a ton of quinine. New sawmills raised the annual capacity of sawed timber to more than 100,000 cu.m. The inquiry commission of the U.N. trusteeship council was, on the whole, favourably impressed by conditions in the territory.

**French Equatorial Africa.—Finance.**—Budget (1949 actual): balanced at 3,928,100,000 fr. C.F.A.; (1951 est.) balanced at 7,710,300,000 fr. C.F.A. Monetary unit: franc C.F.A. (Colonies Françaises d'Afrique)=2 metropolitan francs. Exchange rate Nov. 1950: 349.85 M.fr. per U.S. dollar.

**Foreign Trade.**—(1949) Imports 11,309,500,000 fr. C.F.A.; exports 6,313,000,000 fr. C.F.A.

**Transport and Communications.**—Railways (1946): 512 km. Roads (1949): 38,087 km. Motor vehicles licensed (1948): cars 640, commercial 2,600. Shipping (1949, metric tons, cargo unloaded; loaded in parentheses): Pointe Noire 193,000 (71,000); Brazzaville 54,700 (53,000); Port Gentil 41,100 (96,300); Libreville 27,200 (99,000). Passengers (1949, all ports): arrivals 8,179; departures 7,025. Air transport (1949): aircraft landed 572; passengers flown: arrivals 6,020; departures 5,885; freight carried (metric tons): unloaded 743.7; loaded 517.

**Agriculture.**—Main crops (metric tons, 1949): millet 550,000; cassava 390,000; bananas 347,000; palm oil 4,500; palm kernels 6,400; cotton 23,300. Livestock (1949): cattle 4,000,000; sheep 3,500,000; goats 2,500,000; pigs 5,000; horses 10,000. Timber (Gabon) 579,000 cu.m.

**Mineral Production.**—(1949) Gold 1,800 kg.; diamonds 122,928 carats.

**Cameroun.—Finance.**—Budget (1950 est.) balanced at 3,125,000,000 fr. C.F.A.; (1951 est.) balanced at 4,682,000,000 fr. C.F.A. excluding 2,700,000,000 fr. C.F.A. for development and equipment. Monetary unit: franc C.F.A. (Colonies Françaises d'Afrique)=M.fr. 2. Exchange rate: 349.85 M.fr. per U.S. dollar (1950).

**Foreign Trade.**—(1949) Imports 8,387,000,000 fr. C.F.A.; exports 6,661,000,000 fr. C.F.A.

**Transport and Communications.**—Railways (1949): 505 km. Roads (1948): 10,606 km. Ships entered (1949): 450; cargo (metric tons): unloaded 388,000, loaded 444,100. Air transport (1949): aircraft landed 557; passengers: arrivals 2,878; departures 4,010; cargo (metric tons): unloaded 50, loaded 52.9. Telephone subscribers (1949): 751.

**Agriculture.**—Main crops (metric tons, 1949): cassava 829,000; millet 412,000; maize 109,800; yams 70,000; bananas 383,500; rice 8,400; peanuts 69,600; palm oil 37,200; palm kernels 31,900; sugar cane 56,900; cacao 45,700; coffee 7,400; rubber 2,400. Livestock (1949): cattle 1,000,000; sheep 400,000; goats 600,000; pigs 100,000.

**Mineral Production.**—(1949) Tin 104 metric tons; gold 279 kg. (C. A. J.)

**French Guiana.** An overseas *département* of France on the northeastern coast of South America. French Guiana has an area, including the territory of Inini (30,301 sq.mi.) of 34,740 sq.mi. Pop.: (1946 census) 28,506, including Inini (4,993); (1949 est.) 29,000, excluding 6,000 Amerindians. The population, concentrated in great majority on the coastal lowland, is mainly coloured (Negro or mixed); the inhabitants of Inini are aboriginal Indians; the Europeans number about 5% of the total. Religion: mainly Roman Catholic. Capital and chief port, Cayenne (pop., 1948 est., 10,961). Prefect: Robert Vignon.

**History.**—Great efforts directed since 1948 toward the equipment of the country began to show results in 1950. The main improvements were in the field of electrification and water supply, and the road system also was being modernized. On Aug. 18 a 75% ad valorem duty was imposed by the general council of the territory on imported rum and tafia to protect the local rum industry against competition by Martinique products. Nineteen refugees from camps of the International Refugee organization in Germany left on Dec. 15 to join 174 similar settlers estab-

lished in 1949 at Saint Jean de Maroni in the old penitentiary abandoned since the abolition of the convict prison. An outstanding undertaking was the planning of a French Institute of Tropical America for which funds were made available.

**Finance.**—Budget 1950: *département*, balanced at 433,600,000 metropolitan fr.; territory of Inini balanced at 87,300,000 M.fr. Exchange rate Nov. 1950: 349.85 M.fr. per U.S. dollar.

**Foreign Trade.**—(1949) Imports 1,031,300,000 M.fr.; exports 219,300,000 M.fr. Main exports: tulipwood 2,300 kg.; gold 467.1 kg.; rum 254 hl.

**Agriculture.**—Main crops (metric tons, 1949): sugar cane 17,500; cassava 12,000; sweet potatoes 3,200; maize 250; bananas 250. Livestock (1949): cattle 3,000. (C. A. J.)

**French Guinea:** see FRENCH WEST AFRICA.

**French India.** This group of four settlements in India has a total area of 193 sq.mi. Pop.: (1948 est.) 317,300. The Bengali-speaking Chandernagor (4 sq.mi.; pop. 1948, 44,800) was transferred to India on May 2, 1950. The four Tamil-speaking southern settlements are Pondicherry, area 112 sq.mi., pop. (1948 est.) 222,600; Karikal, 52 sq.mi., pop. 70,500; Mahé, 23 sq.mi., pop. 18,300; Yanaon, 6 sq.mi., pop. 5,900. Chief town and seat of administration, Pondicherry (pop., 1948 est., 22,572). Commissioner: André Meynard.

**History.**—Since the transfer in 1950 of Chandernagor to India, which did not include it in western Bengal but undertook to administer it directly (May 9), French settlements in India constituting an overseas territory included only four provinces. On Dec. 6 Jawaharlal Nehru reaffirmed that no foreign possessions were to remain in India. This viewpoint was accepted by the Indian deputy to the French national assembly, Saravane Lambert, who proposed transfer pure and simple to India without recourse to a popular referendum. He found support among the members of the Ashram (hermitage) founded at Pondicherry by Aurobindo Ghose, high-caste Hindus and even the Roman Catholic intellectual élite. All claimed that the spread of France's cultural influence would continue unhampered. Taking into account the Chandernagor precedent, the French government took its stand on the 1946 constitution by which any cession of territory was to be subject to the consent of the population. Life was made difficult for the settlements by Indian customs requirements and limitation of supplies.

**Finance.**—Budget (1949 actual) balanced at Rs. 6,056,800. Monetary unit: rupee. Exchange rate (Dec. 1950): Rs. 1=21 cents U.S.

**Foreign Trade.**—(1948) Imports 3,214 metric tons valued at 147,100,000 fr.; exports 1,594 metric tons valued at 633,900,000 fr. (C. A. J.)

**French Indochina:** see INDOCHINA.

**French Literature.** Following upon the period of "literary commitment" rooted in the experience of World War II, a tendency to withdraw from political and social action, which was already noticeable among French writers during the preceding year, became more evident as 1950 advanced, and except for those who had linked their fate indissolubly to that of Russian Marxism (Louis Aragon, Paul Eluard, Tristan Tzara, Roger Vailland were the more prominent of these) there appeared to be little serious literary reaction to the acceleration of events on the world stage.

True, pleas signed by many of the best-known literary names in France were addressed by nonpartisan groups to the authorities in Prague, Athens and Istanbul urging clemency for certain condemned intellectuals. There was also a limited participation on the part of French writers—not the most representative, however—in the International Congress for the Defense of Culture that took place in Berlin early in the summer. And it goes without saying that at no time did the essential debate die down entirely in the literary reviews and journals.

The death of Emmanuel Mounier, the editor of *Esprit*, spirit-

ual heir of Charles Péguy and founder of the personalist philosophy, dealt a serious blow to liberal Catholic intellectuals, one that left them, despite the distinguished literary personality of Albert Béguin (who succeeded Mounier as director of *Esprit*) without a rallying force. In what might be termed, for the sake of convenience, the opposite camp, André Breton's genius for leadership seemed to lack both orientation and disciples, and his activities, confined as they were to a new, enlarged edition of *L'Humour noir* and a special number on surrealism published by the review *La Nef*, were more of a historic than a creative nature. André Malraux's attention seemed to be turned definitively to interpretation of the visual arts of past epochs and, finally, it was perhaps not without significance that Jean-Paul Sartre's chief contribution to the year's output should have been a long, almost metaphysical analysis of the work and personality of a rarely gifted fellow-writer, Jean Genêt, author of *Notre Dame des fleurs*, *Journal du voleur*, etc. The reiterated "too late" of Sartre's preface to the Spaniard Juan Hermanos' *La Fin de l'espoir*, a bitter summing up of the tragedy of republican Spain, was indicative of a general mood. Pessimism, nihilism, romanticism, occultism—all these were present in the French literature of the mid-20th century and there seemed to be few writers sufficiently attracted by the social and ethical realities proposed to them to be willing to sacrifice their intimate convictions.

In the field of the novel, impartial judgment would demand the mention of about 15 titles, for there appeared to be few marked preferences on the part of the public, and this despite the wide publicity accompanying the Goncourt, Théophraste Renaudot and Fémina prizes which were awarded respectively to *Les Jeux sauvages*, by Paul Colin; *Les Orgues de l'enfer*, by Pierre Molaine and *Une Femme sans passé*, by Serge Groussard. Hervé Bazin's avid story of possessive maternity which, because it was turned down by the Académie Goncourt, was wittily advertised as *Hors Goncourt*, was quite as popular as the prize-winners; and for many, the best novels of the year were André Dhôtel's strange, poetic *L'Homme de la scierie* and Marguerite Duras' *Barrage contre le Pacifique*, the latter set in Indochina. *Bon pied, bon oeil*, by Roger Vailland, and Louis Aragon's fourth volume of *Les Communistes* constituted good documentary accounts of certain political milieux, and *L'Affaire Bernan*, by Joseph Kessel, continued his contemporary chronicle, *Le Tour du malheur*, begun a few years back. Marcel Jouhandeau's unabashed *L'Imposteur*, part of a cycle entitled *Chroniques maritales*, gave a witty if cynical picture, that both shocked and amused, of the author's own stormy domestic life. Of the very large number of translations published, Graham Greene's novels were the most widely read and commented. Thomas Mann's *Dr. Faustus*, Malcolm Lowry's *Under the Volcano*, *The Ambassadors* by Henry James (presented as "the American Proust"), and the Italian Vasco Pratolini's *I Poveri Amati* also found great favour.

Although no poetry was published that could be called sensational—unless this term could be applied to Raymond Queneau's *Petite cosmogonie portative*—there appeared two volumes by René Char, *Les Matinaux* and *Art bref suivi de premières allusions*, both of which continued the humanistic, slightly moralistic tradition that had come to be associated with the work of this distinguished poet. *Passages*, by Henri Michaux, and *Connaissance du soir*, by Joë Bousquet (whose death occurred in November) were other high lights of a rather uninspired year. Among the younger poets, *Poésie zéro ou l'école sultan*, by Georges Schehadé, revealed a genuinely original talent; and the books of two still younger men, *Le Théâtre de la chrysalide*, by Romain Weingarten (author, in 1948, of a much discussed play, *Akara*), and *Derrière son double*, by Jean-Pierre Duprey (the latter volume

prefaced by André Breton), were well received. Finally, Jean Paulhan (awarded the 1950 City of Paris prize for the sum of his critical activities) devoted an entire number of his *Cahiers de la Pléiade* to a group tribute in honour of the poet, St. John Perse, author of *Anabase*, *Exil*, *Vents*, etc.

If examined in the perspective of literary creation, the theatrical year was an unusually lean one, and there was a general critical wail over the dearth of good new plays. The result was a season given over for the greater part to revivals and translations, with emphasis on the producer's art rather than on the play itself. It is therefore no exaggeration to say that, with only three exceptions—Marcel Aymé's *Clérambard*, Henry de Montherlant's *Malatesta* and the Kafka-like experiments of Arthur Adamov—none of the new plays presented (certain of which were signed by such well-known names as Jean Anouilh, Henry Bernstein, François Mauriac, Armand Salacrou and Albert Camus) obtained more than perfunctory critical notice.

The epoch being essentially one of militant philosophical renewal, this vein was both rich and productive. Emile Bréhier's *Transformation de la philosophie française* and Jean Wahl's article on philosophy, in the group manifestation entitled *Cinquante années de découvertes*, furnished important summaries of the philosophical currents of the first half of the century: increasing discredit of the notion of philosophical systems and, parallel with an apparently triumphant subjectivity, a return to the concrete with the perspective of a veritable offensive of rationalism. Louis Lavelle's two new works *Traité de valeurs* and *Introduction à l'ontologie* attracted considerable comment, as did Simone Weil's *Connaissance du surnaturel*. Other works to be noted were *La Nostalgie de l'être*, by Ferdinand Alquié; *Signification du rire*, by Francis Jeanson; and *Philosophie de la volonté*, by Paul Ricoeur. Jean-Paul Sartre was said to be working on a monumental *Traité de la morale*. Continued interest in German philosophical thought was evidenced by publication in translation of Edmund Husserl's *Idées directrices pour une phénoménologie* and *Méditations cartésiennes*, to which must be added two volumes devoted to Nietzsche: one from the pen of Karl Jaspers, with an introduction by Jean Wahl, and a group manifestation, *Etudes nietzschéennes*, commemorating the 50th anniversary of the poet-philosopher's death.

Evidence of increasing attentiveness to the social sciences was furnished by the publication of such volumes as *Sociologie et anthropologie*, by Marcel Mauss, with an introduction by Claude Lévy-Strauss; *La Mémoire collective*, by Maurice Halbwachs; *Sociologie du communisme*, by Jules Monnerot, and *L'Utopie et les Utopies*, by Raymond Ruyer. There was also a bewildering number of new works, by both French and foreign authors, treating of the many religious, aesthetic, political and economic problems of the day. Some of the more important titles were: (religion) *Emmaüs*, by Paul Claudel; *Dialogue des Carmélites*, by Georges Bernanos; *Eveils*, by Jean Schlumberger; *La Religion des Cathares*, by Hans Soderberg; *L'Occultisme*, by Robert Amadou; (aesthetics) *L'Artiste et sa conscience*, by René Leibowitz; *Précis de décomposition*, by E. M. Cioran; *Etudes sur le temps humain*, by Gaston Poulet; *Bâtons, chiffres et lettres*, by Raymond Queneau; *Les Fauves*, by Georges Duthuit; *Saturne, essai sur Goya*, by André Malraux; *La Littérature à l'estomac*, by Julien Gracq; (general) *La Renaissance orientale*, by René Schwob; *Le Mystique du Surhomme*, by Michel Carrouges; *Portrait de l'aventurier*, T. E. Lawrence, Malraux, von Salomon, by Roger Stéphane; *Genèse de la pensée moderne*, by Marcel Jean and Arpad Mézei; *Où va le peuple américain?* by Daniel Guérin. Three important anthologies: *Lumière du Graal*, *Le Romantisme allemand* (new, revised edition), *Aspects du génie d'Israël*, appeared in Marseille.

The year saw the appearance of two lively new literary re-

views, *Contemporains* and *Eléments*; the regrettable disappearance of two others, *Empédocle* and *Paru*; and the revival, after a year's silence of the sharply analytical *Critique*. (See also LITERARY PRIZES.)

FILMS OF 1950.—France: *Background for Literature* (Coronet Instructional Films); *Une Famille Bretonne* (Encyclopædia Britannica Films Inc.). (M. JOL.)

**French Overseas Territories:** see FRENCH UNION.

**French Pacific Islands:** see PACIFIC ISLANDS, FRENCH.

**French Union.** With the establishment, by the constitution of 1946, of the French union, in which are comprised both the mother country and the former empire, the old colonial terminology was abolished and for the colonies were substituted four categories of overseas regions. The older, completely assimilated colonies claimed recognition as French *départements* administered as in the mother country; the others became overseas territories (*territoires d'outre-mer*) which henceforward would elect representatives to parliament and would have their own local assemblies possessed of wide powers; the trust territories, to be known in future as *territoires associés*, were similar in structure to the overseas territories and had the same electoral privileges; lastly, there were the former protectorates, now styled *états associés*, which could belong to the union only by an act of voluntary accession. Total area of the overseas territories of the French union: approximately 4,602,028 sq.mi.; total population (1949 est.): 78,511,000. Certain essential information on the component parts of the French union is given in the table. (See also separate articles.)

French Union		
Country and area, sq. mi. (approx.)	Population* (000's omitted)	Capital, status, governors, rulers, etc.
AFRICA

\*1949 est. if not otherwise stated.

†1948 est.

‡Upper Volta territory was formed on Jan. 4, 1947, from parts of French Sudan, Ivory Coast and Niger.

§1946 census.

On the Investment Fund for the Economic and Social Development of the Overseas Territories (F.I.D.E.S., or Fonds d'Investissement pour le Développement Economique et Social des Territoires d'Outre-Mer), set up in 1946, and on the corresponding reserve for the overseas *départements* (F.I.D.O.M.) was based all economic planning for the French union. This capital was provided from the French budget and territorial contributions voted by the local assemblies. In accordance with this, a committee presided over by René Pleven had drawn up in 1946-47 a comprehensive plan for the development of the overseas territories; in 1949 its procedure was modified. By Sept. 30, 1950, loans and grants extended by the state to the overseas territories and *départements* amounted to 86,723,300,000 fr. But the

limitations imposed on allocations for 1951 by the international situation and the heavy burden of rearmament meant that it would not be possible to continue the work in progress, and the economic expansion of the French union was in danger of being seriously retarded. (C. A. J.)

**French West Africa.** This group of eight colonies, described since 1946 as overseas territories of the French union, is situated in western Africa and is bounded west and south by the Atlantic ocean, north by the Spanish Sahara, the southern territories of Algeria and the Fezzan, and east by Chad and Nigeria. The eastern part of the former German colony of Togo, under French trusteeship, is administered with the A.O.F. (Afrique Occidentale Française). Areas and populations are:

	Area (sq. mi.)	Population (1936 census) (1948 est.)	
Mauritania . . . . .	364,092	383,000	524,000
Senegal* . . . . .	81,081	1,791,000	1,994,000
Sudan . . . . .	461,389	3,569,000	3,137,000
Upper Volta† . . . . .	121,892	—	3,044,000
Niger . . . . .	493,822	1,747,000	2,041,000
Ivory Coast . . . . .	129,807	3,850,000	2,031,000
French Guinea . . . . .	108,455	2,011,000	2,130,000
Dahomey . . . . .	44,749	1,351,000	1,474,000
Total . . . . .	1,805,287	14,702,000	16,375,000
Togoland . . . . .	21,235	781,000	953,000

\*Dakar was incorporated with Senegal in 1946.

†Territory of Upper Volta was formed on Jan. 4, 1947, from parts of Sudan, Ivory Coast and Niger.

The population is mainly Negro, but in the savannah lands there is much Arab and Berber admixture. Pop.: European (1948) 51,760 (including about 40,000 French) in the A.O.F., in Togoland 841. The population consists of multiple Negro ethnic groups which do not coincide with the linguistic groupings. Islam makes headway leaving undisturbed, however, the fundamental animism. Animists were estimated at 53.4%, Moslems 44.2% and Christians 2.4%. Mauritania was almost entirely Islamized

(99.4%); in the Niger valley, Senegal and French Guinea the majority of the population had turned to Islam (75%, 71% and 64%); the Sudan was deeply penetrated (43%), but the Ivory Coast, Upper Volta and Dahomey were little affected (9%–10%). Chief towns (pop., 1948 est.): Dakar, capital of the A.O.F. (185,000); Saint Louis (62,900); Bamako (70,492); Conakry (38,000); Abidjan (36,000); Porto Novo (31,000); Lomé, capital of Togoland (30,100). High commissioner in the A.O.F.: Governor General Paul Béchard. Governors: Mauritania, Marie Rogué; Senegal, Camille Bailly; Sudan, Edmond Louveau; Upper Volta, Albert Mouragues; Niger, Jean Toby; Ivory Coast, Laurent Pechoux; French Guinea, Paul Siriex; Dahomey, Claude Valluy; Togoland, Jean Cédile.

**History.**—Ugly incidents on the Ivory Coast were provoked by the Rassemblement Démocratique Africain (R.D.A.) which passed under Communist control. A demonstration at Dimbokro on Jan. 30, 1950, ended with 12 dead and 22 wounded among the natives and 22 wounded among the forces of law and order. Emergency measures taken by the government and the native leaders' fear of excesses brought about the disruption of the R.D.A.

The problem of unifying the Ewés distributed between the two Togolands was examined by the Trusteeship council which in its session of June–July decided to form a Franco-British consultative commission. The commission would formulate plans for carrying out the aims of the two territories. In October delegates of the French government presented to the Trusteeship council their replies to the two petitions of Alexandre de Souza, chairman of the Council of Notables of Lomé and founder of the Comité de l'Unité Congolaise, who stood for the union of the two Togolands and against the electoral procedure and "arbitrary arrests" on French territory. Only supporters of French trusteeship were appointed to the consultative commission as a result of the elections in French Togoland (Oct.–Nov.) by indirect suffrage. Discussion at the first session of the consultative commission held at Lomé (Nov. 8–10) under the joint chairmanship of Sir Charles Arden Clarke, governor of the Gold Coast, and Yves Digo, governor of Togoland, ended in the institution of a permanent commission charged with presenting a report on the points at issue.

**French West Africa.—Finance.**—Budget (1951 est.) balanced at 27,884,000,000 fr. C. F. A.

**Foreign Trade.**—(1949) Imports 34,479,700,000 fr. C. F. A., exports 27,400,700,000 fr. C. F. A. (Franc C. F. A. [Colonies Françaises d'Afrique] = 2 metropolitan francs. As of Nov. 1950, U.S. \$1.00 = 349.85 metropolitan francs.)

**Transport and Communications.**—Railways (1949): 3,918 km. Roads (1948): 75,799 km. Ships entered (1949): Dakar 2,234; Conakry 367; Port Bouet 152; Grand Bassam 194; Cotonou 194. Cargo (all ports, 1949): unloaded 1,726,000 metric tons, loaded 1,433,000 metric tons. Passengers (all ports, 1949): arrivals 41,146; departures 43,980. Air transport (1949, aircraft landed): transcontinental traffic, French lines 501, foreign lines 2,467; intercolonial traffic 441. Passengers (total): arrivals 20,344; departures 20,383; transit 44,005. Freight carried (total) 5,365 metric tons. Telephone subscribers (1948): 5,665.

**Agriculture.**—Main crops (metric tons, 1949): yams 1,459,000; peanuts 729,000; cassava 924,000; rice 505,000; maize 290,000; palm kernels 60,900; palm oil 12,100; bananas 480,800; coffee 52,000; cocoa 52,000; cotton 23,800. Livestock (1949): cattle 6,000,000; sheep 8,200,000; goats 6,200,000; pigs 260,000; horses (1948) 186,500; asses (1948) 561,700; camels (1948) 284,000.

**Mineral Production.**—(1949, metric tons) Phosphate alumina 5,675; ilmenite and zircons (1949, six months) 13,179; mineral oil (Senegal) 70,534; cement 43,918; diamonds 94,996 carats; gold 90.1 kg.

(C. A. J.)

**Togoland.—Finance.**—Budget (1949 actual) balanced at 555,500,000 fr. C. F. A.

**Foreign Trade.**—(1949) Imports 1,454,400,000 fr. C. F. A.; exports 844,700,000 fr. C. F. A.

**Transport and Communications.**—Railways (1948): 449 km. Roads (1948): 3,275 km. Ships entered (1949) 194; cargo (metric tons): unloaded 40,600; loaded 48,100.

**Agriculture.**—Main crops (metric tons, 1949): cassava 170,000; yams 200,000; millet 90,000; maize 53,000; peanuts 16,000; rice 5,200; palm kernels 4,400; palm oil 2,500; coffee 2,000; cocoa 2,500; cotton 1,300.

Livestock (1949): cattle 50,000; sheep 100,000; goats 100,000; pigs 10,000.

**Frequency Modulation:** see FEDERAL COMMUNICATIONS COMMISSION; RADIO.

**Friends, Religious Society of.** This Protestant sect, the members of which are also known as Quakers, originated in England about 1650 under the influence of George Fox. The 53 Yearly Meetings of Friends throughout the world today represent somewhat diverse views, but all share a belief in an inward divine Light which is in every man. In 1950 there were about 179,000 members of the Society of Friends. Of this total number 119,000 were in North America, 24,000 in the British Isles, 29,000 in Africa, and the remainder were scattered over many countries on all the continents.

In April 1950 Clarence Pickett, executive secretary of the American Friends Service committee for more than 20 years, retired to become honorary secretary, remaining on the staff to render special service to the committee. During his years of service the committee undertook such projects as establishing a co-operative mining community, institutes of international relations, civilian public service camps for conscientious objectors during World War II, a war relief program and operation under United Nations auspices of a relief program in Palestine.

Lewis Hoskins, director of personnel for the committee, succeeded Clarence Pickett as executive secretary.

After more than a year's preliminary work final arrangements were made for the beginning of a self-help slum clearance and housing project in Philadelphia, Pa., sponsored by the American section of the American Friends Service committee with the co-operation of the City Planning commission and the Federal Housing administration. A city block was to be redeveloped using as far as possible the labour of the residents.

In June the American Friends Service committee published a pamphlet, *Quaker Work with Arab Refugees, Undertaken for the United Nations*, a description of a year and a half of work with 200,000 Arab refugees near Gaza.

The Friends World Conference committee met at Oxford in July to plan for a world conference of Friends to be held at Oxford during the summer of 1952. This date would be the tercentenary of the rise of the Society of Friends. There had been two other such world gatherings of Friends, in 1920 at London and in 1937 at Swarthmore, Pa.

Thirty young people from eight countries met in July at Bièvres, Fr., for a young Friends international retreat. The biennial general conference of six American Yearly Meetings was held in June at Cape May, N.J., with an attendance of 1,900. In October more than 1,000 members of the 11 Yearly Meetings comprising the Five Years Meeting gathered at Richmond, Ind.

A conference representative of American Quakerism met at Richmond, Ind., Oct. 26 to 28, 1950, and drew up a statement on peace which it referred to the whole society for study and action. The conference reaffirmed a statement of a similar body published in 1948, which emphasized the society's historic opposition to war and preparations for war, and in addition suggested a six-point program for specific action for peace.

The American Friends Service committee and Friends in England sponsored an unofficial embassy at the general assembly of the United Nations in the fall of 1950, in the interest of international peace. An international team made up of Friends from England, Sweden, Mexico and the United States lived together in New York city and each day visited the sessions of the United Nations. They interpreted Friends views to delegates and through writing and speaking gave their impressions of the United

Nations to Friends and others. (See also CHURCH MEMBERSHIP.)  
(Ly. W. R.)

**Fruit.** The world fruit crop of 1950 was indicated as generally abundant, though probably somewhat smaller than in 1949. Apricots, cherries, peaches, plums and prunes totalled 6,200,000 tons, compared with 7,100,000 tons in 1949 and 6,600,000 tons prior to World War II. World apple production (including that for cider) was estimated at 585,200,000 bu., 8% larger than the 1949 crop and 18% higher than the prewar average. European production was 19% larger than in 1949. World pear production was indicated at 164,100,000 bu., 1% less than 1949 but 25% higher than prewar. The citrus crop appeared to be larger in most areas. Dried fruit packs were generally smaller, except for raisins.

The U.S. fruit crop in 1950 was about 12% smaller than in 1949 and about 5% less than average. The situation varied much among areas and kinds of fruits, because of winter damage and late spring freezes. Only the apricot and sour cherry crops of the stone fruits were larger than in 1949.

Prices for most fruits in 1950 were higher to the producers and, unlike 1949, almost all of the production was harvested and marketed. The rapidly expanding market for frozen concentrated orange juice became a major factor in orange utilization.

**Apples.**—The U.S. 1950 apple crop totalling 120,499,000 bu. was 10% smaller than the large 133,742,000 bu. crop of 1949 but 10% larger than average. The leading varieties, Delicious (27,000,000 bu.), Winesap (13,000,000 bu.), and McIntosh (13,000,000 bu.), were approximately as abundant as in 1949, whereas Jonathans were down 32% and York Imperial more abundant by 62%.

Table I.—U.S. Commercial Apple Production by Leading States

(In thousands of bushels)

State	1950	1949	Average 1939-48	State	1950	1949	Average 1939-48
Washington . . .	34,592	31,820	27,764	Oregon . . . . .	2,720	2,953	2,783
New York . . . .	17,625	20,090	14,399	New Jersey . . .	2,520	3,124	2,490
Virginia . . . . .	12,580	8,525	9,589	Connecticut . . .	1,406	1,640	1,188
Michigan . . . . .	7,020	11,735	6,776	Maine . . . . .	1,391	1,006	768
Pennsylvania . . .	6,930	9,680	7,300	Maryland . . . . .	1,352	1,251	1,526
California . . . .	6,496	9,445	7,814	North Carolina . .	1,296	448	982
West Virginia . . .	4,260	3,720	3,844	Idaho . . . . .	1,220	1,825	1,911
Massachusetts . . .	3,825	3,842	2,473	New Hampshire . .	1,100	1,056	732
Ohio . . . . .	3,534	5,446	3,828	Indiana . . . . .	1,020	1,715	1,333
Illinois . . . . .	2,852	4,176	3,125	Missouri . . . . .	1,020	1,548	1,260

The average price to producers for the crop was estimated at \$1.85 per bushel, compared with \$1.38 per bushel for the 1949 crop. It was estimated that only 2,400,000 bu. of the 1950 crop were not harvested because of low prices, as compared with 11,900,000 bu. of the 1949 crop. Purchase by the United Kingdom of 1,300,000 boxes of Canadian apples, as compared with about 6,000,000 pre-World War II, left Canadian producers, particularly those in Nova Scotia, with a serious surplus problem.

**Apricots.**—The 1950 crop in the commercial producing states, California, Washington and Utah, was 202,100 tons, compared with 197,600 tons in 1949, but 13% less than average for the decade. The world crop of 544,820 tons was 12% less than in 1949 and 15% below pre-World War II.

**Avocados.**—The U.S. production in 1950 was estimated at 25,200 tons, 31% more than in 1949, 39% above average. Production in California and in Florida was above 1949 and above average.

**Bananas.**—The U.S. supply, all imported, which accounted for one-sixth of the fresh fruit consumed, was expected to continue at about 20 lb. per capita in 1950, approximately the same as in previous years.

**Cherries.**—The 1950 U.S. commercial cherry crop was slightly smaller—242,010 tons, compared with 250,230 tons in 1949 but in excess of the average of 179,240 tons. Sour cherries, commercially produced mostly in Michigan, New York and Wisconsin, were a record crop of 160,350 tons, against 112,530 tons in 1949.

The sweet cherry crop, mostly produced in Washington, Oregon and California, was only 81,660 tons, 41% below 1949 and 5% below average. World production of 1,079,539 tons was a little less than 1949 but slightly above prewar.

**Cranberries.**—The U.S. 1950 crop was a record 980,300 bbl., compared with 840,400 bbl. in 1949 and an average for the decade of 714,580 bbl. Massachusetts produced 620,000 bbl., 63% of the total crop. The Wisconsin crop was 215,000 bbl., almost twice the average for the previous decade.

**Dates.**—The California date crop of 1950 was estimated at 15,100 tons, compared with 14,100 tons in 1949 and only 9,160 tons for the 1939-48 average.

**Figs.**—The 1950 fig crop of California and Texas was even smaller than in 1949. California produced 23,800 tons of dried figs in 1950 (24,800 tons in 1949) and 11,000 tons not dried, against an average for 1939-48 of 32,910 and 16,230 tons. Texas figs for preserving were estimated at 590 tons in 1950, compared with 934 tons average for the decade.

**Grapefruit.**—The 1950-51 U.S. grapefruit crop was indicated as a large one of 48,520,000 boxes, compared with 36,500,000 boxes in 1949-50, and an average of 50,722,000 boxes for the previous decade. The average price per box to producers was estimated at \$1.02, compared with \$1.82 in 1949.

**Grapes.**—The U.S. grape crop of 2,640,900 tons in 1950 was slightly less than the 2,662,100 tons of 1949 and the 2,776,885 tons average of the previous decade. The California crop, 2,411,000 tons of the total, was slightly below the 2,485,000 tons of 1949 and 5% below average. Raisin production was sharply reduced. The crop of the Great Lakes area was 43% more than in 1949 and one-third above average. The world crop was estimated at 37,500,000 tons, 2% more than in 1949 but 6% below the prewar total. Europe produced 63% of the total.

**Lemons.**—The indicated 1950-51 California lemon crop of 12,500,000 boxes was larger than the 11,630,000 boxes in the previous year; the ten-year average was 13,055,000 boxes. The price to producers was estimated at \$3.10 per box, against \$3.59 for the previous crop.

**Limes.**—The 1950-51 Florida crop of 280,000 boxes was large, compared with 260,000 boxes in 1949 and 168,000 boxes average for 1939-48.

**Olives.**—California in 1950 produced 43,000 tons, compared with 35,000 tons in 1949 and 47,900 tons average 1939-48. The Spanish pickled olive crop was about one-half of that of 1949.

**Oranges.**—The indicated U.S. crop for 1950-51 was 106,490,000 boxes, compared with 103,535,000 boxes in 1949 and 96,070,000 boxes average of 1939-48. Prices, estimated at \$1.63 per box for the crop, were lower than the \$2.16 of 1949.

Table II.—U.S. Orange Production by States

(In thousands of boxes*)					
State	1950	1949	Average 1939-48		
Florida					
Early and midseason . . . . .	34,000	33,600	23,250

\*Boxes hold 77 lb. in California and Arizona; 90 lb. in other states.

**Tangerines.**—The 1950 Florida crop was estimated at 4,800,000 boxes, somewhat less than the 5,000,000 boxes of 1949 but far above the 3,630,000 boxes average for the decade.

**Peaches.**—The U.S. 1950 peach crop was estimated at 52,573,000 bu., 30% below the 74,818,000 bu. 1949 crop and 25% be-

low the decade average. The estimated average price to producers of \$2.11 per bushel was comparable with \$1.54 per bushel for the 1949 crop. The world crop, estimated at 88,400,000 bu., was about average but 22% below 1949.

Table III.—U.S. Peach Production by Leading States

(In thousands of bushels)

State	1950	1949	Average 1939-48	State	1950	1949	Average 1939-48
California . . .	29,460	35,211	29,161	Missouri . . .	950	950	738
Michigan . . .	4,080	3,500	3,606	Ohio . . .	927	1,194	871
Pennsylvania . .	2,194	2,451	1,987	Virginia . . .	837	1,734	1,501
Arkansas . . .	1,980	2,412	2,203	Texas . . .	783	2,400	1,743

**Plums and Prunes.**—The 1950 plum crop in California, estimated at 78,000 tons, was slightly above average but well below the 90,000 tons of 1949. California prune production of 147,000 tons was moderately below 1949 and about three-fourths of average. Low winter temperatures in the Pacific northwest reduced the crop of that area to less than one-third of 1949 or normal. World production of plums and prunes, estimated at 2,400,000 tons, was 7% below 1949 and 14% below the pre-World War II average.

**Pears.**—The 1950 pear crop of the U.S. was 31,263,000 bu., 14% less than the record high of 36,404,000 bu. in 1949 but above average for the decade. The decline was rather general as to type and area, except for a record crop of Anjous in Oregon. Price to producers was estimated at \$2.21 per bushel, compared with \$1.22 for the 1949 crop.

Table IV.—U.S. Pear Production by Leading States

(In thousands of bushels)

State	1950	1949	Average 1939-48	State	1950	1949	Average 1939-48

				Ohio . . .	205	272	300

**Pineapples.**—Florida pineapple production in 1950 was 6,500 boxes, compared with 5,000 boxes in 1949 and an average of 9,160 boxes (1939-48). A large part of U.S. consumption was imported, mostly from the Hawaiian Islands.

**Strawberries.**—The 1950 strawberry crop was a large one of 11,169,000 crates, compared with 8,795,000 crates in 1949 and a ten-year average (1939-48) of 9,163,000 crates. Acreage, yield and value were all above the previous year. (See also HORTICULTURE.)

**FILMS OF 1950.**—*Apples* (Encyclopædia Britannica Films Inc.); *Pineapple Culture* (Paul Hoefer Productions).

**Furniture Industry.** The 4,000 factories in the United States making wooden furniture during 1950 recorded a total dollar output for the year of approximately \$1,500,000,000, an all-time record, compared with \$1,175,000,000 in 1949 and \$1,335,000,000 in 1948, the previous peak year.

Much of this gain was the result of price increases, which totalled about 18%, but unit production also was stepped up about 12% without fully meeting the heavy demand for furniture. Because of the large number of factories in the industry, absolute accuracy in estimating total production value and price increases is impossible, but the above figures were thought to be within 3% of what final figures for 1950 from all factories would ultimately show.

At the close of the year the furniture factories had a 48% backlog of orders on their books, or about four months' production. Cancellations during the year were the lowest since 1943, many lines having gone on an allotment basis around midyear.

Pay rolls in the industry increased 30%, keeping pace with production value, and the number of employees increased approximately 12%. This indicated a total of approximately 200,000 employees, the highest in the industry's history, averaging 50 per plant. Average earnings rose from \$1.21 per hour in 1949 to \$1.26 in 1950. The work week was increased from 40 hr. to an average of 43.1 by the end of the year.

Modern furniture was in greatest demand during 1950, again leading the traditional styles in total sales and accounting for more than half the industry's production. Eighteenth-century English furniture, particularly Chippendale, Hepplewhite and Sheraton, was second in popularity with furniture buyers and French Provincial, Chinese, Regency and Empire designs were favoured in the high-style decorative field. So-called borax unstyled furniture, once predominating in the low-priced field, had all but disappeared because of the change to low-priced modern by manufacturers in the south.

The trend toward dual-purpose furniture continued to grow. Sofas that open into beds, cabinets that serve both living and dining room purposes, double dressers and swivel-top tables that serve several purposes outsold the conventional types.

During the year, the major furniture markets held semi-annually at Grand Rapids, Mich., Chicago, New York, High Point, N.C., Jamestown, N.Y., San Francisco and Los Angeles recorded the highest attendance of store buyers in history and buying was the heaviest ever recorded. This condition existed all year and was heightened in the fall by the war in Korea. By the end of the year most manufacturers had all the business on their books they could fill in four months and many were taking orders on an open price basis only.

Although retail furniture store volume slumped during the early winter because of the imposition of credit controls, buying from factories showed slight change because dealers were anxious to maintain full inventories to avoid being short-stocked if lumber should be rationed in 1951, as seemed possible. Many factories which had contracts for television cabinets were preparing at the end of the year to reconvert to furniture because metal controls indicated a sharp drop in the output of radio and television sets in 1951.

Imported furniture, which flooded the market in 1949, with England, Belgium, Sweden, Norway, Italy, Switzerland, Scotland and the Philippines competing for favour, was less apparent in 1950 and accounted for less than 3% of the total amount of furniture sold by dealers and decorators. This was offset by sales of U.S. factories to Canadian, Mexican and Hawaiian dealers. (See also INTERIOR DECORATION.)

(J. A. G.)

**Furs.** The fur industry in the United States showed improvement during the first eight months of 1950 but experienced a severe slump in the last quarter. Late in the year, retail prices were reduced extensively.

Ranch mink was the leading fur during the year. Approximately 2,800,000 skins entered the United States market. Most of these were produced in the United States and Canada. Norway, Sweden, Denmark, Finland and the U.S.S.R. produced a total of about 500,000 skins, the best of which went to the U.S. Breeding of mutation mink, or mink of many colour variations, increased and proved profitable. "Sapphire" mink was introduced, the colour of which is well described by the name.

Other furs in demand were wild mink, Alaska seal, Persian lamb, muskrat, ermine, white fox, red fox, black fox, marmot, beaver, sheared raccoon, seal-dyed muskrat, broadtail lamb,

sheared South American lamb (American broadtail), and, to a lesser extent, moleskin, China and Jap weasel, squirrel, otter, fitch, mouton, platinum fox and silver fox.

Many furs were dyed. New colours such as navy blue, sky blue, golden glow, dark brown, cinnamon brown, bottle green and cardinal red were introduced, and the blue shades met with considerable approval.

Early in 1950 raw fur prices advanced. Retail business was satisfactory during August but poor in the fall and early winter. A mild fall in the eastern half of the country forced fur apparel prices down. Reduced prices and wintry weather stimulated business slightly in December. Nevertheless, many firms, mostly manufacturers and retailers, became insolvent. Failures during the year totalled more than 200, with liabilities estimated at \$9,000,000. Most of them were in the New York city area.

The United States was the largest consumer of furs. The government collected approximately \$29,000,000 from the 20% retail fur tax during the first nine months of 1950 as compared with about \$33,000,000 for the corresponding period in 1949.

Business in Europe increased. The U.S.S.R., Canada, South Africa, the Scandinavian countries and the soviet satellites were the chief sources of supply. Up to the end of Sept. 1950, fur skin imports were valued at more than \$68,000,000, or about \$10,000,000 less than in the corresponding period in 1949. Fur skin exports from the United States during the same period totalled about \$25,000,000 in value, a decrease of about \$1,000,000 compared with 1949.

The London fur market increased its import and export business and served all European countries. It not only financed transactions in furs for all the world but once more became the greatest clearing house for fur skins regardless of their origin. It was the principal source through which Persian lambskins and other furs from the U.S.S.R., Afghanistan and South-West Africa were distributed.

The fur industry in western Germany, with headquarters in Frankfurt, steadily expanded its volume of business with surrounding European countries as well as with London and New York.

New York remained the world's leading fur processing and retailing centre. The New York fur fashion show and exhibition on June 5-6, attended by more than 5,000 people, was the most complete display of fur apparel ever presented.

There was marked consumer demand for capes, scarfs, stoles, shawls and jackets, especially in mink, induced by inflated prices for full-length coats. There was little change in fur fashions except for less sweep and a return of the pyramidal silhouette. Paris style influence dominated.

(W. J. Br.)

**Future Farmers of America:** see FAIRS AND EXHIBITIONS; SOCIETIES AND ASSOCIATIONS.

**Gaitskell, Hugh Todd Naylor** (1906- ), British cabinet member, was born in London, April 9. He was educated at Winchester and New college, Oxford. After lecturing in the department of adult education, University college, Nottingham, in 1928 he joined the staff of the department of economics, University college, London, becoming in 1938 head of the department and reader in political economy in London university. On the outbreak of World War II he joined the newly formed ministry of economic warfare, and later became head of the intelligence section for Germany. When Hugh Dalton became minister in 1940, Gaitskell became his principal private secretary and in 1942 accompanied him to the board of trade as principal assistant secretary. In the general election of 1945 Gaitskell was returned as Labour

member for South Leeds. In 1946 he became parliamentary secretary to the ministry of fuel and power and was made minister in 1947, when he was sworn of the privy council. After the general election of Feb. 1950 Gaitskell became minister of state for economic affairs, and began to take some of the burden of work from the chancellor of the exchequer, Sir Stafford Cripps. On Oct. 19 he was appointed to take Sir Stafford's place as chancellor of the exchequer.

**Galapagos Islands:** see ECUADOR.

**Gambling:** see BETTING AND GAMBLING.

**Gas, Natural and Manufactured.** World production figures had never been compiled for the gaseous fuels, as data were lacking from many of the smaller countries. However, there were data available for most of the important producers.

**Natural Gas.**—In Table I are collected such figures as were available in 1950 on the production of natural gas in countries other than the United States where the quantity is significant.

Table I.—Natural Gas Production

(In millions of cubic feet)

	1946	1947	1948	1949	First half 1950
Venezuela . . . . .	331,991	402,585	470,388	499,205	256,524
Canada . . . . .	47,886	52,548	58,481	75,008	36,339
Mexico . . . . .	27,121	35,258	37,631	41,954	25,084
France . . . . .	3,899	5,170	6,145	8,052	4,446
Italy . . . . .	2,246	3,305	4,153	8,348	7,095

**United States.**—The United States has by far the world's largest production and consumption of natural gas, as reported by the U.S. bureau of mines and summarized in Table II.

Table II.—Production and Consumption of Natural Gas in the U.S.

(In thousands of millions of cubic feet)

	1944	1945	1946	1947	1948	1949*
Gross production . . . .	5,614.2	5,902.2	6,190.2	6,733.2	7,178.8	?

United States . . . . .	553,872	597,097	584,807	563,195	325,175

The expansion of manufactured gas production in the areas not producing natural gas was greatly reduced in recent years by long distance pipe lines carrying natural gas from the producing areas to distant states. In 1948 more than one-third of the marketed output of natural gas was consumed outside of the state in which it was produced. For example, Texas natural gas was in 1950 piped to 30 other states and Mexico, from the Atlantic coast on the east to South Dakota on the north and California on the west.

(G. A. Ro.)

**Gasoline:** see PETROLEUM.

**Gasperi, Alcide de** (1881— ), Italian prime minister, was born on April 3 at Pieve Tesino, Trentino. After studying at the University of Vienna, he became editor of *Il Nuovo Trentino* and later was elected to the Austrian parliament as an Italian minority representative. After the union of his native province with Italy, he was elected deputy to the Italian parliament in 1921. He opposed Mussolini's dictatorship and in 1926 was sentenced to four years' imprisonment for anti-fascist activities. During World War II De Gasperi took part in the resistance movement in Rome and on June 9, 1944, joined the first Ivanoe Bonomi cabinet as minister without portfolio. Minister of foreign affairs of the second Bonomi (Dec. 10, 1944) and Ferruccio Parri (June 19, 1945) cabinets, he was elected leader of the reconstructed Christian Democratic party and on Dec. 9, 1945, became prime minister. On Feb. 11, 1949, the 20th anniversary of the signing of the Lateran treaty between Italy and the papacy, he made his first official call on Pope Pius XII. Following the withdrawal, on Oct. 31, 1949, of the Democratic Socialist ministers, De Gasperi resigned on Jan. 12, 1950, but on Jan. 27 succeeded in forming his sixth cabinet. In an Easter broadcast on April 8, he defended the Italian participation in the North Atlantic treaty; on May 3, in the senate, he demanded an "Italian solution" to the problem of Trieste (*q.v.*). (See also ITALY.)

**Gas Turbine:** see AUTOMOBILE INDUSTRY.

**Gem Stones.** There is no production of precious stones in the United States. There is a small diamond (*q.v.*) deposit near Murfreesboro, Ark., but several attempts to work it failed, the latest of these being in 1949. Sapphires of an industrial grade were mined at several localities in Montana, and some gem stones were found, but the mines had been closed. However, many types of semiprecious and ornamental stones were being produced during 1950, the most important being beryl, tourmaline, Kunzite, turquoise, nephrite jade and the various forms of silica, such as agate, rose quartz, jasper and petrified wood.

The U.S. commercial demand for gem stones is supplied by imports, as follows:

	1948		1949	
	Carats	Values	Carats	Values
Rough diamonds . . .	909,871	\$44,400,481	651,150	\$28,299,799
Cut diamonds . . .	388,499	56,244,934	335,487	41,427,718
Rough emeralds . . .	4,937	28,054	80,231	226,233
Cut emeralds . . .	11,213	286,565	13,723	284,578
Pearls, natural . . .		772,763		532,310
Pearls, cultured . . .		748,302		1,733,698
Marcasites . . .		244,693		178,207
Other varieties . . .		258,553		208,124
Rough . . .		3,160,778		2,045,476
Cut . . .		9,794,908		9,249,488
Imitation . . .				
Total . . .		\$115,940,031		\$84,185,631

Imports declined sharply in 1949, to the lowest point since 1944. The total value of imports during the decade 1940-49 was as follows:

1940 . . . . .	\$37,769,135
1941 . . . . .	33,777,215
1942 . . . . .	28,520,070
1943 . . . . .	72,109,788
1944 . . . . .	77,529,806

1945 . . . . .	\$114,435,231
1946 . . . . .	189,017,646
1947 . . . . .	110,076,029
1948 . . . . .	115,940,031
1949 . . . . .	84,185,631

(See also MINERALOGY.)

(G. A. Ro.)

**Genetics.** The Genetics Society of America sponsored in 1950 a "Golden Jubilee," celebrating the 50th anniversary of the rediscovery of J. G. Mendel's work. A program of 24 addresses by leading geneticists reviewed progress in both theoretical and applied genetics. Evening lectures by R. Goldschmidt on "The Impact of Genetics on Science," by L. H. Snyder on "Old and New Pathways in Human Genetics," and by Julian Huxley on "Genetics and Modern Thought" were of particular interest to the large audiences attending. This meeting was held at Ohio State university, Sept. 11-14, 1950.

At a symposium on the "Origin and Evolution of Man" held at Cold Spring Harbor, N.Y., June 9-17, a number of papers on human genetics were presented. A new book, *Genetics and the Races of Man* by W. C. Boyd, summarized for the first time the growing body of knowledge on human genetics as it relates to anthropology. W. N. Powell, J. G. Rodarte and J. V. Neel described a case of severe anaemia in which the patient had inherited a gene for thalassemia from the mother and a gene for sickle cell anaemia from the father. They suggested three alternative genetic explanations: factor interaction of two independent genes, neither of which has much effect alone; an unusual penetrance of the thalassemia gene in heterozygous condition; or that the two genes actually belong to a multiple allelic series. W. C. Boyd found that the so-called "taste" gene conditioning ability to taste the synthetic substance, phenylthiocarbamide, also conditioned ability to taste a naturally occurring antithyroid drug found in turnips and cabbage. He suggested that this gene may have some selective value in connection with diet and thyroid function.

**Mutation.**—G. Lefevre ran large-scale experiments on the effect of X-rays on *Drosophila* and found no reverse mutations from mutant to wild-type, either in germ cells or somatic cells. He concluded that X-rays produced only loss or rearrangement of chromatin and not changes in the genes or point mutations. R. P. Wagner, C. H. Haddox, R. Fuerst and W. S. Stone found that subjecting the culture medium to ultra-violet irradiation increased mutation rate in the mould, *Neurospora*. It was thought that organic peroxides formed in the medium were the mutagenic agents. W. K. Baker and E. Sgourakis demonstrated that the mutation rate in *Drosophila*, following X-ray treatment in an atmosphere low in oxygen content, was less than when the oxygen content was high. B. McClintock discovered many new mutable genes in corn. She showed that mutations at these loci were conditioned by the transposition of a special type of chromatin, heterochromatin, to a point in the chromosome adjacent to the mutable locus.

**Cytogenetics.**—On the basis of extensive experiments on *Drosophila*, M. Whittinghill concluded that much crossing-over between homologous chromosomes occurred in the gonial stage early in the germ tract. He concluded that variability in cross-over data in different experiments was the result of gonial rather than meiotic exchanges. Whittinghill and C. W. Hinton found that increased cross-over values in young females and in X-rayed females were the result of increase in gonial rather than meiotic cross-overs. B. M. Slizinski demonstrated the multiple-strand nature of chromosomes in the salivary glands of *Drosophila* by subjecting them to X-rays and producing breakage of one or a few chromatids. N. H. Giles and H. P. Riley found an increase in chromosome aberrations in the pollen grains of the plant, *tradescantia*, when X-rayed in an atmos-

phere high in oxygen content, over the amount of aberration when the oxygen content was low.

**Biochemical Genetics.**—J. Lederberg mixed two strains of the bacterium, *Escherichia coli*, one of which was resistant to streptomycin and the other to sodium azide. The two strains differed by 11 other characteristics, which served as genetic markers. He found that genetic crossing-over occurred between the two resistant loci and suggested that such characters might be favourable for the study of sexual and genetic phenomena in other micro-organisms.

**Genocide, Convention on:** see INTERNATIONAL LAW.

**Geography.** **International Affairs.**—Geographers of many nations conducted co-operative research programs in 1950. Commissions of the International Geographical union were active during the year, attacking such problems as world distribution and spread of disease, classification and use of lands, world map coverage, utilization of aerial photography for mapping and conservation of soil resources. These commissions planned to meet in Washington, D.C., in 1952 in conjunction with the 17th congress of the International Geographical union. Geographers from all nations of the world would assemble for this congress to hear the reports of the commissions and participate in the excursions and other features of the program.

In Oct. 1950 the Pan-American Institute of Geography and History held its fifth general assembly in Santiago, Chile. The commissions on cartography and geography of the institute met concurrently with the general assembly. Among the programs considered and acted upon were ones relating to the extension of geodetic control nets, establishment of uniform standards for mapping and charting in the American republics, exploration of mineral resources, appraisal of existing facilities for obtaining climatic data, and the training of scientific and technical personnel. Representatives from all the American republics and Canada participated in the general assembly and commission meetings.

The research activities of the Pan-American institute are directed toward the solution of practical problems facing the American republics, and are financed by the governments of the member nations. Preparation of research programs is accomplished through permanent commissions established by the institute. These commissions meet at two-year intervals to formulate programs and co-ordinate research activities. The institute holds a general assembly every four years.

Geographers had taken an active part in the work of the United Nations and the United Nations Educational, Scientific and Cultural organization. In 1950 they participated in programs of the Food and Agriculture organization, World Health organization, World Meteorological organization and several other similar groups sponsored by the United Nations. They also participated in the opening meeting of the Interim International Arid Zone Research council held by U.N.E.S.C.O. in Nov. 1950.

**Geographers in Government.**—At no time since the peak of World War II had there been more geographers in government service than during 1950. This was true in most countries of the world. Many who left federal employment following the termination of hostilities in 1945 had returned to accept important positions in government departments. Frequently these positions were not identified as geographic posts, but the work was

distinctly geographic in nature or required the use of geographic techniques.

War in Korea resulted in the recall of geographers to active military duty. In almost all instances these geographers were assigned to units or special missions which required their specialized knowledge and training. As the nations of the world started to rebuild their fighting forces the demand for geographers increased.

**Geography in Colleges and Universities.**—The colleges and universities of the United States offered very little instruction in geography in 1950. A *New York Times* survey, published Dec. 18, 1950, revealed some very disturbing facts. Fewer than 5% of the college students took even one course in geography in 1950 and only 2.2% of the graduate students were enrolled in geography. According to Benjamin Fine, author of the survey report, geography was almost ignored in colleges and the students' knowledge of the subject was woefully inadequate. Paradoxically the majority of college authorities considered geography essential for intelligent citizenship.

Fortunately the situation revealed by the *New York Times* survey did not hold true throughout the world and the condition in the United States was improving. In 1950 there were 22 graduate departments in the United States offering work leading to the doctor's degree in geography. These departments were well staffed and they conducted the best training program in their histories. The graduates had accepted important positions in government, business and industry and were applying geographic methods and techniques to the solution of problems which faced modern society.

**American Geographical Society.**—On June 1, 1950, George H. T. Kimble became director of the American Geographical society. He followed in office two distinguished geographers, Isaiah Bowman and John K. Wright. Soon after Kimble's appointment the society launched a new publication entitled *Focus*, the first copy of which dealt with Korea and appeared Oct. 15, 1950. *Focus* was to appear monthly (except July and August) to provide background facts and geographical interpretations of specific problems and significant events in the news.

Among the noteworthy contributions of the American Geographical society in 1950 was a three-coloured map showing the distribution of poliomyelitis based upon more than three years of research in medical geography conducted by the society. This was the first in a series of maps on the distribution of disease to be issued by the society. (See also CARTOGRAPHY; EXPLORATION AND DISCOVERY; NATIONAL GEOGRAPHIC SOCIETY; SOCIETIES AND ASSOCIATIONS.) (W. W. AD.)

**Geology.** During 1950 there was a continued demand for well-trained geologists, even though the number of students graduated in geology was the highest in history. The demand was intensified by the search for strategic and fissionable materials by private industry and government agencies.

**General Geology.**—Two textbooks and one teaching manual appeared: *The Principles of Physical Geology* by Victor E. Monnett; *Geology for Engineers* (1949) by Joseph M. Trefethen; and *A Laboratory Manual for Geology*, Part I, "Physical Geology," by Kirtley F. Mather, C. J. Roy and L. R. Thiesmeyer.

**Regional Geology.**—General regional geology of Mexico, China, Indonesia and South America was brought up to date by: *Geología de México* (1949) by Valentin R. Garfias and Theodore C. Chapin; *Geological Map of China* (1949) by the China geological survey; *The Geology of Indonesia* by R. W. van Bemmelen (1949); and *Geologic Map of South America* prepared by George W. Stose in co-operation with the American Geographical society and the U.S. geological survey.

**Historical and Stratigraphic Geology.**—Cretaceous and Cenozoic stratigraphy and correlations were discussed in three papers: "Geology of Atlantic Coastal Plain in New Jersey, Delaware, Maryland and Virginia" by Walter B. Spangler and Jahn J. Peterson, published in the *Bulletin* of the American Association of Petroleum Geologists; "Correlation of the Cretaceous-Tertiary Transition in Saskatchewan and Alberta, Canada" by Loris S. Russell; and "Geology of the Eastern Venezuela Basin" by Hollis D. Hedberg. The latter two papers were published in the *Bulletin* of the Geological Society of America.

**Petrology and Petrography.**—Much of the theoretical knowledge of petrology was brought together by Ernest E. Wahlstrom in *Introduction to Theoretical Igneous Petrology*. By presenting new evidence and data, C. N. Fenner continued the discussion of assimilation of basic rocks by siliceous magma in his *American Journal of Science* paper, "The Chemical Kinetics of the Katmai Eruption."

The second edition of the reference book *Structural Petrology of Deformed Rocks* by Harold W. Fairbairn and Felix Chayes was published.

**Structural Geology.**—Important world-wide structural data became available: "Tectonic Map of Canada" prepared by the Geological Association of Canada, with the support of the Geological Society of America, under chairmanship of Duncan R. Derry; "Geologic-Tectonic Map of the United States of Venezuela" compiled by Walter H. Bucher; "The Structure of Ecuador" by Victor Oppenheim; "Geotectonic Position of New Guinea" by M. F. Glaessner; and "Structural History of the East Indies" by J. H. F. Umbgrove (1949).

**Sedimentation.**—Continued geologic interest in organic reefs in sedimentary rocks was evident in the numerous papers that appeared on that subject. The February *Bulletin* of the American Association of Petroleum Geologists and the July issue of *Journal of Geology* were devoted entirely to articles on reefs and reef formations. Also available was *Bibliography of Organic Reefs, Bioherms, and Biostromes*, edited by W. E. Pugh.

Sedimentation studies were advanced by the publication of the second edition of William H. Twenhofel's text and reference book, *Principles of Sedimentation*; a symposium edited by Parker D. Trask on "Applied Sedimentation"; an "Annotated Bibliography on Sedimentation" compiled under the auspices of the Subcommittee on Sedimentation, Federal Inter-Agency committee; a paper by Joseph M. Trefethen on "Classification of Sediments"; and a paper by P. H. Kuenen and C. I. Migliorini on "Turbidity Currents as a Cause of Graded Bedding."

**Marine Geology.**—*Marine Geology*, a long-needed book by P. H. Kuenen, summarized advances in the new field of marine geology, emphasizing sources, transportation and formation of sediments, oceanography, basins, depressions, reefs, and geomorphology of the sea floor.

**Petroleum Geology.**—Numerous articles on specific areas and problems that appeared principally in the *Bulletin* of the American Association of Petroleum Geologists attested to the continued importance of and interest in petroleum geology. Of major interest was the search for buried reefs as possible petroleum reservoirs, particularly in the plains areas of western Canada and northwestern and southwestern United States.

The comprehensive *World Geography of Petroleum*, edited by Wallace E. Pratt and Dorothy Good, considered all phases of the petroleum industry. H. R. Tainsh in a *Bulletin* of the American Association of Petroleum Geologists wrote on "Tertiary Geology and Principal Oil Fields of Burma." A second, expanded and revised edition of the Colorado School of Mines' quarterly, *Subsurface Geologic Methods*, compiled by L. W. LeRoy was published.

**Mineral Deposits.**—In the field of mineral deposits, con-

OIL RECOVERY PLANT in southern Illinois for driving "trapped" oil out of underground sandstone strata by forcing water through the porous rock and driving the oil to producing wells. The operation was relatively new in Illinois and was expected to reach peak utilization in 1951

tinued studies of wall rock alteration problems was evidenced by two articles in *Economic Geology* by Paul F. Kerr and others. The importance of fissionable materials was pointed out by numerous papers on uranium-bearing minerals and the geology of fissionable minerals, and a "Glossary of Uranium- and Thorium-Bearing Minerals" (U.S. geological survey *Circular* 74) by Judith Weiss Frondel and Michael Fleishcher. Harrison Schmitt, in papers in *Economic Geology*, suggested a reclassification of low-temperature mineral deposits.

Geological Society of America *Memoir* 45 by Edson S. Bastin, on "Interpretation of Ore Textures," an important addition to the study of mineral deposits, offered new interpretations and brought under one cover ideas presented in numerous shorter papers.

Two important text and reference books appeared in revised second editions: Alan M. Bateman's *Economic Mineral Deposits*, and *Industrial Minerals and Rocks* published by the American Institute of Mining and Metallurgical Engineers. The reprinting of the Hoover translation of *De Re Metallica, libri xii*, again made available Georg Agricola's famous treatise on mining and metallurgy of the early 16th century.

**Engineering Geology.**—A. Desio in *Geologia Applicata all'Ingegneria* (1949) explored the border between geology and

engineering. The Geological Society of America published the *Berkey Volume, Application of Geology to Engineering Practice*, a symposium on engineering geology by a number of contributors, honouring C. P. Berkey. A series of papers on engineering geology also was published in *Applied Geology*, the quarterly of the Colorado School of Mines.

**Geochemistry and Biogeochemistry.**—General aspects of geochemistry with detailed discussions of the occurrence of the elements was treated by Kalervo Rankama and T. G. Sahama in their book *Geochemistry*.

Russian contributions to this subject were reviewed by V. P. Sokoloff and H. E. Hawkes, U.S. geological survey, in "Selected Russian Papers on Geochemical Prospecting for Ores." (See also MINERALOGY; PALAEONTOLOGY; SEISMOLOGY.)

FILMS OF 1950.—*Our Changing World* (John Ott Pictures Inc.); *Rocky Mountains—Continental Divide* (Arthur Barr Productions). (T. H. K.)

**George VI** (1895–19 ), king of Great Britain, Ireland and the British dominions, was born at York cottage, Sandringham, Norfolk, Dec. 14. (For his early career see *Encyclopædia Britannica*.) By the Indian Independence act the king ceased from Aug. 15, 1947, to be emperor of India and became king of each of the new dominions of India and Pakistan; a proclamation by the king on June 22, 1948, provided that the words "Emperor of India" should be omitted from the sovereign's title.

On Jan. 26, 1950, India was proclaimed a sovereign independent republic within the Commonwealth of Nations, but in 1949 had declared that it would accept the king "as the symbol of the free association" of the commonwealth countries and "as such head of the commonwealth." A Canadian act of parliament named him king of Canada. Although Ireland had formally declared itself a republic and seceded from the commonwealth on April 18, 1949, there had been no further modification of the king's title by the end of 1950.

On March 7, 1950, the king welcomed the president of France, Vincent Auriol, and Mme. Auriol, who were paying a short state visit to England. It was announced in March that the king and queen would grant their patronage to the 1951 Festival of Britain, and in May the king visited the south bank site of the festival. In April he visited Stratford-on-Avon, saw a rehearsal of *Julius Caesar* and attended a performance of *Henry VIII* at the Memorial theatre.

Twice during the year the king opened parliament in state: on March 6, after the general election, and on Nov. 1. In October he attended the ceremony in Westminster hall marking the opening of the new chamber of the house of commons, and replied to addresses presented by the lord chancellor and the speaker. In late November Queen Juliana and the prince of the Netherlands paid a state visit to England and the king decorated the Dutch queen with the Royal Victorian chain. On Dec. 25 he broadcast a Christmas message to the peoples of the commonwealth.

**Georgia.** Georgia, the fourth state to enter the union, ratified the constitution on Jan. 2, 1788. It is located in the south Atlantic region, has an area of 58,876 sq.mi. and is popularly called the "empire state of the south." Its population by the official 1950 census was 3,444,578, an increase of 10.3% over the 1940 census of 3,123,723. Leading cities and their populations in 1950 (as shown by preliminary census reports) were: Atlanta, the capital, 327,090; Savannah, 119,689; Columbus, 79,510; Augusta, 71,507; and Macon, 70,106.

**History.**—In a brief session of the general assembly extending from Jan. 16 to Feb. 13, 1950, the voter's registration act of 1949 was suspended until 1952 in order to give county registrars time

to check the qualifications of persons desiring to vote and to register those found qualified; a system of juvenile courts, consisting of 23 districts, was established; the residence period for obtaining divorces was reduced from one year to six months; state executive committees of political parties were given power to fix the date for holding their primary elections.

In March, the federal court of appeals ruled against a suit to have the Georgia county unit system declared unconstitutional. The federal court of appeals held that it was the duty of the general assembly and not of the courts to correct any inequities which might exist under the system.

In the Democratic primary held on June 28, all the county unit votes were divided between Governor Herman Talmadge (295) and former Acting-Governor M. E. Thompson (115). The popular vote was as follows: Herman Talmadge, 287,637; M. E. Thompson, 279,137; C. O. Baker, 10,250; Pat Avery, 3,050; Mrs. J. W. Jenkins, 2,963.

In the other contests for state offices, all incumbents were re-nominated; and United States Senator Walter F. George defeated his opponent by taking every unit vote in the state. The nominees of the Democratic party were unopposed on the general election ballot (Nov. 7) and were re-elected with only a few "write-in" votes being cast against them. However, a proposal (vigorously sponsored by Governor Talmadge) to extend the county unit system to the general election by amending the state constitution was defeated with 134,290 votes for it and 164,337 against it.

At the end of the year the principal state officials were: governor, Herman E. Talmadge; lieutenant governor, S. Marvin Griffin; chief justice of the supreme court, W. H. Duckworth; secretary of state, Ben W. Fortson, Jr.; treasurer, George B. Hamilton; attorney general, Eugene Cook; auditor, B. E. Thrasher, Jr.; comptroller general, Zach D. Cravey; commissioner of labour, Ben T. Huie; commissioner of agriculture, Tom Linder; superintendent of schools, M. D. Collins; chancellor of the university system, Harmon W. Caldwell.

**Education.**—During the school year which ended June 30, 1950, there were in Georgia, 2,540 elementary schools (859 for white children and 1,681 for Negroes) with an enrolment of 603,776 pupils (385,624 white children and 218,152 Negroes) and 16,476 teachers (10,865 white and 5,611 Negro). There were 1,364 high schools (735 for white children and 629 for Negroes) with an enrolment of 166,185 pupils (126,731 white children and 39,454 Negroes) and a teaching staff of 6,904 (5,339 white and 1,565 Negro). State expenditures for public education during the year amounted to \$49,707,807.

In 1950 during the fall quarter, 23,406 students were enrolled in the 15 units of the state's university system including 2,072 Negro students in the three Negro colleges and 996 students who were taking work in off-campus centres. The university systems' total operating budget for the fiscal year amounted to \$22,415,781.55, of which approximately \$7,000,000 went for plant, auxiliary, and noneducational enterprises.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Public assistance payments during the fiscal year ending June 30, 1950, amounted to \$33,709,923, an increase of approximately 27½% over the previous year. Old age assistance amounted to \$25,998,779.00; aid to the blind, \$836,915.00; aid to dependent children \$6,874,229.00. In Nov. 1950, a total of 102,178 persons received old-age grants with an average allowance of \$23.75; 2,801 blind persons received benefits averaging \$28.25; and 43,225 dependent children received benefits averaging \$18.31.

In Nov. 1950, there were approximately 8,200 beneficiaries for unemployment insurance under the Georgia program. The average payment per week of total unemployment was \$14.85. Also in November, 130 veterans were drawing \$20.00 per week of total unemployment under provisions of the G.I. Bill.

As of June 30, 1950, there were 6,514 prisoners in the various state and county institutions under the control of the state board of corrections. Budget allotments to this board for the fiscal year were \$1,008,780.81.

**Communications.**—According to the state highway department, the road mileage in Georgia as of June 30, 1950 was as follows: total of state, county, and city systems, 95,950 mi.; state roads, 15,202 (10,317 mi. paved and 4,885 mi. unpaved); county roads, 77,138 (3,149 mi. paved and 73,989 unpaved); urban streets, 3,610 mi. For the fiscal year ending June 30, 1950, total receipts of the highway department were \$43,564,063.88 from the following sources: state treasury, \$30,348,501.90; federal government, \$12,303,064.55; miscellaneous, \$102,497.43.

On Dec. 31, 1949 there were 6,086 mi. of main-line railroad track in Georgia. On Nov. 1, 1950, the Bell Telephone company reported 517,126 telephones in service in Georgia. According to the Georgia Public Service commission, there were 57,172 telephones being serviced by other telephone companies in Georgia on Dec. 31, 1949.

**Banking and Finance.**—On June 30, 1950, there were in Georgia 291 state banks with total assets of \$740,434,228.37 and deposits of \$665,048,079.22. On the same date, there were 51 national banks in Georgia with total assets of \$970,857,000 and total deposits of \$904,834,000.

There were 70 savings and loan, or building and loan, associations operating in Georgia in Oct. 1950. Total assets of these associations were \$250,000,000 as compared with \$225,000,000 in Oct. 1949.

For the fiscal year ending June 30, 1950, the total state receipts were \$125,361,475.02, the largest to date. Budget allotments for the fiscal year ending June 1950 were \$127,210,245.22. On June 30, 1950, the state treasury had a net surplus of \$4,305,213.96.

**Agriculture.**—In Dec. 1950, the United States department of agriculture estimated the value of field crops produced in Georgia during 1950 at \$418,000,000, an increase of 12% over 1949. The value of commercial truck crops was \$11,367,000.

Table I.—Leading Agricultural Products of Georgia

Crop	1950	1949	Average 1939–48
Cotton, bales . . . . .	495,000	604,000	769,000
Cottonseed, tons . . . . .	199,000	252,000	310,000
Corn, bu. . . . .	57,172,000	59,400,000	44,857,000
Peanuts, lb. . . . .	691,200,000	612,000,000	666,233,000
Tobacco, lb. . . . .	101,545,000	115,670,000	88,728,000
Potatoes (sweet), bu. . . . .	5,850,000	6,030,000	6,723,000
Hay, tons . . . . .	604,000	683,000	750,000
Oats, bu. . . . .	16,119,000	14,775,000	13,502,000
Velvet beans, tons . . . . .	274,000	221,000	392,000
Peaches, bu. . . . .	975,000	2,040,000	5,044,000
Wheat, bu. . . . .	1,900,000	2,280,000	2,419,000
Pecans, lb. . . . .	35,750,000	18,000,000	28,228,000
Sugarcane syrup, gal. . . . .	2,800,000	3,150,000	3,932,000
Potatoes, Irish, bu. . . . .	1,248,000	1,296,000	1,541,000
Lespedeza (seed), lb. . . . .	9,700,000	19,100,000	8,100,000
Cowpeas, bu. . . . .	380,000	420,000	711,000
Sorghum syrup, gal. . . . .	672,000	590,000	969,000

**Manufacturing.**—According to the *Census of Manufactures 1947*, the latest made by the bureau of the census, 249,926 persons were employed in Georgia's 4,754 manufacturing establishments. These persons received \$484,246,000 in wages and salaries, and a total of \$1,015,999,000 in value was added by manufacture.

Table II.—Major Industry Groups in Georgia: 1947

Industry	Number of employees	Salaries and wages	Value added by manufacture
Textile . . . . .	102,535	\$205,061,000	\$398,023,000
Food . . . . .	26,774	53,676,000	133,448,000
Lumber (exclusive of furniture) . . . . .	33,979	44,559,000	88,466,000
Apparel . . . . .	25,009	40,477,000	76,084,000
Chemical . . . . .	11,119	24,088,000	77,043,000
Paper . . . . .	7,319	19,226,000	54,207,000

In Oct. 1950 an estimated 817,100 workers were engaged in nonagricultural employment in Georgia. This was approximately 52,700 more than the total for Oct. 1949.

**Minerals.**—The mineral production of Georgia (exclusive of crushed marble, cement, slate, bauxite and heavy clay products) was valued at \$27,755,606 in 1949.

Table III.—Leading Mineral Products of Georgia

Minerals	Quantity in 1949	Value in 1949	Value in 1948
Clay, short tons . . . . .	2,058,287	\$16,764,668	\$15,472,110
Stone, short tons . . . . .	4,156,220	8,427,627	10,801,355
Sand and gravel, short tons . . . . .	984,488	757,680	719,771
Iron ore, long tons . . . . .	228,689	692,649	746,818
Talc, short tons . . . . .	49,338	580,405	624,694
Barite, short tons . . . . .	50,267	465,325	654,959
Lime, short tons . . . . .	7,028	67,252	—

**German Literature.** Before the desperate situation of Germany between east and west was again brought into the foreground by the mounting international tension in the fall of 1950, the German reader in the western parts of the country was mainly attracted to books concerned with the immediate past, or with those which probed into the bases of civilized life or into the means of its reconstruction.

The theatre was thriving; plays performed by excellent actors in private houses but for the general public, the so-called *Zimmertheater*, had a popular appeal. Carl Zuckmayer's *Der Gesang im Feuerofen* was the outstanding drama of the year. The flood of lyrical attempts, by which minor talents sought to regain composure in the years after World War II, had ebbed. A new volume of Marie Luise von Kaschnitz, *Zukunftsmusik*, and Ernst Wil-

helm Eschmann's *Tessiner Sonette* testified to a genuine flow of verse and tone; Karl Wolfskehl's posthumously published *Hiob* was the legacy of a universal mind deeply rooted in the literary and philosophic realm of the beginning of the 20th century; Gottfried Benn's collection of poems, *Trunkene Flut*, augmented by some later pieces of lyrical strength and wisdom, and his *Statische Gedichte* arose from the search for a bridge over the abyss between a present which must be faced with relentless honesty and a creative mental solitude.

Because of this power of stating straightforwardly the incongruous situation of modern man, Benn's autobiographical sketches, *Doppelleben*, came to be a representative interpretation, the more so since he did not shy away from a penetrating account of his years under the nazi regime. It was such a reporting of experience, rather than the novel, which served as a medium for finding new bases of judgment and action. Adolf Heusinger revealed the paradoxical and confused situation at general headquarters during World War II in his book of conversations, *Befehl im Widerstreit*. Ernst von Weizsaecker's memoirs, *Erinnerungen*, gave an insight into the life and decisions of a high bureaucrat of noble intentions who, although increasingly deprived of influence, tried to stem the disaster. Juergen Thorwald wrote, on the basis of eye-witness reports from all levels of society, the story of the catastrophic flight of millions from the eastern provinces in 1945, *Es begann an der Weichsel* and *Das Ende an der Elbe*. The dramatist Max Frisch published a diary, *Tagebuch 1946–1949*, which was a reflection of the European experience of these years, including the German part in it, seen through the critical and thoughtful eyes of a Swiss. A selection of personal reports by German youths, *Jugend unterm Schicksal*, was an introduction into the spiritual reaction of boys and girls to war, catastrophe and postwar confusion, and indicated the inner resources still available to this young generation.

One of these autobiographical writings, however, was a work of art in its own right: the book of the classical archaeologist Ludwig Curtius, *Deutsche und Antike Welt*. The wealth of German literary, scholarly and musical culture was here presented by means of the portrayal of the leading personalities in the years prior to World War I. The political conflicts preceding and following that war, and the ensuing decades of despair were presented by the urbane mind of a humanist faithful to his small Suevian origins and capable of preserving a realm of beauty and inward happiness.

Whereas Curtius' book struck a note which was familiar in a happier and better past, most of the scholarly literature faced the contemporary crisis without hesitation and without undue hope. The Viennese school of historians produced Otto Brunner's *Adeliges Landleben und Europaeischer Geist*, a vivid interpretation of the cultural function of feudalism and its decay; and Friedrich Heer's *Aufgang Europas*, which was a re-examination of the relations between religious ideas and politics in the 12th century. In his *Gespraech der Feinde*, Heer emphasized the importance of his historical work by delineating the role of occidental Christianity in the east-west conflict which followed World War II. Alfred Mueller-Armack's *Diagnose unserer Gegenwart* was a pertinent analysis of the times on the basis of European sociology.

In philosophical thought, the religious and existentialist ways of approach were foremost. The inspiring influence of Martin Heidegger was attested to by two dedicatory volumes, one of which, *Anteile*, contained among other things an outstanding interpretation of myth by the classicist Walter F. Otto, and an essay by Ernst Juenger which tried to define the position of the creative mind in the modern age and thus came close to a commentary on his *Heliopolis*. The Catholic Romano Guardini in his *Welt und Person* sought a Christian answer to the existen-

tialist problem of man. Contemporary Protestant thought was analyzed and clarified in *Kerygma und Mythos*, edited by H. W. Bartsch, which was a disputation among leading theologians.

(AR. B.)

**Germany.** A country of central Europe, Germany is bounded north by the North sea, Denmark and the Baltic sea, east by Poland, south by Czechoslovakia, Austria and Switzerland, and west by France, Luxembourg, Belgium and the Netherlands. According to a declaration signed in Berlin on June 5, 1945, the country was under the supreme authority of the four Allied powers—the United States, Great Britain, the U.S.S.R. and France—and divided into the four following zones together with Berlin (*q.v.*):

Zones	Area (sq. mi.)	Population	
		(May 17, 1939, census)	(Oct. 29, 1946, census)
British . . . . .	37,723	19,785,500	22,344,900
United States . . . . .	41,506	14,257,600	17,174,400
French . . . . .	15,405*	6,088,900	5,004,000*
Soviet . . . . .	41,623	15,157,100	17,332,900
Berlin . . . . .	344	4,321,500	3,179,200
Total . . . . .	136,601†	59,610,600	65,035,400‡

\*Excluding the Saar (area 734 sq.mi.; pop. 874,400).

†Including some small German frontier areas which, as agreed upon under the six-power agreement of March 26, 1949, were taken over by Belgium, Luxembourg, the Netherlands and the Saar respectively (total area, 52.1 sq.mi.; total pop., c. 13,500).

‡1949 est., including the Saar, 69,382,000.

Before the *Anschluss* of Austria the area of Germany was 181,742 sq.mi. with a population (1939 census) of 69,317,000. By 1946 the British, soviet and U.S. zones contained larger populations than in 1939; the zonal increases were: British zone 12.9%, soviet 14.4%, U.S. 20.5%. The additional inhabitants were mainly Germans evacuated or transferred from Poland and Czechoslovakia. Only the population of the French zone was less (3.5%) than in 1938. Language (1946 est.): German with small admixtures of Lusatian (260,000 in Kottbus-Bautzen area), Polish (150,000, mainly in Westphalia) and Danish (17,000). Religion (1938 est.): Protestant 62.7%; Roman Catholic 32.5%; Jewish 0.7%; others 4.1%. Chief cities (first figure, 1939 census; second figure 1946 census): Berlin (4,332,242; 3,179,200); Hamburg (1,711,877; 1,406,158); Munich (829,318; 738,018); Cologne (772,221; 489,812); Leipzig (707,365; 608,111); Essen (666,743; 520,592); Dresden (630,216; 463,032); Frankfurt-on-Main (553,464; 389,097); Düsseldorf (541,410; 421,506); Dortmund (542,261; 436,198); Hanover (470,950; 347,040).

During the year 1950 Germany remained partitioned into two states with a special provisional regime for Berlin.

**Western Germany.**—Area, 94,634 sq.mi. Pop. (Sept. 13, 1950, census): 47,557,926 (including 25,259,619 women) which indicated an increase of 3,034,626 since Oct. 29, 1946. Capital: Bonn (pop., Dec. 1949 est., 110,000). President of the German Federal Republic: Theodor Heuss; federal chancellor: Konrad Adenauer (*q.v.*). Allied high commissioners: British, Sir Ivone Kirkpatrick; French, André François-Poncet; U.S., John J. McCloy (*q.v.*). Allied commanders in chief in western Germany: British, Lieut. Gen. Sir Charles F. Keightley; U.S., Lieut. Gen. Clarence R. Huebner; French, Gen. A. Guillaume.

**Eastern Germany.**—President of the German Democratic Republic: Wilhelm Pieck; prime minister: Otto Grotewohl. Soviet Control commission: Gen. Vasili Ivanovitch Chuikov, chairman; Ivan Fedorovich Semichastnov, deputy chairman; Vladimir Semenovitch Semenov, political adviser.

**History.**—The western German Federal Republic and the eastern German Democratic Republic went their several ways during 1950. The former followed western democratic lines while the latter became much more closely bound to the soviet system. The Federal Republic had not yet obtained complete sovereignty but was rapidly developing toward that goal. This advance was registered in the conference of the three western foreign min-

isters in New York (Sept. 12-19). There it was decided: (1) to end by legislation the state of war with Germany; (2) to reinforce the Allied troops in Germany and to treat any attack against the federal republic or on Berlin from any quarter as an attack on themselves; (3) to help in creating mobile police formations in western German *Länder* (states); (4) to empower the federal government to set up a ministry of foreign affairs, and to enter into diplomatic relations with foreign countries "in all suitable cases"; (5) to revise the Occupation statute and the occupation laws of Berlin and to relax Allied controls particularly in internal economic affairs; and (6) to revise agreement on prohibited and restricted industries and in the meantime to allow cargo ships of any size to be built for export, and the steel limit of 11,100,000 tons annually to be exceeded where this would facilitate the defense of the west. Before agreement on the revision of the Occupation statute was reached, Chancellor Adenauer proposed that a security pact would be the proper basis for that *Gleichberechtigung* (equal rights) which was an essential basis for German participation in the defense of western Europe. The Allied High commission decided to refer the matter to their governments. Allied conditions for a revision of the Occupation statute, namely, recognition of former German debts and agreement by the federal republic to a sharing of raw materials essential for defense, had yet to be approved by the western German parliament.

Apart from French objections to German rearmament, Germans themselves were strongly divided on this issue. Kurt Schumacher, Social Democratic leader, held that before an agreement on rearmament new federal elections should be held, and sufficient Allied forces should be maintained in western Germany in order that the country did not become "the first victim of a war between east and west." (In *Landtag* elections held during November in Hesse and Württemberg-Baden, and in Bavaria, Socialists fought mainly on this issue of rearmament and made great gains.) Some Allied reinforcements arrived in western Berlin and western Germany. On Nov. 24 the U.S. 7th army was reactivated as the foundation of the new U.S. strength in western Germany, with headquarters at Stuttgart.

The federal republic became a free and equal partner in many international organizations, notably in the consultative assembly of the Council of Europe at Strasbourg, where on Aug. 7 its 18 members (and 3 of the Saar) attended the session. The German request for an observer on the committee of ministers was, however, refused. The federal republic had consular representatives in many world centres. It was co-operating in the Schuman plan and in the World Tariff conference at Torquay, Eng. The federal republic was displeased that the Saar (*q.v.*) should have been invited to Strasbourg simultaneously with itself. German suspicions about France's intentions were not allayed by Robert Schuman's visit to Bonn even though he confirmed that the status of the Saar would be finally settled only in a peace treaty.

The political unification of all Germany again became topical through the soviet invitation to the U.S., Great Britain and France to join a four power conference on this subject based on the resolutions of the Prague conference of the foreign ministers of the U.S.S.R. and its European satellites (Oct. 21-22). These conditions were in marked contrast with those which the high commissioners of the three western powers laid down on May 26 in their three identical letters sent to Gen. V. I. Chuikov stressing western democratic conceptions of individual freedom and independent justice.

The German democratic government meanwhile concluded its own arrangement with Poland regarding Germany's eastern frontier. The Oder-Neisse line was accepted as the final "peace frontier" between these countries. John J. McCloy, the U.S. high commissioner, declared on the same day that Germany's frontiers

Above, right: RAINER HILDEBRANDT (right) interviewing two former prisoners of a Russian prison camp in Germany. Under the slogan "silence is suicide," Hildebrandt made effective use of press and radio in 1950 to present Germans with evidence amassed on oppressive features of the soviet system

Right: GERMANS STANDING to sing "Deutschland über Alles," at the invitation of Konrad Adenauer, chancellor of west Germany, who spoke in the U.S. sector of Berlin, April 18, 1950. The anthem was never officially sanctioned after the fall of Hitler and Allied officials remained seated

Below: EAST GERMAN POLICE with their trained dogs on parade in the soviet sector of Berlin on May day, 1950. Allied powers protested the military character of the police units as violating soviet post-World War II pledges

could be fixed only in a general peace treaty. The Bonn government repudiated the Warsaw agreement.

During the year the eastern German government sent ambassadors to all European and Asiatic soviet satellites. On July 22 it complained that U.S. aircraft were scattering Colorado beetles throughout eastern Germany. Walter Ulbricht, one of the deputy premiers and the most powerful leader in the eastern republic announced on July 25 that a seagoing navy of 25 ships would be built between 1952 and 1955; also that, by agreement with Poland, eastern Germany would have the use of the harbour of Szczecin (Stettin) until "a democratic Germany had at its disposal the ports of Hamburg and Lübeck." (See also REPARATIONS.)

*German Federal Republic.*—A number of formerly important issues between the Allies and the German government faded into the background during 1950. Dismantling was practically over. Disturbances marking the high point in German obstructionism occurred on March 6 at Watenstedt-Salzgitter, in Lower Saxony. Germans were faced with the problem of planning new industry there. Steel production, fixed by the Allies at a maximum of 11,100,000 tons a year, reached that level in February, according to Ludwig Erhard, the federal minister of economics. Meanwhile the above-mentioned New York agreement allowed this limit to be raised under certain conditions. Steel production capacity was estimated at 14,500,000 to 15,000,000 tons and home needs, according to German experts, at 13,500,000 tons.

Decartellization continued. The Allied High commission directive of Sept. 22 ordered six of the largest iron and steel firms in the Ruhr to be liquidated as of Sept. 30. Negotiations regarding German proposals for the decentralization of the I.G. Farben (dye trust) were not completed.

On May 8 the Allied High commission promulgated a law for the prevention of German rearmament to be effective from June 7. In September, however, the Allies sanctioned the creation of a mobile German police force, 30,000 strong, to deal especially with Communist sabotage and agitation. By the end of the year, however, the federal republic had agreed only to a force of 10,000 following long-drawn-out negotiations between the federal government and the *Länder*, in which costs and the question of competence between the central and provincial authorities played a great part.

The federal parliament continued to be led by the coalition government with Adenauer as chancellor. The only change in the cabinet came with the resignation, on Oct. 9, of Gustav Heinemann, federal minister of the interior. This followed differences with the chancellor regarding the latter's handling of the memorandum on rearmament to the High commission (Aug. 29). Robert Lehr, another Christian Democrat, was Heinemann's successor. The federal parliament, though differing considerably on social and economic issues, was united on foreign matters insofar as they concerned German demands for equal rights and the consequent abolition of the Allied control, especially in internal affairs.

Great economic progress was made during the year. From Sept. 1949 to Sept. 1950 exports increased by 33% and 25 trade agreements were signed, 11 of them with Economic Recovery program (E.R.P.) countries. Unemployment, which in February was 2,000,000, was reduced by November to 1,277,912. In the government's building program 210,000 dwellings were completed by Sept. 30 and more than 1,400 bridges were repaired. There were 2,000,000 more Germans employed in 1950 than in 1938. Coal production steadily increased: record day output (Oct. 23) was 374,000 tons.

It was estimated that during the fiscal year 1950-51 western Germany could export more than \$2,000,000,000 worth of goods. In the July-September quarter, the republic's only favourable

"THE CHANGE," a 1950 cartoon by Loring of the *Providence Evening Bulletin*

trade balance was with countries behind the "iron curtain," exports to eastern Europe amounting to \$31,300,000 and imports from that area to \$30,700,000. The east-west agreement (Feb. 25) which was interrupted for some time because of differences over accounts and an alleged "creeping blockade" by eastern Germany, was expected, by the end of the year, to be shortly resumed.

A crisis arose in the dollar situation early in November. Western Germany had used up in three and one-half months credits allotted by the European Payments union for the whole year; at the end of September western Germany's deficit was \$175,000,000 and all credit was spent. A special credit of \$120,000,000 was made available to meet its indebtedness to E.R.P. accounts and to adjust its balance of payments generally. This situation, according to a White Book published by the German minister for E.R.P. (Nov. 24), was the result of three causes: the unexpected upswing in German economy, the price changes on the world markets and the movement of imports of dollar countries to other currency areas.

The federal budget for 1950-51 totalled 13,013,600,000 deutschemark, and provided for continuation of food subsidies which should have ended by July 1. Two outstanding items in the budget were occupation costs (4,598,400,000 DM., or 36% of the total) and social services costs.

An important issue which remained unsettled and affected both politics and industry concerned the relations between the employers and the trade unions. This was the *Mitbestimmungsrecht* (the right of participation in the control of industry). It was discussed at a joint conference of the employers' associations and the trade unions at Hattenheim, near Frankfurt, in the spring. No agreement was reached. Differences on wage claims alienated employers and employees still more. At the trade union congress in September the employers were attacked as being incapable of creating a new social order in industry. A draft law on *Mitbestimmungsrecht* had been before the federal parliament for several months. It was, however, shelved because the government coalition parties were themselves divided on this matter.

A meeting at Darmstadt (Oct. 30) between representatives of the Social Democratic party and those of the Bekenntniskirche, which was a powerful section of the Evangelical Protestant Church, seriously raised for many Protestants the problem of the attitude of their church toward political parties. This meeting, in which Kurt Schumacher and Martin Niemöller, bishop of Hesse, were the principal participants, revealed common agreement especially against the rearmament of Germany under existing conditions. Bishop Niemöller's political utterances were the main subject of discussion at a special session of the Evangelical

Church council in western Berlin (Nov. 17). A communiqué published afterward recommended that church officers should follow a policy of restraint in dealing with political matters.

**German Democratic Republic.**—The final change from soviet military occupation to civilian rule came on June 7, when Maj. Gen. A. G. Kotikov, commandant of the soviet sector in Berlin and the military governors of Brandenburg, Saxony and Thuringia were recalled to Moscow. But after the establishment of this republic (Oct. 11, 1949) political and economic developments were considerably speeded up to change it into a *Volksdemokratie*, a form of dictatorship of the proletariat with the S.E.D. (Sozialistische Einheitspartei or Socialist Unity party) as its dominant force. With the introduction of the bloc policy the S.E.D. rendered innocuous the only two bourgeois parties, the Christian Democratic union and the Liberal Democrats. Between Jan. 24 and Feb. 7 more than 150 members of these two parties (including three provincial ministers) fled to western Berlin. Between Dec. 1, 1949, and May 31, 1950, more than 117,000 refugees from eastern Germany sought asylum in the west.

The political purges removed all open opposition to the S.E.D. so that the elections of Oct. 15 showed a 99.4% vote (open, not secret ballot) for government candidates. Superficial uniformity was made all the easier through the activities of a new security police under the control of Wilhelm Zaisser, who had served in the International brigade in the Spanish civil war and was later trained in Moscow. The special task of this new organization was to fight "saboteurs and spies." It worked in close co-operation with the *Volkspolizei* which in April was estimated to be 150,000 strong (30,000 administrative police, 20,000 engaged in ordinary police duties, those in the 150 training schools for police officers and 50,000 alert troops or *Bereitschaften* in battalion strength of about 2,000 each). They lived in barracks, had soviet arms and were manned mainly by former army officers, who would later be replaced from the ranks of the F.D.J. (Freie Deutsche Jugend or Free German Youth). On May 23 the western powers, through their ambassadors in Moscow, protested to the soviet government against this violation of the Potsdam agreement of Aug. 2, 1945.

To insure reliability within the ranks of the S.E.D. long-standing Communists who had been in exile in the west during the Hitler regime were removed from public life because they were assumed to be tainted with "Titoism." The appointment of Ulbricht as secretary-general of the S.E.D. (July 25) made this trusted servant of the U.S.S.R. the chief influence in eastern Germany and gave a clear indication of the extreme line of policy to be followed. Whereas the S.E.D. dictated policy at home, the so-called national front was used as a cover for all appeals to supporters of a united Germany—but along Communist lines. In the first congress of this organization held in eastern Berlin (Aug. 25) Pieck presented a 12-point program of "national resistance" against western Germany. This included the usual Communist demands for the abolition of the Occupation and Ruhr statutes, of armaments production and dismantling in western Germany.

The new government, formed on Nov. 15 as the result of the election one month previously, retained Grotewohl as prime minister. In his statement of policy, he reaffirmed the government's close ties with the U.S.S.R. and its support for the Prague proposals as a basis for a unified Germany. He announced a purge of the S.E.D. and added that all members must undergo a political test to prove their devotion to the party; further, that no new members would be admitted until June 30, 1951.

Much enthusiasm was shown at the third S.E.D. congress (July 20–24) at the announcement of the success of the four-year production plan. But it was impossible to test the accuracy of these claims since no reliable statistics were available. An out-

standing feature of economic development was the extension of the number of nationalized industries and the corresponding disappearance of private enterprises, despite the protection guaranteed to them in the constitution (article 22). Of 115 soviet limited liability companies (Sowjet Aktion-Gesellschaften, S.A.G.), 19 were handed back to the Germans, among them the famous Meissen china factory. But the majority, including fuel and chemical plants, were still in soviet hands. Of 2,000,000 workers in eastern Germany, 300,000 worked in S.A.G., 950,000 in German nationalized industries and only 750,000 in private business. Only 25% of production remained in the republic, the rest went to the U.S.S.R. After dismantling, only 10% of the former industrial plants remained.

Despite constitutional guarantees of freedom of worship, a sharp fight against organized religion continued, especially for the control of youth. On April 25 Bishop Otto Dibelius, of the Lutheran Church, protested to Grotewohl against the compulsory membership of the S.E.D. and the Free German Youth, and against the attacks on religion in the state schools. But Grotewohl's speech at the S.E.D. congress showed that the Communists had no intention of abandoning their opposition. The sect of the Jehovah's Witnesses was banned, its funds confiscated and many of its leaders sentenced to long terms of imprisonment for alleged espionage. Communist efforts to establish a *Volkskirche* met with poor results: only 100 out of 6,000 pastors in the republic openly supported the idea. In the cultural field much stricter supervision of publications, especially of books published in the west, was evident. Many university professors and higher school teachers were dismissed or escaped to the west while those remaining were continuously attacked for failure to support the regime and "pure Lenin-Stalin Marxism."

Germans arrested by the Russians between the end of hostilities in 1945 and Jan. 1950 were estimated at 185,000, according to a statement (Oct. 21) by Rainer Hildebrandt, head of the Group for Fighting against Inhumanity. Of these, 37,000 were sent to Siberia, 96,000 perished in camps and 12,721 were released. Concentration camps still existed at Bautzen and Waldheim in Saxony; there was also a special prison in Brandenburg. (See also EUROPEAN UNION; NORTH ATLANTIC COMMUNITY; PRISONERS OF WAR; REFUGEES; UNION OF SOVIET SOCIALIST REPUBLICS.)

(J. E. Wt.)

**Education.**—*Western Germany.*—Schools (May 1948): elementary 28,865, pupils 6,254,333, teachers 110,401; higher elementary (bizeone only) 620, pupils 175,946, teachers 5,845; secondary 1,429, pupils 600,235, teachers 26,934; universities 16, students 71,672, professors and lecturers 3,377.

*Eastern Germany.*—Universities 5, students (1948) 12,269, teaching staff 671. In addition there was the University of Berlin with, in 1948, 5,634 students and 157 professors and lecturers.

**Finance and Banking.**—*Western Germany.*—Budget (1950–51 est.): balanced at 13,013,600,000 deutschemark, including occupation costs of 4,598,400,000 DM. National income (1949): 64,500,000,000 DM. Bank deposits (Sept. 1950): 20,565,000,000 DM. Currency circulation (Sept. 1950): 7,923,000,000 DM. Monetary unit: deutschemark, created by the currency reform of June 20, 1948. Official exchange rate (Dec. 1950): U.S. \$1=4.20 DM.; "free" exchange rate (Frankfurt, Dec. 1950): U.S. \$1=5.30 DM.

*Eastern Germany.*—Budget (1950 est.): balanced at 13,500,000,000 ostmark, including occupation costs estimated at 6,100,000,000 OM. Currency circulation (Dec. 1949): 4,145,000,000 OM. Although theoretically at par with the western mark, the free exchange rate in Berlin was (Dec. 1950) 1 DM.=5.60 OM.

**Foreign Trade.**—Western German exports in 1950 almost doubled in value in comparison with 1949. As imports increased by a quarter, the trade balance remained adverse, although considerably reduced. Imports (1950) 9,790,000,000 DM., exports (1950) 7,579,000,000 DM.

**Transport and Communications.**—Railways (1949, approximately): western Germany 32,468 km., eastern Germany 14,432 km. Railway traffic (western Germany, monthly averages, 1949): passenger-kilometres 2,530,000,000; ton-kilometres 3,988,000,000; goods transported 18,102,000 metric tons. Roads (1949): western Germany 128,000 km., eastern Germany 54,900 km. Licensed motor vehicles (western Germany, Nov. 1948): cars 278,396, commercial 401,109. Cargo in western German ports in external trade (monthly averages, 1949): loaded 442,000 metric tons, unloaded 1,293,000 metric tons. Telephones (western Germany, Jan. 1949, including public call boxes): 1,974,036.

**Agriculture.**—*Western Germany without the Saar.*—Main crops (metric

tons, 1950): wheat 2,614,000; rye 3,021,000; barley 1,473,000; oats 2,545,000; potatoes (1949) 20,875,000. Livestock (1949, includes the Saar): cattle 10,846,000; pigs 9,679,000; sheep 2,012,000; goats 1,444,000; horses 1,624,000; poultry 44,067,000. Food production (metric tons, 1950 est.): meat 1,100,000; butter 250,000; cheese 160,000; sugar, raw value (1949) 614,000; milk (1950) 133,000,000 hl.

**Eastern Germany.**—Main crops (metric tons, 1950): wheat 815,000; rye (includes mixed grains) 2,130,000; barley 515,000; oats 1,140,000; potatoes (1949) 8,499,000. Livestock (1948): cattle 2,879,000; pigs 2,616,000; goats 1,398,000; horses 665,000; poultry 15,764,000. Food production: milk (1948) 20,250,000 hl.; butter (1949) 64,000 metric tons; sugar, raw value (1949) 555,000 metric tons.

**Industry.**—**Western Germany.**—The index of industrial production reached 129 in Nov. 1950 (1936=100) compared with 88 in 1949. In November there were 1,316,000 people unemployed. Chief items of production (metric tons, 1950): coal 108,654,000; crude oil 1,081,000; electricity 40,800,000,000 kw.hr.; gas 8,868,000,000 cu.m.; pig iron 9,473,000; steel 12,121,000; cement 11,193,000; cotton yarn 269,000; wool yarn 80,000; synthetic fibres 156,000. Motor cars produced (1950) 208,000; trucks 80,000.

**Eastern Germany.**—Eastern Germany was producing about 3,000,000 metric tons of coal and 600,000 tons of steel yearly; it also produced more than 100,000,000 tons of lignite.

**Gibraltar.** A British fortress colony, Gibraltar is situated on a narrow peninsula covering the western outlet of the Mediterranean sea. Area: 2.12 sq.mi. Pop. (mid-1950 est., excluding members of the armed services): 25,000. Governor: Lieut. Gen. Sir Kenneth Anderson.

**History.**—Protests against the new trades tax continued into 1950. On May 5 all shops and businesses closed for four and one-half hours and a meeting of traders resolved to return all the assessment notices that had been issued. An appeal to King George VI later in the month was unsuccessful and the tax was subsequently paid. The colony's new legislative council was opened by the duke of Edinburgh on Nov. 23. Toward the end of the year a fish cannery was established with about £500,000 of local capital. The Colonial Development corporation was also putting into operation a factory-ship to be based on Gibraltar to catch, process and can shark, tuna and crawfish off the west coast of Africa. With the departure of the 1st battalion, the Royal Irish fusiliers, and their replacement by a royal artillery unit in August, the fortress was without infantry in its garrison for the first time since "the Rock" was captured in 1704. On the suggestion of the governor the 14th-century King's chapel was being turned into a shrine for those regiments which took part in the campaign of 1704 or in the 14 subsequent sieges in its defense.

**Finance and Trade.**—Currency: pound sterling, with a local issue of notes. Budget (est. 1950): revenue £797,815; expenditure £1,104,830. Foreign trade (1949): imports £4,358,746; exports including re-exports, £408,749. (K. G. B.)

**Gifford, Walter Sherman** (1885– ). U.S. ambassador to Great Britain, was born on Jan. 10 in Salem, Mass. After graduating from Harvard university, he joined the Western Electric company and from 1905 to 1908 held the dual post of assistant secretary and assistant treasurer. His work came to the attention of Theodore N. Vail, who was then president of the Bell Telephone system, parent company of Western Electric, and Vail appointed Gifford chief statistician of the American Telephone and Telegraph company, of which the Bell system was a subsidiary. He held this post until 1916. In December of that year he was made director of the Council of National Defense in Washington, D.C., serving to advise congressional leaders on elements of war production. At the end of World War I he returned to

A. T. & T. as vice-president, and in Jan. 1925 became its president. He served on President Herbert Hoover's Organization on Unemployment Relief in 1931–32, and on the Business Advisory council for the department of commerce, 1933–35. During World War II he became (1939) a member of the War Resources board and (1941) chairman of the Industry Advisory committee of the Board of War Communications. On Sept. 27, 1950, President Harry S. Truman appointed him U.S. ambassador to Great Britain to replace Lewis W. Douglas, who resigned. He was confirmed in the post Dec. 7, 1950.

**Glands:** see ENDOCRINOLOGY.

**Glass.** In 1950, the U.S. glass industry enjoyed general prosperity. The total value of all glassware produced exceeded \$1,000,000,000. The industry employed about 120,000 persons, paying them \$360,000,000. Except for a brief strike in the hand-operated plants, no work stoppages occurred. However, a strike in the soda-ash industry curtailed supplies of that essential raw material for several weeks.

Polished plate-glass production made the greatest gain. Automobiles used 75% of the plate glass output, as well as a large part of the window glass, in the nearly 8,000,000 cars manufactured.

Container production reached 110,000,000 gross, or enough to give each inhabitant of the U.S. approximately 100 bottles and jars. The value of these items was 40% of the total manufactured in 1950.

Factories making tumblers, stemware and other items of household glassware by hand operation suffered from competition with European plants, and determined efforts were made to obtain added tariff protection.

Window glass was in high demand, not only to supply the large number of new residence units, but also for other requirements for sheet glass. Multiple-glass insulating windows (plate) increased in popularity, appearing as picture windows in many new homes. Mirrors, as home decoration, were sold in such numbers as to add materially to plate glass demand.

Television tubes were made in huge numbers, requiring new and expanded factories. Projection of television upon large screens and the making of mirrors with selective colour reflection for coloured television made important new applications of glass.

Inventors were prolific in 1950, bringing forth numerous improvements in processes and products. Among these were: glass with a conducting film, perfected for electrically heating flat-glass surfaces; improved devices for feeding batch glass, and others for delivering gobs of hot glass to forming machines; new tube-drawing machines, in particular one for making elliptical or other nonround tubes; the use of glass fibres in reinforcing tape and paper—among several developments in fibre glass; and more effective application of coloured glass in windows and eye-protection goggles as a safeguard against heat and actinic radiations. (See also CLAY AND CERAMIC PRODUCTS.)

(S. R. S.)

**Gliding.** Eleven countries were represented at the International Gliding contest at Örebro, Swed., July 5–15, 1950: Denmark, Finland, France, Great Britain, the Netherlands, Norway, the Union of South Africa, Switzerland, the United States and Yugoslavia. Billy Nilsson of Norway, flying a Wiehe, earned first place and the title of world champion. Second place went to Paul MacCready, Jr., of the United States, also flying a Wiehe. Yugoslavia sent to the contest the

Orao, a new design sailplane with which the Yugoslavian pilot Milan Borisek placed third. A Swedish pilot, Laroy Mansson, flying a Wiehe, set a new international goal and return record of 245 mi.

The Fédération Aéronautique Internationale officially recognized two speed records: the feminine international single-place record of Irena Kempowna of Poland who flew a Sep over a 62-mi. triangular course at an average speed of 31 m.p.h. on June 10, 1949, and that of William Briegleb who, on Aug. 12, 1949, flew a BG-8, with a passenger, over a 62-mi. triangular course at an average speed of 27.87 m.p.h.

In the British National Gliding contest at Great Hucklow, Derbyshire, July 24-30, Phillip Wills, flying a Wiehe, earned first place.

Several new motorless aircraft appeared in Europe during the year. In France, Louis Bréguet supervised the design and construction of a high-performance single-place sailplane, the Bréguet 900. A two-place intermediate trainer, T.H.K. 14, was constructed in Turkey. Another new Yugoslavian design was the Jardran, a glider able to take off and land on water.

In the United States, Harland Ross and George Diebert outfitted a Schweizer TG-3 glider with insulation and demand type oxygen equipment. On Jan. 27, 1950, they soared the Sierra Nevada atmospheric wave to 36,000 ft. above sea level for an altitude gain above point of release of 24,300 ft.

The 17th National Soaring contest was held at Grand Prairie, Tex., Aug. 2-13. Two of the gliders were completely new designs—the RJ 5 by Richard Johnson and Harland Ross and the Prue 215 by Irving Prue. Johnson, flying the RJ 5, earned the title of national champion and set a national goal record of 318 mi. on Aug. 12. Margaret Downs brough established a new national goal and return flight of 68.9 mi. on Aug. 11. Les Arnold and Harry Perl, flying the powered glider "Hummingbird," made the longest goal and return flight of the contest, a 79-mi. flight.

(B. Sk.)

**Gold.** The devaluation of the pound sterling and 30 other currencies in Sept. 1949 had the result of increasing the price of gold in terms of these monetary units by amounts ranging from 10% to 44%. Though devaluation had not been embarked upon with this as the primary objective, the rise in the gold price was perceived at the time as a potentially favourable development for those participants who were important gold producers. Such countries, it was estimated, accounted for about 80% of the world's output, exclusive of the U.S.S.R.

It was recalled that between 1929 and 1940, under the influence of declining costs and commodity prices and an average increase of 76% in the price of gold, world production had almost exactly doubled, rising from somewhat more than 18,000,000 oz. to 36,700,000. The jump from 1929 to 1930 alone had been approximately 10%.

The first full year following devaluation did not indicate that history was about to repeat itself on that score. Production continued its steady post-World War II recovery with a further improvement of about 5% bringing the annual rate (outside the U.S.S.R.) to around 25,000,000 oz. It was still, however, far below its all-time peak of 1940. Inflated prices and costs, coupled with the policy of reducing the grade of ore milled, apparently offset in considerable measure the advantage gained by higher prices in terms of many nondollar currencies.

But the wide-scale devaluation was followed in late 1949 and 1950 by a spectacular change in national ownership of the world's gold. These months saw the long and steady postwar flow of monetary gold to the United States finally halted and reversed. In the 15 months following Sept. 1949 the United States sold about \$1,800,000,000 in gold to foreign countries.

Table I.—Analysis of Changes in Gold Stock of United States

§Not yet available.

¶Gold held under earmark for foreign account, including that held for international institutions, amounted to \$5,387,800,000 on Nov. 30, 1950. Gold under earmark is not included in the gold stock of the U.S.

¶Preliminary.

¶Ten-month total.

This, however, while it constituted a record outward movement of the metal from that country, represented only one-third of the \$5,400,000,000 added to United States gold stocks between the beginning of 1946 and Sept. 1949. The end of 1950 found the United States still the repository for two-thirds of the world's monetary gold stocks (excepting the U.S.S.R.).

In 1947 countries other than the United States and the U.S.S.R. had lost \$2,400,000,000 in gold, exclusive of \$670,000,000 contributed to the International Monetary fund. In 1948 the figure was reduced to \$1,200,000,000 and in the first nine months of 1949 it had fallen to a negligible amount. In the 12 months ended Sept. 30, 1950, these countries had increased their gold stocks by \$1,600,000,000 to a total of \$10,600,000,000. Almost half of this came in the third quarter of 1950, when, as a result of the defense effort brought about by the Korean war the normal U.S. export surplus of goods and services virtually disappeared. Gold and dollar assets rose in these countries during this period from \$14,700,000,000 to \$18,200,000,000 or by about 24%. This rise, however, was very unevenly distributed among the various countries. Almost 45% occurred in the sterling area, with the United Kingdom alone adding \$1,331,000,000. The increase in Canada was \$218,000,000; in the Marshall plan nations other than the U.K. \$570,000,000; and in Latin America \$422,000,000.

(E. H. Co.)

**World Production.**—While world gold output had made some recovery from the wartime low, it was in 1950 still far below the 1939 level of 40,000,000 oz. The outputs listed in Table II (as reported by the U.S. bureau of mines) account for 70%–80% of the total, most of the remainder being the Russian out-

Table II.—World Production of Gold (Refinery Production)

(Thousands of fine ounces)

put, for which only indefinite estimates were available.

**United States.**—Mine production of gold declined in both 1948 and 1949, but showed decided improvement in 1950, the total for the first ten months being 1,971,250 oz., more than in the full year 1949. This figure indicated that the probable total for the year would be the best since 1942.

**Canada.**—Mine production of gold advanced from 3,525,221 oz. in 1948 to 4,123,518 oz. in 1949 and 3,309,692 oz. in the first three quarters of 1950.

**South Africa.**—Gold production advanced from 11,584,849 oz. in 1948 to 11,705,048 oz. in 1949, with another small increase indicated for 1950, the total for the first eight months being 7,835,063 oz., against 7,777,747 oz. in the same period of 1949. (See also EXCHANGE CONTROL AND EXCHANGE RATES; MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

**Gold Coast:** see BRITISH WEST AFRICA.

**Golf.** The sensational comeback of Ben Hogan in the national open tournament, the surprising marathon triumph of Sam Urzetta in the United States amateur championship, and increased attendance at and membership in tourneys conducted by the United States Golf association, governing body of the game in the U.S., highlighted 1950 golf.

Hogan, winner of the U.S. open in 1948 and victim of a nearly fatal auto-bus collision in Feb. 1949, began his comeback by tying Sam Snead for the Los Angeles open crown in Jan. 1950. Hogan then rested until the U.S. open, played in June over Philadelphia's Merion club course. Tied with Lloyd Mangrum and George Fazio after the regulation 72 holes (each had 287), the little Texan shot a 69 in the play-off to win by 4 strokes. Lee Mackey, Jr., an unemployed Birmingham, Ala., professional, set a new single round record of 64 in the opening 18.

Urzetta, 24-year-old East Rochester, N.Y., basketball star, who was playing in his third national amateur, won the championship at Minneapolis, Minn., with a stirring 39-hole victory over the heavy favourite, Frank Stranahan of Toledo, O. It was the longest title battle in the 50-year history of the tournament.

The women's national title was captured by Beverly Hanson of Fargo, N.D., a perennial contender since her junior days, who defeated Mae Murray of Rutland, Vt., 6 and 4. Miss Murray had previously distinguished herself by eliminating Fay Crocker of Montevideo, Urug., after 27 holes of a scheduled 18-hole match. It was the longest women's match ever played in U.S.G.A. competition.

Chandler Harper of Portsmouth, Va., a highly respected campaigner for a decade, finally won his first major title when he beat Henry Williams, Jr., of Philadelphia, Pa., 4 and 3 in the final match for the Professional Golfers association championship.

In the only international series of the year 1950, the U.S. women's Curtis cup team retained the trophy by vanquishing a visiting team from the British Isles, 7½ to 1½, at Buffalo, N.Y.

The United States and Western Golf associations both showed profitable ledgers at the end of the year. The latter derived substantial contributions to its Evans Scholars' fund through its three championships. The U.S.G.A. set a record for attendance at the open, proceeds at the Merion club tournament being \$29,701.35. For the third straight year U.S.G.A. memberships increased, the roster in 1950 being 1,448. Membership had increased by 697 in the five years since World War II.

Other winners of important championships during 1950 included Stanley Bielat, Yonkers, N.Y., national public links; Mason Rudolph, Clarksville, Tenn., U.S.G.A. boys' junior; Pa-

CHANDLER HARPER blasting from a trap during the Professional Golfers association title match at Columbus, O., June 27, 1950. Harper defeated Henry Williams, Jr., 4 and 3

tricia Lesser, Seattle, Wash., U.S.G.A. girls' junior; and Fred Wampler, Purdue university, Lafayette, Ind., national intercollegiate.

Sam Snead of White Sulphur Springs, W.Va., led all professional money winners for the 1950 season with earnings of more than \$33,000, while the \$17,000 plus won by Mildred (Babe) Didrickson Zaharias of Chicago, Ill., outdistanced all other women professionals. (C. Br.)

**Great Britain.**—During 1950 A. D. Locke (Union of South Africa) retained his title of British open champion at Troon, Ayrshire, Scot., with a score of 276, which broke the previous record by 7 shots. He also won several of the succession of professional tournaments, headed the averages and in a short excursion to the U.S. tied for, and later won on the replay, the Tam o' Shanter tournament at Chicago.

The open championship developed into a duel between R. de Vincenzo (Argentina), Locke and Dai Rees (South Herts.) who, level at 218, started their last round in that order. All three went out in 33. On the longer and more difficult homeward half Vincenzo took 37, Locke 35 and Rees, to whom the last 9 proved troublesome throughout, 39. Vincenzo at the short 13th, acting on the letter of the new rule, as he was entitled to do, declared his ball unplayable on finding it "plugged" in a bunker and, with a 2 with his second ball, secured a 3. After consulting with various golfing unions, St. Andrews decided not to change this admittedly unsatisfactory rule till after the full trial period of two years.

Amateur champion for the second time in two years, and first amateur in the open championship with a final 66, was Frank Stranahan (U.S.), who beat Richard Chapman (U.S.) by 8 and 6 in the final at St. Andrews. The field was illuminated by the presence of several of the leading U.S. golfers, including W. P. Turnesa, J. B. McHale, Jr., W. C. Campbell and W. L. (Dynamite) Goodloe. The English championship was won at Deal, Kent, by John Langley, who after being three down beat Ian Patey on the last green. As a boy of 17 he had been runner-up on the same course in 1936. For the first time all three prin-

principal titles went abroad in the same year, the hat trick being completed when vicomtesse de Saint Sauveur, daughter of the French golfer André Vagliano, beat Mrs. G. Valentine by 3 and 2 in the women's final at Newcastle, Down, N.Ire. In Britain the most successful woman golfer was Mrs. A. Gee, who won the English title at Sheringham, Norf., and, in partnership with N. Sutton, the new Penfold professionals-and-women foursomes.

In the Curtis cup match at Buffalo, N.Y., the British team, outdriven and altogether outplayed on an exceptionally long and sodden course, were overwhelmed by  $7\frac{1}{2}$  to  $1\frac{1}{2}$ , F. Stephens and E. Price winning their foursome and Miss Stephens halving her single. Later the team played in the U.S. women's championship at Atlanta, Ga., where P. Garvey reached the last eight. Apart from Locke, the most successful overseas player was Ossie Pickworth from Australia. Second in his first tournament in Great Britain, he tied for the *Daily Mail* event, losing on the play-off, and capped his visit with a fine win in the Irish open. Among British professionals Rees had an outstanding season, winning for the second year in succession the match-play championship, in which he beat in the final Frank Jowle (Sheffield), who in turn had beaten Henry Cotton. This was Rees's fourth win and he thus equalled the record of James Braid, who died on Nov. 27. (H. Lo.)

**Gomez Castro, Laureano** (1889- ), president of Colombia, was born on Feb. 20 in Bogotá, and was educated at the Colegio de San Bartolomé and the National university. From 1911 to 1918 and again from 1921 to 1923 he served as a national deputy. In 1931, after serving as minister plenipotentiary to Argentina (1924) and to Germany (1930) and as minister of public works (1925-26), he was elected a senator. From 1930 he was regarded as the leader of the Conservative party.

During World War II his newspaper, *El Siglo*, reputedly attracted Falangist support to him by its friendly attitude toward Gen. Francisco Franco of Spain. Gómez was credited with engineering the choice of Mariano Ospina Pérez as Conservative candidate for the presidency, which the latter won in 1946. In 1948 Pérez appointed Gómez foreign minister. As such, Gómez presided over the ninth International Conference of American States at Bogotá, which was disrupted by rioting following the assassination of Liberal leader Jorge Eliécer Gaitán. The day after the assassination, Gómez resigned and went abroad. He returned to Colombia from Spain after being nominated Conservative candidate for the presidency. The election of 1949 was held under conditions of martial law, and the Liberals boycotted it. Gómez was elected, and was inaugurated Aug. 7, 1950, for a four-year term. (See also COLOMBIA.)

**Gonorrhoea:** see VENEREAL DISEASES.

**González Videla, Gabriel** (1898- ), president of Chile, was born on Nov. 23 in La Serena. He attended the public schools and the law school of the University of Chile in Santiago. In 1930 he was elected to the national chamber of deputies, where he served for nine years. After serving as minister to France and ambassador to Portugal and Brazil, he was elected to the senate in 1945, and in the same year served as a member of the Chilean delegation to the United Nations organizational conference in San Francisco.

In the presidential election of Sept. 1946, he was the Radical party's candidate, and though his plurality was not sufficient, he was named chief executive by act of congress in October, and inaugurated in November. Three seats in his new government were given to Communists, who were the first Communist party members to serve in any government in the Americas. In the

next two years, however, Communists were held responsible for a series of crippling strikes, and accordingly, by a presidential decree, individual liberties were suspended for the duration of the crisis, and Communists were arrested, while diplomatic relations with the Soviet Union, Yugoslavia and Czechoslovakia were broken off. Gonzáles Videla signed a bill outlawing communism in Chile in Sept. 1948.

His political support continued to be drawn from a wide selection of liberal elements in Chile, and he made frequent tours throughout the country to further his program of reform. He even visited Antarctica in 1948 to cement Chile's claims there, and in April 1950 visited the U.S. as a guest of President Truman. (See also CHILE.)

## Great Britain & Northern Ireland,

**United Kingdom of.** An independent kingdom in northwestern Europe, the United Kingdom comprises the main island of Great Britain, with numerous smaller islands off the English and Scottish coasts, and the six northeastern counties of Ireland. It is a constitutional monarchy, with a king and parliament of two houses, the house of lords consisting of 3 peers of the blood royal, 795 hereditary peers (21 dukes, 27 marquesses, 134 earls, 93 viscounts and 520 barons), 26 spiritual peers (2 archbishops and 24 bishops), 16 Scottish representative peers, a number of Irish representative peers (in 1950, 6; vacancies no longer filled) and 8 life peers who have held high judicial office; and the house of commons, numbering 625 members, elected by universal suffrage. Areas and populations of the component parts of the United Kingdom were:

	Area (in sq.mi.)	Population (June 30, 1950, est.)
England, together with Channel Islands and the Isle of Man . . . . .	50,327	43,400,000*
Wales, including Monmouthshire . . . . .	8,016	
Scotland . . . . .	30,411	
Great Britain . . . . .	88,753	48,548,000
Northern Ireland (q.v.) . . . . .	5,451	1,371,000
United Kingdom . . . . .	94,205	49,919,000

\*Wales: pop. (1949 est.) 2,591,000.

Language: English is almost universally spoken, but in Wales (according to the 1931 census) 3% of the population spoke Welsh only and 31% spoke both languages; in Scotland 0.15% spoke Gaelic only and 2.7% spoke both languages; on the Isle of Man 528 spoke English and Manx. Religion: Church of England (nominal membership 15,000,000, effective 5,500,000); Roman Catholic Church (England, Wales, Scotland and Northern Ireland: c. 3,500,000); Presbyterian Established Church in Scotland (1,600,000 in 1949); Church in Wales (est., 250,000); Methodists (1,500,000 in 1949); Jews (c. 400,000).

Capital, London (q.v.) (pop., est. Dec. 31, 1949): city and metropolitan police districts, 8,436,140; city and metropolitan boroughs only, 3,410,720. Chief towns (est. Dec. 31, 1949, if not otherwise stated): Birmingham 1,114,250; Glasgow 1,089,400; Liverpool 805,050; Manchester 704,430; Sheffield 514,350; Leeds 508,340; Edinburgh 487,700; Belfast (Jan. 1, 1939) 443,500; Bristol 442,220; Nottingham 304,060; Hull 297,920; Newcastle-on-Tyne 294,980; Leicester 286,200.

BRITISH ELECTION MEETING beginning to form at Tynemouth, Eng., a scene repeated throughout Great Britain in the weeks before the elections of Feb. 1950. Results proved it the closest general election since 1910, with the Labourite majority in the house of commons reduced from 146 to 7

King: George VI (*q.v.*); prime minister and first lord of the treasury: Clement R. Attlee (*q.v.*); secretary of state for foreign affairs: Ernest Bevin (*q.v.*).

**History.**—*Political.*—During the campaign that preceded the general election in Feb. 1950, it was natural that the Labour party, having invited the electorate to “face the future” in 1945, should be content this time to turn round and look at the past, recent and not so recent. Its candidates compiled inventories of what had been accomplished since 1945 and then compared this record of prodigious legislation with that of peacetime Tory governments in the years between the wars. They attributed the continuance of full employment to their own economic planning, and in every Socialist brief case there was a copy of the Health Service act. Not so much was heard about plans for the future, although the official party program did mention the public ownership of beet sugar manufacturing and sugar refining and also of the cement industry. The chemistry industry would be “carefully examined,” with a transfer to public ownership in the offing if the examination satisfied the party that nothing short of that would do. The Conservatives, for their part, also contemplated the past—and with much less satisfaction. Recalling the fuel crisis over which Emanuel Shinwell had presided and the leadership of Hugh Dalton in economic stress and strain, they asked for the justification of Socialist plans and planners. Recounting the exploits of John Strachey in the African interior, they demanded to know if the scheme for growing peanuts inspired confidence in Socialist business acumen. Recapitulating the money troubles of the nationalized industries, they questioned the wisdom of further nationalization. The Liberal party, meanwhile, was preaching the evils of a class war, enlarging upon the danger in a parliament tightly controlled by two tightly controlled political parties, each handicapped by the prejudices of a particular group or class. It looked at the Conservative and Socialist past and found neither encouraging for the future. In detail, it opposed conscription in peacetime as

wasteful and inefficient, once more raised a plea for proportional representation, paid more attention than either of the other two parties to the place of women in the community and developed its ideas on ownership for all, with co-ownership and profit sharing in industry as an incentive to greater effort.

In general, the election proceeded mildly and with decorum. The net result was that the Labour party won 315 seats, the Conservatives and their friends of various nomenclatures took 298 and all other parties, including the Liberals, suffered either total or near extinction. Not for a century had the house been so evenly divided.

How long the new Labour government would or could remain in office was a nice point. When the new house met it was promised only a limited program of legislation—a uniform code for regulating the breaking up of streets by public utility undertakings, alterations in the law relating to midwives, and other tremendous trifles—yet somehow the government kept on. Surrounded by prophecies of its imminent demise it grew in strength—not spectacularly but steadily enough. By September the government’s self-confidence had increased to such an extent that it announced its intention to proceed with the nationalization of iron and steel, although the moment could have been delayed, and it made known the membership of the new Iron and Steel corporation. Vesting day was fixed as Feb. 15, 1951. For the opposition, this was a deplorable return to party politics when party politics were least relevant to the situation (the Korean war had been in progress since June). Officially, the government was doing no more than implementing an act of parliament. Unofficially, it was quelling the impatience of its restless extremists, champing at the bit and longing for another appeal to the country. The more experienced campaigners preferred to wait and see. After repairing to Beatrice Webb house in May for spiritual refreshment and intellectual guidance the leaders of the Labour movement still gave an impression of uncertainty about their future course. The annual party conference, despite the advertisements of unity which issued from it, did not weaken this impression. Nor did the king’s speech at the opening of the new

BRITISH FOUNDRY for the production of diesel engine castings which began operations at Lincoln, Eng., in 1950. The highly mechanized foundry was part of Britain's effort to reduce a lag in its development of modern industrial techniques

parliamentary session in October, when the government proposed the nationalization of the beet sugar industry (not sugar refining) and gave notice that it would seek authority to make permanent "powers to regulate production, distribution and consumption and to control prices." This could mean much or it could mean little, according to its interpretation. Settled in its new chamber, which had been built on the bomb-ravaged site of the old house, the commons eyed the government with emotions ranging from friendly curiosity to dark suspicion.

*Finance and Economics.*—The dollar gap yawned much less wide during 1950. A White Paper published on Oct. 18 recorded that during the first half of the year the United Kingdom balance of payments with all countries showed a surplus of £52,000,000, the largest in any half year since the outbreak of World War II. Shortly afterward came the news of the resignation, because of ill health, of Sir Stafford Cripps, the chancellor of the exchequer. By the end of the third quarter of 1950 the gold and dollar reserves of the sterling area stood at \$2,756,000,000 as against \$1,340,000,000 just before devaluation of the pound in Sept. 1949, and \$2,241,000,000 at the start of the European Recovery program in March 1948. The progress made by the United Kingdom toward international solvency was based on two fundamentals of policy, both pressed by Sir Stafford Cripps. The commonwealth was to pare and prune to the bone all its purchases from dollar countries, and equally it was to expand its sales to the dollar area by every business device and every ingenuity of salesmanship. To some extent Sir Stafford Cripps stood as the symbol of British determination to regain economic and financial self-respect. But to put it that way did less than justice to the effect Sir Stafford made upon the postwar scene. He not merely expressed a British mood: he shaped it. The two were interacting. Without Cripps, however, the need for Crippsian policies persisted. If imports from the American continent had been reduced, those which Great Britain still took were costing more

through the devaluation which had so stimulated British exports. And, similarly, more exports had to be sold to provide a given quantity of dollars. The effect of devaluation on the price of essential raw materials could be felt increasingly as the year went on. It might have caused more serious worry had not the invasion of Korea and the rearmament of the west bolstered world markets and relieved Great Britain, temporarily at any rate, of the prospect of a buyers' market. (See also INTERNATIONAL TRADE; EUROPEAN RECOVERY PROGRAM.)

At home, the government's domestic finance continued to be exposed to criticism. Whether the fiscal policies imposed upon the British people were such as to invite the highest productive effort was a problem just as much political as financial. Its answer depended upon political philosophy. No one doubted the need to export; what was at issue was the method by which these exports were to be provided by British industry in the largest possible quantities and at the cheapest possible price. The chancellor's diagnosis of the ailment seemed reasonable: "The present danger continues to be one of excessive spending or deficient saving." But on the subject of the right prescription, the debate continued. Excessive government spending and a deficient encouragement to private saving did not help toward that proper balance between supply and demand which characterizes the healthy community life. As part of an effort to keep wage demands in cold storage the chancellor's budget offered relief in the lower rates of income tax. But on the other side, an increase of ninepence a gallon on gasoline had its own effect upon the cost of living, more important perhaps from the psychological than from the strictly material point of view. The lapsing of the T.U.C. (Trades Union congress) wage-restraint policy, the demands of the rearmament program, the threatened curtailment of U.S. aid in view of the improved balance-of-payments position and the revival in familiar panoply of a world sellers' market—all betokened a new bout of inflationary fever. (See also BUDGET, NATIONAL.)

*Industrial.*—The era of full employment was maintained through 1950, with only faint stirrings of uneasiness about conditions in the world markets. Increasingly the advantages of devaluation were felt, so that price considerations mattered less than they had in the latter part of 1949. Here and there, in individual industries, there was apprehension. From the beginning of 1950, organizations in the Lancashire cotton industry, for example, were expressing their fear of competition from Japan, whose cheap labour represented a constant threat to western standards. In cotton as in nearly all other industries the salvation was seen to lie in more efficient production from more modern plants. Productivity teams continued to cross the Atlantic to inspect the U.S. way of industrial life. They all came back with the same story: they all returned missionaries speaking the language of output per man-hour. The word "incentives," too, came into even stronger vogue, and it was seen that as the whole western world began to rearm (an autumn decision taken because of renewed fear of the U.S.S.R.) the incentive to modernize, adapt, re-equip and refurbish lost a touch of its latter-day power. At the very moment that a buyers' market appeared on the horizon it was lost to sight again, misted over by the harrowing doubts which assailed a world living neither at peace nor in war.

The approach (nothing more) to a war economy put an end to pleasurable anticipation that the government might light some more bonfires of discarded controls. Steadily, one by one, regulations had continued to be thrown away in the earlier part of the year. Milk rationing and registration, gasoline rationing—they were the kind of outward symbols of the country's austere determination which had been dropped. With the announcement of rearmament, hope of further progress in the same direction was temporarily abandoned. Inflation resumed its prominent

place in the English vocabulary. Official indexes showed that over most of 1950 the cost of living had risen but a point or two. Impressions collected by the housewife did not seem to tally, however, and there was no surprise when great new cracks began to appear in the wage-freeze policy. In the middle of January a conference of trade union executives called to consider recommendations made by the general council of the T.U.C. had shown which way the wind was blowing—and that it was most certainly a thaw wind. The general council, sizing up the situation after devaluation, had held on as best it could to wage restraint. Its views were endorsed, but by a majority so narrow as to vitiate any influence the T.U.C. might have been trying to exert. The general council was fighting a losing battle, its final defeat occurring at the Brighton congress when a policy of “modified restraint” suggested by the council was rejected from the floor. How far the overthrow of official trade union policies could be attributed to Communist agitation within the unions remained the subject of exciting political controversy. (See also LABOUR UNIONS; WAGES AND HOURS.)

Keen political eyes were also turned upon the recently nationalized industries for evidence to support or refute the case for public ownership. Toward the end of 1949 the British Transport commission had appealed to the minister for permission to increase freight charges by 3s. 4d. in the pound, and when the Transport tribunal heard the application early in 1950 it heard also the depressing story of the commission's life. The details could be studied later in the second annual report of the commission, which showed that in 1949 a loss of more than £20,000,000 had been incurred. For the same 12 months the Coal board was able to show an over-all surplus of nearly £9,500,000 but without export sales at prices above domestic levels the industry would have been much less happily placed.

The British Electricity authority, struggling to keep pace

with a constantly growing demand, and involved in a program of heavy capital outlay, came through the first 18 months of its existence with £4,391,000 to spare. On the public utilities as upon the whole industrial machine rearmament threatened to impose new stresses and strains and to raise fresh difficulties over the supply of materials and the distribution of labour.

*Foreign Policy.*—The end of 1950 found British minds still living in two worlds and wondering whether the two together would ever make sense. Could membership in the British Commonwealth be the complement of leadership in Europe? Defensive measures to protect western Europe against a possible assault by the U.S.S.R. commanded undivided support, so that proposals and plans for military co-operation could be discussed without mental reservations. The signing on Jan. 27 of the Anglo-American Mutual Assistance agreement, concluded under the North Atlantic treaty of 1949, testified to the British readiness to enter into military commitments. Similarly, when the Communist invasion of South Korea raised a direct challenge to the United Nations and when Great Britain was asked for military help to answer the challenge, its view was not in question. It favoured direct military support of the United Nations in defense of collective security.

The demand for rearmament created by a worsening international situation could be met if not cheerfully at least with a singleness of purpose and a mind free of doubt. It seemed that no alternative existed. Already Britain was budgeting to spend approximately £780,000,000 on defense, which represented 23.6% of all expenditure on government account and about 7.6% of the national income. Put another way, it meant that Britain was spending £15 per capita on military preparedness. But this was not enough. In July, soon after the attack in Korea, the government announced its resolve to divert another £100,000,000 to defense. A few days later there came the news of a three-year defense plan involving a total outlay in that period of £3,400,000,000—10% of the national income. An increase in pay to the

SIR STAFFORD CRIPPS, British chancellor of the exchequer, brandishing a broom to emphasize the “clean sweep” he promised to continue if re-elected. He had just been returned to office by his Bristol constituents in Feb. 1950

forces, agreed to as part of a new recruiting campaign, pushed up this prodigious figure by another £200,000,000.

In matters affecting the political integration of western Europe, however, there was no such spectacular determination. The Council of Europe struggled to embody the novel and noble ideas stirring within the continent, but it received only condescending patronage from the British government. By the Labour party the whole ideal of political federation such as Europe desired was given but a cold formal nod of the head. Indeed, the party's national executive committee went so far as to proclaim in a statement on European unity that no Socialist government in Europe could submit to the authority of a body whose policies were decided by an anti-Socialist majority.

For similar if not identical reasons the seeds that Robert Schuman (*q.v.*) scattered when he produced his plan for a European coal and steel pool fell on stony ground. The French foreign minister proposed the creation of a single authority to control the production of steel and coal in France and Germany, with membership open to other European countries. The six powers who later sat together to see what they could make of it all did not include Great Britain, whose attitude was one of doubt and isolation. (See also EUROPEAN UNION; KOREAN WAR; NORTH ATLANTIC COMMUNITY; UNITED NATIONS.)

Within the family of the commonwealth, meanwhile, economic development was claiming much attention. The Colombo, Ceylon, conference of foreign ministers, held in January, engaged in an extensive review of political and economic problems of south and southeast Asia and among other things agreed on the establishment of a Commonwealth Consultative committee. From the first meeting of this Consultative committee (held in Sydney, Austr., in May) there emerged the beginnings of a technical assistance scheme between commonwealth governments. For the commonwealth, while it recognized the need to uphold international authority through military action (as in Korea), attached equal importance to economic well-being in Asia as an effective buffer to Communist advance.

In the colonial territories as a whole about 350 major projects calling for capital expenditure of £400,000,000 were either planned or under way. The experience of the Overseas Food corporation in its African peanuts scheme became steadily more unhappy, however, the big mistake (according to the Committee of Public Accounts) having been the "failure to realize the impracticability of the original plans in the conditions existing immediately after the war." Accordingly, the corporation prepared a "clear cut modification" of the scheme, which in Jan. 1951 was officially admitted to have failed. (See also COMMONWEALTH OF NATIONS, and articles on the various members of the British Commonwealth.)

**FILMS OF 1950.**—*Introducing Britain* (Simmel-Meservey); *Queen of the Border* (British Information Services). (F. Sn.)

**Education.**—England, Wales and Scotland (1949): primary and secondary schools 30,912, pupils 6,290,236; special schools (for handicapped, England and Wales) 576, pupils 45,073; further schools 10,767, pupils 2,298,601; teachers, all schools, 244,085. Universities 21, students 95,328, teaching staff 9,377.

**Finance and Banking.**—Budget: (actual 1949–50) revenue £3,924,000,000, expenditure £3,356,600,000; (est. 1950–51) revenue £3,897,800,000, expenditure £3,455,100,000. National debt (Dec. 31, 1950) £26,426,000,000. Currency in circulation (Dec. 31, 1950) £1,333,200,000. Gold and dollar reserves of the sterling area (Dec. 31, 1950) £1,178,000,000, (Sept. 18, 1949, at same rate of exchange) £478,000,000. Exchange rate since Sept. 18, 1949, £1 = U.S. \$2.80.

**Foreign Trade.**—Imports (1949) £2,272,500,000, (1950) £2,604,000,000; exports including re-exports (1949) £1,843,000,000, (1950) £2,274,000,000. Main sources of imports (1949, per cent of total imports): Canada 10%; United States 9.8%; Australia 9.4%; New Zealand 5.1%; India 4.3%; Denmark 3.4%; France 3.3%. Main destinations of exports (1949): Australia 10.5%; Union of South Africa 7%; India 6.6%; Canada 4.4%; Ireland 4.3%; New Zealand 3.6%; United States 3.2%.

**Transport and Communications.**—Railways (1949): Great Britain, total first track (all gauges) 19,700 mi.; Northern Ireland 1,035 mi. Passenger journeys originating (British railways, monthly average, 1949) 82,700,000. Freight traffic originating (weekly average, 1949) 5,380,000

tons. Roads (1948): Great Britain 183,659 mi. Motor vehicles licensed (Great Britain, Aug. 1950): 4,310,000 including 2,237,000 private cars. Air transport (United Kingdom airlines, all services, monthly averages 1949): aircraft miles flown 3,677,000; passengers carried 76,400; passenger-miles flown 51,100,000; freight carried 1,180 tons; freight carried in ton-miles 1,507,000; mail carried 442 tons; mail carried in ton-mi. 880,000. Shipping: merchant vessels on the United Kingdom register of 500 gross tons and over (Nov. 1950): non-tankers 13,557; tankers 3,918. By June 1949 the volume of 18,093,000 gross tonnage registered was 202,000 more than in 1939. Number of telephones, private stations (March 31, 1950): 5,171,491 (70% with automatic dial). Radio receiving sets licensed (Nov. 1950): 12,334,150, incl. 549,200 television sets.

**Agriculture and Fisheries.**—Production (long tons, 1950 est.): wheat 2,520,000; barley 1,595,000; oats 2,617,000; rye 56,000; mixed corn 698,000; potatoes 9,637,000; sugar beets 5,049,000. Livestock (1950): cattle 10,607,000; sheep 20,408,000; pigs 2,976,000; poultry 95,988,000. Sales of milk in the United Kingdom amounted to 1,737,000,000 gal. in 1949. In 1945–48 the United Kingdom was importing a yearly average of 3,850,000 tons of wheat and 695,000 tons of wheat meal and flour.

It was estimated that agricultural production in the years 1948–50 was about 30% above the 1934–38 average. About 40% of Britain's food was home produced, compared with about 30% before World War II. At the end of 1950 meat, bacon, fats, cheese, sugar, sweets and tea continued to be rationed. During the fiscal year 1950–51 about £410,000,000 was paid on food subsidies, compared with £462,600,000 in 1949–50.

**Fisheries:** Total catch, England and Wales (1949): 708,600 long tons, worth £29,479,000; Scotland (1949): 293,000 long tons worth £10,308,000. This excludes shellfish, but includes gray mullet and whitebait.

**Industry.**—The number of industrial establishments with more than 10 employees (April 1948) was 51,040. The total working population in 1950 was 23,325,000 of whom 16,055,000 were men. There were 690,000 in the armed forces and women's services, of whom 666,000 were men, and there were 274,000 unemployed.

**Fuel and power production (1950):** coal 216,300,000 long tons; gas 531,600,000,000 cu.ft.; electricity 54,480,000,000 kw.hr. The total number of wage earners in the coal-mining industry decreased from 277,000 in Jan. 1949 to 686,000 in Nov. 1950. The average output in tons per man-shift was 1.14 in 1938, 1.00 in 1945 and 1.19 in 1950.

**Metals production (long tons, 1950):** iron ore (30% metal content) 12,948,000; pig iron 9,801,000; steel 16,293,000; virgin aluminum 29,500; refined copper 115,700; virgin zinc 70,200; refined lead 74,100. The British steel industry achieved in 1950 an all-time record, and the same could be said of the motor industry. The estimated output of passenger motor cars was 530,000 and of trucks 260,000.

**Textiles production (1950):** cotton woven cloth 2,106,000,000 linear yards; woven wool fabrics 457,000,000 sq.yd.; rayon filament yarn 208,000,000 lb.; rayon staple fibre 174,000,000 lb. The above does not include 25,000,000 sq.yd. of woolen blankets which were produced in 1950. The index of industrial production according to the British Central Statistical Office (1946=100): 1949=129; Oct. 1950=150; according to the Statistical office of the United Nations (1937=100): 1949=116; July 1950=128. (K. Sm.)

**Great Lakes Traffic:** see CANALS AND INLAND WATERWAYS.

**Greece.** A kingdom in the southern part of the Balkan peninsula, Greece has an area of 51,182 sq.mi. including the Dodecanese Islands (1,035 sq.mi.); the mainland accounts for 41,328 sq.mi. and the islands, the largest being Crete (3,235 sq.mi.), for 9,854. Population: (1940 census) 7,344,860; (Dec. 31, 1949, est.) 7,960,000. Language (1940 census): Greek (93%). Religion (1940 census): Greek Orthodox (96.5%). Chief towns (1940 census, municipal area only): Athens (cap., 481,225); Piraeus (205,404); Salonika or Thessaloniki (226,147); Patras (79,570); Volos (54,919). Ruler: King Paul I. Prime ministers in 1950: Alexander Diomedes; John Theotokis (from Jan. 6); Sophocles Venizelos (from March 23); Nicholas Plastiras (from April 15); Sophocles Venizelos (from Aug. 21).

**History.**—The final liquidation of the Communist rebel forces throughout the country, which was completed by the end of 1949, enabled the government to deal with the problem of the repatriation of the 700,000 refugees who had fled from the areas of military operations to the safety of the towns. During 1950 almost all the refugees were able to return to their villages where, with government aid in the form of food, agricultural implements and building materials, they could start to rebuild their homes and resume work on the land. Greece's share of Marshall aid was cut by \$62,000,000 for the year 1950–51 because of the Greek government's inability to provide the necessary funds in drachmas required to carry out the capital investments envisaged in the economic reconstruction program.

The restoration of internal security also made possible the holding of elections. On Jan. 5 the coalition government of

Populists, Liberals and Unionists under Alexander Diomedes resigned, and a caretaker government, with a special mandate to hold the elections, was formed under the former president of the chamber, John Theotokis. On Jan. 7 parliament was dissolved, and general elections were held on March 5. More than 2,800 candidates belonging to 26 different groups contested the 250 seats of the new chamber (as compared with 354 in the previous chamber). The Populists won 62 seats, the Liberals 56 and the Democratic Socialists 35. A new political party, the National Progressive Union of the Centre (E.P.E.K.), led jointly by Gen. Nicholas Plastiras and Emmanuel Tsouderos, won 45 seats. The left-wing Democratic front led jointly by John Sofianopoulos and Alexandros Svolos won 18 seats, and the extreme right-wing Independent Political front (P.E.P.) led by Constantine Maniadakis won 16 seats. The remaining 18 seats were won by the National Renaissance front (Panayotis Kanellopoulos), the National party (Napoleon Zervas)—which later fused with the Liberals—the Agrarian group and the New party, which returned only one deputy as compared with 18 deputies in the previous chamber.

No single party having an over-all majority, the three centre parties (Liberal, E.P.E.K. and Democratic Socialist), who between them held 136 seats, concluded an agreement to form a government. The king entrusted the mandate of forming a government to the leader of the Liberal party, Sophocles Venizelos. As the other two partners to the agreement insisted that the premiership should be assumed by Plastiras, Venizelos finally formed a government consisting exclusively of Liberals. This government resigned on April 14 and was succeeded the following day by the centre coalition envisaged in the original agreement, comprising 8 Liberals, 7 members of E.P.E.K. and 6 Democratic Socialists. The new government received a vote of confidence (140-99) on April 27 and continued in office until Aug. 18, when the Liberals withdrew their support after a disagreement over the scope of the leniency measures adopted by the government. The cabinet that followed was again an exclusively Liberal one under Venizelos, but was widened first (on Aug. 28) by the inclusion of the Democratic Socialist party and later (Sept. 13) by the inclusion of the Populists. This government lasted until Nov. 2 when it resigned following a disagreement between the Populist leader and the other two party leaders regarding the attitude of the government over investigations into charges of misappropriation of funds in the Piraeus Port organization in which members of the Populist party were alleged to be implicated. It was succeeded by a two-party coalition of Liberals and Democratic Socialists, with Venizelos as premier and George Papandreou as deputy premier, and received a vote of confidence on Nov. 16.

In the field of international relations, the outstanding event of 1950 was the improvement of relations with Yugoslavia. The first signs of a *rapprochement* appeared shortly after Marshal Tito had stated in April that Yugoslavia was prepared to co-operate with a left-centre government in Greece. The situation deteriorated, however, following a statement by Yugoslav Foreign Minister Eduard Kardelj raising the question of a "Macedonian Minority" in Greece, and a deadlock persisted in Greco-Yugoslav relations until November, when Marshal Tito categorically stated in an interview with the *New York Times* that Yugoslavia had no territorial claims relating to Greek Macedonia. This was followed by the repatriation, on Nov. 7, of some of the Greek military personnel taken into Yugoslavia as prisoners by the Greek Communist rebels, and on Nov. 25 by that of the first group of Greek children similarly abducted by the rebels and repatriated in conformity with the U.N. resolution relating to this matter. On Nov. 30 Premier Venizelos announced in the chamber of deputies the government's decision

to resume normal diplomatic relations with Yugoslavia and the appointment of Spyro Capetanides as Greek minister plenipotentiary to Yugoslavia.

On Dec. 5 Milan Yovanovitch was appointed Yugoslav minister to Greece.

In November and December, the Greek question was debated by the U.N. fifth general assembly in New York, to which the U.N. Special Committee on the Balkans submitted its annual report covering the period Sept. 1949 to July 1950. In this report, the committee stated that with the elimination of large-scale guerrilla activity the threat to Greece had altered in character. Pointing out that many thousands of Greek guerrillas had fled beyond the northern frontiers of Greece, the report said that the disarming and disposition of these guerrillas had not been verified by any international agency, and that the Greek guerrilla leaders themselves claimed that their forces still existed. The committee expressed the opinion that "the continuing potential threat to Greek political independence and territorial integrity is to be found at present chiefly in Bulgaria," and added that the failure to solve the problem of the repatriation of Greek children removed to other countries by the guerrillas "constitutes a continuing source of international friction as well as a standing challenge to the United Nations and to the most elementary humanitarian principles." The assembly finally approved the report and adopted various resolutions in accordance with the recommendation made by the committee, which it decided to maintain in its functions for another year. (See also UNITED NATIONS.) (A. A. P.)

**Education.**—(1948-49) Primary schools 9,986, pupils 1,218,000; secondary schools 507, pupils 169,836; universities 2, professors 289, students 13,337; institutions of higher education 9. Illiteracy (1940) 27%.

**Finance and Banking.**—Budget: (1949-50) revenue dr. 5,494,000,000, expenditure dr. 5,830,000,000,000; (1950-51 est.) balanced at dr. 5,246,000,000,000. Currency circulation (July 1950) dr. 1,676,000,000,000. Gold reserve (July 1950) U.S. \$3,000,000. Bank deposits (June 1950) dr. 1,840,000,000,000. Monetary unit: drachma with an exchange rate with certificates (Nov. 1950) of 15,000 drachmas to the U.S. dollar.

**Foreign Trade.**—(1949) Imports dr. 2,048,112,000,000; exports dr. 574,728,000,000. Main sources of imports (1949): United States 41%; United Kingdom 9%; Turkey 5%; France 5%. Main destinations of exports (1949): United Kingdom 21%; United States 19%; France 11%; Germany 10%.

**Transport and Communications.**—Roads (1949) 4,189 mi. Licensed motor vehicles (Dec. 1949): cars 7,500; commercial vehicles 16,500. Railways (Dec. 1949): operating trackage 2,140 mi. Shipping (July 1949): number of merchant vessels over 100 gross tons 377; total tonnage 1,329,257. Telephone subscribers (1949) 65,078. Radio receiving sets 44,500.

**Agriculture and Fisheries.**—Main crops (metric tons, 1949): wheat 720,000; barley 130,000; oats 85,000; rye 30,000; maize 240,000; potatoes 329,000; rice 22,000; cottonseed 30,000; olives 823,000; olive oil 196,000; grapes 1,233,000; other fruit (1948) 186,000; wine (1948) 450,000; pulses (1948) 67,000; fresh vegetables (1948) 629,000. Livestock: cattle (Dec. 1949) 678,000; sheep (Dec. 1948) 6,631,000; pigs (Dec. 1949) 509,000; horses (Dec. 1948) 231,000; mules (Dec. 1948) 142,000; poultry (Dec. 1948) 8,626,000. Meat production (1949) 52,000 metric tons. Fisheries, total catch (1949), 37,000 metric tons.

**Industry.**—Value of production (1949) dr. 5,376,634,000,000. Fuel and power: lignite (1949) 131,500 metric tons; electricity (installed capacity, 1948) 145,000 kw. Raw materials (metric tons, 1949): chrome ore 3,100; magnesite 22,900; manganese 1,000; bauxite 44,300; iron pyrites 14,300.

**FILMS OF 1950.**—*Look at Greece* (Film Program Services).

**Green, William** (1873- ), U.S. labour leader, was born March 3 in Coshocton, O. He spent much of his youth as a miner, and at the age of 27 was a subdistrict president of the United Mine Workers of America. He was elected president of the American Federation of Labor in 1924 and at the A.F. of L. 1950 convention was re-elected to his 27th consecutive term. Under Green, the A.F. of L. remained predominantly a crafts union. When the Committee for Industrial Organization (later, the Congress of Industrial Organizations), a group of ten A.F. of L. unions, opened its campaign to establish industrial-type unions, Green refused to sanction the move and the C.I.O., led by John L. Lewis, broke away from the parent body in 1937. Over the years Green repeatedly emerged as Lewis'

chief opponent.

During World War II Green helped prevent strikes in war industries, and when the Korean war began in 1950 he again volunteered to adopt a no-strike pledge, calling upon all labour to join him, whereupon Lewis rejoined with a comment that his mine workers would "do our own no-striking." On April 10, 1950, Green announced limited approval of C.I.O. President Philip Murray's proposal for a joint committee of all labour to consolidate action on economic, legislative and political objectives, but on May 8 he announced that the A.F. of L.'s executive board had rejected the Murray proposal for functional unity, though agreeing to work for "organic" unity of all labour. On Aug. 8 Green was named by W. Stuart Symington, chairman of the National Security Resources board, as one of the 12-member committee to advise on U.S. mobilization.

**Greenland.** The world's largest island (840,000 sq.mi., about 705,000 sq.mi. covered by an ice cap), in the North Atlantic ocean, northwest of Iceland. Greenland is a Danish possession. It came under temporary United States protection in 1941. Capital, Godthaab. The census showed a population of 21,384 on Dec. 31, 1945, of whom 50% were under 20 years of age, and only 5% were over 60. Males counted 47.8%, females 52.2%. Mid-1949 population est. 23,000. Seats of the governors are Godthaab in the south and Godhavn in the north.

**History.**—Negotiations had continued for several years over the continued U.S. occupation of air fields in Greenland, until in Aug. 1950 an exchange of notes was announced. The new agreement provided that Denmark would take over the U.S.-built airport Bluie West 8 at Sondre fjord; Danish military authority would operate the facilities, but this would "not prevent the U.S. from using Bluie West 8 in the future." At Bluie West One, still operated by U.S. personnel, a hotel was being built to accommodate 60 guests. Both Denmark and the U.S. recognized their common interest in the defense of Greenland, but the question of sovereignty was a delicate one.

The organization of government and economy was the subject of a searching inquiry by a Danish commission, which after a year and a half of intensive work published its findings and recommendations in the spring of 1950. This report advocated far-reaching centralization on the island. Populations of small, isolated villages with poor fishing grounds should be moved to locations better for sealing and fishing (Umanak, Upernivik, Cape Farewell and others might thus be abandoned). Small municipalities should be amalgamated into larger ones, the district councils be abolished, and the two provincial councils be combined. A central court of appeal should be established, and Danish law be extended gradually to cover natives as well as Danes.

The commission was deeply interested in economic development and organization. A mineral survey of Greenland was urged. Sheep raising should be encouraged, and this would necessitate irrigation projects and cheap loans for the purchase of fertilizer. Greenlanders should have sea-going cutters and be encouraged to engage in distant deep-sea fishing. Quick-freezing plants should be built for the fish fillet trade. Harbour facilities should be improved at Egedesminde and Godthaab. The government trade monopoly should be abandoned, and ultimately free trade established. The total budget for development was estimated at about \$13,000,000, and included large expenditures for housing, schools, health, fisheries, transportation and technical services.

**Education.**—Schools (1948): infant and primary 175, pupils 4,200, teachers 237; postprimary 4, pupils 100, teachers 15; technical 1, pupils 50, teachers 2; institutes of higher education 2, students 45, lecturers 10.

**Finance and Banking.**—Budget (1948-49): expenditure 23,593,000 Kr., revenue 17,449,000 Kr. Currency circulation (Dec. 1949): 2,700,000 Kr.

Savings and bank deposits: 2,800,000 Kr. Monetary unit: the Danish krone, with an exchange rate of 6.90 Kr. to the U.S. \$1.

**Foreign Trade.**—(1949) Imports 30,036,000 Kr., exports 604,000 Kr.

**BIBLIOGRAPHY.**—A. J. Fischer, "Greenland's Silent Revolution," and P. Frenchen, "A Front Moves North," both in *The Norseman* (London, May-June 1950); Hans Henrik Koch, "A New Era for Greenland," *Danish Foreign Office Journal* (July-September 1950). (F. D. S.)

**Grenada:** see WINDWARD ISLANDS.

**Guadeloupe.** This French overseas *département*, situated in the Lesser Antilles, consists of two islands separated by a narrow channel, and five smaller islands. Total area: 686 sq.mi. Pop. (1949 est.) 281,000. The inhabitants are mainly nonwhite (Negro or mixed), speak a French patois and are Roman Catholic. Chief towns (pop., 1946 census): Basse-Terre (cap., 10,086); Pointe-à-Pitre (41,323). Prefect, Maurice Philipson.

**History.**—A strike which immobilized a Capesterre factory for several weeks in May and June prevented the 1950 sugar-production schedule from being fully completed. Exports from the port of Basse-Terre continued to increase in volume, banana cargoes particularly contributing to this development. Work on the new airport at Raizet, to the northeast of Pointe-à-Pitre, was urged steadily forward and the official opening took place on May 20. By its central position in the arc of the West Indies the airport was admirably designed to maintain communications between Central, North and South America, and was marked out for a busy future.

The economic existence of Guadeloupe was bound up with the sugar cane yield and with the export prospects for sugar and rum. Restored to a credit position in 1945, the balance of trade became again adverse in 1948, and in 1949 was almost at equilibrium.

**Finance.**—Budget: (1949 actual) balanced at 803,700,000 fr.; (1950 est.) balanced at 1,542,800,000 fr. Currency: Metropolitan franc. In Nov. 1950, U.S. \$1.00 = 349.85 fr.

**Foreign Trade.**—(1949) Imports 6,960,600,000 fr.; exports 6,842,400,000 fr.

**Transport and Communications.**—Ships entered (1949) 723; cargo: unloaded 114,400 metric tons; loaded 111,600 metric tons.

**Agriculture.**—Main products (metric tons, 1949): sugar cane 608,300 (1950: 782,000); sugar 42,700 (1950: 66,500); bananas 78,000; rum 115,849 hl. Livestock (1950): cattle 58,000; pigs 30,000; sheep 7,000. (C. A. J.)

**Guam.** Guam is the largest and southernmost island of the Marianas, lying in the Pacific at 13° 26' N. lat. and 144° 39' E. long., about 5,100 mi. W. of San Francisco, Calif., 3,340 mi. W. of Honolulu, T.H., and 1,500 mi. E. of Manila, Phil. Area: 206 sq.mi. Population, June 30, 1950, 27,985 Guamanians and 30,769 non-Guamanians, including U.S. military and civil service personnel. Agaña is the principal city and capital. Other important towns are Sinajana and Inarajan. The Guamanians are Chamorros, and their religion is predominantly Roman Catholic. Governor in 1950: Carlton Skinner.

**History.**—Guam was ceded to the U.S. by Spain in the Treaty of Paris of 1898 which terminated the Spanish-American War. It was administered by the U.S. navy until Aug. 1, 1950, when the U.S. department of the interior took over the administration of the island. On Sept. 3, 1949, Carlton Skinner was appointed the first civilian governor of the island. The Guam congress, composed of a house of council and a house of assembly, is a popularly elected legislature. One councilman is elected for each municipality; the term is four years. One assemblyman is elected for each district within the municipalities for a two-year term. In 1947 legislative power was extended to the Guam congress in place of its former advisory power. The congress can override the governor's veto of proposed legislation and submit the disputed legislation to Washington for final action. There is a popularly elected native commissioner for each of the island's 15 municipalities; the term is four years. The judiciary con-

U.S. AIR FORCE on review at dedication ceremonies of the Andersen Air Force base in Guam, April 1950

sists of a court of appeals, a superior court, an island court, a justice court and a police court.

**Education.**—In 1950 there were 21 elementary and junior high schools and 1 high school with a total of 9,829 pupils and 317 teachers. About 84% of the population was literate according to the 1940 census.

**Finance and Trade.**—During the fiscal year ending June 30, 1950, Guam's expenditures amounted to \$4,422,479, of which \$560,755 came from U.S. appropriations and the balance from local revenues; \$3,872,527 of revenues were collected during the fiscal year. In 1950 the Bank of America took over the operations of the Bank of Guam, which had been established by the navy in 1915.

In the fiscal year ending June 30, 1950, imports totalled \$8,188,175 and exports \$644,452.

**Transportation and Communications.**—There were about 80 mi. of paved highways in Guam and about 60 mi. of improved secondary roads. There were no railways, but there were five military airfields. Guam is the relay station for the Pacific Cable company with connections to Japan, China, the Philippines, Australia, Hawaii and the U.S.

(S. Nr.)

**Guatemala.** A Central American republic. Guatemala is bounded by Mexico, British Honduras, Honduras and El Salvador. Area: 45,452 sq.mi.; pop. (1949 est.): 3,784,000. Preliminary census figures for 1950 showed only 2,786,369 (3,283,209 in 1940). Capital: Guatemala City (1946 est. pop., 225,000). Other urban centres (1940 census) are Antigua Guatemala (12,601), Chiquimula (10,868), Comalapa (10,461), Mazatenango (14,227), Puerto Barrios (15,784), Quezaltenango (33,538) and Zacapa (14,443). Language: Spanish; religion: predominantly Roman Catholic. President in 1950: Juan José Arévalo.

**History.**—A slight swing to the right carried the leftist administration of President Arévalo through a series of political crises in 1950 which included an abortive revolt and a presidential election.

Failure of the government to commemorate the first anniversary of Col. Francisco Javier Arana's assassination incited a Conservative demonstration on July 20 that was broken up by military and labour elements with the loss of three lives. The suppression of this demonstration brought on another by the university students, who held the minister of interior responsible and demanded his resignation. Labour, business and professional elements joined in a general strike in the capital city, and some oppositionists demanded Pres. Arévalo's resigna-

tion. On July 24 the government suspended several constitutional guarantees and imposed a state of siege, but within two weeks restrictions were lifted.

In September the government cut itself off from Communist support by banning the party's weekly newspaper. Later in the month a Communist school was ordered closed, and 40 students were arrested for trying to continue their classes. However, the minister of interior who ordered the closure was given a vote of no confidence by the national congress and was forced to resign. By October, government pressure to eliminate Communist influence was being extended to the labour unions.

On Nov. 5, shortly before the national elections, some adversaries of the Arévalo administration attempted unsuccessfully to seize the military base of La Aurora allegedly in preparation for a general revolt, but the movement was crushed with 17 casualties. The government did not suspend constitutional guarantees.

In the elections, held Nov. 10–12, ten candidates contended for the presidency, to succeed Arévalo in 1951, but the administration's Revolutionary Action party scored an easy victory. The results, announced Nov. 13, gave Col. Jacobo Arbenz 242,901 votes. His nearest rivals were Miguel Ydigoras Fuentes of the rightist National Reconciliation party (68,146) and Lic. Jorge García Granados of the democratic and civilian People's party (30,016). The administration party also tightened its grip in congress by winning 19 of the 24 seats at stake.

**Education.**—In 1946 there were 4,425 primary schools with 8,266 teachers and 225,362 students; 45 secondary schools with 819 teachers and 5,494 students. The national university had 1,719 students. The 1948–49 national budget allocated \$6,300,000 for public education.

**Finance.**—The monetary unit is the quetzal, maintained at par with the U.S. dollar. The national budget for 1949–50 was raised from \$41,496,265 to \$51,097,811 on April 1, 1950. The proposed budget for 1950–51 was for \$45,000,000. On Sept. 30, 1950, the Bank of Guatemala held net foreign-exchange reserves totalling \$34,872,000, \$28,479,000 in gold and \$6,317,000 in deposits and securities. At the end of 1949 total money in circulation amounted to \$64,000,000, about \$665,000 more than in 1948. As of March 31, 1948, the foreign debt was \$847,700; the internal debt, \$3,000,000.

**Trade and Resources.**—Exports for 1949 totalled \$51,932,631 (\$50,165,490 in 1948); imports, \$67,983,773 (\$68,349,860 in 1948), inclusive of monetary gold and silver. The United States supplied about 74% of the imports and took 92% of the exports. The chief exports were: coffee (1,991,181 bags of 132 lb. each, valued at \$37,353,000), bananas (753,228,000 lb., at \$7,584,000), chicle (5,953,500 lb. at \$1,366,000) and lumber (2,057,000 bd.ft., at \$146,000). The chief crops (with 1949–50 production estimates) are: corn (920,000,000 lb.), coffee (138,600,000 lb.), beans (100,000,000 lb.), sugar (70,900,000 lb.), rice (18,000,000 lb.), abacá fibre (8,300,000 lb.), bananas (7,100,000 stems), tobacco (2,600,000 lb.) and cotton (2,400,000 lb.). At the end of 1948 the country had 900,974 head of cattle, 216,422 horses and mules, 617,611 sheep, 63,545 goats and 374,367 hogs.

**Communications.**—In 1949 there were 608 mi. of railroad (28 mi. government-owned); 4,800 mi. of highway (about 2,400 mi. all-weather surfaced); two international airway connections and one domestic line connecting 34 localities. At the end of 1948 there were 4,025 mi. of telephone lines (2,893 mi. government-operated); 3,800 telephones; 4,366 mi. of telegraph lines; 15 broadcasting stations; 38,000 radios; 5,200 automobiles; and 4,500 trucks and buses.

**Gustav VI** (1882– ), king of Sweden, of the Goths and of the Wends, was born at Stockholm, Nov. 11. He was the son of King Gustav V and Queen Victoria, nee Princess of Baden. Of his marriage on June 15, 1905, to Princess Margaret

of Connaught (d. 1920) there were four sons and a daughter. The eldest son, Prince Gustav Adolf (b. 1906) was killed in an aircraft accident in 1947; he had married in 1932 Princess Sibylle of Saxe-Coburg-and-Gotha, and their only son, Prince Carl Gustav (b. April 30, 1946), became crown prince of Sweden. After the death of his first wife, King Gustav VI married on Nov. 3, 1923, Lady Louise Mountbatten (b. 1889), daughter of the first Marquess of Milford Haven. He succeeded his father on the latter's death, Oct. 29, 1950, and the following day took the oath in Stockholm palace before his government and people. He promised to govern the country gently, with justice and integrity. "Duty before everything" would be his guiding motto.

**Gymnastics.** A steady performance in two days of competition in the University of California gymnasium enabled William Roetzheim of Florida State university, Tallahassee, to defend successfully his all-around title in the 1950 national Amateur Athletic union championships. Roetzheim also captured horizontal bar laurels.

Don Perry of the Pasadena, Calif., Y.M.C.A., unbeaten in five years of competition, equalled his own world record of 3.1 sec. in the rope climb. Edward Henning, 71, representing the East Side Turners of Cleveland, O., won with the Indian clubs for the 12th time; Irvin Bedard of the University of Illinois, Urbana, led the tumblers for the third straight year; and the Los Angeles Athletic club tallied 39½ points for the team championship.

Other winners were: Ara Hairabedian, University of Southern California, Los Angeles, calisthenics; George Wikler and C. Gilden, Los Angeles Athletic club (tied), flying rings; Jack Barnes, University of Southern California, long horse; Edward Scrobe, American Turners, New York city, parallel bars; and Eugene Rabbitt, Syracuse (N.Y.) university, side horse.

The women's national A.A.U. meet at Elizabeth, N.J., saw Clara Schroth of the Philadelphia, Pa., Turners again take five titles. She scored in the calisthenics, balance beam, flying rings and parallel bars events en route to the all-around championship. Roberta Bonniwell, a teammate, triumphed with the Indian clubs while Marian Barone, another Philadelphia star, won the side-horse vault. Joanne Slocum of the Dallas, Tex., Athletic club took the tumbling and the Swiss Turn Verein of Paterson, N.J., the team drill.

The University of Illinois captured both Western conference and National Collegiate Athletic association team laurels; Army and Syracuse university tied for eastern intercollegiate honours, while Temple university, Philadelphia, and Syracuse university shared first place in the Eastern league meet. (T. V. H.)

**Gynaecology and Obstetrics.** The maternal mortality rate in the United States for 1949 had been reduced to slightly less than 1 maternal death per 1,000 live births, contrasting with the 1933 rate of 6.2 maternal deaths per 1,000 live births. The great reduction was attributed in part to three major developments: the increasing percentage of births in hospitals; the development of the concept of antepartum care; and the advances in the management of the complications, namely, the administration of sulfonamides, antibiotics, whole blood or blood derivatives. Steady improvement of undergraduate and postgraduate medical training was the most important factor in the welding together of these developments.

The attempt further to reduce neonatal morbidity and mortality was reflected in many studies. Interest was focused on the growth of the uterine musculature with the conclusion that maximal uterine growth occurred in the first 20 weeks while the longitudinal stretching to accommodate foetal growth excelled

in the latter half of pregnancy; thus faulty myometrial growth and inadequate growth were postulated as potential causes of premature labour.

The pathology of retrolental fibroplasia, an ocular opacity in the newborn, was elucidated. Observations demonstrated its site or origin as the retina, beginning with an acute phase, a course of four to five months with resultant irreversible changes and the termination depending on the severity of the acute phase. The preponderance of cases in which the lesion was bilateral and the infant premature led to a theory of a basic metabolic disorder, with defective fat metabolism as the possible cause.

The association of embryonal developmental anomalies and rubella in the pregnant woman was generally accepted. The final conclusion was that if a pregnant woman contracted rubella (German measles) in the first three months of her pregnancy, the period of greatest foetal differentiation, her child would almost certainly show deformities, particularly deaf-mutism, cataracts, cardiac defects and dental anomalies.

That the cause of abortion was predominantly foetal was re-emphasized in one large series in which abnormal conceptuses constituted 73% of the abortuses. The role of conservative therapy alone was strengthened by one large statistical survey in which the salvage rate was almost identical with the results of studies employing hormonal therapy. One author suggested that since so many conceptuses were abnormal there was no advantage in continuing any form of therapy too long, a seven-day trial being sufficient in threatened abortion.

Assessment of the management of diabetes mellitus by endocrine therapy, and studies including only careful management of the diabetes in pregnancy began to appear, but more time was necessary for a full evaluation to determine if advantages were to be gained with the addition of endocrine therapy. The cardinal points remained that delivery prior to the expected date of confinement and the more frequent employment of Caesarean section in selected cases were essential to reduce foetal mortality rates.

The decreasing incidence of eclampsia (convulsions) with the improvement of antepartum care was reflected by many studies of particular phases of pre-eclampsia. The use of rigid standards to demarcate pre-eclampsia "mild" and pre-eclampsia "severe" by any one or two criteria was decried. It was emphasized that these served only as a guide; the whole ensemble of the patient was to be evaluated in the estimation of progress.

The incorporation of educational programs on childbirth in the antepartum management of patients was enhanced among the medical profession with the publication by Herbert Thoms of the book *Training for Childbirth*. Dr. Thoms outlined his program of lectures on the physiology of pregnancy and birth and on the courses of exercises, and he stressed psychic support during labour. His straightforward conclusion was that the underlying principles of the natural childbirth program were useful and sound for whatever type of delivery was elected and that this sort of physiological and physical preparation for childbirth was essential. The advocates of these procedures did not insist that full dependence on them alone was expected or required. Many patients would need, in addition, ordinary analgesic or anaesthetic assistance.

Encouraging progress continued to be made both in the diagnosis and the treatment of pelvic cancer. The increased cancer potential of the late involution of the endometrium was stressed. Lack of general agreement among pathologists persisted as to the criteria of carcinoma *in situ*. Reiteration was made of the valuable place of cytological studies as an aid and not as a final diagnosis in the early detection of uterine cancer, adequate biopsy or curettage being a necessary supplement.

At the International Congress on Obstetrics and Gynecology

in New York in May 1950, the League of Nations Classification of Carcinoma (cancer) of the Uterine Cervix was modified in the following manner. Stage 0 was delineated as preinvasive cancer. In stage one the cancer was strictly confined to the cervix while in stage two the cancer extended beyond the cervix but had not yet reached the pelvic wall. The cancer involved the vagina but not the lower third. In stage three the cancer involved the lower third of the vagina and had not reached the pelvic wall. Stage four cancer involved the bladder or the rectum, or both, or had extended beyond the limits previously described. This classification was termed the International Classification of Cancer of the Uterine Cervix and its adoption by all concerned organizations was recommended.

The place of surgery in early cancer of the cervix gained momentum with the acceptance in many clinics of total hysterectomy with associated removal of the ovaries in women past 40 years of age and their preservation in women under 40 years of age as the optimal treatment of true cancer *in situ*. In one clinic statistics were advanced to show that radical surgery could be performed with a good cure rate in selected cases of stage one and stage two cancer of the cervix. The importance of the degree of pelvic extension was emphasized in the attention given to gland dissections in the Wertheim operation and the impetus toward retroperitoneal dissections. An operation that continued to be evaluated was the radical procedure of removal of the uterus, tubes and ovaries, entire vagina, rectum and bladder with the implantation of the ureters into the bowel. However, for the earlier stages the proven value of irradiation prevailed and this alone or in combination with surgery was the accepted treatment for cervical cancer except in clinics equipped for investigative radical surgery.

The increase in the utilization of the total, in preference to the supracervical, hysterectomy was apparent with large series being reported in which various techniques were successfully incorporated to reduce to a minimum bladder and ureteral injury and postoperative morbidity. Gynaecologists were electing total hysterectomy as their procedure of choice whenever there was no contraindication imposed by local or general conditions. The chief reason advanced was that this removed all possibility of later recurrence of cancer in a cervical stump.

Vaginal plastic operations remained the most frequently performed major gynaecological operation. Adequately performed, they were successful in 85% of patients. New methods using fascial slings and the suspension of the urethra to the abdominal wall were devised for urinary incontinence. The multiplicity of operations performed for this distressing symptom suggested that none was entirely satisfactory.

In the management of ovarian enlargements the differentiation of functional cysts from other tumours was frequently afforded by repeated pelvic examinations over a specified period. The general procedure at operation for cystic ovarian degenerations was to examine the opposite ovary routinely with inspection of both ovaries for the presence of excrescences before deciding on an extreme procedure, ovarian tissue being preserved wherever possible in the younger woman.

The removal of the ovaries when a hysterectomy was performed in the postmenopausal woman was generally approved in avoidance of possible subsequent malignant changes in these now useless organs.

lowing Vaginal Operative Procedure," *Am. J. Obst. & Gynec.*, 59:1260-78 (June 1950); Andrew A. Marchetti, "Female Bladder and Urethra Before and After Correction for Stress Incontinence," *Am. J. Obst. & Gynec.*, 58:1145-54 (Dec. 1949). (P. T.)

**Haiti.** The Republic of Haiti occupies the western third of the island of Hispaniola, the rest of which constitutes the Dominican Republic. It has an area of 10,748 sq.mi. The population was estimated (1949) at 3,750,000. The population is almost wholly Afro-American; less than 5% is of European origin. The capital, Port-au-Prince, has a population of about 125,000; Cap Haïtien, Gonaïves and Les Cayes have about 20,000 each. Official language: French. Presidents in 1950: Dumarsais Estimé; (after Dec. 8) Paul E. Magloire.

**History.**—Early in 1950, the tension between Pres. Dumarsais Estimé and various groups led to disorder. Apparently, various military and commercial groups were discontented because of the immense cost of the Bicentennial exposition, which closed June 8 and which threatened to engulf the financial resources of the government. The president was obliged to resign on May 10. Col. Paul E. Magloire, head of the military junta which brought about the change, was chosen president in October by direct popular election. A constitutional assembly was set up in Gonaïves to revise the constitution. President Magloire took the oath of office on Dec. 8, with a cabinet of technicians previously not identified with political parties. The new regime was primarily concerned with efficient reorganization of the country's economy. Prompt settlement of claims against the government was undertaken by the junta, and foreign obligations were punctually met. Important public works were undertaken in areas previously less favoured, such as harbour development, water and sewage systems at Cap Haïtien, a cadastral survey of the Artibonite valley and important roads.

The firm demand in world markets for sugar, coffee, sisal, cabinet woods and vegetable oils sustained Haiti's export trade during 1950, and went far toward paying for the increase in imports. The political unrest led to a brief disturbance in commercial and credit conditions; after the election, a substantial improvement was noted. The year witnessed the highest employment in Haitian history.

The foreign relations of Haiti were generally peaceful through 1950. (C. Me.)

**Education.**—Haiti in 1949 had about 1,060 primary schools attended by 87,000 pupils and 6 national *lycées* and 15 private secondary schools attended by about 10,000 pupils. Higher education was available at the national law and medical schools, the Central School of Agriculture and the government-controlled University of Haiti. About 15% of the 1948-49 budget was earmarked for education.

**Finance.**—The monetary unit is the gourde, valued in 1950 at 20 cents U.S. currency, official rate. Actual government expenditure in the fiscal year ended Sept. 30, 1949, was \$18,660,000; revenue was \$16,620,000. The budget for the fiscal year 1951 (Oct. 1, 1950-Sept. 30, 1951) balanced expenditure and revenue at \$21,058,000. On Sept. 30, 1949, the net public debt was \$7,960,575; private deposits in the two banks, \$7,177,650; and currency in circulation (excluding U.S. dollars), \$6,329,689.

**Trade and Communications.**—Exports in the trade year 1949 (Oct. 1, 1948-Sept. 30, 1949) were \$31,019,800; imports were \$31,426,800. The chief exports were coffee (43%), sisal (30%), bananas (6%) and sugar (5%); leading imports were cotton fabrics (14%), electrical machinery and apparatus (13%) and wheat flour (11%). Leading suppliers were the U.S. (77%), Netherlands Antilles (4%) and Canada (4%); leading customers, the U.S. (59%), Belgium (12%) and Italy (9%).

On Jan. 1, 1950, there were about 2,000 mi. of improved roads, of which only about 245 mi. were surfaced. There were 88 mi. of public railway and 75 mi. of industrial trackage. Registered motor vehicles totalled 3,880 on Jan. 1, 1949. International air service was supplied in 1950 by Pan American World Airways; the Haitian air force furnished internal air transport. In 1949 there were five small commercial broadcasting stations and about 4,900 telephones.

**Agriculture.**—Exports of coffee, the chief export crop, totalled 483,509 bags of 132 lb. each in the trade year 1948-49. Exports of sisal fibre, the second crop, increased to 32,749 short tons as new acreage reached maturity. In 1949, 48,805 short tons of sugar and 2,441,510 gal. of molasses were produced. Livestock (1945) included 200,250 cattle, 13,800 sheep and 1,010,000 goats.

**Manufactures.**—Manufacturing was on a small scale and, except for sugar refining, was mainly for domestic consumption. There was one large modern sugar mill operated by the Haitian-American Sugar company near

Port-au-Prince, which accounted for most of the sugar production, and another smaller mill. A third mill was completed near Les Cayes in 1950. A modern textile mill made denim and gray goods.

**Mineral Production.**—Minerals are of negligible importance in the Haitian economy. (J. W. Mw.)

**Hammer Throw:** see TRACK AND FIELD SPORTS.

**Handball.** The Town club of Chicago, Ill., was the host club at which the annual National A.A.U. four-wall handball championships were held in 1950. They were not only hosts, but also the victors in both events. Ken Schneider of the Town club won the singles crown, defeating Walter Plekan, of Buffalo, N.Y., in the finals. In 1949 these two had met in the semi-finals and the results were reversed. First honours in the doubles were captured by Frank Coyle and William Baier who overwhelmed in the finals still another Town club entry, George Di Re and Jack Gordon.

#### National Four-Wall Rankings for 1950

##### Singles

1. Ken Schneider, Chicago, Ill.
2. Walter Plekan, Buffalo, N.Y.
3. Gus Lewis, Chicago, Ill.

##### Doubles

1. Frank Coyle and Wm. Baier, Chicago, Ill.
2. George Di Re and Jack Gordon, Chicago, Ill.
3. Sol Newman and Harold Shrutt, Buffalo, N.Y.

**Harrison, William Henry** (1892— ), U. S. National Production authority administrator, was born on June 11 in Brooklyn, N.Y. He began work as a repairman and inspector for the New York Telephone company, and later studied electrical engineering part time at Pratt institute, Brooklyn. He joined the American Telephone and Telegraph company (A.T. & T.) as an engineer in 1918 and was plant engineer in 1933 when he resigned to become vice-president and director of the Bell Telephone Company of Pennsylvania and of the Diamond State Telephone company. In 1937 he became assistant vice-president of the A.T. & T. and the following year vice-president and chief engineer. During World War II he served with the national defense council, the Office of Production Management and the War Production board in various capacities directing construction, production, and the procurement of supplies. Early in 1942 he was assigned to the office of the chief signal officer and in June to headquarters, army services of supply, as director of procurement and distribution services. He was appointed brigadier general in 1942 and temporary major general in 1943.

He returned to A.T. & T. as vice-president in 1945, but in June 1948 resigned to become president and director of the International Telephone and Telegraph corporation. On Sept. 10, 1950, Secretary of Commerce Charles Sawyer named Harrison administrator of the National Production authority, to handle the priorities, allocations and inventory controls assigned to the commerce department under the defense mobilization program.

**Hawaii.** The territory of Hawaii consists of a group of eight large islands and numerous islets in the Pacific ocean between latitudes 18° 55' and 22° 15' N. and between 154° 50' and 160° 30' W. longitude. The total area of the group is 6,433 sq.mi. From southeast to northwest, the islands are Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai and Niihau. In addition, stretching northward beyond Niihau more than 1,100 mi. is an archipelago of rocks, reefs and shoals which includes

HAWAIIAN DELEGATES meeting at Honolulu in April 1950 to draft a constitution pending approval of Hawaiian statehood by the U.S. senate; the document was completed July 15

Midway (longitude 177° 22' W.). Likewise, 960 mi. S. of Honolulu and included as part of the city and county of Honolulu lies Palmyra, a coral atoll consisting of 55 islets, 5 mi. long and 2½ mi. wide. The largest island in the territory is Hawaii, with an area of 4,021 sq.mi. The capital of the territory is Honolulu, situated on the island of Oahu. Honolulu is a modern city with a population of 232,193, exclusive of military and naval personnel.

The population of the territory grew from 423,330 in 1940 to 499,794 in 1950. The largest single racial group is the Japanese, which constitute 39.5% of the total. The second largest is the Caucasian with 27.5% of the total, and the Hawaiian and part Hawaiian are third with 19.3%. Other important groups in origin are Filipino, Chinese, Puerto Rican and Korean.

Ingram M. Stainback became governor of Hawaii on Aug. 24, 1942, and was reappointed July 13, 1946. Joseph R. Farrington was in 1950 serving his fifth two-year term as Hawaii's delegate to the U.S. congress.

**History.**—Hawaii has been a territory of the United States since 1900. Since that date the territory has made repeated petitions to congress for statehood and in a plebiscite in 1940 its electors voted in favour of statehood by a majority of more than two to one. A statehood convention was held in April 1950, with delegates from all the islands attending. The constitution drafted at this convention was approved by the voters in the general territorial election of 1950, following approval by the territorial legislature. In Dec. 1950 copies of the constitution were formally presented to Pres. Harry S. Truman and to both houses of congress by the governor of Hawaii. A statehood enabling bill failed of passage in the United States senate and immediate steps were made by the territory to carry its fight for statehood to the next session of congress in 1951.

**Banking and Finance.**—Bank clearings in 1949–50 amounted to \$1,703,347,996.56. The volume of business transacted was \$1,192,731,693.63, a

decrease of \$54,152,791.58. Total territorial tax collections amounted to \$160,632,106 compared with \$163,836,560 in 1948. The net bonded indebtedness was \$19,393,000. The net assessed valuation of real property was \$333,643,899. Internal revenue collections for the fiscal year 1949-50 totalled \$81,062,910.49, a decrease of \$9,761,787.51.

**Trade and Commerce.**—Hawaii purchased from the mainland United States in 1949 merchandise valued at approximately \$307,612,000 and shipped to the mainland products valued at approximately \$212,466,000.

**Production.**—Hawaii's principal crops are sugar, pineapple and coffee. Production during the fiscal year 1949-50 included a total of 995,890 tons of sugar valued at \$112,278,000; 23,745,873 cases of pineapple and juice valued at more than \$75,000,000; and 6,000,000 lb. of (green) coffee valued at approximately \$1,700,000. In addition to export crops, field crops and miscellaneous fruits, vegetables and nuts valued at \$10,000,000 were marketed locally. Livestock and poultry products had a value of \$20,964,000. The total catch of fish during the year amounted to 7,500 tons, valued at \$4,500,000. (I. M. S.)

**Hay.** The 1950 U.S. crop of all kinds of hay amounted to 106,819,000 tons, the third largest crop in 85 years of record and, including a carry-over of 15,000,000 tons, the largest amount on record per animal unit to be fed. The 1949 crop was 99,536,000 tons, and the ten-year average 100,344,000 tons. The 75,741,000 ac. of harvested hay was not a record but exceeded the 72,995,000 ac. of 1949 and the 1939-48 average of 74,470,000 ac. Average yields of 1.41 tons per acre were among the highest recorded and compared with 1.36 tons in 1949 and 1.35 tons for the ten-year period, but results were uncommonly diverse from area to area. Quality was good in most areas. Wisconsin, producing 7,051,000 tons, continued as the leading state.

An alfalfa hay crop of 41,029,000 tons again set a new record both as to production and acreage. The lespedeza crop of 7,598,000 tons was 1,000,000 tons less than in 1949. Clover-timothy harvested was 29,636,000 tons, nearly 5,000,000 tons larger than the small 1949 crop. The wild hay crop of 12,509,000 tons was slightly larger than in 1949, with Nebraska and the Dakotas the major producing area.

The value of the crop was preliminarily estimated at \$2,251,435,000 or \$21.10 per bale, as compared with \$2,122,276,000 and \$21.30 per bale in 1949.

**Hayseed.**—The 1950 crop of the six major hayseeds (alfalfa, red clover, alsike clover, sweet clover, lespedeza and timothy) totalled 609,100,000 lb., about 10% more than large 1949 crop and 27% larger than the ten-year average. The red clover seed crop was a record (2,638,300 bu. compared with 1,319,200 bu. for 1949), the alfalfa seed crop a near record, sweet clover the largest in 11 years and timothy the largest in 7 years. Excepting the scarcer alsike clover and lespedeza seeds, prices appeared likely to be substantially below those prevailing for the previous crop. (See also SOYBEANS.) (J. K. R.)

**Hay Fever:** see ALLERGY.

**Health, Industrial:** see INDUSTRIAL HEALTH.

**Hearing Aids:** see DEAFNESS.

**Heart and Heart Diseases.** The National Conference of Cardiovascular Diseases was held in Washington Jan. 18-20; and the first International Congress of Cardiology, in Paris Sept. 3-9, 1950. The Paris congress was held at the Sorbonne with 1,200 physicians attending. At this congress the International Society of Cardiology was formed.

The psychogenic factors of essential hypertension were pointed out, and the role of the adrenal re-emphasized by subtotal, and even total, adrenalectomy which became feasible through the replacement possibilities of cortisone and pituitary adrenocorticotrophic hormone (ACTH). A. M. Master, L. I. Dublin and H. H. Marks suggested a redefinition of hypertension since at ages 55 or 60 and older, systolic pressure of 180 or even to 190 mm., and diastolic pressure of 100 or even 110 mm. should not *ipso facto* be considered abnormal since they may merely reflect

the degree of arteriosclerosis. They believed the upper levels accepted as normal to be too low, particularly after the age of 45.

The development of atherosclerotic coronary disease in people under the age of 40 was shown to be confined almost entirely to the male sex, and to the predominantly mesomorphic type. J. W. Gofman and his associates demonstrated that persons prone to atherosclerosis showed a significant increase, in their blood sera, of giant lipid and lipoprotein molecules of low density, as shown by flotation rates in the ultracentrifuge. Alteration of cholesterol deposition in arteries by extremely low cholesterol diet and lipotropic substances was advocated by some investigators, but experimental evidence was conflicting.

Progress in congenital heart disease studies concerned the increased accuracy of diagnosis, especially by the use of the intracardiac catheter, or the intra-arterial catheter and retrograde arteriography, as in the visualization by X-ray of coarctation of the aorta. Helen B. Taussig reported 828 patients operated on for pulmonary stenosis and atresia. Of these, 164 died but more than 80% of the patients with tetralogy of Fallot who were benefited were doing well six months to five years after operation. Pulmonary stenosis became amenable to surgery upon the valve or infundibulum of the right ventricle. Relief of coarctation of the aorta by surgery was extended by the use of arterial grafts.

Surgery also invaded other fields of cardiovascular pathology as successful operations upon the stenosed mitral valve were performed. In France it was found possible to remove the entire endothelial lining of the arteries of the legs from groin to ankle in cases with a high degree of arteriosclerotic occlusion of these vessels and to restore circulation, even at times to limbs with gangrene.

M. Prinzmetal and his associates presented evidence that the same basic mechanism exists in auricular premature beats, auricular paroxysmal tachycardia, auricular flutter and auricular fibrillation, that is, a single ectopic focus in the auricle, thus denying the earlier concepts of Sir Thomas Lewis regarding a circus movement in auricular flutter and fibrillation.

Investigative instrumentation was extended by the development of a small, portable, ballistocardiograph by William Dock, and this technique became rapidly explored in clinical medicine, using this instrument as well as the table models of Starr and Nickerson. Intracardiac investigation in man progressed to the point of introduction of a catheter into the left ventricle and even into the left auricle, in one subject, where electrocardiograms were recorded. New instruments for the study of Vector electrocardiography became available.

Drug therapy was advanced by the development of several anticoagulants and an amide of procaine for use in ventricular ectopic rhythms, and the demonstration of the value of aureomycin in nonspecific pericarditis. (See also CHEMOTHERAPY; MEDICINE.)

**Helicopter:** see AIRCRAFT MANUFACTURE; AVIATION, CIVIL.

**Hench, Philip Showalter** (1896- ), U.S. physician and research expert, was born Feb. 28 in Pittsburgh, Pa. He received a bachelor of arts degree from Lafayette college, Easton, Pa., in 1916, and his doctorate in

medicine at the University of Pittsburgh in 1920. The following year he became a fellow of the Mayo foundation of the University of Minnesota in Rochester. He became a first assistant in medicine in the Mayo clinic in 1923 and eventually became head of its department of rheumatic diseases. He remained associated with the Mayo clinic, although in 1928-29 he engaged in special studies at the Freiburg and von Mueller clinic in Munich, Germany, and in World War II he served in the U.S. army medical corps. In 1948 he and two assistants, Charles H. Slocumb and Howard F. Polley, began conducting tests on patients incapacitated by arthritis, using cortisone, the suprarenal cortex hormone, on some, and ACTH, the adrenocorticotrophic hormone on others. The results were spectacular. These experiments were carried out after numerous consultations with Edward C. Kendall, head of the biochemistry department at the Mayo foundation. Hensch and Kendall on Oct. 26, 1950, were named by the Swedish Caroline Institute of Medicine as recipients of the Nobel prize in medicine, along with Tadeusz Reichstein of Switzerland.

Their joint citation read "for their discoveries regarding the hormones of the adrenal cortex, their structure and biological effect."

**Highways:** see ROADS AND HIGHWAYS.

**Hispaniola:** see DOMINICAN REPUBLIC; HAITI.

**Hockey, Field.** Recording three successive shutouts, the Philadelphia first team carried off top honours in the annual championship of the United States Field Hockey association, held in 1950 at Rochester, N.Y. Philadelphia beat the first Southeast group, 5-0, then blanked Middle Atlantic, 3-0, and Northeast, 4-0.

Six of the 11 stars picked for the All-America team at the conclusion of the tourney were Philadelphians. They included Betty Schellenberger, stellar right inner, who was selected for the eighth season and Ann Volp, left inner, who was picked for the sixth time.

The annual competition of the Northeast association drew 160 women athletes from New York, Connecticut, New Hampshire and Massachusetts. Held at Wellesley, Mass., the tournament was featured by a 3-0 triumph of the 1950 All-Northeast eleven over the reserves. Barbara Clement, Norma Simmons and Betty Richey made the goals. Boston, stronghold of the sport in the U.S., placed seven players—Betty Webber, Jean Graham, Helen Mackey, Margot Cunningham, Ann Delano, Miss Clement and Miss Simmons—on the All-Northeast first squad. (T. V. H.)

**Hockey, Ice.** A powerful band of Detroit Red Wings successfully defended the championship of the National Hockey league in 1950 and then went on to win the Stanley cup. The Wings narrowly escaped elimination in the semifinals at the hands of the Toronto Maple Leafs, who had conquered the Wings in 11 straight play-off contests in three years. Once again the Leafs got away flying and with their great goalie, Walter "Turk" Broda, starring, blanked Detroit in the opener, 5-0. After dropping the second game, 3-1, Toronto again won by 2-0, but the Wings drew even by annexing the fourth contest, 2-1 in overtime. Broda then scored another shutout, 2-0, but Detroit came back to triumph in the sixth game by 4-0.

A goal by Leo Reise in overtime gave the Wings a 1-0 victory in the big seventh game.

New York's surprising Rangers, fourth in the regular league campaign, eliminated Montreal by 4 games to 1 to reach the final play-offs. The Gotham skaters won by 3-1, 3-2, 4-1 and 3-0, the Canadiens being able to gain only one decision and that coming by 3-2 in the fourth encounter which was decided in overtime.

DETROIT RED WINGS v. the New York Rangers at Detroit on April 11, 1950, during the first of the National Hockey league Stanley cup playoff finals. The Red Wings defeated the Rangers 4 to 1 and went on to take the Stanley cup with a score of 4 games to 3

Having gained the Stanley cup finals, the Rangers were faced with the odd situation of having no home ice as the circus had moved into Madison Square Garden and the Blue Shirts used Toronto's rink for their "home" battles with Detroit. Detroit took the opener by 4-1 only to have New York come back with a 3-1 decision. After the Wings had won, 4-0, the Rangers triumphed, 4-3, on Don Raleigh's overtime goal and captured a 3-2 advantage in games when Raleigh again scored in extra play for a 2-1 decision in the fifth meeting. Detroit kept its hopes alive by capturing the sixth encounter, 5-4, on a shot by Sid Abel and then swept off with the series and the Stanley cup when Pete Babando scored in 28 min. 31 sec. of a sudden-death overtime period for a 4-3 triumph in the big seventh game.

Chuck Rayner, young goalie of the Rangers, received the Hart trophy as the National league's most valuable player, while Edgar Laprade, his teammate, was chosen for the Lady Byng trophy, given annually to the player displaying the best sportsmanship. Jack Gelineau, Boston net guardian, won the Calder Memorial trophy for the outstanding rookie and Ted Lindsay, who accounted for 78 points in the regular campaign, won the Art Ross trophy for leading the circuit in scoring.

Canada won world amateur honours at London with a sweep of five games in the round-robin finals, while the United States, with a single loss, placed second.

Other champions included: American Hockey league, Indianapolis Caps; U.S. Hockey league, Minneapolis Millers; Pacific Coast Hockey league, New Westminster Royals; Amateur Hockey Association of the U.S. (eastern), Chatham, Ont., Maroons; Amateur association (western) Spokane, Wash., Flyers; Eastern league, New York Rovers; International league, Chatham Maroons; Allan cup, Toronto Marlboros; Memorial cup, Montreal

Junior Canadiens; National Collegiate Athletic association, Colorado college, Colorado Springs; Canadian intercollegiate, Montreal. (T. V. H.)

**Hoffman, Paul Gray** (1891— ), U.S. industrialist and government official, was born on April 26 in Chicago, Ill., and studied at The University of Chicago. In 1911 he became a salesman for a Studebaker dealer in Los Angeles, Calif., and later was sales manager and then district branch manager for Studebaker in that city. After serving in World War I he purchased the Studebaker retail branch in Los Angeles, and in 1925 he went to South Bend, Ind., as vice-president of the Studebaker company. In 1933 he and Harold Vance, another vice-president, as receivers successfully reorganized the company and Hoffman served as Studebaker president from 1935 to 1948. He was an organizer of the Committee for Economic Development and chairman of its board of trustees from 1942 to 1948. On April 5, 1948, Pres. Harry S. Truman appointed him Economic Cooperation administrator to supervise the European Recovery program (ERP). In 1950 he declared the ERP was defeating communism in western Europe, and urged that a recovery program there be continued. When he resigned as ECA administrator, effective Sept. 30, Hoffman declared ECA should spend \$8,000,000,000—\$14,000,000,000 more on "economic, informational and psychological activities" abroad before ending on schedule in 1952.

On Nov. 6 it was announced that Hoffman had been appointed director of the Ford foundation, which was the largest public trust in the world.

**Hogs:** see LIVESTOCK.

**Holland:** see NETHERLANDS.

**Home Building, Federal:** see HOUSING.

**Home Economics.** Membership in the American Home Economics association in 1950 included 19,414 professional memberships, 424 college clubs, 54 home-maker groups and 4 foreign associations.

The standard sponsored by the association for dimensions, tolerances and terminology for home cooking and baking utensils was adopted by the American Standards association. At the annual convention standards for cotton housedresses were also adopted.

Interest in evaluating home economics programs continued. A series of six workshops for home economics staff members was held to introduce new tools for evaluation and to assist with a critical review of the college program.

**Bureau of Human Nutrition and Home Economics.**—A series of comprehensive reports on city family eating habits in the United States was issued. In co-operation with the agricultural experiment stations, studies were underway to obtain information on the nutritional status and food needs of selected population groups. Complete food composition tables, listing 751 different foods, were published. A conference of scientists was arranged to work on uniform methods of taste-testing in food research.

For institutions, nutritionally adequate food plans at low and moderate cost and a number of quantity recipes were developed.

First reports were released on a study of housing features for farm families, also in co-operation with the agricultural experiment stations.

The cause of stretching and shrinking in commonly-used cotton knit fabrics was investigated. Ways of teaching sewing by means of television were studied.

**Home Economics Extension Service.**—More than 1,500,000

women reported that they had improved their families' diets through better selection, preparation and preservation of food. In addition, 10,350 schools were assisted in establishing and maintaining hot lunches. About 300,000 families received help on housing improvements. About 235,000 women and 28,000 men participated in child development and family relations programs. Through 4-H club programs, the service reached 1,000,000 girls.

Approximately 3,100 white and 385 Negro home economists directed these county and community programs, with help from 600,000 volunteer local leaders.

**Experiment Stations.**—Research in home economics in the land grant colleges is largely conducted as part of the research programs of the agricultural experiment stations established in connection with the colleges. These researches are supported in part by state and special funds, and in part by federal grants administered through the office of experiment stations of the U.S. department of agriculture. During 1950 investigations were continued in the fields of family economics, family relationships, foods and nutrition, housing, home management and textiles and clothing.

Some of these investigations were fundamental in character; others were applied. Certain researches concerned with farm housing problems and with food consumption and nutritional status of selected population groups were conducted on the regional co-operative basis made possible through provisions of the Research and Marketing act of 1946.

**Public Schools and Colleges.**—Approximately 1,750,000 girls and boys were enrolled in home economics classes in junior and senior high schools. There was a 24% increase in enrolment in adult classes over the previous year, making a total of 713,000 receiving help with homemaking problems. Nearly 300,000 members of Future Homemakers of America and New Homemakers of America, national organizations of high school home economics students, emphasized international friendship in their individual and chapter projects.

Two studies in colleges and universities showed that there were approximately 470 colleges granting degrees in home economics and 330 teaching home economics but not granting bachelor's degrees. In 408 of the institutions granting degrees there were 43,000 students majoring in home economics and 28,000 students enrolled for some home economics courses. Approximately 13,000 students were enrolled in 236 of the colleges not granting degrees.

In 1949 a total of 8,900 bachelor's, master's and doctor's degrees were granted.

**Honduras.** A republic of Central America, Honduras is bounded by Guatemala, El Salvador and Nicaragua. Area: 59,160 sq.mi. Pop. (1945 census): 1,200,542, including approximately 35,000 tribal Indians. On June 30, 1950, the population was estimated at 1,533,625. Capital: Tegucigalpa (pop. 62,263 in 1949). Other principal cities are: San Pedro Sula (24,425), Comayagua (16,907), Le Ceiba (13,456), Tela (11,544), and Puerto Cortés (8,837). Language: Spanish. Religion: predominantly Roman Catholic. President in 1950: Juan Manuel Gálvez.

**History.**—The administration of President Gálvez was accused by the Liberals in May 1950 of depriving them of the rights of assembly and public expression. Countering, the government cited a statute forbidding the dissemination of partisan propaganda except during election campaign periods. Criticism by the Liberals continued, but the government strengthened its position by thwarting an attempted coup d'état in September. Two army officers were arrested before the coup was set off, and the other conspirators fled, according to the official version. In the municipal elections, Nov. 26, the administration party won 77,593 votes while the Liberals received 8,104 and other minor groups 13,934, collectively.

Two new financial institutions, the Central Bank of Honduras and the National Development bank, were created by the national congress in February and began operations July 1. The former, with an initial capital of 500,000 lempiras, was authorized to manage monetary, credit and exchange policy, while the latter, capitalized at 1,500,000 lempiras, was established to make loans, issue and sell public securities and finance public works, especially agricultural projects. Shortly after it opened, the Central bank began to retire the 12,000,000 U.S. half dollars from circulation and, for the first time in several years, released the national coinage for circulation.

**Education.**—In 1949 there were 1,700 primary schools with 83,619 students, 27 secondary schools with 1,340 students, 24 normal schools with 1,541 students and 14 commercial schools with 1,073 students. The National university enrolled approximately 500 and the Pan American School of Agriculture 171. The national budget in 1948 allotted 3,172,130.12 lempiras for public education.

**Finance.**—The monetary unit is the lempira, officially valued at 49.5 cents U.S. on Oct. 31, 1950. The national revenues for the 1949–50 fiscal year amounted to 27,792,221 lempiras, and expenditures 26,538,651 lempiras. A budget of 25,000,000 lempiras was provided for the 1950–51 year. On Dec. 31, 1949, currency in circulation totalled 12,595,213 lempiras, of which 9,645,090 was in coin, and the foreign debt amounted to approximately \$719,500. The internal debt was approximately \$5,787,500 on June 30, 1949.

BARRICADES set up in Hong Kong by British police on Jan. 30, 1950, after rioting by several thousand transport workers

**Trade and Resources.**—Exports during the fiscal year 1948–49 totalled \$20,800,000, exclusive of monetary gold and silver (\$19,128,000 in 1947–48); imports, \$34,000,000 (\$34,906,000 in 1947–48). Most of the trade was with the United States. Bananas (13,926,896 stems) accounted for 34% of the export value; logs and lumber, 12.6%. Other exports included coffee (8,292,560 lb.), coconuts (11,337,304 nuts), abacá fibre (6,118,870 lb.), cattle and hogs (91,522 head), gold (20,820 troy ounces) and silver (3,389,513 oz.).

**Communications.**—In 1947 the banana area of the north was served by 922 mi. of railroad; the main towns by 1,201 mi. of highway and 63 airfields. At the end of 1948 there were 959 automobiles and 993 trucks and buses, 2,646 mi. of telephone lines, 6,300 telephones, 6 radio stations and 15,000 radios.

**Honduras, British:** see BRITISH HONDURAS.

**Honey:** see SUGAR.

**Hong Kong.** This British colony on the coast of China consists of Hong Kong Island and the ceded territory of Kowloon and Stonecutter's Island. The New Territories (the remainder of the Kowloon peninsula and numerous islands) were leased from China in 1898 for 99 years. Area: colony 36.5 sq.mi., New Territories 355 sq.mi. Pop.: (1950 est.) 2,250,000. Language: Chinese (Cantonese); about 5% speak English. Capital: Victoria. Governor: Sir Alexander Grantham.

**History.**—The year 1950 opened with a strike of public transportation employees and unrest in other utilities. Riots at the end of January after a police ban on meetings were followed by the deportation of union officials, and the strike ended on Feb. 9.

The survey for a new airport off Deep bay near the Chinese frontier, to cost £3,250,000 was begun in February. In May a British order in council gave the supreme court jurisdiction to decide the ownership of 71 aircraft of the China National Aviation corporation grounded at Hong Kong and the court confirmed the claim to ownership of the Chinese People's Republic. Seven were damaged by time bombs on April 2.

Thought in Hong Kong, always susceptible to external influence, continued to be dominated by the situation in China. The improvement hoped for after the recognition of Peking did not take place, though the reply of the head of the Peking government, Chou En-lai, implying that the status of Hong Kong would not be an immediate issue, gave satisfaction.

Refugees continued to pour into Hong Kong and the population reached a record level. Many came from Shanghai and Shanghai industries, particularly textiles, became prominently

represented in Hong Kong.

From April 28 the government suspended immigration for Chinese without valid entry permits. The population then began to fall, partly because of more stable conditions in China, and in October the outlook of traders was more optimistic, particularly about Shanghai.

For the third year in succession trade figures were a record, and for 1949 they were 38% above those for 1948. Trade with China, which had fallen in 1947-48 to half the pre-World War II figure, also improved.

**Finance and Trade.**—Currency: Hong Kong dollar, valued at 17.5 cents U.S. (Dec. 1950). Budget (1949): revenue \$194,933,955; expenditure \$159,954,023. Foreign trade (1949): imports \$2,750,204,801; exports \$2,318,902,992. (W. H. Is.)

**Hormones:** see ENDOCRINOLOGY.

**Horse Racing.** The battle between jockeys Joe Culmone and Willie Shoemaker for the most winners ridden in a single year was perhaps the most interesting feature of a thrill-packed season for turf followers in the United States. Sundown of Dec. 31, 1950, found the two jockeys in a deadlock for the title. Booting home three victors apiece on the last day of the year, they finished even with 388 winners to equal the all-time record set by Walter Miller in 1906. The final standings:

	Mounts	Firsts	Seconds	Thirds
Shoemaker . . . . .	1,634	388	263	229
Culmone . . . . .	1,674	388	280	219
Miller . . . . .	1,384	388	300	199

Following the trend of sport in general, there was a slight decline in attendance at U.S. tracks during the year, although pari-mutuel betting showed a small gain. Estimates by the Thoroughbred Racing association had \$1,395,000,000 wagered, with attendance figures about 22,500,000. New York state meetings showed an increase in both respects, 4,238,542 persons, or 2.1% more than the year before, making their way through the turnstiles to bet \$308,477,512, a rise of 1.7%.

In addition to the duel for jockey honours, there were the Hill Prince-Noor and Noor-Citation races, a number of record-making runs and the battle between Calumet Farm and Brookmeade for money-winning laurels to hold the interest of the fans.

Christopher T. Chenery's Hill Prince, acclaimed the horse of the year by the Thoroughbred Racing association, ran twice against Noor, Mrs. Charles S. Howard's Irish-bred five-year-old. The two stars first met at Belmont park on Oct. 7 and the Prince, carrying 117 lb. over two miles, annexed the Jockey club gold cup. They went to the post again on Dec. 9 for the Hollywood gold cup run of a mile and a quarter, and with each weighted at 130 lb., Noor triumphed easily as he set a new track mark. Palestinian was second and Hill Prince finished third, four lengths behind Noor. Following this race, Noor was retired to stud, but that victory had brought his earnings for 1950 to \$346,940 to give him the money-winning crown.

Before invading the east, where he finished second in three tests at Belmont, Noor had defeated Citation in four straight stake races, breaking records in three of them. Two of the records, 1 min. 46½ sec. for nine furlongs and 1 min. 58½ sec. for ten furlongs, were set at Golden Gate, scene of two other standard-breaking races during the season. It was there that Citation, making a comeback after more than a year's layoff because of an injury, ran the mile in 1 min. 33½ sec. and Bolero was clocked in 1 min. 8½ sec. for six furlongs.

Middleground, King Ranch ace, with apprentice Bill Boland up, captured the Kentucky Derby at Louisville, Ky., blue-ribbon classic of American racing, on May 6. With 90,000 looking on at Churchill Downs, Middleground, a son of Bold Venture, the

Derby victor of 1936, ran the mile and a quarter in 2 min. 1½ sec., only one-fifth of a second off the record for the event. Hill Prince took the place, a length and quarter back, with C. V. Whitney's Mr. Trouble third.

Hill Prince reversed the tables in the running of the rich Preakness at Pimlico in Baltimore, Md., on May 20. Finding the mile and three-sixteenths to his liking, the Prince, with Eddie Arcaro riding, defeated Middleground by five lengths. Dooly, running as an entry with Mr. Trouble, led home his more famous stablemate to grab the show.

Middleground gained two-thirds of the "triple crown" by annexing the \$91,950 Belmont stakes on June 10. A great stretch ride by young Boland brought Middleground a length victory over George D. Widener's Lights Up as Mr. Trouble finished third in the mile and a half run. Hill Prince, heavily backed at 17 to 20, tired badly and ran seventh. Middleground was retired in the fall after breaking an ankle.

With the death on Dec. 28 of Warren Wright, owner of Calumet Farm, Calumet horses entered in big races of Dec. 29 and 30 were withdrawn and Calumet lost all chance of overtaking Brookmeade in their close duel for stable money-winning laurels for the year. R. H. McDaniel was champion of the trainers for most winners saddled.

Hill Prince was U.S. champion and best of the three-year-old colts; Noor, the handicap leader; Next Move, the top three-year-old filly; Two Lea, the best handicap filly (or mare); Battlefield, the outstanding two-year-old colt; Aunt Jinny, the title winner among two-year-old fillies; and Oedipus, the steeplechase king.

The trotters and pacers enjoyed a banner campaign and Proximity, owned by Ralph and Gordon Verhurst of Victor, N.Y., was named harness horse of the year in a nation-wide poll of experts. The old mare was credited with four new world records during the season and brought her earnings to \$247,379 to break the mark of \$206,462 set by Goldsmith Maid many years before.

Lusty Song, three-year-old colt from the Hayes Fair Acres stable of Du Quoin, Ill., driven by Del Miller, captured the Hambletonian at Goshen, N.Y., on Aug. 9. The favourite won in straight heats, being timed in 2:02 for each one-mile test to win \$40,537.72. (T. V. H.)

**Canada.**—The higher cost of living was reflected in a slight drop in pari-mutuel betting during the 1950 season. The 1950 statistics (with 1949 in parentheses) were: 356 (355) days of racing at the tracks of 31 (29) racing associations which held 2,761 (2,750) races, at which \$53,469,032 (\$59,550,478) was wagered, with \$3,003,905 (\$2,957,310) paid out in prize money. Ontario set up a racing commission, banned night harness racing with pari-mutuel betting and raised the provincial tax on pari-mutuel betting from 10% to 12½%. The royal Canadian mounted police stopped supervision of saliva tests at race tracks. (C. Cy.)

**Great Britain.**—A winter of exceptional mildness favoured racing under National Hunt rules in Great Britain and Ireland. The Grand National was won by the favourite, Mrs. L. Brotherton's nine-year-old gelding Freebooter, trained by R. Renton at Ripon, Yorks., and ridden by J. Power. For the third year in succession the Cheltenham gold cup was won by F. L. Vickerman's Cottage Rake; and for the second year in succession the Champion Hurdle cup was won by Hatton's Grace. Both horses were trained by M. V. O'Brien in Ireland and ridden by A. Brazon.

For flat racing the inclement weather of the summer discouraged large crowds at meetings but facilitated the work of trainers.

French horses enjoyed unprecedented success in the English

classic races. Only one of these was won by a British horse, the Aga Khan's Palestine, which in the Two Thousand Guineas defeated the American-bred Prince Simon by a short head. W. Johnstone won the One Thousand Guineas on the French filly Camaree. The remaining three classic races were won by M. Bous-sac's horses, trained by C. Semblat and ridden by Johnstone: Galcador won the Derby, Scratch II the St. Leger and Asmena the Oaks.

The best French three-year-old in England was F. Dupré's Tantième, who beat Galcador in the French Two Thousand Guineas, was beaten by Scratch II in the Prix du Jockey Club, but ended the season by winning the £35,040 Prix de l'Arc de Triomphe, in which Scratch II finished fourth. The King George VI stakes at Ascot were won by Cagire II, a French-bred colt trained in England, who had been fifth in the St. Leger. The Grand Prix de Paris was won by Vieux Manoir, who later finished second to Scratch II in the St. Leger. The best three-year-old fillies in France were Corejada, who won the French One Thousand Guineas and the Irish Oaks, and Aglae Grace, who beat Corejada in the French Oaks. The Irish colt Dark Warrior won the Irish Derby.

Only 3 English-bred horses were in the field of 13 for the Ascot gold cup, but one of these, Supertello, was the winner. The Goodwood cup was won by a moderate French horse, Val Drake. The five-year-old Aldborough won the Queen Alexandra stakes at Ascot and the Doncaster cup but died a few weeks later at the peak of his career. A useful three-year-old English filly was the king's Above Board, one of the easiest Cesarewitch winners in the history of the race.

(M. A. MD.)

**Horses:** see LIVESTOCK.

**Horse Shows:** see SHOWS.

**Horticulture.** During 1950, florists throughout the U.S. united in opposition to a proposal of the Dutch marketing board that the shipment of cut flowers to America be permitted. They held that this would put Dutch growers in competition with the purchasers of U.S. florists' bulbs and seriously interfere with trade relations between the two countries. Bulb shipments from the Netherlands were sufficient to break the U.S. market at the end of the season, although the tulip crop was smaller than expected because of bad spring and summer weather.

Japan greatly increased its lily bulb exports but they still were less than before World War II. In the U.S., extreme cold weather in Oregon in January did considerable damage, but bulb growing in the northwest continued on a large scale.

Australia sent 200,000 orchid blooms to the U.S. by plane, twice as many as in any previous year. New Zealand sent the U.S. 2,500 lb. of grass and clover seed for the improvement of its grasslands. The seed was distributed to the state experiment stations.

Canada eased its ban on the importation of flowers and greens from the U.S. and lifted its restrictions on imports of apricots and peaches. Hundreds of tons of these fruits were sent from California to Canada to offset heavy losses to the canneries caused by a severe winter. The blueberry crop in the Saguenay section of Quebec jumped to a value of \$3,000,000, because of deep-freeze demands and the use of new self-sealing plastic crates. Nova Scotia had the worst potato blight in years, but two new blight-resistant kinds, Canso and Keswick, were offered to give better future crops. Canada continued to ship potatoes to the U.S. in spite of strong protests from Maine growers.

A great increase in new houses brought a heavy demand in the U.S. for shade trees and for garden shrubs. The former became scarce. Landscape work improved in volume, but all branches of the horticultural industry began to suffer a labour shortage be-

cause of men called into military service.

Spraying from the air continued to be of great value in controlling forest pests. In the Pacific northwest 1,000,000 ac. of Douglas firs were sprayed, at a cost of \$1,000,000. Spraying was less successful, however, in attempted control of the Dutch elm disease, which spread rapidly in the east, causing the removal of thousands of trees. The beetles which carry the disease were found in Colorado in large numbers, but the disease did not appear, possibly because the soil there is alkaline. Heavy applications of lime were suggested as a remedy to be tried in the east.

The elm trees in the Mississippi valley were being destroyed by a fungus disease hard to control. The oak wilt found in Wisconsin in 1941 had spread to adjoining states and was doing much damage. A new pest, found on avocados in California was the six-spotted mite. Heavy applications of sulphur helped keep it in control.

A somewhat similar pest did much damage to evergreen trees in the east.

The U.S. cranberry crop of about 940,000 bbl. was larger than in the previous year but smaller than the peak in 1948. However, because of large stocks left over, considerable picking was omitted in an effort to maintain reasonable prices. Massachusetts had the largest proportion of the crop, about 600,000 bbl.

The George Robert White medal of honour, the outstanding horticultural award in the U.S. went to Wilson Popenoe, agricultural explorer and director of the Escuela Agricola Panamericana, Honduras.

There was continued development and use of new chemicals for the control of insect pests and fungus diseases. Some of them were found very toxic although very efficient. Chemicals for killing crab grass received much attention. Experiments were being made with chemicals to retard the growth of lawn grass and with grasses that are naturally dwarf. Increased interest in "organic gardening" was shown in both the U.S. and England. In the latter country orchardists were introducing earthworms to improve their soil.

Europe was believed to have sufficient vegetable seeds for its needs, but unfavourable weather brought heavy crop losses in eastern Europe. Items like onions, usually plentiful in Yugoslavia, were selling for \$3 a pound in that country. The U.S.S.R. reported that orchard land in Siberia and the Urals had been increased to 88,888 ac., where several years before there had been only 750 ac. Germany showed much advance along horticultural lines, with well-attended flower and vegetable shows. France was building up its old industry in forced lily-of-the-valley pips. Italy worked at rebuilding its shelter belts to protect growing crops. This important project, begun in 1937, had been neglected.

There was much complaint because the government was slow in breaking up great landholdings to provide more land for food crops.

Thailand developed a new irrigation project which would greatly increase the production of oranges, palms, betel nuts, guava and mangoes. Japan also found new land available for growing seeds, bulbs and plants. The amount of such material in the markets became normal in spite of bad growing weather, and prices were lower. Korean gardeners found themselves short of fertilizers and vegetable seeds. The U.S. government prepared to meet the fertilizer situation. Large amounts of vegetable seeds were obtained through gifts from private sources and shipped to the Philippines, where there was a shortage. (See also BOTANY; FRUIT; VEGETABLES.)

**Hospitalization Insurance:** *see* HOSPITALS; INSURANCE.

**Hospitals.** As 1950 neared its close, hospitals in the United States were feeling the effects of the Korean war, and were mapping future plans. The calling of doctors, nurses and other health personnel into the armed forces threatened to produce a shortage in hospitals similar to that existing during World War II, and interest increased in personnel recruitment and in the maximum use of existing personnel.

Hospitals took an active role in planning for atomic attack, involving joint utilization of hospital facilities in target areas, interchange of hospital staffs, supply problems and training of personnel. A national system of blood collection, entailing participation of all hospital blood banks, was formulated.

Effect of the Korean war on new hospital construction was not yet certain. On June 30, construction for the year was expected to exceed the 1949 total by 71%. However, the trend toward decreased nonmilitary expenditures led congress in August to cut the 1950-51 fiscal appropriation for the Hospital Survey and Construction program from \$150,000,000 to \$75,000,000. Just what this would do to initially approved projects was uncertain as late as November. On Aug. 31, 1,476 Hill-Burton projects were on the books. Of these, 243 were completed and in operation, 808 under construction and the remaining 425 in preliminary stages of planning. The estimated total cost of all these was \$1,016,700,543, with a federal share of \$374,759,783. Full execution of projects on the books would add 71,821 hospital beds and 265 health centres.

The total book value of hospitals in the United States rose about \$500,000 in 1949 to \$6,945,805,000, according to the annual American Hospital association survey. Operating costs continued to rise. In general hospitals, average daily costs mounted \$1.24 a day in 1949, to a new high of \$14.33 a patient day. The average income of general hospitals, exclusive of gifts or endowments, was \$11.74 a patient day.

For care of indigent patients, city, county and federal governments paid general hospitals an average of \$8.73 a day in 1950. Where payments were based on the government reimbursable cost formula, they averaged \$12.88 a day over the United States.

Admissions were up 5.9% in 1949 to a new high of 17,821,765, though the percentage of occupancy was down from 87.9% in 1948 to 86.4% in 1949. The average length of stay also

went down in 1949. For short-term hospitals, excluding federal, the average stay was 8.3 days in 1949, against 8.7 in 1948.

With the passage of H.R. 6000 by congress in August, federal social security was for the first time made available to employees of nonprofit organizations, including hospitals. The program was to become effective on Jan. 1, 1951, and was expected to benefit appreciably the 434,585 full-time employees of nonprofit hospitals in the nation. (*See also* VETERANS' ADMINISTRATION, U.S.)

In Canada, hospital construction continued at its peak rate through 1950. With federal and provincial assistance in health grants, 24,000 hospital beds were added after April 1, 1948, in more than 300 separate projects. The extension of supporting services and of personnel training lagged because of the lack of financial support.

Another significant development was the initiation of a two-year training course for professional nurses at the Toronto

**ROOMING-IN PLAN** in practice at the Grace-New Haven Community hospital in Connecticut, one of 30 hospitals in U.S. cities offering facilities, in 1950, for mothers to keep their newborn infants in the room with them during the hospital stay

Western hospital. The cost of this experiment was to be met jointly by a charitable foundation, federal and provincial government grants and by the hospital board. After two years of intensive education, the student was to spend a third year on supervised internship with pay, in the parent hospital or in selected smaller hospitals.

In the prepaid hospitalization area, Alberta served notice that it would extend its dollar-a-day municipal-provincial scheme to the whole province, by paying one-half of the nontaxpayer's annual premium. The volume of care had continued its upward trend under the compulsory plans in British Columbia and Saskatchewan, and there was a small reversal of the downward trend in length of stay.

**BIBLIOGRAPHY.**—"Statistics and Directory Section," *Hospitals*, pt. 2 (June, 1950); *Hospital Rate Survey 1950*, American Hospital Association (Sept. 1950). (GE. BU.)

**Great Britain.**—In Great Britain the new national hospital service controlled by the minister of health and financed out of taxation was 18 months old at the beginning of 1950. During the early part of the year steeply rising expenditure dominated the scene.

Estimates of costs for hospital, specialist and ancillary services rose from £200,000,000 in 1949 to £270,000,000 in March 1950, and the chancellor of the exchequer told the house of commons that no further increase in cost could be permitted.

The vast reorganization of the medical staffing of the hospitals of Great Britain, undertaken as part of the new service, was beginning to take effect. The regional hospital boards to whom this responsibility had been entrusted had done two important things. First, they had drawn up detailed plans for providing each hospital management committee with a full consultant and specialist staff, calculating how many sessions would be required in a given area for medical, surgical, gynaecological and other specialties. Secondly, they had undertaken a detailed review of all members of the senior medical staff holding appointments in the hospitals and had given each man his "grading" either as consultant (the salary for this post, if held full time, being £2,750 a year) or other subordinate category. By 1950 the outlines of the new plan and its implications for individual hospitals and individual medical men were established. In some areas it was possible to create a single integrated medical staff covering all the hospital units under the control of a hospital management committee; in others, circumstances dictated two or more separate units. Often one of the greatest problems lay in deciding which of the small hospitals should be placed at the disposal of the general practitioners of the neighbourhood, and how their work should be related to that of the main hospitals.

**Sweden.**—In September a study tour of hospitals in Sweden was organized by the International Hospital federation. The study tour allowed 130 persons from various countries to obtain first-hand knowledge of Swedish hospital planning and construction and methods of organization and arrangements. The design of Swedish hospitals, in particular the large and recently established hospitals in Stockholm known as the Southern and the Caroline, attracted much attention in hospital circles all over the world.

Arrangements were made by the International Hospital federation to hold a congress in Brussels, Belg., in the summer of 1951. (A. G. L. I.)

**Hotels.** There were 92 new hotels, costing more than \$110,000,000, under construction, planned or completed in the United States during 1950. These new hotels, 14 of which opened during the year, were located in 78 cities in 34 states, where surveys showed that because of population gains more hotel facilities were needed. They would provide a minimum of

12,736 additional guest rooms.

Existing hotels added more than 1,500 guest rooms through new construction in 1950.

The U.S. hotel industry, which was seventh in the nation in point of invested capital, completed a five-year, \$2,000,000,000 rehabilitation and modernization program during the year.

The new hotels, along with the modernized ones, were designed to meet demands of a quick-eating, light-travelling public, composed of an increasing number of women and motor travellers.

Texas, with 12 cities, had more new hotels announced and under way than any other state. California, with the Los Angeles Statler, however, was building the largest hotel. Miami Beach, Fla., was adding more guest rooms than any other city—its eight new hotels would provide 1,900 rooms.

Fifty-three of the new hotels were transient, 34 were resort and 5 were residential hotels. The latter hotels, with their minimum number of guest units, were located in Chicago, Ill., 740; Washington, D.C., 556; New York, N.Y., 525; Dallas, Tex., 151; and Montgomery, Ala., 122.

Unused space of large lobbies was vanishing through conversion into such revenue-producing facilities as stores, showcases, coffee shops and restaurants. In smaller cities some oversize lobbies were being turned into community meeting rooms, readily changeable into banquet rooms and ballrooms. Administrative offices also were moving into overlarge lobbies, often adjoining the front desk to give guests better service.

Separate auto-registration desks and private elevators that take motorists directly from their automobiles to guest rooms without going through main lobbies were increasingly featured in the new and modernized hotels. The increase in automobile travellers caused many downtown hotels to provide parking garages, many of which had mechanics in continuous attendance.

Over-all hotel occupancy dropped from an 84% national average in 1949 to 82% in 1950. However, by Oct. 1950 occupancy was at 86%, the same as in Oct. 1949. The 2% drop for the year's average was ascribed by American Hotel association officials to a decline in week-end business during the early months of the year. (C. A. HH.)

**Great Britain and Europe.**—The feature of the year 1950 that most affected hotels, restaurants and inns in the majority of European countries was the continued encouragement given to all aspects of the tourist industry. By virtue of the key position which they hold in the tourist movement, these establishments became more important nationally; and governments tended to give them increasing recognition and assistance as an industry or a trade, in order to enable them to cater better to overseas visitors.

For instance, it became the officially recognized policy in more than one country to grant preferential treatment, e.g. in the matter of essential goods still in short supply, to establishments concerned with tourists compared with establishments off the tourist maps. With the exception, however, of a comparatively small number, the establishments which catered primarily to tourists were not easy to identify and in any case had to rely on a solid cushion of home trade in order to prosper.

Other trends affecting hotels, restaurants and inns during 1950 included the further decline in public spending, the steep rise in operating costs and the more severe competition for guests, nationally and internationally.

In Great Britain the Meals in Establishments order, a legacy of World War II, was revoked. This ended a complicated structure of price, food and service controls on a meal.

The burden of the purchase tax, heavily felt by British hotels, after prolonged representations was alleviated to some extent by a government-approved scheme to refund some of the

HOUSING PROJECT in Los Angeles, Calif., financed by the Metropolitan Life Insurance company, accommodating 4,253 families. The last of the suites were scheduled for occupancy in 1951.

tax to those establishments which were considered to qualify as tourist hotels (an example of the preferential treatment for this class mentioned already).

More attention was paid in 1950 to the important matter of hygiene in the preparation and handling of food.

There was evidence of a growing interest and eagerness with which hotelkeepers in all countries regarded the latest improvements in design, equipment and amenities in general. Meetings and conferences took place, in which problems were discussed and ideas exchanged: for example, a number of Irish hotelkeepers visited United States hotels on a tour of inspection; and a party from Britain visited Europe, including the wine districts of France. The annual congress of the International Hotel association was held in Nice, Fr.

As the year advanced there was a growing interest in the plans and preparations for the Festival of Britain in 1951: a new London Hotels Information service was set up and by the end of the year plans to accommodate many additional home and overseas visitors were well advanced. (H. C. CE.)

**Housing.** All previous records for home building in the United States were completely overshadowed in 1950 when work was started on 1,395,600 new family dwelling units of all types, exclusive of farm housing. The 1949 record-breaking total of a little more than 1,000,000 new homes was exceeded by 36% and the previous 24-year-old record of 937,000 by almost 50%.

Aided by favourable weather, the boom which began in the

latter half of 1949 continued through the winter months. The first month of 1950 showed a 54% gain over the preceding January; the next month was up 64% over the previous February. These were record-breaking months, and each succeeding month until October continued to eclipse all former marks. May, with the start of 149,100 new homes, set the high point. By this time the boom had gathered such momentum that the outbreak of war in Korea and the imposition of increasingly restrictive government regulations had relatively little braking effect. October and November dipped slightly below the comparable boom months of 1949 but housing starts in December again established a new all-time record for that month.

Steadily mounting construction costs and the spectre of material shortages likewise failed to exert any substantial retarding effect until late in the year. A downward cost trend had been reversed in the fall of 1949. From that point both materials and labour costs began a slow steady climb to an all-time peak in August after which a slight easing of prices was evidenced. The Boeckh index, based on costs in 20 representative cities, stood at 220.6 in June (1939=100), exceeding by 0.1% the previous high established in Oct. 1948. In Aug. 1950 the Boeckh index reached a new high of 228.3, then receded fractionally to 227.8 in September and to 226.6 in October, the last month for which figures were available at the close of the year. Average construction cost of privately-built one-family houses started in the first quarter of 1950 was estimated by the bureau of labour statistics at \$7,950 as compared with \$7,525 in the preceding year. By the third quarter of 1950 the figure had climbed to \$8,975. The estimates do not include land and development cost or profit on the sale of the house.

The government had set off the boom in the summer of 1949 by increasing the secondary market for veterans and FHA (Federal Housing administration) insured mortgages. A bureau of labour statistics study of nine metropolitan areas containing one-fifth of the nation's nonfarm families highlighted the results. The study showed that 75% of all sales were made to veterans of World War II and one-half of these availed themselves of the government-provided opportunity to purchase without cash on 100% loan basis. It was estimated in Feb. 1950 that 70% to 75% of all new rental housing was being built with government assistance and that 50% of all housing in 1950 would be directly under government influence.

The prediction seemed well-founded since the credit expansions authorized the preceding summer were sufficient to carry over well into the spring of 1950. By the end of April congress had enacted and Pres. Harry S. Truman had signed the Housing act of 1950 which included additional authorizations for FHA mortgage insurance and further liberalized G.I. loan provisions.

The Housing act of 1950 constituted an effort by congress to end the very liberal emergency credit facilities authorized under FHA title VI during World War II as a temporary measure to stimulate home construction in centres of defense industry and return to the normal long-range program under which FHA had previously operated. Its effect was to liberalize the permanent program so that it approached closely the title VI provisions which were permitted to lapse.

The main emphasis throughout was on stimulating the construction of lower-price homes and to this end a new section was added to title I of the National Housing act (the law under which FHA operates) permitting the insurance of 30-year mortgages for up to 95% on \$5,000 homes in outlying areas where FHA's normal site-improvement standards might be waived.

Title II, the backbone of the normal FHA program since its inception in 1934, was expanded almost four-fold. The former \$2,250,000 revolving fund maximum for mortgage insurance under this title was increased to \$9,000,000,000 with \$1,000,000,000 of the increase immediately available and the balance subject to the approval of the president. Incentive emphasis under title II also was placed on lower-price homes by modifying the insurance formula so as to favour the lower end of the bracket.

The most radical innovations in the Housing act of 1950 dealt with multifamily rental housing, an area in which the lawmakers faced two difficult problems: (1) how to answer a well organized demand from labour unions, civic, housing and welfare groups for direct government low-interest loans and other aids to nonprofit co-operatives on the Scandinavian pattern; and (2) how to meet the still acute housing needs of moderate income families, particularly in metropolitan areas.

Private enterprise opposition to the government co-operative program was powerful, equally well organized and insistent. In a preliminary skirmish at the previous session the plan had been defeated. At the last session of congress the proposal was again defeated, this time even more emphatically, in the face of all the pressure the administration could bring to bear. The one point on which the lawmakers agreed was that section 608, the rental housing section of the temporary liberal credit war emergency program, would not be renewed. Section 608 had spurred construction of a great deal of multifamily rental housing in 1948 and 1949 with a large carry-over for 1950, but FHA approved rentals were somewhat high to serve the mass market and there were increasing signs of overbuilding and even some foreclosures.

The result was a compromise on all points. Section 608 was not renewed but an additional \$500,000,000 of mortgage insur-

ance authorization was approved to cover the backlog of project applications filed before the expiration but after the exhaustion of previously authorized funds. Then section 207, the rental housing section of the permanent FHA program, was liberalized so as to permit the insurance of mortgages up to 90% of value on the first \$7,000 of cost per apartment and 60% on the balance up to \$3,000 of cost. The credit incentives were designed again to favour construction of lower-cost housing and to require less investment from the builder-developer than previously had been contemplated under the permanent FHA formula.

A co-operative housing program was included also, but with the familiar FHA insured mortgage type of financing rather than direct government low-interest loans or other direct government participation. Section 213 was added to title II of the National Housing act to provide mortgage insurance of 95% on projects costing up to \$5,000,000 where 65% or more of the co-operators were veterans of World War II. Other co-operative developments could get between 90% and 94% insured mortgages depending upon the proportion of veterans participating in the venture. The program started slowly and at the end of the year only a handful of projects had been announced, too few to offer any indication of its effectiveness, particularly under the changed conditions which prevailed.

In late June, the war in Korea set the stage for radical changes in the housing outlook. These developed slowly amid considerable confusion and with relatively little visible effect up to the end of the year. Since restrictive regulations were anticipated and not made retroactive, much homebuilding was rushed into the initial construction stage to escape possible hampering effects.

The first federal action came on July 18 when the president called for ten curtailments of federal housing and credit aids to conserve construction materials for defense needs and to check inflation. Mortgage credit was to be tightened by reducing maximum allowable amounts; discontinuing 100% G.I. loans, and requiring cash down payments of at least 5%; prohibiting the inclusion of inflationary costs in fixing values for mortgage purposes; slowing up secondary mortgage market operations of the Federal National Mortgage association; and reducing credit availability from the Federal Home Loan Bank administration to retard saving and loan association operations. A new program of direct loans to educational institutions for student and faculty housing, enacted three months before, was stopped and a 30,000 unit ceiling was put on federal subsidized public housing to be built during the year.

These curbs were followed on Oct. 12 by further restrictions on home mortgage credit in which the Reconstruction Finance corporation and the Housing and Home Finance agency joined. Regulation X, as it was soon generally known, was directed at both conventional and government-aided loans for the purpose of further stiffening home-purchase terms, moderately in the low-price brackets and very substantially for higher price houses. Required cash down payments were now pegged at from 10% on the lowest price house to 50% in the \$25,000 and over category. Veterans could purchase with about 5% less cash than nonveterans, but every purchaser had to have his own cash for the down payment; it might not be borrowed.

October starts were down 10% from the preceding month but almost equalled Oct. 1949 which was the banner month in that record-breaking year. November showed a further and more substantial drop caused, in part at least, by poor building weather, but December was again a record month.

The extent to which these and other changed conditions resulting from the international emergency had been discounted in advance was evident in materials prices. While there was some talk of gray markets and pirating of labour, the Boeckh index

moved slightly downward in September and October from its August peak.

Hardest hit by the upward trend of construction costs in 1950 was the government-subsidized public housing program authorized after years of congressional strife in the Housing act of 1949. The program got under way very slowly, first because of congressional tardiness in voting the necessary appropriations, and later because of the time required to get projects to the construction stage. The real-estate, home-building, and mortgage-lending groups which had fought the program in Washington carried the fight back to the communities when projects came up for local action. They succeeded in a sizable number of instances in blocking public housing proposals at the local level. As of Nov. 30, somewhat more than 10,200 units of public housing authorized by the 1949 act were put under construction, plus 5,400 units under an earlier program. Up to that date the Public Housing administration had 698 active applications for the construction of 443,000 dwelling units.

The Public Housing administration's difficulties were further compounded by the rising construction costs. In a number of instances contractors' bids were rejected because they ran substantially above the estimates and new bids were invited. In mid-October the Public Housing administration announced new regulations designed to reduce costs by cutting room-size standards, increasing site densities and discouraging heavy construction.

Major interest in the field of prefabricated housing centred in the stalling of the ambitious Lustron steel house program into which the government had put \$37,000,000 in RFC (Reconstruction Finance corporation) loans. Lustron's troubles started in 1949 with a congressional investigation and defaults on repayments to the RFC. In Feb. 1950, RFC foreclosed and then followed bankruptcy, receivership, injunction suits, investigations and court orders in Ohio and Illinois.

Rent control ended for 4,000,000 of the nation's dwelling units during the year under provisions of the Housing and Rent act of 1950. By its terms all federal control would have ended on Dec. 31, except for those localities that voted its continuance before that date, in which case it might be extended to June 30, 1951. As a result of the defense emergency the Dec. 31 deadline was extended to March 31, 1951, to enable the new congress to restudy the need for continued controls.

As the year drew to a close the housing outlook was under close study in terms of defense emergency needs. The expectation was that home-building would be restricted increasingly to military or war industry needs, and plans were being made for a new defense housing emergency program. (See also ARCHITECTURE; BUILDING AND CONSTRUCTION INDUSTRY; BUSINESS REVIEW; LAW; MUNICIPAL GOVERNMENT; TOWN AND REGIONAL PLANNING.) (H. M. Pr.)

**Canada.**—Estimates of federal housing authorities set 1950 completions at about 100,000 (revised figures—1948: 81,243; 1949: 90,955). On Jan. 1, 1950, there were 58,169 unfinished dwellings, compared with 56,456 on Jan. 1, 1949.

Parliament voted the government-owned central mortgage and housing corporation \$75,000,000 for the acquisition of land, installations of services and purchase of building materials, for houses for veterans and married service personnel. Of the sum, \$10,000,000 was for the construction of schools for the children of married personnel in military camps.

Housing costs went up considerably. According to the federal department of resources and development, construction wages in 1945 averaged \$34.03 per week; in 1949 they averaged \$44.37 per week, an increase of 33%. In 1945, working hours averaged 44 per week, in 1949, 40 per week. That had the effect of increasing the cost of a house by 13%. In the 1945-49 period, labour got compulsory holiday pay, which increased the cost of a house

by another 4%. On Dec. 31, 1949, the cost index of housing stood at 199.9; by Oct. 31, 1950, it had risen to 232.6, or an advance of 16%.

The disinclination of the federal government to continue rental controls after April 30, 1951, stimulated housing construction, despite the higher costs. For example, in the Jan.-Aug. 1950 period Canadians borrowed \$188,000,000 for home financing compared with \$78,000,000 for the same 1949 period.

The Interprovincial Building Credits company was organized by private capital to take up where the former federal government home-improvement plan left off. Remodelling and renovations up to \$2,000 qualified for credit up to 100% over a 24-month period.

(C. Cv.)

**Great Britain.**—At Aug. 31, 1950, 1,241,972 new houses, flats and other units of accommodation for families had been provided in the United Kingdom since the end of World War II. Of this total, which included all forms of accommodation except temporary emergency accommodation, England and Wales had built 671,362 new houses and Scotland had built 81,752. In addition, local authorities had built 124,455 temporary houses in England and Wales, and 32,156 in Scotland. It must be remembered that at the same time much labour and material had to be diverted to the repair of war-damaged properties. At the end of World War II 4,000,000 houses, one of every three in the United Kingdom, had suffered to a greater or less degree by damage from enemy bombing. Some of those which were totally destroyed had since been made good; and the repair of unoccupied war-damaged dwellings accounted for 144,000 of the new units of accommodation provided since the war.

When the Labour party was returned to power in 1945 it had promised the electorate that it would create a ministry of housing. This proposal was not put into effect. That many members of the Labour party remained unconvinced that such a ministry would not be necessary was shown at the Labour party conference in the autumn of 1950 when this plea was rejected by Aneurin Bevan, minister of health. At the Blackpool conference of the Conservative party, delegates were equally restive and won the acceptance by the party leaders of a minimum target of 300,000 houses a year as the party's policy.

One of the basic ideas in the postwar housing program was that it would fit in with the general, declared government policy for the decentralization of population and industry. This policy received a severe set-back when Aneurin Bevan awarded special subsidies to local authorities that built multistory flats on expensive central sites. This put a premium on high-density building and congestion in the central parts of cities with the result that flats being built in London and other large cities cost more than twice as much as a house with equivalent accommodation built elsewhere. In only a few cases was the local authority able to provide a reasonable amount of open space. These flats were built at such a cost that they were uneconomic, but the subsidies for elevators and for high-cost land to some degree concealed this. In spite of the general policy of decentralization of population and industry, the number of houses erected in the new towns was, up to the end of 1950, less than 1,000. The new town development corporations necessarily had to undertake the preparatory work of dealing with long-term programs for roads, sewers, water supplies and the other services generally before house building on a large scale could begin. But in spite of this there was a feeling of dissatisfaction with the progress that the towns had made in the previous four years. Again, the corporations had been persuaded by the ministry of town and country planning to adopt plans for houses at densities of 16, 18 and 20 to the acre, far in excess of densities considered desirable by the architects and sociologists employed by the corporations.

**France.**—When the war ended, France found itself with 1,450,000 houses which had been made uninhabitable. When slum and overcrowded dwellings were taken into account, there was an urgent need for 1,800,000 new dwellings. By Oct. 1950, 90,380 new houses had been completed since the country's liberation, and at the end of 1949, 60,000 war-damaged dwellings had been repaired and made habitable.

**Germany.**—The need for houses in western Germany alone was estimated at 5,000,000 and there were in 1950 still 2,250,000 houses destroyed during World War II which were to be rebuilt. Between 180,000 and 200,000 houses were built in 1949, and it was hoped that this figure would be surpassed by 25% in 1950.

**Humour of 1950.** A letter from the author on his own stationery:

walter yust - november 11th

i am sorry that i cannot accept your kind offer to prepare an article on the humor of 1950.

the assorted problems that attend the preparation of my television show leave me no time for comments on humor.

if i remain in television too long i will probably forget what humor is.

sincerely -

fred allen  
180 west 58

**Hungary.** A people's republic of southeastern Europe, Hungary is bounded on the west by Austria, on the north by Czechoslovakia, on the east by Rumania and on the south by Yugoslavia. Area: 35,893 sq.mi. Pop.: (Dec. 31, 1948, census) 9,201,158. Languages: (1947 est.) Hungarian 92.9%, German, 5.1%. Religions: (1947 est.) Roman Catholic 65.6%, Calvinist 20.8%, Lutheran 6%. Chief towns: (1941 census) Budapest (cap., 1,164,963; 1948 est., 1,058,288); Szeged (136,752); Debrecen (125,933); Miskolc (109,433); Kecskemét (87,269); Pécs (78,512). Chairmen of the presidium of the people's republic in 1950: Árpád Szakasits and, from April 26, Sándor Rónai; prime minister: István Dobi.

**History.**—The president of the republic, Árpád Szakasits, resigned on April 26, 1950, and was succeeded by Sándor Rónai, who was formerly minister of trade and was, like Szakasits, a collaborationist Social Democrat. In February there was a cabinet reshuffle. István Kossa was replaced as minister of finance by Gyula Olt, Gyula Ortutay as minister of education and religious affairs by József Dárvas, and Dárvas as minister of building by László Sándor. As consolation prizes, Ortutay was appointed chairman of the Central Office of Museums and Monuments, while Kossa became president of the National Wages committee. In Aug. 1950 another change was announced: György Marosán was replaced as minister of light industry by Árpád Kiss.

Friction between government and Catholic Church once more became acute in May, when the bishops refused to sign the international Communist-organized "Stockholm peace appeal." At the end of August, however, it was announced that an agreement had been made between the Catholic hierarchy and the government. It followed lines rather similar to those of the agreement reached in Poland (*q.v.*) earlier in the year. It was signed for the government by Dárvas, for the hierarchy by Archbishop Groesz of Kálcso. The church recognized the form of the state and the constitution; condemned all subversive action; declared that religion must not be abused for political aims or "anti-state purposes"; appealed to the faithful to support the five-year plan; warned the clergy not to oppose the movement for the formation of agricultural producers' co-operatives; and promised its support to the "peace campaign." On its side the government guaranteed freedom of religious belief and free religious activity for the Catholic Church; promised to restore eight schools to the church and to permit the employment in them of sufficient educational staff; and promised money grants to the church at a diminishing rate for the next 18 years.

During the year the pace of collectivization of agriculture was quickened. Teams of peasants were sent to the Soviet Union to study *kolkhoz* methods, in order to serve as propagandists on their return. A special drive began in the late summer. The Communists' chief economic planner, Ernő Gerő, in a speech on Aug. 22 to peasants returned from the U.S.S.R., said that the number of peasant families belonging to collective farms in Hungary, at present 70,000, must be rapidly increased. As a result of this drive, Premier István Dobi was able to announce on Sept. 9 that a further 35,000 families had joined. The collectivization drive was combined with increased repression of better-off peasants and "harvest saboteurs."

A decree Jan. 27 on labour discipline provided heavy penalties for both wilful damage and negligence to state property in factories. A congress of Hungarian Stakhanovites was held at the end of February. It was claimed that in the last year innovations in methods of production, proposed by the workers themselves, had saved the state 340,000,000 forints. An industrial conference at the end of May, however, showed a less happy picture. The manager of the Rákosi (formerly Manfred Weiss) metallurgical works in Budapest denounced malingering by the workers and the too kind-hearted attitude of National Health service

HUNGARIAN STAKHANOVITES assembled at Budapest in 1950 for their first nation-wide meeting. Stakhanovism is a system of soviet origin for speeding up industrial output by rewarding individual production records

doctors. Gerö in a speech to the central committee of the party on May 31, complained of "undisciplined consumption" by the workers. "If the standard of living rises more rapidly than productivity," he said, "then we partly consume today the factories, enterprises and machines which are meant to raise our standard of living at a much greater pace tomorrow, to strengthen the peace front and to consolidate our future." In order to prevent this, and to make clear the meaning of the last two euphemisms, Gerö recommended that labour discipline be greatly tightened, norms of production be raised, and large-scale enlightenment work be conducted among the workers by party organizations and the party press.

A new nationalization decree of Dec. 28, 1949, had made possible the expropriation of the remaining foreign (Allied) business concerns in Hungary. This was followed by the trial of Edgar Sanders and Robert Vogeler, respectively British and U.S. business men, for espionage. They were condemned to long periods of imprisonment after making public confessions. During their weeks of preliminary imprisonment they had not been allowed to see the British or U.S. consuls. As a reprisal for this attitude the British government broke off commercial negotiations with Hungary. (H. S.-W.)

**Education.**—Schools (1950-51): elementary 6,185, pupils 1,229,957, teachers 36,819; secondary 389, pupils 94,046; universities and institutions of higher education 21, students 31,000, professors and lecturers 7,113. Illiteracy (1941) 6.0%.

**Finance and Banking.**—Budget (1950 est.): revenue 17,537,000,000 forints, expenditure 17,454,000,000 forints. Currency circulation (Feb. 1950): 2,805,000,000 forints. Bank deposits (Feb. 1950): 6,914,000,000 forints. Monetary unit: forint with an official exchange rate of F.11.82 to the U.S. dollar.

**Foreign Trade.**—(1948) Imports 1,975,000,000 forints; exports 2,965,000,000 forints.

**Transport and Communications.**—Roads (1949) 10,248 mi. Licensed motor vehicles (Dec. 1949): cars 16,000; commercial vehicles 15,000. Railways: (1949) 4,773 mi.; passenger-miles (1948) 2,983,000,000; freight

net ton-miles (1948) 2,036,000,000; freight carried (1948) 21,936,000 tons. Danube shipping (Dec. 1947): merchant vessels 514; total tonnage 118,717. Telephones (1948): subscribers 106,768. Radio receiving set licences (Dec. 1948) 475,000.

**Agriculture.**—Main crops (metric tons, 1948): wheat 1,583,000; maize 2,862,000; barley 692,000; oats 334,000; rye 786,000; rice 37,000 sugar, raw value (1949) 265,000; potatoes (1949) 2,585,000; linseed (1949) 10,000; tobacco (1948) 27,000. Livestock: cattle (1948) 2,004,000; sheep (spring 1949) 650,000; pigs (May 1949) 2,677,000; horses (Feb. 1949) 569,000.

**Industry.**—Fuel and power: coal and lignite (metric tons, 1949): 10,620,000; electricity (1946) 1,162,000,000 kw.hr.; crude oil (1949) 510,000 metric tons. Raw materials (metric tons, 1947): iron ore, iron content 61,000; pig iron 345,000; crude steel 719,000; bauxite 374,000; manganese ore 127,000. Manufactured goods (1947): cement 281,000 metric tons, cotton piece goods 148,000,000 m.; woollen piece goods 13,000,000 m.

**Hurdling:** see TRACK AND FIELD SPORTS.

**Hutchins, Robert Maynard** (1899— ), U.S. educator, was born on Jan. 17 in Brooklyn, N.Y. He left Oberlin college, Oberlin, O., in 1917 to enlist in the U.S. ambulance corps. Entering Yale university, New Haven, Conn., in 1919, he received his A.B. in 1921 and his LL.B. (*magna cum laude*) in 1925. In 1923 he was appointed secretary of Yale university and in 1927 dean of its law school. In 1929, at the age of 30, he became the fifth president (and, in 1945, the first chancellor) of The University of Chicago.

The resignation of Hutchins as chancellor of the university, and as a member of its board of trustees, to become an associate director of the Ford Foundation, a philanthropic trust, was announced Dec. 19, 1950. Hutchins had served as the administrative head of the university for almost 22 years, a period longer than that of any of his predecessors. He also was senior in point of service among the contemporary heads of any of the major U.S. universities and colleges. His resignation was to become effective at the end of the university's academic year, June 30, 1951, unless a successor was named earlier. He was, however, granted a leave of absence as of Jan. 1, 1951, to participate in the formulation of the foundation's policies. Hutchins continued as chairman of the board of editors of *Encyclopædia Britannica, Inc.*

University administrative responsibilities largely occupied Hutchins during the year. As in the past, much of his effort was concerned with obtaining additional financial support for the university. The total of funds pledged to the university in 1950 was approximately \$4,000,000.

During the month of May Hutchins was abroad, at Oxford, Eng., and in the Scandinavian countries, speaking at the University of Stockholm, Swed., which had conferred the honorary LL.D. degree upon him *in absentia* in 1949, and at the University of Lund, Swed. (W. V. M.)

**Iceland.** An island republic of the North Atlantic, Iceland has an area of 39,768 sq.mi., and a population (census 1940) of 121,474 (est. mid-1949) 140,000. Capital: Reykjavik, the only large town (est. pop. 1949: 54,707). Religion: Lutheran Christian.

President in 1950: Sveinn Björnsson; prime ministers: from Dec. 6, 1949, Olafur Thors; from March 14, 1950, Steingrímur Steinthorsson.

**History.**—Economic and political difficulties combined to force a revamping of Iceland's cabinet in March 1950. Olafur Thors, who had been prime minister for about three months, was

the strong leader of the Independence (conservative) party, largest single group in the *althing*, but which lacked a majority. When a special investigation headed by Benjamin Eiríksson (regularly on the staff of the International Monetary fund in Washington) recommended a drastic new devaluation of the króna it was impossible for one party to carry out the proposal. Necessity brought a coalition of the Independence and the Agrarian (progressive) parties, and made the dark horse Steingrímur Steinthorsson prime minister.

The leaders of the two major parties were both members of the new ministry, and the foreign minister, Bjarni Benediktsson, remained in his post.

The new devaluation meant a 42.3% drop in the value of the króna. In 1949 the unit of currency had been worth 15.4 U.S. cents; after the general devaluation of Sept. 1949 it was worth 10.7 cents; after the purely Icelandic devaluation of March 1950 it was valued at only 6.1 U.S. cents. Reasons assigned for the trouble were wartime prosperity-inflation; failure of successive herring seasons; and decline in the European market for fish, Iceland's great export.

The adjustments made travel and foreign purchases for Icelanders extremely dear, but would, it was hoped, attract tourists and aid the country better to compete on the world markets with its fish products.

Despite financial complications Iceland pressed forward with industrial expansion. The 4,000 ton, 200-passenger "Gullfoss" began regular runs to Scotland and Denmark. Electric power stations were expanded, partly with the help of the Economic Cooperation administration, which in May granted \$5,000,000 for the developments at Sog and Laxá. Projects for a cement plant and a fertilizer plant were also active.

The government attempted to safeguard its fishing potentialities by declaring a protected zone of four miles along the north of the island.

The government gave 150 tons of cod liver oil for the use of the United Nations in Korea, and Reykjavik was the seat of several conferences: including those of the Union of Scandinavian Cooperatives, and of the Scandinavian foreign ministers. The island was also visited by naval and air units of the U.S., Great Britain and Norway.

Local achievements were the creation of a symphony orchestra (with a few of the players being brought from Germany), the presentation of *The Marriage of Figaro* by the Royal Opera company of Stockholm, Sweden, and the completion of the modernistic National theatre. (F. D. S.)

**Education.**—Schooling is compulsory for those from 7 to 15 years of age. Schools (1949): elementary 216, pupils 16,000, teachers 600; secondary 46, pupils 4,200, teachers 300; technical 44, pupils 3,570, teachers 359. University of Iceland (1950): students 600, professors and lecturers 50.

**Finance and Banking.**—Budget: (1950 actual) revenue 298,000,000 kr., expenditure 262,000,000 kr.; (1951 est.) revenue 287,500,000 kr., expenditure 246,000,000 kr. National debt (Dec. 1950): internal 148,000,000 kr., external £2,000,000. Currency circulation (Sept. 1950) 198,000,000 kr. Bank deposits (Sept. 1950) 216,000,000 kr. Monetary unit: króna (pl. knónur). Exchange rate from March 20, 1950: one króna = 6.14 U.S. cents.

**Foreign Trade.**—(1949) Imports 424,300,000 kr., exports 289,200,000 kr. Main sources of imports (1949): United Kingdom 26.9%; U.S. 16.8%; Denmark 10.4%; Italy 4.8%. Main destinations of exports: United Kingdom 36.0%; Germany 22.9%; U.S. 6.2%; Italy 5.4%.

**Transport and Communications.**—Iceland has no railways. Roads (1949): 3,728 mi. Licensed motor vehicles (Dec. 1949): cars 6,119; commercial 4,486. Shipping (July 1949): number of merchant vessels of 100 gross tons and over 134; total tonnage 72,862. Air transport (1948): km. flown 2,320,500; passengers flown 48,613. Telephones (1947): 16,500. Radio receiving sets (1949): 34,692.

**Livestock and Fisheries.**—Livestock (Jan. 1948): sheep 454,255; cattle 41,633; horses 46,106; poultry 117,083. Fisheries: total catch (1949) 394,200 metric tons.

**BIBLIOGRAPHY.**—Franklin D. Scott, *United States and Scandinavia* (1950).

**Ice Shows:** see SHOWS.

**Ice Skating.** After capturing his third successive world title at London, Eng., in 1950, Richard Button of Englewood, N.J., proved that he still was the top figure skater in the United States by winning national laurels at Washington, D.C., for the fifth consecutive season. The Olympic star was credited with 942.1 points in the compulsory tests alone and drew far ahead of all his challengers.

Mrs. Yvonne Sherman McGowan of New York city successfully defended her women's senior crown although Sonya Klopfer of Brooklyn, N.Y., gave her a keen battle in the compulsory figures. The sister-brother team of Karol and Peter Kennedy from Seattle, Wash., that had triumphed at London earlier in the year, retained the senior pairs title. The St. Paul (Minn.) Figure Skating club stars, Janet Gerhauser, Marilyn Thomsen, John S. Nightingale and Marilyn Thomsen, repeated in the competition for fours.

Lois Waring and Mike McGean of Baltimore, Md., added to the laurels they had won in the world championships by scoring in the gold dance, while Carol Ann Peters and Daniel Ryan of Washington, D.C., captured the silver dance. Donald Laws of Washington, D.C., skated away with the junior men's crown and Tenley Albright of Boston, Mass., was tops among the junior women.

Roger Wickson of Vancouver, B.C., annexed men's honours in the Canadian national and Suzanne Morrow of Toronto, Ont., led the women. Marlene Smith of Niagara Falls, Ont., teamed with Donald Gilchrist of Toronto to capture the pairs event.

Speed skaters had a busy campaign despite a comparatively mild winter and once more Ray Blum of Nutley, N.J., was among the nation's top stars. He successfully defended both his middle Atlantic and North American outdoor championships. Edgar Dame of Revere, Mass., won the North American indoor crown.

Ken Bartholomew of Minneapolis, Minn., took the national outdoor title and Emanuel Babayan of Pasadena, Calif., the indoor laurels. Barbara Marchetti of Wyandotte, Mich., carried off championships in both the North American and national indoor meets.

Betty Mitchell of Winnipeg, Man., won the North American women's crown outdoors and Janice Christopherson of St. Paul triumphed in the national outdoor competition.

FILMS OF 1950.—*Beauty and the Blade* (Teaching Film Custodians, Inc.). (T. V. H.)

**Idaho.** One of the far northwestern states of the U.S., belonging to the group regionally designated as the Pacific northwest and part of the original Oregon territory, Idaho is the 12th largest state, with an area of 83,557 sq.mi. It was admitted as a territory by Pres. Abraham Lincoln in 1863 and became a state on July 3, 1890. Idaho is popularly known as the "Gem state." Pop. (1950) 588,637, which represents an increase of 12.1% over the population in 1940. The 1950 U.S. census preliminary estimate set the population for leading cities as Boise (capital), 34,152; Pocatello, 25,882; Idaho Falls, 18,855; Twin Falls, 17,544; Nampa, 16,142; Lewiston, 12,910; Coeur d'Alene, 12,189; Caldwell, 10,462.

**History.**—On Jan. 1, 1951, state elective and appointive officials began the first year of the second four-year term of office in Idaho's history. With the exception of the office of secretary

LEN B. JORDAN, Republican, elected governor of Idaho, Nov. 7, 1950

of state, which was held by Ira Masters, all were Republicans and were elected to office in Nov. 1950. The governor was Len Jordan. Other officials were lieutenant-governor, Edson Deal; attorney general, Robert E. Smylie; auditor, N. P. Nielson; treasurer, Lela D. Painter; superintendent of public instruction, Alton Jones; inspector of mines, George McDowell. Idaho also elected two Republicans to the United States senate, Henry C. Dworshak, succeeding himself, and Herman Welker. Elected to congressional posts were also Republicans John T. Wood from the first district and Hamer Budge from the second. Elected to the supreme court of the state were Darwin Thomas and C. J. Taylor.

Several special legislative committees, created as a part of the "Little Hoover" commission during the 1949 session of the state legislature, were to report on findings concerning workmen's compensation and other governmental reorganization during the 1950 session, which convened Jan. 8. Only an interim report was made on workmen's compensation during 1950, however, and a full report was to be ready for the 1951 session. The report on the reorganization of the state government was made and part of it was activated by the legislature.

**Education.**—In 1947 the legislature adopted a school district reorganization program under which 781 of Idaho's 1,082 school districts had been eliminated by 1950. Only 10 of the 44 counties remained to be completely reorganized. The public-school enrolment in Idaho for the 1949-50 school year was 127,031. There were 4,786 teachers employed in 1949-50.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Idaho has two institutions for the mentally ill—one at Orofino and one at Blackfoot; a home for the feeble-minded at Nampa; a school for the deaf and blind at Gooding; an industrial school at St. Anthony; a tuberculosis hospital at Gooding, and a recreational centre at Lava Hot Springs. The prison, located at Boise, had an average of 505 inmates during the year 1950, which was far above capacity.

**Communications.**—During the period from Jan. 1, 1950, to Oct. 1, 1950, the Idaho highway department expended \$6,117,968.83 for construction of highways and \$2,559,610.18 for maintaining highways. It was estimated that the department would expend \$10,500,000 for construction during the calendar year of 1951 and \$3,100,000 for maintenance. There were 5,172.2 mi. of state highways in Idaho in 1950, and all roads in the state totalled 38,789.3 mi.

**Banking and Finance.**—At the end of 1950 there were 37 state banks and branches with deposits of \$99,221,000 and assets of \$105,472,000; 59 national banks and branches with deposits of \$305,390,000 and assets of \$322,113,000; and 11 savings and loan associations with resources of \$38,491,143.

The state budget for the fiscal year ending June 30, 1950, showed the following items: general fund receipts \$19,044,040.77; general fund expenditures \$20,241,909.41; free balance general fund, June 30, 1950, \$8,241,650.28; special fund receipts \$91,100,382.69; special fund expenditures \$77,229,824.33. On Nov. 30, 1950, the bonded gross debt was \$17,000, and there was \$5,640.98 on hand, toward retirement of this.

**Agriculture.**—The main sources of income in southern Idaho are potatoes, hay, wheat, sugar beets, beans, fruit, dairying and sheep and cattle raising.

Table I.—Leading Agricultural Products of Idaho

Crop	1950	1949	Average 1939-48
Wheat, bu. (all)	37,350,000	38,106,000	29,648,000
Corn, bu.	1,645,000	1,598,000	1,644,000
Oats, bu.	9,540,000	7,470,000	7,367,000
Barley, bu.	13,896,000	10,098,000	11,071,000
Sugar beets, short tons	1,514,000	1,067,000	1,037,000
Dry beans, cwt.	2,460,000	2,608,000	2,106,000
All hay, tons	2,424,000	2,422,000	2,401,000
Potatoes, bu.	46,610,000	36,000,000	36,548,000
Apples, bu.	1,220,000	1,825,000	1,911,000

**Manufacturing.**—Idaho is not a highly developed industrial state. Manufacturing is built mainly upon transformation of raw products of the agricultural, mining and lumbering industries. In 1950, 1,053 establishments, including many small plants, employed 20,262 persons. Value by manufacture was not known.

**Mineral Production.**—Production of minerals in Idaho, and their values, are set out in Table II.

Table II.—Mineral Production in Idaho, 1949

Metal	Production	Value
Antimony, lb.	3,163,735	\$ 790,933
Cadmium, lb.	427,981	962,957
Copper, lb.	2,876,000	566,572
Gold, troy oz.	77,829	2,724,015
Lead, lb.	158,598,000	25,058,484
Mercury, flasks	(none)	(none)
Phosphate rock, tons	564,649	4,500,000
Silver, troy oz.	10,049,257	9,095,085
Tungsten, units	12,314	350,949
Zinc, lb.	153,116,000	18,985,640
Total		\$63,034,635
Cement, concrete, pipes, blocks, sand, gravel, lime, etc.		4,000,000
		\$67,034,635

(C. A. Rs.)

**Illinois.** A north central state of the United States, admitted to the union in 1818, nicknamed the "Sucker state." Illinois is sometimes called the "Prairie state." Total area: 56,400 sq.mi., of which 55,947 sq.mi. are land. Pop. (1950): 8,712,176 by the official census determination. The population increased 10.3% or 814,935 over 1940, when the official census showed 3,957,149 males and 3,940,092 females; 7,504,202 white, 393,039 nonwhite.

Population classed as urban in 1940 was 5,809,650, rural not on farms 1,119,488, rural farm 968,103.

Chicago (pop., 1950 preliminary census, 3,606,436) is the largest Illinois city followed by Peoria (111,523); Rockford (92,503), East St. Louis (81,950) and Springfield (80,832).

**History.**—The election of Nov. 7, 1950, produced results of historic significance. After five earlier defeats, the Gateway amendment to the 1870 state constitution was adopted 2,512,323 to 735,903. It simplified the process of amending the constitution, unchanged since 1908. For the first time since 1915, the voters elected a state legislature controlled by the political party opposite to that of the governor. The senate had a Republican majority 31 to 20; the house of representatives also was Republican-controlled, 84 to 69. Governor Adlai E. Stevenson is a Democrat.

Republicans won all state offices at stake in the Nov. 1950 election. Everett McKinley Dirksen of Pekin, former congressman, was elected United States senator over Scott W. Lucas, Democratic majority leader, with a plurality of 294,354 votes. William G. Stratton was elected state treasurer; Vernon L. Nickell was re-elected superintendent of public instruction and Earle Benjamin Searcy was re-elected clerk of the state supreme court. Republicans also elected three trustees of the University of Illinois. In addition to the governorship, Democrats occupied four major state offices not at stake in the election: lieutenant governor, Sherwood Dixon; secretary of state, Edward J. Barrett; attorney general, Ivan A. Elliott, and auditor of public accounts, Benjamin O. Cooper.

**Education.**—Public and private elementary and high schools enrolled approximately 1,486,000 pupils for the fall term in 1950, reflecting a continued marked increase. The number of public school districts was reduced from 11,955 in 1945 to 4,580 in 1950, a decline of 7,375 or 61%. State aid to schools was increased by 53% to \$124,247,752 for the 1949-51 biennium and the legislature's school problems commission, in a late 1950 report, recommended a further \$24,000,000 increase for 1951-53.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The legislature appropriated \$265,465,000 for old-age pensions, aid to dependent children, blind assistance and general relief for the 1949-51 biennium. As of Oct. 1950 the Illinois public aid commission reported 4,340 blind receiving an average monthly grant of \$48.51. There were 125,752 receiving an average monthly old-age pension of \$45.19; 85,732 dependent children receiving an average of \$25.95 and 86,234 persons receiving general assistance averaging \$29.61 monthly.

Public assistance volume and costs were reduced substantially during 1950 as a result of an intensive re-examination of public aid rolls. As against 345,013 persons receiving assistance in Jan. 1950, an estimated 287,745 were receiving help in Dec. 1950, a drop of 57,268. Assistance expenditures totalled \$11,986,996 in Jan. 1950, but declined to an estimated \$10,603,377 in December. The Illinois public aid commission reported Illinois was the only state in the nation in which reductions were recorded in all major assistance categories.

Unemployment compensation claims also declined sharply. For the week ended Dec. 23, 1950, the total number of unemployed filing compensation claims in the state was 84,407, as compared with 148,522 the same week in 1949. The number of claimants was about equally divided between the Chicago area and downstate. In the Chicago area the decline was from 85,199 in late 1949 to 43,918.

**Communications.**—The state division of highways expended \$27,859,000 in state and federal funds in construction on the 12,000-mi. primary road system during 1950. This included concrete pavement 41 mi.; concrete pavement widening 71 mi.; bituminous surfacing 93 mi.; miscellaneous surfacing and reconstruction 218 mi.; new bridges 26; highway and railroad grade separations 16. In addition to the expenditures for new construction, the state spent \$18,174,000 for maintenance. During the year various proposals were advanced for increasing state highway revenues, among them an increase in the three cents per gallon gasoline tax, which was one of the five lowest state gas taxes in the nation, and an increase in truck licence fees, in which Illinois ranked 36th among the states.

The Illinois highway system consisted of 125,000 mi. of all types of roads. There were 12,204 mi. of railroad (steam and electric) serving about 80% of the communities of the state. There were 168 government certified airports. The state was served by 14 major air lines.

**Banking and Finance.**—Banking facilities were provided in Illinois by

\$91 banks having total deposits at the close of 1950 of \$12,937,437,900. Of these, 382 were national banks and 509 state banks.

The budget voted by the legislature to operate the state government in the biennium ending June 30, 1951, was \$1,252,990,013, highest in the state's history. State tax collections increased. In the first 11 months of 1950 the 2% sales tax produced \$160,227,107.98, a gain of \$5,909,986.65 over the same period of 1949. Motor fuel taxes were up \$5,483,323.62 but motor vehicle licences declined by \$45,758.53. The cigarette tax was up \$320,178.40. The state government closed the fiscal year 1950 with a cash balance of \$294,426,000 in state funds and \$464,059,000 in trust funds. As of Aug. 31, the total bonded indebtedness of the state was \$419,148,900 of which \$352,300,000 consisted of veterans' compensation (bonus) bonds.

**Agriculture.**—Production of the principal crops during 1950 and 1949 and the average production during 1939-48 are shown in Table I.

Table I.—Leading Agricultural Products of Illinois

Crop	1950	1949	1939-48 Average
Corn, bu. . . . .	419,934,000	518,112,000	417,760,000
Soybeans, bu. . . . .	94,752,000	85,462,000	64,513,000
Oats, bu. . . . .	166,218,000	164,862,000	136,758,000
Wheat, bu. . . . .	27,538,000	46,856,000	28,174,000

**Manufacturing.**—The value added by manufacture to products in Illinois in 1947 was \$6,680,137,000, and the number of employees 1,184,820 of whom 954,415 were production workers. Total salaries and wages were \$3,585,093,000, wages \$2,627,318,000, number of establishments 15,988.

Principal industries and values added by manufacture were meat packing \$187,695,000; blast furnaces and steel mills \$205,187,000; petroleum refining \$101,871,000; tractors \$168,844,000.

Table II.—Production of Coal and Petroleum in Illinois

	1949	1950 est.
Bituminous coal, net tons . . . . .	47,630,380	55,000,000
Petroleum, bbl. . . . .	64,528,000	62,528,000

**Mineral Production.**—Illinois ranked fourth among the states in the total number of persons engaged in mining industries and sixth in the value of products mined. In 1949, the mineral production of the state was valued at \$448,565,000. The value of minerals processed was \$259,051,000, making a total for all mineral enterprises of \$747,613,000. The coal industry in the state was strengthened during 1950 by the opening of three major new mining operations. Petroleum production declined slightly.

(A. E. St.)

**Illiteracy.** The 1950 world census defined literacy as the ability to read and write a simple message in any language. At least one-half of the world's population was illiterate by that definition.

During 1950, the world-wide fight against illiteracy steadily increased in tempo. In addition to the United Nations Educational, Scientific and Cultural organization's growing number of literacy programs, the United States began to provide more bilateral help through its Point Four program. However, as plans were made for the extension of literacy to more remote regions of the world, the complexity of the problem became more and more apparent.

For example, a group of educators who surveyed the situation in Iraq early in 1950 reported that there was no way of knowing how techniques which had been successful in rural areas of the United States would fit into the behaviour patterns of an illiterate Moslem Arab rural or tribal community. It was reported that the problem of the use of several different languages within the country constituted one of the greatest deterrents to the spread of literacy in Afghanistan.

In Turkey, the community centres extended their activities to cover the whole country and the number of graduates from the literacy courses as well as the number of primary school pupils was steadily increasing.

India's problem is the provision of free, compulsory education for about 45,000,000 children of school age. Emergency training programs for student teachers were under way, and compulsory primary education had been introduced in many towns and villages. Another problem was the preparation of suitable literature for illiterate as well as for barely literate adults. The authorities were also striving to overcome obstacles to education for women.

Pakistan, like India, had an illiteracy rate of approximately 90%, and its literacy education programs were similar to those

in India with emphasis on mass education.

The mass education movement in China had completed a valuable experiment in the production of audio-visual materials capable of conveying basic ideas and knowledge without the use of written words. The Chinese Communists were paying special attention to the education of peasants and workers in their drive to wipe out illiteracy and provide technicians for their 10-to-15-year industrialization program.

Until the outbreak of the war in June 1950, literacy instruction was being provided in Korea and the rate of illiteracy dropped from 50% to 20%. One important step was the reintroduction of the old Korean language with its simple phonetic script of 24 characters.

Approximately eight people out of every ten in southeast Asia were unable to read and write. In the area of the Federation of Malaya, only about one-third of all children of school age were receiving any kind of schooling.

It became increasingly evident during the year that Africa's mass illiteracy was fast yielding to the intense eagerness for learning. It was reported that in Ethiopia only about 4% of the population was literate in its own language; in Liberia only about 5%, but in these countries, and in all sections of Africa, literacy education programs were being increased.

In the Caribbean area, also, there was increased emphasis on literacy education. In Haiti, plans were made for an extension of the type of literacy education program which was operated in connection with the Pilot Project in Fundamental Education. Jamaica planned an intensified program of literacy education. The Latin-American countries continued and extended literacy training programs in order to reduce as rapidly as possible the 50% rate of illiteracy still reported for that region.

**I.L.O.:** see INTERNATIONAL LABOUR ORGANIZATION.

**Immigration and Emigration.** Alien and citizen entries into the United States totalled more than 90,000,000 at 468 land, air and sea-ports in the year ended June 30, 1950. Ninety-seven per cent of these entries were of alien and citizen border crossers, who may have made numerous entries across the Canadian and Mexican borders.

**Immigrants.**—Immigrants are aliens admitted to the United States for permanent residence. The 249,187 immigrants who found a haven in the United States in 1950 constituted the largest number admitted in any single year since 1929. Half of them, more than 124,000, were admitted under the Displaced Persons act of 1948. Other quota immigrants numbered 73,340, while 51,727, chiefly wives of United States citizens and natives of west-

PIONEER IMMIGRANTS at a settlement in Goiás, central Brazil, working at a primitive tile plant. About 5,000 farm families were brought from Italy in 1950 to join the polyglot community of displaced persons from Europe already settled in Goiás under Brazilian land grants

ern hemisphere countries, entered as nonquota immigrants.

The 73,340 quota immigrants who were not displaced persons, added to the quota displaced persons, brought the total quota immigration to 197,460, thereby exceeding the annual authorized quota of 154,206 by 28%.

The principal countries of birth of immigrants and their class of admission under immigration laws are reported in Table I.

**Nonimmigrants.**—Nonimmigrants are aliens who enter the United States for temporary periods, or resident aliens returning from a temporary stay abroad. The figures in Table II do not include such special groups as agricultural labourers, border crossers and crewmen.

Table II.—Nonimmigrants Admitted to the United States,  
Year Ended June 30, 1950

Total nonimmigrants admitted . . . . .	426,837
Government officials . . . . .	13,975
Members of international organizations . . . . .	5,010
Temporary visitors for business . . . . .	67,984
Temporary visitors for pleasure . . . . .	219,810
In transit . . . . .	68,640
Returning residents . . . . .	40,903
Students . . . . .	9,744
Treaty traders . . . . .	766
Other nonimmigrants . . . . .	5

**Emigrants and Nonemigrants.**—During the fiscal year there were 456,689 aliens (exclusive of border crossers, Mexican agricultural labourers and crewmen) who departed from the United States. Only 27,598 were emigrants; *i.e.*, aliens who left a permanent residence in the United States for a permanent residence abroad; 48,054 of the nonemigrants were resident aliens who planned to return to the United States after a temporary stay abroad, and 381,037 were aliens who had been admitted as visitors or persons in transit and others temporarily admitted. (See also ALIENS; CENSUS DATA, U.S.; REFUGEES.) (A. R. MY.)

**Great Britain.**—As in all previous years since the end of World War II, in 1950 movements from the United Kingdom greatly exceeded movements in. Estimated emigration figures stood at about 485,000 to all extra-European destinations but mainly to the commonwealth countries.

**Australia.**—Under the ten-year program to build up Australia's population to more than 10,000,000 by 1960, the target for 1950 was 200,000 new settlers from all sources of whom one-half were to be British.

**Germany.**—At the beginning of 1950 about 37,000 displaced

persons, neither repatriable nor capable of being resettled under International Refugee organization schemes, were accepted into the economy of western Germany.

In February the speaker of the *bundestag* stated that within the preceding 15 months nearly 600,000 migrants had entered western Germany from the soviet zone. Since then the influx had continued and something like 300 to 400 political and nonpolitical refugees crossed the east-west frontier daily. About 20,000 Germans were accepted from Czechoslovakia. The German federal government made repeated requests for extension of the categories of persons to be admitted and in April the Allied High commission agreed that in addition to the 25,000 on the agreed list admission could be granted to their dependents, those in possession of special permits issued by the Combined Travel board in Warsaw, those who had residence permits for any of the three western zones and those refugees named on special lists supplied by the U.S. and French occupation authorities. (See also REFUGEES.) (B. L. B.)

**Israel.**—Although the vast scale on which immigration into Israel was organized greatly augmented the strain on that country's economy, the policy of unrestricted entry was continued, and on July 5, 1950, the *knesset* (assembly) passed unanimously the Law of Return which stated that every Jew had the right to settle in Israel. On Nov. 1 Prime Minister David Ben-Gurion stated that, since May 1948, 510,000 Jews had immigrated to Israel. It was estimated that more than a third of these immigrants had come from Asia and Africa, of whom about 50,000 originated in Yemen. (D. F. K.)

FILMS OF 1950.—*America and the Immigrant* (March of Time Forum Films).

**Imports:** see INTERNATIONAL TRADE; TARIFFS. See also under various countries.

**Income, Distribution of:** see WEALTH AND INCOME, DISTRIBUTION OF.

**Income and Product, U.S.** According to preliminary estimates, the United States' national income amounted to \$236,000,000,000 in 1950 and the gross national product to \$279,000,000,000. Both of these comprehensive measures of the nation's economic activity rose to all-time highs under the stimulus of economic expansion and rearmament. The corresponding totals for 1949 were \$216,800,000,000 and \$255,600,000,000.

The same factors resulted in a corresponding increase in personal income to \$222,500,000,000 in 1950 from the level of

\$206,100,000,000 in the preceding year. The trend of production and the flow of income were continuously upward throughout all of 1950.

**Meaning of Income and Product Measures.**—National income, as measured by the U.S. department of commerce, is the sum of the net earnings of labour and property arising from the current production of goods and services by the nation's economy. It measures, therefore, the total factor cost of the goods and services produced by the economy. It includes income in kind as well as money income, but such receipts as relief, unemployment benefits, pensions and capital gains are excluded since they do not represent earnings derived from current productive activity. The national income consists of compensation of employees, the net income of unincorporated businesses, corporate profits, net interest and the rental income of persons.

Personal income is the current income received by persons from all sources, including transfers from government and business but excluding transfers among persons. Not only individuals (including owners of unincorporated enterprises), but non-profit institutions and private trust and welfare funds are classified as persons. Personal income differs from national income by the inclusion of transfers (such as relief, pensions and government interest disbursements) which are not in return for current productive services, and by the exclusion of earnings (social insurance contributions, undistributed corporate income and corporate income taxes) which are not actually received by persons in the current period.

Gross national product or expenditure is the market value of goods and services produced by the nation's economy, before deduction of depreciation charges and other allowances for business and institutional consumption of durable capital goods. Other business products used up by business in the accounting period are excluded. The gross national product consists of consumers' purchases of goods and services; the gross output of capital goods retained by private business, including the change in inventories; net foreign investment; and the goods and services purchased by governmental entities.

**Distributive Shares of the National Income.**—The two most important increases in income flows occurred in wages and salaries and corporation earnings. It may be seen in Table I that wages and salaries rose by a little more than \$10,000,000,000 in 1950 to attain a total of \$144,800,000,000. Approximately \$2,000,000,000 of this increase occurred in the government sector of the economy, primarily because of the increase in the armed forces after the middle of the year. The bulk of the expanded wage flow took place in the private sector of the economy.

The main reason for the expanded flow of wages was the rise in volume of employment and the longer hours worked per week that marked the expansion of economic activity. As contrasted with the situation during the recession year of 1949, the increasing demand in 1950 drew more persons into the labour force and significantly reduced the volume of unemployment. At the same time, however, there was a general movement toward increasing wage rates which further augmented the total flow of wage payments. This movement occurred particularly after the outbreak of war in Korea when major groups of organized labour secured higher wages largely on the ground of the rising cost of living.

In the case of corporation profits before taxes, the increase in 1950 was particularly large. It is normal for profits to show a greater degree of fluctuation with changes in the level of business activity than the other income shares. Since they represent a residual type of income, they tend to fall more in periods of recession and to rise more in periods of prosperity. It may be seen that profits declined more sharply than the other shares in

the recession year of 1949, falling from a level of \$33,900,000,000 in 1948 to \$27,600,000,000 in the succeeding year. By contrast, the total flow of wages was relatively stable over this period.

In 1950, however, the gain in profits was exceptional, the total for the year reaching close to \$40,000,000,000. The profit level had risen appreciably during the first half of the year in line with the expansion of business activity. But, with the sharp increase in prices after the outbreak of the Korean war, the upward movement of profits was much accelerated. Hence, for the year as a whole, rising prices resulted in a substantial amount of inventory profit, the preliminary estimate of which was \$4,600,000,000.

At the end of the year an estimate of corporate profits after taxes was not available because of the changes that had been made in the tax laws. These involved an increase in the surtax rates on corporate income and the imposition of an excess-profits tax. Although these new taxes meant a substantial increase in corporate tax liability, it was apparent that corporate profits after taxes would still reach a new high level. Dividend payments responded to the increase in profits and, in the second half of the year particularly, many corporations declared extra dividends. The dividend total for the year was \$8,900,000,000 compared with \$7,800,000,000 in 1949.

**National Income by Industrial Origin.**—Estimates of national income by industries are shown in Table II. National income classified by industrial origin furnishes a measure of the net value added by each industrial segment to the net national output. Viewed from a different standpoint, "income originating" measures the earnings of the economic resources utilized in the various industries.

More than half of the increase in total national income in 1950 was centred in the manufacturing area of the economy, in

†First three quarters actual; last quarter estimated.

which income originating rose from \$62,900,000,000 in 1949 to \$72,900,000,000 the following year. This rise is typical of a period of business expansion but was accentuated in 1950 by the rearmament program. The other significant increases occurred in the construction, trade, services and government sectors of the economy. Both the trade and services fields reflected the sharp expansion in consumer demand while the construction industry reflected the fact that housing construction was at an all-time high. The increase in government was largely because of the rise in the armed forces.

**Gross National Product.**—The character of the economic situation in 1950 can perhaps best be seen from the changes in the gross national product shown in Table III. Economic activity had declined in 1949 to produce the first recession of the post-war period. From the beginning of 1950 there was marked recovery from this recession. This upward trend was every much accelerated after the outbreak of the Korean war both because the government initiated a large rearmament program which had an immediate impact on the economy, and because the fear of future shortages led to a substantial increase in buying by both consumers and businesses.

As a result the gross national product rose by more than \$23,000,000,000 from the level of the preceding year. In part this increase reflected a sharp rise in prices which occurred after the middle of the year. It may be estimated roughly that about half the increase in the gross product was caused by the rise in production while the other half was the result of the rise in the level of prices.

Although the government's rearmament program provided a significant stimulus to economic activity, the total volume of government spending in 1950 was not larger than in 1949. The lag in government expenditures was due to the fact that the organization of armament production is a time-consuming process. The 1950 increase in the gross product resulted from increased buying for private consumption and investment purposes.

Personal consumption expenditures rose to \$191,000,000,000 in 1950, \$12,000,000,000 above the level of the previous year. The increase was centred in the durable goods area where expenditures were almost 25% higher than in 1949. While a rise in income levels could be expected to produce a sharper increase in durable goods purchases, the fear of shortages in such items as automobiles, radios and electrical appliances was an added stimulus to consumer purchasing after the outbreak of the Korean war.

Gross private investment showed an even larger increase than consumption, rising from \$33,000,000,000 in 1949 to \$48,000,000,000 in 1950. With a housing boom that produced a record total of 1,300,000 housing units during the course of a year, new construction expenditures increased more than \$4,000,000,000. Expenditures on producers' durable equipment rose by \$5,000,000,000 under the influence of scare buying as well as the real

needs for capacity expansion.

A significant factor in the total investment movement was the change in inventories. The actual inventory accumulation amounted to about \$1,800,000,000 in 1950 which was not a large rise under the circumstances. It was indicative of the fact that final demand was sufficiently strong through a large part of the year to prevent inventories from rising. As inventories in 1949 had been liquidated to the extent of \$3,700,000,000, however, the total change in inventories between the years 1949 and 1950 amounted to about \$5,500,000,000.

**Disposition of Personal Income.**—Estimates of personal income and its disposition are provided in Table IV. The substantial increase in personal income in 1950 was offset to some ex-

tent by the increase in taxes that became effective in the fourth quarter of the year. Nonetheless, disposable income rose appreciably from \$187,400,000,000 in 1949 to \$202,100,000,000 in 1950. As previously indicated, consumption expenditures responded to the increase in income and, no doubt, the usual relationship between spending and income was somewhat exceeded because of the heavy buying of goods in the second half of the year. There was, nonetheless, an increase in personal saving from the \$8,600,000,000 in 1949 to \$11,100,000,000 in 1950. As can be seen by contrasting the data for 1950 with those of 1948, savings were only a little higher than in the earlier year compared with the rather large amount by which disposable income exceeded the earlier year. (See also BUDGET, NATIONAL; BUSINESS REVIEW; DEBT, NATIONAL; WEALTH AND INCOME, DISTRIBUTION OF.) (M. GT.)

**Income Tax:** see TAXATION.

**India.** A republican self-governing member of the Commonwealth of Nations. India consists of a union of states in southern Asia. Area: 1,220,099 sq.mi. Pop.: (1941 census) 318,770,000; (March 1950 est.) 347,340,000. Languages: two main groups, Aryan or northern (incl. Hindi, used by 150,000,000; Bengali, 26,000,000; Marathi, 23,000,000; and Gujarati, 15,000,000) and Dravidian or southern (incl. Telugu 30,000,000; Tamil 24,000,000; Kanarese 14,000,000); English is the official language of the union, to be displaced by Hindi in the Devangari script by 1964. Religions: Hindu; Moslem, Christian, Sikh, Buddhist, Parsee, Jewish and other minorities. Chief towns (1941 census): New Delhi (cap., 521,849); Calcutta (2,108,891); Bombay (1,489,883); Madras (777,481); Hyderabad (739,159); Ahmedabad (591,257); Cawnpore or Kanpur (487,324); Amritsar (391,010); Lucknow (387,177). President: Rajendra Prasad (q.v.); prime minister: Jawaharlal Nehru (q.v.).

**History.**—On Independence day, Jan. 26, 1950, India was formally proclaimed as a sovereign democratic republic under the

constitution drawn up by the constituent assembly. India severed its allegiance to the British crown, recognizing it merely as a link uniting the members of the Commonwealth of Nations. Rajendra Prasad was unanimously elected first president. He was a disciple of Mahatma Gandhi and had been three times president of the Indian National Congress party and chairman of the Indian National assembly. Independence day was celebrated throughout India with public rejoicings, and in his inaugural speech the president said that for the first time in its long and checkered history the whole vast land found itself united under one jurisdiction and one union. The objectives of the new government would be to secure justice, liberty and equality among its citizens, to abolish disease, poverty and ignorance, to resettle displaced persons and to develop natural resources. In London, the India league held a meeting attended by representatives of all parties in the British parliament and Clement Attlee, the prime minister, welcomed the new republic as a member of the commonwealth.

At the Commonwealth conference held at Colombo in January Jawaharlal Nehru, the Indian prime minister, said that India would not align itself with any power bloc but would co-operate with the other members of the commonwealth in the preservation of world peace and the economic and industrial development of southeast Asia. On Jan. 30 the second anniversary of the death of Gandhi was celebrated as a day of national mourning. Nehru declared that the policy of India would be based upon Gandhi's ideal of the progressive realization of a nonviolent society, in which caste and class, exploitation and war would cease.

*Indo-Pakistan Relations.*—The chief bone of contention between the two countries was Kashmir, and much disappointment was felt when Sir Owen Dixon, the mediator appointed by the U.N. Security council, failed to break the deadlock. Nehru maintained his attitude that Pakistan was the aggressor and that

a plebiscite could be held only under the auspices of Sheikh Abdullah's government (*see KASHMIR*). Another cause of friction was the economic situation arising out of India's decision to devalue the rupee. This had a disastrous effect on trade, especially in Bengal, where the jute grown in Pakistan territory was processed in Calcutta for export. India's action in suspending coal supplies in retaliation for Pakistan's failure to deliver raw jute seemed at one time likely to end in an economic war, and the flame was fanned on either side by the more irresponsible sections of the press which clamoured for reprisals. As a result, communal rioting was resumed, especially in the mill areas of Calcutta, which had been hard hit, and the casualties were much exaggerated by rumour. This in its turn led to a resumption of migration, and as many as 20,000 fugitives a day began to flee across the border in either direction. Fortunately the responsible leaders of both countries were aware of the perils of the situation and at a meeting of the two prime ministers at New Delhi an agreement was drawn up, guaranteeing to minorities "the complete equality of citizenship irrespective of religion; a full sense of security in respect of life, culture, property and personal honour; freedom of movement within each country; and freedom of occupation, speech and worship, subject to law and morality."

The New Delhi agreement was presented to the Indian parliament on April 10 and was accepted by all except the small body who still dreamed of an undivided India. Two Bengali ministers, H. C. Mookerji and K. C. Neogy, resigned. Immediate steps were taken to implement the decision. Minority commissions were set up and an inquiry into the whole situation was opened at Calcutta. On May 17 A. M. Malik, Pakistan minister for minority affairs, arrived to hold conversations with C. C. Biswas, his opposite number in India. The two arranged to undertake a joint tour of the affected areas in Bengal and Assam, and this had a marked effect. Confidence was restored, and migrations declined from 20,000 to 5,000 a day.

Some 10,000,000 Hindus remained in East Bengal and about 11,000,000 Moslems in West Bengal.

**INDIAN OFFICIALS** at New Delhi after ceremonies proclaiming India a republic on Jan. 26, 1950. Left to right: Sheikh Abdullah, premier of Kashmir, Jawaharlal Nehru, prime minister of the new republic, and Chakravarti Rajagopalachari, last British governor general of India

In the meantime, on April 25, a six months' trade agreement had been signed at Karachi. The Pakistan Jute board consented to furnish Indian mills with 300,000,000 lb. of raw jute, and the government of India undertook in return to arrange for the supply of 20,000 tons of jute manufactures to Pakistan. In addition, Pakistan agreed to take through normal channels goods such as woollen and cotton textiles, mustard oil, tobacco, steel sheets, timber and cement, as nearly as possible of an equal value to the jute purchases by India. Trade in certain other commodities was to be allowed free of import and exchange restrictions, and Pakistan was to furnish India with 150,000 tons of wheat at an agreed price; but no reference was made to coal or to the disagreement over the exchange ratio of the rupee, the real root of the trouble. A frank discussion between the two prime ministers took place over other outstanding differences. Nehru said that it was not expected that the pact would solve all the points at issue by a stroke of the pen. Its value lay in the fact that it created a friendly atmosphere. He also proposed a "no war" agreement with Pakistan, by which all differences between the two countries should be settled by discussion or referred to arbitration. (See also PAKISTAN.)

**Foreign Relations.**—In pursuit of his policy of a united Asia, Nehru paid visits to the Indonesian and Burmese republics and to Malaya, where he was cordially received. The outbreak of war in Korea was regarded with mixed feelings in India, where "imperialism," as exemplified by the U.S. bombardment of North Korean towns, was more unpopular than communism. Nehru, while not offering his services either for war or mediation, put forward a suggestion for limiting the area of the conflict and eventually ending it. This lay in breaking the deadlock in the Security council by the admission of the representative of the People's Republic of China (the Communist regime) and so paving the way to the return of the Soviet Union to the council. The proposal was not favoured by the British or U.S. governments. After these endeavours, the news of the invasion of Tibet by the Chinese in October was received with surprise and regret, as Nehru had always regarded a firm understanding with China as the keystone of Asiatic nationalism and the only barrier to international chaos. A strong note was addressed to Peking, to which the Chinese government replied asserting its suzerainty over Tibet, and claiming that this was a purely domestic issue. In its answer, India pointed out that there was no point of difference between the two countries which could not be settled peacefully. The Indian government repudiated the insinuation that its action had been prompted by foreign powers hostile to China. (See also KOREAN WAR; TIBET; UNITED NATIONS.)

**Nepal.**—In view of events in Tibet and Russian activities in the neighbouring province of Sinkiang, where railways and aerodromes were being constructed and mineral resources exploited with the connivance of the Chinese, the importance of the border states of Sikkim and Bhutan and of the independent kingdom of Nepal (*qq.v.*) was greatly enhanced, and India had concluded with them treaties of mutual assistance. The Indian government gave asylum to King Tribhuvana after the palace revolution in November when he was replaced by his three-year-old grandson.

While professing studiously to respect the right of Nepal to settle its internal affairs, the government strongly advised the rulers to liberalize the institutions of the country.

**Domestic Affairs.**—Nehru's policy, though approved by the great body of moderate opinion, was unpopular with extremists on both sides. To the right were Sardar Patel and the supporters of Hindu orthodoxy and big business, who were opposed to any concessions to Pakistan. To the left were the Socialists under Jai Prakash Narayan, who were critical of the government's alleged failure to alleviate the lot of the masses. Still farther to

the left were the Communists, whose subversive activities in Hyderabad, Assam and other localities had caused considerable anxiety and had more than once required the use of armed force. Apprehensions were therefore aroused about the outcome of the 56th session of the Indian National Congress, held at Nasik on Sept. 21 under the chairmanship of Purushottamdas Taudon, one of Nehru's most outspoken critics. These were dissipated when, after some lively debate, the government's foreign and domestic policy was endorsed by a substantial majority. It was learned subsequently that Nehru, C. Rajagopalachari and Maulana Azad had joined the working committee. This re-established the Congress in its old position as the leading political party in the country.

In August, severe earthquakes devastated parts of Assam, causing much damage and loss of life. Among donations to relieve the sufferers were 10,000 maunds of rice from Pakistan. For the Plan for Co-operative Economic Development in South and Southeast Asia, see CEYLON.

On Dec. 15 occurred the death of Sardar Vallabhbhai Jhaverbhai Patel, deputy prime minister and veteran leader of the Congress party. (H. G. RN.)

**Finance and Banking.**—Budget: (1949-50) revenue Rs. 3,323,600,000, expenditure Rs. 3,361,000,000; (1950-51 est.) revenue Rs. 3,391,000,000, expenditure Rs. 3,378,800,000. National debt (1950-51): Rs. 16,092,600,000. Currency circulation (Sept. 1950) Rs. 12,090,000,000. Gold and foreign exchange (Sept. 1950) U.S. \$1,942,000,000. Bank deposits (Sept. 1950) Rs. 6,770,000,000. Monetary unit: rupee with an exchange rate of Rs. 4.775 to the U.S. dollar.

**Foreign Trade.**—(1949) Import Rs. 5,915,000,000, export Rs. 4,994,000,000. Main sources of imports (1949): United Kingdom 29%; U.S. 20%; Egypt 6%. Main destinations of exports: United Kingdom 24%; U.S. 17%; Australia 5%. Main imports (1949): grain, pulses and flour 19.7%; machinery and millwork 11.5%; raw jute 10.7%; raw cotton 9.7%. Main exports: jute manufactures 33.3%; tea 14.7%; cotton manufactures 9.7%.

**Transport and Communications.**—Roads (1948) 190,500 mi. Licensed motor vehicles (Dec. 1949): cars 120,444; commercial 103,537. Railways (1949): 34,141 mi.; passenger-miles 38,012,000,000; freight net ton-miles 24,993,000,000; freight carried 118,489,000 metric tons. Shipping (July 1949): number of merchant vessels of more than 100 gross tons 168; total tonnage 395,427. Air transport (1949): capacity ton-miles flown 36,600,000; passenger-miles 195,000,000; cargo net ton-miles 6,500,000; air mail carried 1,800,000 metric tons. Telephones (1949): 113,466. Radio receiving set licences (1949): 299,000.

**Agriculture.**—Main crops (metric tons, 1949): wheat 5,685,000; barley 2,302,000; maize 1,959,000; rice 34,519,000; tea 252,000; ginned cotton 520,000; potatoes (1948) 1,850,000; sugar, raw value 3,250,000; peanuts 3,454,000; rapeseed 783,000; cottonseed 1,040,000; linseed 432,000; sesame seed 300,000; jute 500,000; wool 26,000; coffee 22,700; tobacco 363,000. Livestock: cattle (Jan. 1950) 181,500,000; sheep (Jan. 1950) 39,000,000; pigs (1945) 3,709,000; horses (1945) 1,398,000; mules (1945) 45,000; buffaloes (1945) 40,732,000; camels (1945) 656,000; asses (1945) 1,131,000; poultry (1945) 58,248,000. Fisheries: total catch (1949) 513,764 metric tons.

**Industry.**—Industrial establishments (1945): 103,400; persons employed 1,843,797. Number of trade disputes (1949) 914; number of workers involved 684,188; number of days lost 6,560,887. Fuel and power (1949): coal 31,968,000 metric tons; electricity 4,920,000,000 kw.hr.; crude oil 250,000 metric tons. Raw materials (metric tons, 1949): pig iron 1,548,000; steel ingots and castings 1,380,000; copper 6,500; aluminium 3,500; asbestos 88,200; rubber 15,800; superphosphates 47,400; gold 161,000 fine ounces. Manufactured goods (1949): cement 2,136,000 metric tons; cotton yarn 618,800,000 m.; woven cotton fabric 3,576,000 m.; paper and paper boards 104,800 metric tons.

**India, French:** see FRENCH INDIA.

**India, Portuguese:** see PORTUGUESE COLONIAL EMPIRE.

**Indiana.** An east north central state of the United States, popular name, "Hoosier," Indiana was admitted to the union Dec. 11, 1816, as the 19th state. Total area of the state is 36,325 sq.mi., including 314 sq.mi. of inland lakes and rivers. The population of the state according to the 1950 census was 3,934,224, a gain of 14.8% since 1940. Capital: Indianapolis (pop. preliminary 1950 census, 424,683), the largest city. Other cities: Fort Wayne (132,840); Gary (132,496); South Bend (115,698); Evansville (109,869); Hammond (87,423); Terre Haute (64,047); Muncie (58,364); East Chicago (54,124); Anderson (46,809).

**History.**—The general assembly did not meet in 1950. Primary

conventions of both parties were held in June and nominated candidates for U.S. senator and state offices below the level of governor. In the senatorial race Homer E. Capehart was renominated by the Republicans and re-elected. Alex M. Campbell was the Democratic nominee. In the November elections, Republicans won most offices throughout the state. Out of 11 representatives to the national congress, 9 Republicans were victorious. In the general assembly the Republicans would have a 69-31 majority in the house and a 26-24 advantage in the senate. Officers of the state during the year remained the same as in 1949: Henry F. Schricker, governor; John A. Watkins, lieutenant governor; Charles F. Fleming, secretary of state; F. Shirley Wilcox, treasurer; James M. Propst, auditor; J. Emmett McManamon, attorney general; Deane E. Walker, superintendent of public instruction. All were Democrats. Elected for the coming year were: Leland L. Smith, secretary of state; William L. Fortune, treasurer; Frank T. Millis, auditor; Wilbur Young, superintendent of public instruction. All the newly elected officials were Republicans.

**Education.**—The number of public schools in the state in 1950 was approximately 2,200. Enrolment in the elementary or common schools was 498,685, with 12,901 teachers. Enrolment in the high schools (grades 9-12) was 165,007, with 8,197 teachers. Parochial schools had an enrolment of 59,061 in the elementary grades and 9,761 in high school. For the year 1949-1950 the state appropriated \$53,000,000 for the support of schools, in addition to the sums provided by local units of government. The state provided \$17,422,194.58 for the operating expenses of the four state colleges. Twenty-two Indiana colleges and universities enrolled 48,242 full-time students during 1950.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In 1949-50 the state's welfare program cost \$42,358,461.52 of which \$19,907,498.54 was furnished by federal funds, \$10,759,276.66 by state funds and \$11,691,686.32 by county funds. Old-age assistance cost \$24,642,516.19, blind assistance \$945,819.91, aid to dependent children \$8,565,612.96. In addition, child welfare and committed adults cost \$2,344,203.93 from state and county funds. Receipts of the state for unemployment insurance for the year ending June 30, 1950, were \$22,197,522.40. Benefits paid out were \$25,669,997.30.

In 1950 the state maintained nine institutions for mental patients including an epileptic village; nine homes, hospitals and schools and four penal and correctional institutions. As of June 30, 1950, inmates of mental institutions totalled 13,494 and inmates of penal correctional institutions 6,728. A new state board of health building and the Northern Indiana Children's hospital were dedicated during the year.

**Communications.**—The total mileage of state highways in 1950 was approximately 10,530, with county roads totalling nearly 74,000 mi. In 1948-49 the state highway expenditure for roads amounted to \$41,289,787.26 during the fiscal year. Steam railroad first line trackage measured 6,600 mi. There were 69 mi. of electric railways. The estimated number of telephones in the state on Dec. 1, 1950, was 1,150,000. There were 130 commercial airports, 4 military airports, 83 personal landing fields and 1 seaplane base in the state as of July 1, 1950.

**Banking and Finance.**—On Dec. 1, 1950, there were 336 state banks and trust companies with 76 branches. On June 30, 1950, the total resources of these banks were \$1,557,504,573.12. Deposits totalled \$1,449,533,862.24. There were 125 national banks and 30 branches on Dec. 1, 1950. Their midyear resources amounted to \$1,783,038,000 and deposits totalled \$1,246,760,000. State savings and loan companies numbered 164 and their assets were \$210,799,474.80 as of Dec. 31, 1949. The state's 70 federal savings and loan associations listed deposits amounting to \$314,809,468.63 as of Nov. 30, 1950.

**Agriculture.**—Corn and wheat production declined in 1950. Potatoes set a new yield record of 255 bu. per acre. Fruit production was only 75% of 1949.

#### Leading Agricultural Products of Indiana

Crop	1950	1949	Average, 1939-48
Corn, bu. . . . .	213,790,000	249,548,000	207,605,000
Wheat, bu. . . . .	31,798,000	39,150,000	28,258,000
Oats, bu. . . . .	52,577,000	55,825,000	45,047,000
Soybeans, bu. . . . .	35,002,000	34,608,000	22,958,000
White potatoes, bu. . . . .	4,845,000	3,900,000	4,640,000
Barley, bu. . . . .	675,000	578,000	1,169,000
Hay, all, tons . . . . .	2,622,000	2,253,000	2,580,000
Tobacco, lb. . . . .	12,860,000	13,328,000	11,436,000
Mint for oil, lb. . . . .	751,000	944,000	—
Apples, bu. . . . .	1,020,000	1,715,000	1,333,000
Peaches, bu. . . . .	298,000	794,000	453,000
Watermelons, melons . . . . .	3,150,000	2,200,000	—
Tomatoes for processing, tons . . . . .	331,500	249,900	—

**Mineral Production.**—For the year 1949, 6,957,434 tons of coal were taken from approximately 50 shaft and slope mines; 48 strip mines produced 9,592,322 tons. About 9,556,000 bbl. of oil were pumped in 1949. There were 3,480 producing oil wells in the month of Dec. 1949.

(H. J. SR.)

Shungnak and Hydaburg natives of Alaska was put to a vote of the natives in 1950. Barrow natives voted on Feb. 8 against the proposed reservation, indicating that they considered it inadequate in size. Shungnak voted on April 24, also against the reservation. Hydaburg voted favourably on April 24, and its reservation became legal.

Despite the revival of the National Indian institute by a deficiency appropriation during the fiscal year 1950, the house of representatives disapproved the item in the 1951 Appropriation act, and to this extent, co-operation between the United States and the Inter-American Indian institute (in Mexico City) appeared to be closed.

Late in 1949 the Fort Berthold, N.D., Indians had voted to accept the terms of settlement offered by congress in public law

UTE TRIBAL COUNCIL held to discuss a decision made by the U.S. federal court of claims on July 13, 1950, to award the Ute Indians of Colorado and Utah about \$31,700,000 in settlement for land taken from them between 1891 and 1938

**Indians, American.** In accordance with law, the setting aside of reserved areas for the Barrow,

437 of the 81st congress, which awarded the Indians a total of \$12,605,625 in settlement of claims in connection with the construction of the Garrison dam on the Missouri river. The new reservoir was to occupy most of the bottom lands of the Indian reservation, breaking the remainder into five disconnected pieces. The money would assist the Indians in rebuilding their homes and restocking their ranches.

Another large Indian claim was settled when the court of claims decided on July 13, 1950, that 2,505 Utes and associated tribes of Indians of Utah and Colorado were entitled to receive \$31,938,473.43—the value of lands taken from them many years before without due process of law, less the sums spent on their behalf by the federal government and with accumulated interest on the remainder. On Sept. 27, 1950, the money was appropriated by congress.

Federal Indian policy continued to look toward the transfer of responsibilities for administration of Indian affairs to the organized tribes or to state and local governments. Recognizing this trend, Gov. Luther Youngdahl of Minnesota called a conference of state governors or their representatives at St. Paul on March 14, to discuss the problems which the states might face. The governors' Interstate Council on Indian Affairs was formed and met subsequently at Salt Lake City, Utah, and Oklahoma City, Okla. Many of the governors also called local meetings of educators, welfare workers and other officials to consider Indian problems. Some of the state legislatures authorized the establishment of Indian commissions.

On April 19, 1950, the Navajo-Hopi Rehabilitation bill was finally passed and signed by the president, committing the government to a total expenditure of \$88,570,000 over the succeeding ten years for the development of adequate economic, education and health facilities for these Indians. The Appropriation act for 1951 carried \$8,891,000 as the first instalment of these projected expenditures, principally for school construction and economic advancement. In the preceding four years, the government had also provided school facilities for an additional 4,500 Navajo children.

Congresswoman Reva Beck Bosone of Utah introduced into congress a joint resolution on July 28, calling for a survey by the Indian service (using already appropriated funds) of the tribes, bands and groups under jurisdiction of the bureau of Indian affairs, to "determine the respective qualifications of such Indians to manage their own affairs without supervision and control by the Federal Government." The results of this survey were to be presented to the 82nd congress, with concrete programs and proposed legislation. The resolution passed the house of representatives but did not pass the senate.

Dillon S. Myer, president of the Institute of Inter-American Affairs in the state department, was appointed commissioner of Indian affairs May 5, 1950. (W. W. B.)

**Indochina.** Until 1946 this name covered four French protectorates and the colony of Cochin-China, bounded north by China, west by Burma and Thailand and south and east by the South China sea. From 1949 Indochina had no legal existence, being replaced by the three associated states of the French union. Areas and populations are listed in the table.

Three-fourths of the population live on the coastal plain, on one-tenth of the total area. Annamites form the great majority

	Area (sq. mi.)	Population (1936 census)	(1949 est.)
Viêt-Nam . . . . .	126,608	18,972,000	22,973,000
Tonkin (Bac-Ky) . . . . .	44,660	8,700,000	10,006,000
Annam (Trung-Ky) . . . . .	56,974	5,656,000	7,299,000
Cochin-China (Nam-Ky) . . . . .	24,974	4,616,000	5,668,000
Cambodia . . . . .	69,866	3,046,000	3,279,000
Laos . . . . .	89,320	1,012,000	1,208,000
Total . . . . .	285,794	23,030,000	27,460,000

of the population of Viêt-Nam: they speak Annamese and Confucianism is their dominant religion. Cambodians (or Khmers) are Buddhist and Hindu influence shaped their cultural life. The Mois of the southern highlands of Annam and Laos are Indonesians, akin to Dayaks of Borneo: they are pagan and of a backward civilization. In the northern highlands of Laos and Tonkin there are tribes of Chinese origin. In the areas of Luang Prabang of Laos and of Battambang of Cambodia the inhabitants are Thais (or Siamese). In 1946 there were in Indochina 26,000 Europeans, including 23,000 French or *assimilés*. Chief towns (pop., 1949 est.): Saigon, capital of Viêt-Nam, with the seaport of Cholon (1,700,000); Hanoi (166,000); Haiphong (92,000); Pnom-Penh, capital of Cambodia (128,950); Vientiane or Vichan, capital of Laos (13,700).

Rulers and commissioners: Viêt-Nam: ruler, Bao Dai (*q.v.*); high commissioner and commander in chief, Gen. Jean de Lattre de Tassigny. Cambodia: ruler, King Norodom Sihanouk; commissioner, Jean de Raymond. Laos: ruler, King Sisavang Vong; commissioner, Miguel de Pereira.

**History.**—On Jan. 29, 1950, the French national assembly by 401 votes to 193 passed a bill ratifying the agreements establishing the independence of Viêt-Nam, Cambodia and Laos within the French union. An interstate conference presided over by Albert Sarraut, a former premier, opened at Pau on June 29 and

on Nov. 27 with some difficulty reached an understanding regarding the transfer of responsibilities from the French to the national authorities. On his return to Saigon, Tran Van Huu, premier of Viêt-Nam, expressed himself as dissatisfied with France, which he accused of seeking to set up Laos and Cambodia against Viêt-Nam and to keep control of the country by means of French officials. Nevertheless, on Dec. 21 he acknowledged that all important administrative and financial institutions were to have Viêt-Nameese managers from Jan. 1, 1951, but that it would still be necessary to call on the help of French managers for certain technical services.

The government of Bao Dai gained nothing in prestige or popularity, and he was forced, therefore, to try to outbid the nationalists without succeeding in averting suspicion either from himself or from France. Only the seriousness of the military situation succeeded on Oct. 17 in bringing to an end his stay in Cannes where he had been for four months. After renouncing personal control of the state, on Jan. 21 he nominated N'Guyen Phan Long as prime minister and on April 27 called on Tran Van Huu, former governor of south Viêt-Nam, to assume direction of the government. Recognition by the U.S.S.R. of Ho Chi Minh's People's Republic of Viêt-Nam led to similar action by Great Britain and the U.S. with regard to the Bao Dai government on Feb. 7.

On May 8 Dean Acheson, U.S. secretary of state, confirmed that the United States would provide economic assistance for the associated states.

The military situation steadily deteriorated. Viêt-Minh had come under the complete control of Communist elements relying on Chinese help. The French defense line 320 km. long, protecting the Sino-Viêt-Nameese frontier between Moncay and Cao Bang, had to be abandoned in deplorable circumstances. Of 4,800 troops and civilians who left the posts of Thatkhé and Cao Bang more than 2,000 men were lost to the enemy on Oct. 7 and 8.

JUNGLE PATROL DUTY in Indochina in 1950, showing French Viêt-Nam troops mounted on elephants

Doubts were cast on the competence of Gen. Marcel Carpentier, commander in chief, and the morale of the troops was affected. After an inspection by Jean Letourneau, head of the new ministry for associated states (established on May 23), and Gen. Alphonse Juin, joint civil and military powers were vested in Gen. Jean de Lattre de Tassigny on Dec. 7. On his arrival in Hanoi, the general declared that the days of wavering were over and the hour of order had arrived. Hanoi and Saigon thenceforward became fragile bridgeheads in southeast Asia, where a third of the French active forces were tied down. Pending the arrival of U.S. equipment, it was the task of the French to hold the Tonkin citadel whence there had already been partial civilian evacuation.

After dissolving the national assembly on Sept. 18, 1949, King Norodom Sihanouk of Cambodia supported Yem Sambaur as head of the government, with augmented powers, in defiance of the constitution which forbade the assumption in such circumstances of the functions of premier by the president of the assembly. Such was the hostility encountered by the government that the king was compelled on April 28 to take the reins himself and on May 30 to form a government of national union, presided over by Prince Monipong. The draft of an electoral law for the appointment of a new assembly was ill-received by the great majority of opinion. The central authority did not succeed in restoring security.

On Feb. 6 conventions were signed at Vientiane to put into effect the treaty of Paris (July 19, 1949) by which France recognized Laos as an independent associated state. The premier, Prince Boun Oum, resigned on Feb. 15 and was replaced by Phouy Samanikone. From April 14, the Laos new year, the royal government took over effective control of all state administration. To contend with incursions by Issarak and Viêt-Minh forces on the Bolovens plateau, the minister of the interior took in hand the formation of a counter guerrilla commando force.

**Finance.**—Budget (1949 actual) balanced at 1,569,814,400 piastres. Monetary unit: piastre, equivalent to 17 metropolitan francs. U.S. \$1 = 349.85 metropolitan francs (Nov. 1950).

**Foreign Trade.**—(1949) Imports 66,822,600,000 fr., exports 19,303,400,000 fr. Main exports: rice 5,181,700,000 fr.; rubber 6,096,700,000 fr.; spices 999,800,000 fr.; coal 627,500,000 fr.; maize 587,500,000 fr.

**Transport and Communications.**—Railways (1948): 3,245 km. Roads (1948): 20,370 km. Motor vehicles licensed (1948): cars 15,500, commercial 7,500. Ships entered at Saigon-Cholon (1949) 649; passengers: arrivals 81,016; departures 75,038; cargo (metric tons) unloaded 151,000, loaded 103,200. Air transport (1949): aircraft landed 937; passengers: international traffic, arrivals 9,289; departures 12,650; internal traffic, arrivals 63,606; departures 74,954.

**Agriculture.**—Rice production (metric tons, 1949–50): Cochinchina or south Viêt-Nam, 1,550,800 (56% of prewar production); Cambodia, 1,220,400; maize (1949, Cambodia) 35,000. Livestock (1949): 1,486,000; buffaloes 1,264,000; pigs 1,900,000; horses 26,300.

**Industry.**—Main products (metric tons, 1949): coal 371,100; cement (north Viêt-Nam) 152,900; rubber 43,700; alcohol (south Viêt-Nam and Cambodia) 131,977 hl.; timber 248,000 cu.m. Tin concentrates at 50% (Laos, 1950 est.) 550 metric tons. (C. A. J.)

**Indonesia.** The independence of Indonesia was proclaimed at Jakarta (Batavia) on Aug. 17, 1945, but the republic of the United States of Indonesia came into being on Dec. 27, 1949, when Queen Juliana of the Netherlands signed the charter transferring to the Indonesian people the sovereignty of the territories of the Netherlands Indies—with the exception of Irian or Dutch New Guinea (*see* NETHERLANDS NEW GUINEA). The provisional constitution of 1949 stipulated that the republic was to be a federation of seven states and nine autonomous territories. On Aug. 14, 1950, the parliament of the republic decided that the principle of federalism should be abandoned and that Indonesia should be a unitary nation-state divided into ten provinces. Total area (excluding Dutch New Guinea): 583,479 sq.mi. Total pop.: (1939 est.) 69,435,000; (mid-1949 est.) 79,260,000, all but 2.6% being indigenous; two-thirds of the total population lives on Java. Language: Malay is to a certain extent

a language of intercommunication between different population groups speaking 25 main languages and 250 dialects. Religion (1941 est.): Moslem about 90%, Christian 3.4%, Hindu 1.4%. Chief towns (pop., 1930 census): Jakarta (cap., 435,184; mid-1949 est., 1,200,000); Surabaya (341,675); Semarang (217,796); Bandung (166,815); Surakarta or Solo (165,484); Jakarta (139,649). President of the republic: Achmed Soekarno; prime ministers in 1950: Mohammed Hatta and (from Sept. 5) Mohammed Natsir; Netherlands high commissioners in 1950: H. M. Hirschfeld and (from Aug. 3) A. T. Lamping.

**History.**—The very foundations on which the political structure of the republic of the United States of Indonesia was built soon proved to be too weak to support it for long. The federal principle of government, a compromise reached between the original republic of Indonesia proclaimed in 1945 on the one hand and the regional states (*negara*) established since then on the other hand, had been laid down in the constitution, with elaborate safeguards, and ratified by all states. Nevertheless the intransigent nationalist spirit embodied in the old republic, which covered parts of Java and Sumatra, continued to clash with the federal conception of the state. Republican adherents in the territory of different states soon brought about a situation which made it impossible for the separate state governments to carry out their functions. The central (federal) government, observing the way things were going, adopted a passive attitude, and the state governments, unarmed and abandoned, resigned their constitutional powers to the central government one after another (East Java, Madura and Pasundan or West Java in January; South Sumatra and East Borneo in March; the rest of Borneo and East Indonesia in April).

The next phase was characterized by public demonstrations demanding the annexation of the states' territories by the republic of Indonesia. Again the central government, remaining passive, took steps to legalize the apparently inevitable trend, and on March 8 emergency legislation was enacted on the strength of which those territories as well as the federal district surrounding the capital, Jakarta, were incorporated in the republic of Indonesia.

The annexation of state territories did not proceed without hitch everywhere. In West Java armed malcontents, supported by a small number of soldiers from the former Netherlands Indies army led by a former captain ("Turko" Westerling), even succeeded in capturing the capital, Bandung, on Jan. 23 from the republicans. The Netherlands high commissioner and the Indonesian premier, however, issued a joint statement threatening "co-ordinating action" (that is, the using of the Dutch troops awaiting repatriation) against the insurgents, whereupon the movement petered out.

In East Indonesia some prominent Ambonense people, watching the imminent downfall of the East Indonesian state of which their country formed part, on April 25 seceded and proclaimed a South Moluccan independent republic. The central government waged a protracted blockade followed by active naval and land warfare against the islands of the South Moluccas groups, until it was claimed in November that the capital city, Ambon, had been taken and major resistance had ceased.

Meanwhile the central government and the government of the republic of Indonesia, enlarged by the above-mentioned annexations, had conferred on the means of legalizing the situation. On May 19 the conference resolved to have a new interim constitution enacted, which would be based on unitary instead of federal principles of government; limited provincial autonomy would be substituted for state rights and the senate consisting of equal numbers of members from each state abolished. This new constitution merging the republic of the United States of Indonesia with the republic of Indonesia was duly approved by

the representative bodies and promulgated on Aug. 15. The last of the states, East Sumatra, now ceased to exist; the name of the Republik Indonesia Serikat (United States of Indonesia) was officially changed to Republik Indonesia. President Soekarno retained his office, but the Hatta cabinet resigned and was succeeded by the Natsir cabinet.

**Internal Difficulties.**—While the political events summarized above demanded most of the central government's attention, internal conditions in nearly every region of Indonesia, whether directly affected by those events or not, deteriorated considerably. In some areas (notably Achin or Atjeh in north Sumatra) the authority of the central government was not recognized or was ignored; in west and central Java a fanatical Moslem group (Dar'ul Islam) terrorized the rural population and defied the government.

A big budgetary deficit threatened the country. Successive waves of strikes in various sectors of private enterprise curtailed production for home consumption and for export, thus affecting the balance of trade unfavourably. The Communist party infiltrated, and soon dominated, the trade union movement; politically their tactics followed the usual pattern of exploiting every available difficulty which Indonesia had to face, at home or abroad, to foster opposition to the responsible government and to discredit its attempts to meet its problems in a realistic spirit.

In October the Natsir cabinet met the parliament for the first time and after prolonged debates on general policy won a vote of confidence with a substantial majority. After a nationwide drive to collect all arms possessed illegally by civilians, a widespread campaign of army and police forces to stamp out terrorism and banditry was scheduled to begin on Dec. 4.

**Foreign Relations.**—Indonesian relations with the Netherlands and the Netherlands-Indonesia union which was designed to systematize their voluntary close co-operation as sovereign states went through more than one severe crisis. The "Westerling" affair in the eyes of the Indonesians and the liquidation of the federal states which was looked upon as a violation of the right of self-determination by the Dutch caused considerable tension between the union partners. Nevertheless the two governments agreed not to let these differences stand in the way of the regular half-yearly conferences of ministers, as called for by the union statute. The first of these conferences opened in Jakarta on March 25, the second in November at The Hague. Both successfully handled several legal, financial and economic subjects and ended in mutually acceptable agreements.

At the first union conference it was decided to establish a joint committee to study the problem of the future status of New Guinea, which was held over at the round-table conference. The committee's report showed diametrically opposed Dutch and Indonesian standpoints; violent agitation for the annexation of New Guinea started, sparked by a series of fiery speeches by President Soekarno. This campaign brought the country into open conflict with Australia, whose government declared itself firmly opposed to any Indonesian territorial ambitions in New Guinea.

In its external policy the Indonesian government followed on the whole, though not dependably, the guidance of India and adopted an attitude of neutrality in regard to the disputes dividing the Atlantic and the soviet blocs. After prolonged hesitation, influenced in the main by China, ever looming large on the Indonesian political horizon, Indonesia finally joined the United Nations in September, where its delegation entered the assembly among manifestations of good will toward the youngest member.

(W. G. P.)

**Education.**—Schools (1949-50): primary 24,542, pupils 4,212,031, teachers 74,751; secondary 1,250, pupils 165,399, teachers 7,500; teachers' colleges 397, students 21,023. Universities: faculties 14, students

3,238. Chinese schools 681, pupils 162,315, teachers 3,421.

**Finance and Banking.**—Budget: (1949–50 actual) revenue 2,602,200,000 guilders, expenditure 3,907,100,000 guilders; (1950–51 est.) revenue 1,871,100,000 guilders, expenditure 2,596,100,000 guilders. National debt (July 1950): 18,394,000,000 guilders. Currency circulation (Sept. 1950): 2,400,000,000 guilders. Gold reserves (Sept. 1950): U.S. \$178,000,000. Bank deposits (Sept. 1950): 813,000,000 guilders. Monetary unit: guilder or florin with an exchange rate of 3.81 florins to the U.S. dollar.

**Foreign Trade.**—(1949) Imports 1,574,000,000 guilders; exports 1,478,000,000 guilders. Main sources of imports (1949): U.S. 25%; Netherlands 21%; U.K. 10%; Japan 7%. Main destinations of exports: Malaya and Singapore 24%; Netherlands 23%; U.S. 16%; U.K. 4%. Main imports: textiles 25.5%; foodstuffs, beverages and tobacco 20.5%; vehicles and machinery 17.6%; metals 10.6%. Main exports: petroleum 28.3%; rubber 23.9%; tin and tin ore 11.7%; copra 10.8%.

**Transport and Communications.**—Roads (1940): 43,700 mi. Licensed motor vehicles (Dec. 1949): cars 17,200; commercial 28,000. Railways (1948): 2,389 mi.; passenger traffic (1948) 49,000,000; freight carried (1949) 4,992,000 metric tons. Shipping regularly serving Indonesia (1947): merchant vessels 154, gross tonnage 757,000. Garuda Indonesian Airways (1949): passenger-miles flown 7,788; freight ton-miles 4,296. Telephones (1940): subscribers 51,606. Wireless receiving sets (1949) 100,000.

**Agriculture.**—Main crops (Java and Madura only; metric tons, 1949): rice, paddy 5,796,000; maize 1,700,000; cassava 4,692,000; sweet potatoes (1948) 1,140,000; soybeans (1949) 227,000; peanuts (1948) 270,000. Livestock: sheep (1948) 1,820,000; cattle (1949) 3,598,000; pigs (1948) 1,171,000; horses (1948) 620,000; buffaloes (1948) 1,246,000; goats (1948) 6,910,000. Fisheries: total catch (1947) 28,000 metric tons. Total production of fats and oils (1949) 840,000 metric tons.

**Industry.**—Fuel and power (metric tons, 1949): coal 662,000; crude oil 5,930,000. Raw materials (metric tons, 1949): tin 29,400; natural rubber 438,000; bauxite 678,000.

**Industrial Health.** During 1950 a state of national emergency in the United States drew attention to the manpower resources of the country and the ability of the health professions to contribute toward peak industrial production. The numbers of professional personnel engaged in industrial health services at the close of the year assured reasonable protection, and the facilities for recruitment and training were regarded as much improved. Industry, as a prime target in the event of hostile attack, revived discussions and plans for defense measures, both as regards plant security in the immediate sense and in the direction of integration with over-all community organization. Much thought was given to total mobilization and assignments to services either in the armed forces or supporting industrial facilities on the basis of special skills or physical and emotional fitness.

The division of industrial hygiene of the public health service embarked on a clinical and environmental study of uranium mining and milling. Air pollution continued to receive a major share of the division's attention, particularly through an international joint commission operating in Windsor, Ont., and Detroit, Mich. A field study instituted in ten eastern states represented the first steps toward uniform collection of occupational disease reports on a national scale. Field headquarters and laboratories were established in Cincinnati, O., in supplementation of similar services located in Salt Lake City, Utah, for the western area.

The Federal Security agency (*q.v.*) conducted a conference on aging which considered medical and health aspects of the older population, particularly suitable employment and preparation for retirement under medical and personnel supervision.

A National Conference on Workmen's Compensation and Rehabilitation was jointly sponsored by the Federal Security agency and the department of labour, to promote closer working relations. The second President's Conference on Industrial Safety reaffirmed the principle of joint action between official agencies, voluntary associations, labour and industry as a means for further substantial reductions in work injuries.

The President's Committee on National Employ the Physically Handicapped Week took action to alert the national security resources board to the potential contributions of the dis-

abled in current estimates of available industrial manpower.

The first Conference on Health Problems of Industries Operating in Tropical Countries was held at the Harvard university school of public health. The extensive operations of 22 English, Dutch and U.S. corporations were described as very largely dependent upon the control of epidemic disease and improvement of substandard nutritional and hygienic conditions found in the native populations of the orient, Africa and the East and West Indies.

Although there was no completely acceptable explanation for toxic manifestations associated with exposure to beryllium and certain of its compounds, the favourable results achieved through treatment with ACTH and cortisone were regarded as substantial progress. There was a definite trend toward a re-examination of pulmonary dust diseases in the light of functional tests and physiologic estimates of efficiency.

The interest in noise and its control was accelerated by conferences between otologists and industrial hygienists.

(C. M. PN.)

**Canada.**—According to A. Grut, chief of the industrial hygiene section of the International Labour office, Canada in 1950 was well to the front among the nations taking steps to combat occupational diseases. In March 1950 the industrial health division of the federal department of national health and welfare formed a new radiological health section, to meet potential health hazards created by the use of radioactive materials and radiation-producing apparatus. It acted as a source of government information on radiological health, and assisted provincial and municipal health agencies in health radiation problems. In June 1950 the National Research council Atomic Energy project disclosed a record of 1,181,148 exposure hours in 1949 without a single lost-time injury, and 84% fewer lost-time accidents than in 1948. The frequency of lost-time accidents was 1.44 and the severity 0.013 (international figures were 9.5 for frequency and 0.4 for severity in projects of similar size and type).

Quebec required annual medical certificates for men working more than 50 hours per month in dust-exposure jobs in mines. Ontario expanded its X-ray services for workers exposed to silica dust in foundries, quarries, mines and potteries. (C. Cy.)

**Great Britain.**—The year 1950 saw the publication of the report on *Industrial Lung Diseases of Iron and Steel Foundry Workers* (London) by A. G. McLaughlin, who, with the assistance of several specialists, had studied about 3,000 workers in 19 foundries in Great Britain. The main foundry occupations are sandblasting, the cleaning of castings by fettling, chipping and knocking out, grinding, moulding and furnace brick-laying. The report included the results of clinical and radiographic examinations, an analysis of earlier records and a study of the pathology of the lungs of 64 deceased foundry workers and of details relating to dust surveys, with descriptions of foundry processes and methods of investigation. In describing the X-ray appearances a fourfold classification was used; viz., normal, early reticulation, reticulation and nodulation (including massive shadows). It was shown that severe abnormalities are more likely to occur in steel foundry workers than in workers in iron or mixed iron and steel foundries; that fettlers are more liable to injury than any other foundry workers; and that moulders also are especially liable.

The Medical Research council published a comprehensive report on industrial fluorosis in Great Britain. Its investigation comprised the study of the hazard to man and animals in an area near Fort William, Inverness, Scot. The report dealt with the manufacture of aluminum and with the environmental studies within and without the factory and gave details of the effect of fluorine compounds on animals in the area together with clin-

INTENSIVE PUBLIC HEALTH inspection on a farm in Paulding county, O., during a severe epidemic of polio in the area in the fall of 1950. Blood samples were taken from children (right) and livestock (background), the water tested and counts taken of flies and other insects

ical, dental and other investigations on selected individuals. Although the older furnace-room worker inhaled a considerable quantity of fluoride, his urinary excretion of it roughly counterbalanced his intake. Some of the older workpeople showed bone changes now generally recognized as indicative of fluorosis, but none suffered any clinical disability. The residents in the neighbourhood showed no sign of injury to health.

There were two important meetings on industrial diseases in 1950: the third International Congress of Experts on Pneumoconiosis in Sydney, Austr., and an international meeting on industrial diseases in Milan, It. The Institute of Biology and the Atomic Scientists' association, with the support of the British association, held a two-day conference in October in the Royal institution. On the first day the biological and medical effects of nuclear radiation and tolerance levels and measures of protection were considered by a number of specialists in their respective fields. The second day was devoted to the biological implications of atomic energy and to the problems of the future. (See also ACCIDENT PREVENTION; MEDICINE; PUBLIC HEALTH ENGINEERING; PUBLIC HEALTH SERVICES.) (A. J. AR.)

**Industrial Production:** see BUSINESS REVIEW.

**Infantile Paralysis.** During 1950 an unusually high incidence of poliomyelitis (infantile paralysis) was reported from Australia, the Belgian Congo,

France, Germany, Israel, Mexico, the Philippines and the United States. During 1949 and 1950 a transition of the disease from endemic to epidemic form, previously noted in several other countries, occurred in Israel. Earlier, the highest annual total of cases reported from that area was 62 (in 1939). In 1949 there were 128, and during the first ten months of 1950 there were more than 1,500. The United States experienced its third epidemic year in succession, with 27,902 cases in 1948, 42,173 in 1949 and more than 30,000 in 1950. These figures may be compared with annual averages of 6,398 for the 5-year period 1938-42, and 16,306 for 1943-47.

An unknown fraction of the reported cases may have represented infection by the Cocksackie viruses rather than by viruses of the poliomyelitis group. During 1950 Cocksackie viruses were again repeatedly isolated from cases with symptoms indicative of poliomyelitis. While the majority of these patients were non-paralytic, Cocksackie and poliomyelitis viruses were isolated simultaneously from some paralytic cases. In these instances there were increases in antibodies against both viruses during convalescence. But the relation of the Cocksackie viruses to poliomyelitis in general and particularly to the paralytic disease was still to be clarified.

Several British and Australian observers reported that dur-

ing outbreaks of poliomyelitis a relatively high incidence of the disease was found among children who had recently received inoculations for immunization against other diseases; and that in such instances paralysis tended to affect the limb where the inoculation was made. The reason for this association was undetermined.

Earlier studies, on population samples from various parts of the world, had shown that antibodies against poliomyelitis virus (Lansing type) are acquired by the great majority of persons before maturity, indicating a wide dissemination of the virus and a high incidence of infection with the virus without evidence of disease. An exception to this appeared in a report on two relatively isolated communities of Eskimos in northern Alaska. Among 243 people, antibodies were present in more than 80% of those above the age of 20, but were absent, with few exceptions, in all below 20. Fatal cases of supposed poliomyelitis had occurred in the area 20 years before but no illness suggesting poliomyelitis had been observed since then.

The severe outbreak among Eskimos in northern Canada, reported in 1949, was found to behave in a manner typical of outbreaks of poliomyelitis in a population that had not previously been in contact with the virus.

Other developments in poliomyelitis research included the following:

The program of classifying the numerous poliomyelitis viruses that had been isolated from different human cases was continued. No new type of virus was reported to add to the three types previously identified.

Continuation of studies on growth of the virus in tissue cultures had opened the possibility of simplifying laboratory techniques for (1) detection of virus in suspected materials and (2) identification of virus types. Strains of virus were recovered for the first time by inoculation of tissue cultures with virus-contaminated materials without resort to animals. The virus in tissue cultures produces characteristic effects on the cells which effects are inhibited by specific poliomyelitis antibodies. **FILMS OF 1950.**—*His Fighting Chance* (British Information Services). (H. M. W.R.)

**Infant Mortality.** Within a brief period of 16 years, infant mortality in the United States had been cut by half by 1950. Provisional data for 1950 indicated a rate of about 30 infant deaths per 1,000 live births, compared with a rate of 60.1 per 1,000 for 1934; the earliest infant mortality rate available, for 1915, was 99.9 per 1,000 live births. The improvement from 1949 to 1950 was exceptionally rapid; in a nine-month comparable period, infant deaths fell by 7.3%, while the infant mortality rate declined by 6.4%. Except for April, each monthly rate for 1950 in this nine-month period was below that for 1949. A total of 111,200 infant deaths (under one year of age) was recorded in the United States during 1949; the infant mortality rate was 31.1 per 1,000 live births. In the same year, Canada recorded 15,158 infant deaths, and a rate of 42.8 per 1,000 live births. England and Wales experienced a marked decrease in infant mortality from 1949 to 1950 according to provisional urban data for the first ten months of both years; these data showed 13.5% fewer infant deaths and a 9% drop in the rate. For the whole of England and Wales, 23,682 infant

deaths were recorded in 1949 and the infant mortality rate was 32.4 per 1,000. New Zealand, in 1949, experienced the remarkably low infant mortality rate of 23.8 per 1,000.

In 1948, the latest year with complete data for the United States, the infant mortality rate ranged from a low of 28.9 per 1,000 in cities of 100,000 or more to a high of 36 in communities of 2,500 to 10,000 population; for the rural areas, the recorded rate was 33.1 per 1,000. Infant mortality in urban areas was at a minimum of 26.6 per 1,000 in the Pacific coast states, while the New England states were not much higher, with a rate of 26.9 per 1,000; the highest rate for urban centres was in the west south central states, where the rate was 42.1 per 1,000. As for rural areas, the low record was held by the west north central states with a rate of 26 per 1,000, and the high record by the mountain states with a rate of 46.6 per 1,000.

Infant mortality for the nonwhite population of the United States remained fully 50% higher than that for the white population; the respective rates for 1948 were 46.5 and 29.9 per 1,000 live births. Among the nonwhites, Negroes had a rate of 45.7 per 1,000 live births and other races a rate of 63.1 per 1,000. The infant mortality rates for males were appreciably higher than those for females. Thus, white males had a rate of 33.7 per 1,000, compared with 25.9 for white females; in the case of nonwhites, males had a rate of 51.4 and females 41.4 per 1,000 live births.

In 1948, just one-third of the infant deaths (under one year of age) occurred during the first day of life and one-tenth in the second day. More than two-thirds of the infant deaths were within the first month of life, more than one-fifth within the next five months and less than one-tenth within the second half year of infancy. Of the deaths within the first month of life, 48.8% were from premature birth, 15.3% from injury at birth, 13.1% from congenital malformations, 6.5% from asphyxia and atelectasis; and 3.7% from pneumonia and influenza. This mortality picture according to cause of death was greatly altered in the remaining 11 months of the first year of life. For that period, 28.8% of the deaths were due to pneumonia and influenza, 15.9% to congenital malformations, 15.3% to diarrhoea and enteritis, 8.1% to accidents, 2.3% to premature births and 2.1% to congenital debility. Almost one-half of the accidental deaths in infancy are from mechanical suffocation.

In the few years from 1940 to 1948, there was a reduction of almost 50% in the infant mortality rates for pneumonia and influenza, diarrhoea and enteritis and congenital debility; there were even more rapid decreases in the rates for syphilis and whooping cough. During the same period, however, there was practically no change in the infant mortality rate for congenital malformations; the rate for premature birth fell by about one-fifth.

Stillbirths (counting cases with a gestation period of at least 20 weeks) recorded in the United States during 1948 numbered 72,838; the ratio of registered stillbirths to live births during the year came to 20.6 per 1,000. The ratio for the white population was 18.3 per 1,000 live births, just half that for nonwhites who had a rate of 36.5. For the whites, the ratios ranged from a low of 15.1 per 1,000 live births for the Pacific coast states to a high of 21 for the middle Atlantic states; in the latter area, New York state had a very high rate, 22.9 per 1,000. However, interstate comparisons of stillbirth ratios are affected by differences in the definition of stillbirth and in the completeness of their reporting. It was found, in a New York city study, that two-thirds of the foetal deaths within the first three months of pregnancy were not reported; one-third of those in the next three months failed to be reported, and one-seventh of those in the three months following. **Insurance.** **Life Insurance.**—During 1950 the legal reserve life insurance companies of the United States and Canada paid about \$4,000,000,000 to policyholders or beneficiaries, an amount larger than in any previous year. If the increases in reserves held to assure payment of future benefits are included with payments to policyholders and beneficiaries, then about \$8,000,000,000 was paid or credited in 1950 to United States and Canadian families.

New life insurance issued by the companies of the United States and Canada during 1950 exceeded \$30,000,000,000, constituting another record. At the end of the year, the insurance owned by the 88,000,000 policyholders of the United States and Canada amounted to about \$244,000,000,000. However, this amount was equivalent to only about a year's income of the people of the two countries. The premiums paid in 1950 for life insurance and annuities totalled about \$8,000,000,000 or slightly more than 3% of the people's income.

Because of the strained international relationships, life insurance companies took precautionary measures to protect the interests of existing policyholders against an undue number of persons taking out large amounts of insurance in anticipation of combat service. During the year, some companies began to insert war clauses in policies issued to military personnel or to young men, while others adopted restrictions on the amount of insurance written on persons subject to military service.

The assets of United States and Canadian legal reserve life insurance companies increased by \$4,600,000,000 during 1950 and reached \$68,500,000,000.

In the United States, the life insurance companies' holdings of mortgages increased by \$3,200,000,000 during 1950 to attain a total of more than \$16,000,000,000. The companies' portfolios of corporate bonds and notes increased by \$1,700,000,000 during 1950; this increase was much less than in 1949 as a result of lower demands from corporations for new debt capital. On Dec. 31, 1950, all corporate securities owned by these companies aggregated \$25,200,000,000. Their holdings of United States government securities declined again during 1950 to \$13,650,000,000, which holdings were nevertheless more than were held by any other private institutional investor group with the exception of commercial banks.

The 1950 interest rate earned by United States companies on their total assets was expected to be about the same as in 1949 (3.04%). During 1950, interest rates obtainable on new investments rose somewhat, but rates on new long-term investments were still below the level reached after World War II.

In the United States, at the end of 1950, men in military service and veterans held more than \$38,000,000,000 of United States government and National Service life insurance and there were also several billions of dollars of life insurance in force in fraternal organizations, assessment associations, etc. Further-

more, the equivalent of a very large amount of life insurance was available under Social Security survivorship benefits; these benefits provide a basic amount of protection around which a complete life insurance program can be built. (See also SOCIAL SECURITY.) (L. A. L.)

**Casualty Insurance.**—The volume of premiums on casualty lines showed an increase in 1950 over the preceding year. This increase was almost entirely automobile insurance. The profit margin for the companies declined from the results for the two preceding years, and it was believed that some companies might show underwriting losses when all claims had been adjusted.

Automobile liability is the major source of business written by casualty insurance companies. With a record output of 8,000,000 new automobiles and the accumulative effect of automobile financial responsibility laws in many states, the volume of this business increased substantially in 1950. The frequency and severity of claims under such policies were both rising steadily. Claims consciousness by the public, and the disposition of juries to make larger and larger awards, indicated the desirability of rate revision in some jurisdictions. Premium differentials for drivers under 25 years of age, approved in some states, might improve the experience on this class of insurance.

Workmen's compensation results were adversely affected by three factors: pay rolls, upon which premiums are calculated, were lower during the first six months of 1950; many rate reductions had been made following the profitable experience of preceding years; and the benefits had been increased under workmen's compensation laws. Toward the end of the year accelerated production in many industries and higher wage scales had begun to increase the volume of premiums for compensation insurance.

Burglary insurance, which had been unprofitable during 1946, 1947 and 1948, showed a modest profit for the companies in 1950, despite a general reduction in rates effective Oct. 30, 1950. The experience of the three-year period, used to calculate this rate reduction, had produced a net loss to the carriers under policies issued to householders, and a profit under policies for industrial and commercial assured. The expense of operating this business reached an all-time high in 1950 and inflationary trends promised a further increase in 1951.

In the general liability field (other than automobile) owner's, landlord's and tenant's liability insurance continued to represent about 50% of the volume of premiums written. This classification produced an underwriting loss for the companies in 1949 and again in 1950. Higher rates on owner's, landlord's and tenant's policies were being sought by underwriters, and substantial increases were approved by the supervisory authorities for New York. Manufacturer's and contractor's liability and products' liability insurance were profitable during 1950, but the trend of profits on these two lines was downward. Operating costs were rising and, with the pressure of activity in defense preparation, an increase in accident frequency was anticipated. Both of these affected the profit margin adversely.

Plate-glass insurance, which was profitable during the first ten months of 1950, suffered unprecedented losses in the windstorm which struck the eastern states in November. Plate-glass losses in that storm, at greatly increased labour and material costs for replacements, turned a profit into an underwriting loss for many companies.

Boiler and machinery insurance premium writings increased more than \$10,000,000 in 1950 over the 1949 writings of \$33,000,000. As most such policies are written for a three-year term, the full effect of the general rate increase adopted in 1948 would not be felt until 1951. The ratio of incurred losses to earned premiums was approximately 22% for the year. The

bulk of the premiums on such policies is used for engineering and inspection services to reduce loss frequency, and to insure longer life and uninterrupted service by boilers and machinery subject to this expert scrutiny. Much new equipment was placed in service during 1950 by the manufacturers of boilers and power machinery who had an accumulation of unfilled orders following World War II. (See also FIRES AND FIRE LOSSES; VETERANS' ADMINISTRATION, U.S.) (L. E. F.)

**Hospital, Medical and Surgical Insurance.**—Nearly half the population of the U.S. had some type of hospital insurance at the close of 1950. There was a marked increase in the number of union contracts providing health coverage, resulting in a heavy growth for both nonprofit and commercial insurance programs, and encouraging an earlier tendency toward more comprehensive offerings in all fields.

Membership in nonprofit Blue Cross plans exceeded 40,000,000 at the end of the year. Nonprofit Blue Shield plans covered more than 19,000,000 for surgical benefits, and about half that number for medical benefits. There was a pronounced trend toward raising income limits for full service benefits in Blue Shield plans to \$5,000. The Health Insurance council reported the Dec. 31, 1949, commercial coverage, after eliminating duplication, as 28,000,000 for hospitalization, 23,000,000 for surgical and 4,500,000 for medical. Estimated totals for all types of coverage at the close of 1950 were 73,000,000 for hospitalization, 57,000,000 for surgical and 19,000,000 for medical, including consumer-sponsored, industrial and group clinic programs.

Nearly 50 health bills were introduced in the 81st congress. These called for direct federal action, encouragement of voluntary organizations, direct federal subsidies or grants-in-aid to the states. New proposals not previously introduced included the Wolverton bill (H.R. 8746), reflecting a plan proposed by Harold Stassen; the Bosone bill (H.R. 6766); the Flanders-Ives bill (S. 1970); and the Humphrey bill (S. 1805), reflecting the Cooperative Health federation's proposals. None of these bills received committee action.

Except in local instances, health insurance was not a major factor in the 1950 elections. California added a modest direct allowance for hospitalization to its compulsory cash sickness law. New York became the fourth state to put such a law into operation, while a similar proposal in Washington was overwhelmingly defeated by referendum after passage by the legislature. (A. G. S.)

**Great Britain.**—World-wide trading figures of British insurance offices published during the year 1950 revealed a phenomenal growth in premium income, in part the result of inflationary pressure but largely a reflection of the realignment of currency values in the latter months of 1949—a complex transaction variously interpreted by individual companies. The aggregate fire and accident premium income for 24 representative British offices in 1949 was £286,075,000; the combined underwriting surplus was £25,350,000, representing 8.9% of the premiums. Marine premiums rose to £34,656,000, and after providing a surplus of £2,945,000 the total marine funds reached £54,542,000. New ordinary life sums assured in 1949 again exceeded £500,000,000 but new industrial life business showed a further recession, the total new sums assured of eight leading offices being only £170,991,000.

The demand for ordinary life assurance cover was sustained. Short-term business was written in connection with gifts *inter vivos*, and also to provide temporary life cover to meet commercial needs. Assurance against estate duty was increasingly made subject to the provisions of the Married Women's Property acts. When the chancellor of the exchequer appointed a committee to review the income tax treatment of superannuation and pension schemes, reaction was not entirely unfavourable, and

much new business resulted. "Family protection" assurance was still popular.

In fire insurance the trend in the first half of 1950 was to a levelling off in the volume of premium income and, in some important territories, to a slight recession; but with the events in Korea and the subsequent stockpiling, premium income regained a certain buoyancy. The rise in commodity prices involved heavy insurance commitments, and it was not easy to provide full insurance cover for wool stocks in Australia and the Union of South Africa. The strain imposed on underwriting capacity showed how much the growth of free reserves had been restricted by increased taxation. Reinsurance then assumed its vital role once again, with excess-of-loss reinsurance attracting much attention.

The trend of insurance values in the United Kingdom was again toward higher levels, but the rise in aggregate premiums was not considered commensurate with the increase in money value of individual risk losses. In Canada the fires at Rimouski and Cabano in Quebec accounted for £8,000,000 and £5,000,000, respectively. Fire wastage was heavy during 1950, but the underwriting account produced a reasonable margin of profit.

Automobile business was again preponderant in the accident departments. Third-party insurance cover was sought, and there was a demand under existent cover for the upward revision of limits of indemnity because of the depreciated value of money.

The marine insurance market viewed with concern the lower rates quoted for cargo risks and also the effect of devaluation on hull underwriting, especially in the case of vessels repairing in hard-currency countries. Marine funds were maintained at a high level, and the British market provided cover for more than £8,000,000 on each of the Cunard "Queen" liners without government assistance. Theft and pilferage losses remained a serious problem. (P. Ss.)

**Inter-American Highway:** see ROADS AND HIGHWAYS.

**Interior, U.S. Department of:** see GOVERNMENT DEPARTMENTS AND BUREAUS.

**Interior Decoration.** In terms of progress, interior decoration for 1950 presented a picture of contrasts wherein the confusion that developed during the last six months of the year, dating from the outbreak of hostilities in Korea, seemed in danger of over-shadowing the genuine accomplishments of the first half of the year. The sum total, however, actually showed greater advancement than at any time since before World War II.

With new-home construction at its highest point since the 1920s, the need for simple, well-made, and reasonably priced home furnishings was more important than ever. In response, there appeared, one after another, entire collections of furniture designed specifically to meet these needs, done in every important decorative style from most advanced contemporary classifications to those of Provincial, 18th century or traditional derivation.

Simplicity, versatility and a minimum of ornate decoration were the common characteristics of every new group. Chests, shelves and storage units were specifically designed with the modern home and contemporary living in mind. The light look became increasingly important in consideration of the new homes where space was at a premium and multiple-purpose pieces proved their versatility in serving with equal success in living room, dining room or bedroom surroundings. Built-in units, including sofas and tables as well as chests and cabinets, became more popular, and similar pieces, actually portable but with a built-in appearance were a great success. In every price range, chair and

PRIZE-WINNING STORAGE CHEST (right) and chair (left) in an international low-cost furniture design competition sponsored jointly by the Museum of Modern Art and the Museum Design Project, Inc. Award-winners were first placed on commercial display in May 1950

sofa designs reached new heights in comfort and construction, with the use of new woods, new metals and the increased application of foam rubber in upholstery.

Playing an important part in the development of good design in all types of products for the home was the inauguration of the Good Design competition, sponsored jointly by the Museum of Modern Art in New York and the Merchandise Mart in Chicago, Ill., and scheduled as an annual event. Selections made in January and June of each year would be judged on the basis of their compatibility with "design intended for present-day life, in regard to usefulness, to production methods and materials and to the progressive taste of the day." The initial selections, presented for the first time in Jan. 1950, were hailed as an outstanding constructive influence on the entire field of interior decoration.

In furniture design, new interpretations of separate and occasional chairs appeared in great variation, from those of moulded or laminated plywood to chairs made entirely of plastic or of metal and wood with seats and back of woven burlap, woven plastic, paper fibre or even of specially processed string. Many new types of knock-down furniture appeared on the scene, and most of the new presentations were distinguished by their unmistakable evidence of greater quality. Chests, tables, desks and chairs and even a few sofas, designed to be put together with a minimum of effort and workmanship, branched far afield in the designs offered, in woods and finishes and ingenuity of construction.

More and more metal appeared in combination with wood, used for construction efficiency as well as for interesting appearance, particularly in contemporary pieces. Tables were shown with tops of copper, stainless steel or slate combined with a variety of woods in interesting design. And in addition to metals, materials such as cork, rawhide and cane were used in combination with woods with sufficient frequency to make their mark as a genuine fashion trend.

Among the interesting new finishes were those especially created for table tops, and marked by their common characteristic of practicality, apparent in terms such as waterproof, stain-proof, burnproof, alcoholproof and the like. One group of furni-

ture, made by an aircraft company and designated as precision-made, featured a finish that was said to withstand almost every type of damage. Still another successful finish of the indestructible type was one of plastic which could be made to look like any light or dark wood. When used as a table top in combination with natural wood for legs it was indistinguishable in appearance from the natural wood.

Television had a strong influence on many new pieces of furniture, with the accent on portability. Furniture in this group made use of casters on tables or chairs to provide for easy moving about. Tables were designed to be converted into seating pieces, and seating units appeared which could be extended to double size, or as collapsible units which could be stored away when not in use, along with an increase in longer sofas and more sectional units for corner placement in room decoration.

Cotton rugs showed a wide range of improvements and an ever-expanding acceptability in 1950, considerably beyond the special and scatter-rug classification. In new versions in room sizes they were considered a highly satisfactory and decorative as well as practical type of floor covering. One of the important innovations in this group was a reversible rug of cotton, tufted and looped on both sides to give double use and wear.

In fabrics for window and upholstery use nylon was increasingly important and included patterned as well as plain-colour presentations. Highly recommended for its resistance to wear and to soil, it provided a very practical product in this field and at a cost no higher than most other fabrics for similar use.

(G. M. J.)

## International Bank for Reconstruction and Development.

The operations of the International bank proceeded at an accelerated pace in 1950. The volume of loans, amounting to \$276,630,000, was somewhat greater than in the previous year, and brought total loan commitments to \$1,020,775,000. The bank's activities in providing technical advice to member countries also increased during the year. Bank lending for the first time extended to countries in Africa, southeast Asia, Australasia and the near east. Nineteen of the 49 member countries had bank-financed projects either under way or planned. In cases where a private enterprise, rather than a member government, is the borrower, the government guarantees repayment of the loan.

**Loan Operations.**—In Brazil, a loan of \$15,000,000 was made to the São Francisco Hydroelectric company for power development in the northeastern area of the country where lack of power had been a major obstacle to development. In Colombia, a loan of \$3,530,000 was made to the Central Hidroelectrica del Rio Anchicaya Limitada for a hydroelectric plant to foster economic development in the western part of the country. In Mexico, a loan of \$26,000,000 went to the Mexican Light and Power Company, Ltd., to help the company finance the expansion of its electric power facilities to meet the rapidly growing needs of Mexico City and the surrounding area; and a \$10,000,000 line of credit was established to enable a consortium of eight commercial banks and a government agency to make loans of between \$25,000 and \$1,000,000 to finance the development projects of private enterprises. A loan of \$33,000,000 was made to the General Administration of Electric Plants and State Telephones of Uruguay to help finance projects to augment electric power facilities and expand telephone services.

Two loans totalling \$7,000,000 were made to the Ethiopian government: one of \$5,000,000 for the rehabilitation and maintenance of the country's road system; the other of \$2,000,000 to provide foreign exchange for projects to be financed by a new Ethiopian development bank.

A loan of \$12,800,000 went to the government of Iraq to

finance the foreign exchange costs of a flood control project on the Tigris river to prevent the recurrent flooding of large areas of agricultural land and urban centres, particularly Baghdad; and possibly eventually to increase agricultural production through a projected irrigation system.

Two loans totalling \$16,400,000 to the Turkish government consisted of: \$12,500,000 to assist in a program to improve major ports in Turkey, and \$3,900,000 for the construction and mechanization of grain storage facilities throughout the country. A third loan of \$9,000,000 was made to the new, privately owned Industrial Development Bank of Turkey to enable it to make available to private enterprises in Turkey foreign exchange needed for industrial development projects.

A loan of \$18,500,000 was made to the Indian government to assist in financing the first stage of a long-range plan to develop the resources of the Damodar valley. The bank's loan would purchase equipment for constructing the Bokaro power plant and the Konar dam.

Three loans totalling \$25,400,000 were made to the government of Thailand to help finance three projects basic to the country's economy: \$18,000,000 for irrigation, drainage and water communications; \$4,400,000 for the development of the port of Bangkok; \$3,000,000 for railway rehabilitation.

A loan of \$100,000,000 went to the Australian government to make possible the purchase abroad of capital goods and equipment needed for development during the next two years. The sectors of the Australian economy concerned included agriculture, public utilities, railways, mining and general manufacturing industries.

**Other Activities.**—The bank's technical assistance activities continued to expand during the year. Comprehensive survey missions, inaugurated by the mission to Colombia in 1949, were undertaken in Turkey, Guatemala and Cuba. The broad objective of these missions was to examine all important sectors of the country's economy and to make recommendations designed to help the government formulate a long-range integrated development program.

Technical assistance of a different character was extended to other member nations. For example, the bank joined with the United Nations Food and Agriculture organization in sending a mission to Uruguay to survey Uruguayan agriculture and make recommendations designed to increase agricultural production.

Early in 1950 the bank retired its outstanding 2½% bonds due in 1957, by refunding them with a \$100,000,000 issue of 2% serial bonds due 1953 to 1962. In March, it sold a second issue of Swiss franc bonds in Switzerland amounting to 28,500,000 Fr. (\$6,600,000) principal amount of 2½% serial bonds due 1953 to 1956. The bank also sold for the first time without its guarantee bonds totalling the equivalent of \$1,215,000 from its loan portfolio, both in Europe and in the United States. The obligations so disposed of had been received by the bank in connection with loans to the Netherlands Herstelbank, the Cr dit National of France and the Luxembourg and Netherlands governments.

The international character of the bank's funds available for lending was considerably enhanced during the year. Twenty-three countries agreed to make part or all of their local-currency subscription to the bank's capital stock available for use in the bank's lending operations. This brought to 27 the number of countries which had done so.

Net income from the bank's operations for the fiscal year ended June 30, 1950, amounted to \$13,698,398, compared with \$10,610,247 for the previous fiscal year. A general reserve was established in 1950, to which the bank's net earnings were allocated. This reserve and a statutory special reserve already in existence amounted on Dec. 1, 1950, to approximately \$49,000,000.

With the admission to membership of Pakistan and Ceylon in 1950, the bank had 49 member nations at the end of the year.

The annual meeting of the governors of the bank was held at Paris in September. The fifth annual report, presented to the governors at that meeting, included a major section on the lending policies of the bank as they had been developed, on the basis of the bank's charter, through four years of actual lending activity. Among other things, the report emphasized that the bank's lending standards are intended to bring maximum benefit to countries receiving bank loans, as well as to provide the bank with the reasonable prospect, required by its charter, that its loans will be repaid. **International Children's Emergency Fund:** see CHILD WELFARE.

**International College of Surgeons:** see SOCIETIES AND ASSOCIATIONS.

**International Confederation of Free Trade Unions:** see DEMOCRACY; LABOUR UNIONS.

**International Court of Justice.** During the year 1950 the court gave the following advisory opinions and judgments:

**Admission of States to United Nations.**—On March 3 the court advised the U.N. general assembly, in response to a request, that the assembly was not competent under article 4, paragraph 2 of the charter to admit a state to membership in the United Nations without a recommendation from the Security council.

**South-West Africa.**—On July 11 the court gave an opinion regarding the mandated territory of South-West Africa. The territory, detached from Germany by the treaty of Versailles, had been placed under mandate with the Union of South Africa, to be administered under supervision of the League of Nations. Following dissolution of the League in 1946, differences arose between the Union and the general assembly concerning the international status of the territory, having in mind the trusteeship system established under chapter xii of the charter of the United Nations.

The assembly asked the advice of the court regarding the international status of the territory, the obligations of the Union arising therefrom, and in particular: (1) whether the Union continued to have obligations under the mandate; (2) whether chapter xii of the charter was applicable; and (3) whether the Union was competent to modify its status, and if not, where such competence was lodged.

The court stated: (1) that South-West Africa continued to be a territory under mandate; that the Union's obligations under the covenant of the League and the mandate continued; and that the supervisory functions of the League could be exercised by the United Nations, to which annual reports and petitions by inhabitants should be submitted; (2) that the provisions of chapter xii of the charter were applicable in the sense that they provided a means by which the territory might be brought under the trusteeship system, but that they did not impose upon the Union a legal obligation to place it under the system; and (3) that competence to modify its international status rested with the Union, acting with the consent of the United Nations.

**Interpretation of Peace Treaties.**—Charges were made in the general assembly by certain allied and associated powers, parties to the peace treaties with Bulgaria, Hungary and Rumania, that the three governments had violated provisions of the treaties relating to human rights and fundamental freedoms and had refused to submit the disputes to arbitration. The treaties provided for such disputes, commissions composed of three members—one appointed by each party and the third chosen by mutual agreement or, failing this, by the secretary-general of the United

Nations.

The assembly requested the opinion of the court on four questions: (1) whether the diplomatic exchanges relating to the matter disclosed "disputes" within the meaning of the treaties; (2) whether the three governments were obligated to appoint representatives to the commissions; (3) whether, in the event of an affirmative reply to question 2 and of the failure of one party to appoint its commissioner, the secretary-general might designate the "third member . . . upon request of the other party to dispute"; and (4) whether a commission thus constituted would be competent to make definitive and binding decisions in settlement of disputes.

The court, on March 30, answered the first two questions in the affirmative. Questions 3 and 4 were not to be considered unless the three governments should fail to designate commissioners within 30 days from the date of the first opinion. Commissioners were not designated and on July 18 the court gave a second opinion. It stated that the secretary-general was not authorized to appoint the "third" member when one of the parties had failed to appoint its national member, and that it was therefore unnecessary to consider question 4.

**Diplomatic Asylum, Colombia-Peru.**—On Jan. 3, 1949, Víctor Raúl Haya de la Torre, leader of a political party in Peru, who had been accused of promoting a military rebellion about three months earlier, was given asylum in the Colombian embassy as a political refugee. A request by the embassy for a safe-conduct for his departure from the country was denied by Peru on the ground that he was guilty of common crimes. On Aug. 31, 1949, the two governments agreed to submit the dispute to the court. In the proceedings both governments invoked, *inter alia*, the 1928 Havana Convention on Asylum. Colombia asked the court to declare: (1) that, as the state granting asylum, its qualification of the nature of the offense was binding on Peru; and (2) that Peru was bound to give the necessary guarantees for the safe departure of the refugee.

Peru asked that these contentions be dismissed, and as a counterclaim contended that the grant of asylum was in violation of articles 1 and 2 of the Havana convention, and in any case its maintenance was contrary to the treaty. Article 1 of the convention prohibited the granting of asylum to persons accused of common crimes. Article 2 recognized political asylum but provided that it might not be granted "except in urgent cases and for the period of time strictly indispensable for the person . . . to ensure in some other way his safety."

The court, on Nov. 20, rejected Colombia's two submissions. It also rejected that part of Peru's counterclaim which was based on article 1 of the convention, since it had not been shown that the refugee had been accused of common crimes prior to the grant of asylum.

It found, however, that asylum was not justified under the urgency provisions of the convention.

Immediately following the reading of the judgment Colombia filed application for interpretation, setting forth certain questions concerning surrender of the accused to the Peruvian authorities. By a further judgment given Nov. 27 the court referred to provisions of the statute and rules of court requiring in such cases a showing of disagreement between the parties as to the meaning and scope of the judgment. It stated that there was no disagreement; that the application presented entirely new questions not covered by the judgment, and as such was inadmissible. (See also INTERNATIONAL LAW; UNITED NATIONS.) (G. H. H.)

**International Labour Organization.** The International Labour conference continued to be the central feature of I.L.O. activities in 1950. It met in Geneva, Switz., June 7–July 1, with 52 of

its 62 member states represented. Two new members—Indonesia and Viêt-Nam, were admitted during the conference. Advisers and representatives of the United Nations and other specialized international agencies also attended. The director's report stressed the topic of "Productivity of Labour." Delegates agreed that the I.L.O. could and must help increase production in highly industrialized countries, as well as in less developed areas, by worldwide sharing of techniques to increase output. In addition to productivity of labour and better distribution of its product, the subjects of migration and technical assistance were the major themes of conference discussions.

The conference adopted no new convention, and only one recommendation—no. 88, concerning the vocational training of adults, including disabled persons. Under its double discussion procedure, however, two topics were debated—minimum wage-fixing machinery in agriculture, and equality of remuneration for men and women workers for work of equal value. The work of the conference as a whole consisted chiefly in stocktaking, appropriate to its 30th anniversary year, and in intensification and integration of its new role as a specialized agency of the United Nations.

Preparation for action in the annual and regional conferences, and the operational activities of the I.L.O. required much time and attention at the conference.

The preliminary migration conference held in Geneva in April–May had shown how Europeans who found no employment at home could be transported to oversea countries through the help of I.L.O. agencies. Appreciation of the practical results of I.L.O. migration work was shown in the \$1,000,000 fund provided by European immigration and emigration countries for technical assistance.

This fund was in addition to the I.L.O. regular budget for 1950 and 1951.

The budget voted for 1951 by the International Labour conference was \$6,219,506, about \$300,000 more than that for 1950; the increase was due chiefly to higher costs of operational activities.

The committee of experts on the application of conventions and recommendations reported for the first time, under article 19 of the revised constitution, on the annual reports required on unratified conventions and on recommendations, as well as on particulars for the submission to competent national authorities of the conventions and recommendations adopted by the conference in 1948. The conference committee had the same material plus the report of the experts. All agreed that while the new requirement imposed greater burdens on both the experts and the conference committee, it yielded worth-while results, but the annual reports required by article 22 of the constitution on ratified conventions were still considered of major importance. Of the 98 conventions previously adopted and including those of the 32nd conference, many not yet in force, 89 were listed as the total adopted from 1919 through 1948, and still open for ratification. The total number of ratifications to Oct. 30, 1950, was 1,152, an increase of 105 for the conference year (June 1949–June 1950) and of 108 for Nov. 1949 to Oct. 1950. The new reports on six unratified conventions and six recommendations adopted by the conference in 1948 showed the need for more thorough examination by governments of the possibilities of ratification of conventions, and the extent to which effect had been given to the instruments in question.

Only a third of the members had submitted all these instruments to their legislatures.

The governing body held its usual four sessions (Jan. 3–7 in Mysore, India; March 8–11 and June 2–30 in Geneva, Switz.; Nov. 13–25 in Brussels, Belg.) and accomplished a difficult task in implementing the decisions of the Asian Regional conference

at Nuwara Eliya, Ceylon, in January, with its 16 resolutions applying I.L.O. principles and agreements to Asian conditions. It also reviewed and implemented the work of the industrial committees and approved 15 fellowships. (See also CHILD WELFARE.)

**BIBLIOGRAPHY.**—*International Labour Review* (monthly), *Industry and Labour* (bimonthly), the *Legislative Series*, the *Industrial Safety Survey*, the *Year Book of Labour Statistics*, the *Official Bulletin*, and other regular publications appeared as usual. Special interest centred in the report of the director-general and the fourth report of the I.L.O. to the U.N. (S. McC. L.)

**International Law.** During 1950 international law continued to develop in the direction of the law of a world federation, although it could hardly be said that international politics manifested a similar tendency. Among developments of importance were the clarification of the concept of aggression, the exercise of the authority of the United Nations to determine aggression and to take forcible measures to suppress it, the emancipation of the United Nations, at least in part, from the crippling influence of the veto, the drafting of a Covenant on Human Rights with procedures of implementation, the nullification by national courts of local legislation contrary to the U.N. charter provisions protecting human rights, the interpretation of international constitutional instruments effectively to fulfil their purposes and the increased activity of the International Court of Justice and the International Law commission in applying and codifying international law.

**Collective Security.**—The rapid decision of the Security council of the United Nations in June 1950, taking advantage of the voluntary absence of the soviet delegation, that the Communist government of North Korea was guilty of aggression against the Republic of Korea and the rapid organization with U.S. leadership of military forces under the United Nations flag to implement this resolution marked the most positive application of collective security to that date. The international law of collective security had been observed, but the intervention of Communist China in Korea raised doubts whether the political situation in the world was yet adapted to that law.

Neither the Soviet Union nor the Communist Chinese government had, in any way, participated in the Security council's decisions of June 1950. On the contrary they made it clear that they did not accept these decisions, and considered North Korea to have been the victim of aggression instituted by the United States and the Korean republic. The power of the Communist bloc was such that the United Nations could not confine the operation to one of policing to suppress aggression if the opposing bloc intervened, as eventually it did; nor could decisions determining aggression be made at all if the great Communist powers participated in the Security council and exercised their vetoes.

These two weaknesses in the law of collective security were recognized by the United Nations and efforts were made in the fifth assembly to remedy them. The assembly passed on Nov. 3, 1950, the "Uniting for Peace" resolution initiated by the United States. This resolution provided for emergency meetings of the general assembly on 24-hr. notice in order to make recommendations concerning aggression if the Security council was unable to function. Furthermore, members of the United Nations were called upon to earmark forces for policing purposes and the United Nations was to establish a Peace Observation commission to report actual or potential aggressions and a Collective Measures committee to report on methods to maintain international peace and security. To alleviate the belligerent potentialities of this more effective organization of collective security in a bipolar world, one pole of which rejected the procedures, the resolution also urged efforts at pacific settlement

and meetings among the great powers to achieve political adjustments, thus moderating legal sanctions by processes of political negotiation and conciliation.

The assembly also passed on Nov. 17, 1950, a resolution initiated by Yugoslavia recommending that states engaged in hostilities declare within 24 hr. a readiness, if reciprocated, to discontinue military operations and to withdraw their forces and authorizing the United Nations Peace Observation commission to supervise such action. This method of stopping hostilities, or if unsuccessful in that regard, of providing evidence for determining the aggressor, had been utilized by the League of Nations and resembled the procedure set forth in article 40 of the U.N. charter authorizing the Security council to call upon states engaged in hostilities to observe "provisional measures" to stop the fighting. This resolution also dealt with a soviet proposal to define aggression by referring it to the International Law commission for study.

These resolutions defining both the legal and political aspects of collective security and augmenting the role of the general assembly, in which no country had a veto in this regard, must be regarded as further steps in developing the new international law based upon the assumptions stated in the first Hague convention of 1899 that there is a "solidarity uniting the members of the society of civilized nations" and that the major interest of that society is to "obviate as far as possible recourse to force in the relations between the states."

**Sources of International Law.**—The direction of international law depends in no small measure upon the criteria applied in interpreting and applying written instruments and customary rules under changing conditions. If the sovereignty of nations is assumed and international rules and instruments are construed to invade that sovereignty as little as possible, progress toward a law-governed world reaching down to the individual would be slow. If on the other hand, such instruments and rules are construed, so far as possible, to realize the purposes and needs set forth in general statements of principle, progress would be more rapid. The issue has been defined as that of "restrictive" v. "effective" interpretation. Practice during 1950 illustrated a preference for "effective" interpretation in a number of instances.

The International Court of Justice, in an advisory opinion requested by the general assembly, held that South-West Africa remained in the status of a mandated territory. Since, however, that status implied an international agency of supervision and the League of Nations designed for that role no longer existed, the tribunal found that the principle of effectiveness justified substitution of the United Nations for the League of Nations. South Africa was, therefore, obliged to administer the territory in accord with the mandate and to report to the general assembly of the United Nations. South Africa was not, however, obliged to change the mandate to a trusteeship as had been done by most of the mandatories. The charter was so explicit in regard to the voluntary character of such a transfer that the principle of effectiveness could not be applied. The case illustrated both the possibilities and the limitations of judicial construction as a method of legislation.

A memorandum of the secretary-general published March 8, 1950, concerning the representation of China in the United Nations also urged that international law be interpreted by the principle of effectiveness. Though acknowledging that recognition of a new government was a political question, the secretary-general felt that the representation of a member in the United Nations should be governed by the legal principle which attached prime importance to effectiveness in carrying out the purposes of the charter. "In essence, this means an inquiry as to whether the new government exercises effective authority

within the territory of the state and is habitually obeyed by the bulk of the population."

This memorandum seemed to imply that the Communist government of China, which controlled the country except for Formosa, should represent China in the United Nations, but it was not given effect because of the outbreak of hostilities in Korea and the subsequent intervention of Communist China. The nationalist government of China was permitted to represent China in the Security Council and the general assembly, but the Communist government was invited to present its views concerning the Korean hostilities in November. The assembly, however, considered a resolution introduced by Cuba which, as amended by Uruguay, modified the criteria proposed by the secretary-general. This resolution specified among other factors to be taken into consideration in deciding upon the representation of a member: (1) the extent of effective control over territory and acceptance by population; (2) willingness to accept responsibility for the discharge of charter obligations; and (3) extent to which authority had been established by internal processes. After extensive debate the general assembly approved on Dec. 14 a resolution which merely said the general assembly was the organ of the United Nations best qualified to decide upon the representation of a member and that it should consider the question "in the light of the purposes and principles of the charter and the circumstances of each case." This treatment of the problem as political rather than legal was doubtlessly influenced by the military intervention of Communist China in Korea.

The principle of effectiveness was applied by the California court of appeal in the case of *Fujii v. California* (217 Pacific Reporter [2nd], 481; 218 Pac. [2nd] 595) in holding the California Alien Land Law inapplicable because contrary to the provisions of the United Nations charter, a treaty binding the United States. By the charter all members pledged themselves to take joint and separate action in co-operation with the organization for the achievement of universal respect for and observance of human rights and fundamental freedoms for all without distinction as to race, sex, language or religion (article 56). It had been urged that this charter provision was not self-executing. The court, however, said, "Such a discrimination against a people of one race is contrary both to the letter and to the spirit of the Charter which, as a treaty, is paramount to every law of every state in conflict with it. The Alien Land Law must, therefore, yield to the treaty as the supreme authority."

**Status of the Individual.**—No tendency of modern international law was more discussed during 1950 than that according a legal status to the individual. Effective international procedures for maintaining the status of individuals had not yet been established, although the United Nations Commission on Human Rights, the United Nations International Law commission and the general assembly had discussed the problem at length. The Covenant on Human Rights drafted by the Human Rights commission designed to give legal effect to some of these rights did not provide for direct access to international procedures by the individual, but was to be implemented only on the initiative of governments. Proposals which had been made permitting individuals to petition organs of the United Nations on the basis of the charter provisions or the provisions of the Covenant on Human Rights were not accepted by the commission, but the general assembly on Dec. 4, 1950, returned the draft to the commission with instructions to consider provisions for petition from individuals and organizations on alleged violations of human rights. It was urged that this right was implied by the charter and it would seem to follow from the self-executing character attributed to the charter protection of human rights

by the California court in the *Fujii* case and by a Canadian court in refusing to give effect to racially restrictive covenants in the *Wren* case (1945, 4 Ontario Reports 778). In the *Fujii* case it was even suggested that the Universal Declaration of Human Rights proclaimed by the general assembly in 1948, while not a treaty, was an important document for interpreting the meaning of the term "human rights" as used in the charter. The possibility of individual petition was again raised by the action of ten Hollywood writers and others alleging that human rights had been violated by their conviction for refusing to testify before the un-American activities committee of the United States house of representatives.

The general assembly, in addition to considering the draft Covenant on Human Rights, had before it the advisory opinions of the International Court of Justice (March 30 and July 18, 1950) finding that Bulgaria, Hungary and Rumania were obliged to give effect to the human rights provisions in the peace treaties to which they were parties and to observe the procedures of implementation prescribed in those treaties. The general assembly condemned the wilful refusal of the three governments to carry out these procedures and invited members of the United Nations to submit evidence on the matter to the secretary-general to be transmitted to other members.

One of the most important and most difficult human rights to deal with is that of freedom of transnational communication. Efforts had been made to ensure this freedom by conventions, but the soviet-bloc states had refused to accept conventional obligations and had attempted to prevent radio or other information coming into their territory and to prevent information going out of their territory except through governmental censorship. Juristic discussion of the subject during 1950 indicated the difficulty of solving this problem because of the traditional position of international law permitting states to control incoming and outgoing communications in order to defend themselves from subversive or revolutionary movements and to protect the integrity of their national cultures. In this field the conflict between national sovereignty as traditionally interpreted and the human rights protected by the new international law was emphasized and a juristic line between communications which are legitimate and those which have the character of psychological warfare had not yet been drawn.

In regard to the liabilities of individuals under international law, the Genocide convention came into force, but without ratification by the United States. Certain interpretations insisted upon by the senate committee on foreign relations were still under discussion in 1950. The International Law commission submitted to the fifth assembly a report codifying the principles of the Nuernberg judgment on war crimes and also dealing with the general topic of crimes against the peace and security of nations and the establishment of an international criminal court. The general assembly provided for a conference at Geneva in Aug. 1951 to draft a convention for an international criminal court.

**Rights and Duties of States.**—Among more conventional problems of international law discussed during the year the following may be mentioned:

The formalities of international legislation through conclusion of multilateral treaties were expedited through the practice of "acceptance"—a more flexible procedure than those of "adhesion," "accession" and "ratification." The problem of reservations to such treaties was faced in connection with the Genocide convention and the fifth assembly asked for an advisory opinion of the International Court of Justice on the subject.

The International Law commission presented to the fifth assembly recommendations for making the sources of international law more available, urging particularly that the assembly

provide for an index of the League of Nations and the United Nations treaty series, for a résumé of practices of the United Nations on questions of international law and for a series of reports on international arbitral awards. It also recommended that governments publish digests of their diplomatic correspondence and other materials bearing upon international law.

On matters of diplomatic and other immunities under international law, a British court held that the Tass agency was immune from local jurisdiction because it was a branch of the soviet government and not an independent corporation (*Krajina v. Tass Agency*, 1949, 2 All. E.R. 274). The immunity of the press counsellor of the Rumanian legation in Washington, D.C., was upheld by a U.S. court (*Mongillo v. Vogel*, 84 Fed. Supp. 1007, 1949) as was the immunity of the U.S. vice-consul in England on certification by the foreign office of a statement from the United States embassy that he was attached to that embassy (*Price v. Griffin*, Br. Year Book. Int. Law, 1949, p. 433). The third secretary of the Australian mission to the United Nations was held immune on a speeding charge (*New Rochelle v. Page-Sharp*, 91 N.Y.S. 2d 290, 1949), but V. A. Gubitchev, attached to the headquarters planning staff of the United Nations and a soviet national, was not allowed immunity on an espionage charge in the United States (*U.S. v. Coplon and Gubitchev*, 84 Fed. Supp. 472, 1949).

The International Court of Justice decided in a dispute between Colombia and Peru on Nov. 20, 1950, concerning the asylum of a Peruvian political leader, Víctor Raúl Haya de la Torre, in the Colombian embassy at Lima. It held that Peru was not bound to give De la Torre a safe conduct through its territory or to accept Colombian unilateral assertion that his offense was political. The court, however, would not accept Peru's contention that he was guilty of a common crime since the charge was that of military rebellion. The court also held that the conditions for giving diplomatic asylum under treaties, especially the Havana convention of 1928, had not been fulfilled in this case. The opinion left Colombia uncertain what to do with De la Torre, who remained in its embassy and it requested an interpretation by the court. The court, however, held on Nov. 27 that the questions which had been submitted did not permit it to solve this problem.

The International Court of Justice also awarded damages to Great Britain in the Corfu channel case, although Albania, which in an earlier decision had been found liable for the destruction of certain British warships in 1946, denied the jurisdiction of the court to fix the damages and was absent. In another case the court advised the general assembly that it could not admit new members to the United Nations without favourable recommendation by the Security council, thus sustaining the great power veto upon new members. As already noted, the court during the year advised concerning the status of South-West Africa and concerning the responsibilities of Bulgaria, Hungary and Rumania under the human rights provisions in the peace treaties ratified by those countries. During the year Indonesia was admitted to the United Nations and the general assembly decided that Eritrea should be federated with Ethiopia.

Certain matters concerning the international law of hostilities were considered. A United States court held that persons deprived of property under duress in Germany could not gain relief if their claims had been outlawed by statutes of limitations, even though the United States diplomatically had favoured the policy of restoring such property (*Bernstern v. Nederlandsche-Amerikaansche Stoomvaart Maatschappij*, 173 Fed. 2d 71, 1949). In another case the traditional rule suspending the operation of statutes of limitations during the period of war was applied (*Frabutt v. N.Y.C. and St.L. RR*

*Co.*, 84 Fed. Supp. 460, 1949). The rule that a government cannot close ports occupied by insurgents was announced by the department of state in connection with protest against the seizure of certain United States vessels by Chinese nationalists while attempting to enter or leave Communist-held ports.

The United Nations International Law commission made progress in codifying the law of treaties, of arbitral procedure and of the regime of the high seas. The International Law association met in London and considered problems of nationality, of the sea bed, of sovereign immunities, of the status of corporations, of air law and of the codification of international law. The Hague Academy of International Law met in the summer of 1950, and during the course of its discussions paid especial attention to problems concerning the relations of international politics and international organization to international law. (See also INTERNATIONAL COURT OF JUSTICE; LAW; TRUST TERRITORIES; UNITED NATIONS.)

**International Monetary Fund.** Marked improvement occurred during 1950 in the earnings and reserve positions of most of the International Monetary fund's 49 member countries, especially those which had devalued their currencies in 1949. This improved trend, which was already conspicuous in the first six months of 1950, was extended during the rest of the year as international trade and payments also felt the effects of stimulated demand arising from increased defense expenditures, especially those in the United States. In view of the prospective large rearmament expenditures, the fund in its *Fifth Annual Report* and other published statements recommended strong anti-inflationary policies to stabilize the purchasing power of members' currencies and to preserve their economic health. In transmitting this report to the board of governors at the annual meeting in Sept. 1950, the managing director of the fund recommended increased taxation, restriction of investment and credit to essential purposes, and the reduction of less essential government and private expenditures in view of the increased military expenditures.

In view of the improved reserve and balance of payments positions of its members during 1950, the fund also felt a relaxation by some member countries of their exchange restrictions was justified. Moreover, as financial adviser to the contracting parties to the General Agreements on Tariffs and Trade (G.A.T.T.), the fund pointed to the increased earnings and improved reserve positions of certain countries as justifying a progressive relaxation in the level of discriminatory trade restrictions, which had been imposed by some members.

During 1950, the fund's membership was increased to 49 countries, following admission of Pakistan with a quota of \$100,000,000 and Ceylon with a quota of \$15,000,000 and the resignation of Poland. Total quotas in the fund, with these changes, amounted to the equivalent of \$8,036,500,000. Of this amount, approximately \$1,494,000,000 was held in gold and \$5,534,000,000 in members' currencies; approximately \$1,003,000,000 in gold and currencies was not yet due from members whose initial par values had still to be agreed upon.

Foreign exchange transactions of the fund, from the beginning of operations in March 1947 through the end of 1950, totalled the equivalent of \$777,283,000. Of this, approximately \$759,830,000 represented sales by the fund of U.S. dollars, the equivalent of \$11,408,000 represented sales of Belgian francs, and \$6,045,000 represented sales of British pounds sterling. However, there were no sales of currency except in connection

with repurchases by member countries of their own currencies.

Three countries repurchased amounts of their own currency from the fund during 1950 with gold and dollars. The payments were made by Belgium (\$12,100,000 in U.S. dollars and \$8,500,000 in gold), Egypt (\$7,678,163 in U.S. dollars and \$829,766 in gold) and Ethiopia (\$300,000 in U.S. dollars), bringing the total of all repurchases since the beginning of operations to \$33,017,000.

While the fund's discussions with its members are confidential, some of the subjects and decisions taken are revealed from time to time in public announcements. Among these, there was announced concurrence by the fund during the year in par value changes for the Ecuadorian sucre, Icelandic króna and the British Honduras dollar, and in various exchange rate modifications involving the currencies of Austria, Bolivia, Chile, Iran and Nicaragua. The fund agreed to an extension of Canada's gold mining subsidy program, at a reduced rate, through 1951.

The fund published in May 1950 the recommendation of its executive board advising against the adoption of a proposal for a change in the fund's gold policy on external transactions in gold at premium prices that had been made by the Union of South Africa at the board of governors' meeting in Sept. 1949, calling for sanction by the fund of the sale by member countries of one-half of all newly-mined gold production in foreign markets at premium prices. This proposal was referred to the executive board for study in the light of "all relevant considerations." In addition to concluding that no change in the fund's gold policy was desirable, the executive board stated that in its view there was no economic justification for recommending to the board of governors a uniform change in the par values of all currencies in relation to gold. The position of the executive board was upheld by the board of governors at its fifth annual meeting in Paris in Sept. 1950.

During the year the fund published the first of its annual series of reports on exchange restrictions, as required by its articles of agreement. Its work in this and other related fields of exchange and trade restrictions was made the responsibility of a new exchange restrictions department. Another publication begun during the year, entitled *Staff Papers*, makes available selected studies prepared by the staff for the information and use of the fund and its officials. The fund also publishes a *Balance of Payments Yearbook*, a monthly statistical bulletin (*International Financial Statistics*) and a weekly economic news digest (*International Financial News Survey*). *Direction of International Trade* is published jointly with the International Bank for Reconstruction and Development and the Statistical Office of the United Nations.

The fund maintained interest in the creation and early operations of the European Payments union, being concerned especially with its effects upon general multilateral exchange convertibility and nondiscriminatory exchange and trade practices, which are the fund's objectives. It had close contacts and working relations with the International Bank for Reconstruction and Development, and with the United Nations (*q.v.*) and those of its specialized agencies that have related interests.

At the 1950 annual meeting of the governors, regular biennial elections were held to name 9 executive directors for a two-year term to represent the 44 members who do not appoint directors; the other five posts on the executive board are filled, in accordance with the articles of agreement, by appointment by each of the five countries having the largest quotas in the fund. (See also BANKING; EXCHANGE CONTROL AND EXCHANGE RATES; INTERNATIONAL TRADE.) (A. N. O.)

**International Red Cross:** see RED CROSS.

**International Refugee Organization:** see REFUGEES.

**International Trade.** The value of world exports totalled approximately \$54,900,000,000 in 1949 and \$51,200,000,000 in the first half of 1950, at an annual rate. The volume<sup>1</sup> of exports in the first six months of 1950 was, however, actually 5% greater than in 1949 because of a lower price level in terms of dollars. After the termination of World War II, 1949 was the first year in which the volume of world trade exceeded prewar levels. The volume of world exports in that year was 8% higher than in 1937.

In the first half of 1950 progress was made in the direction of international equilibrium. The world trade deficit as indicated by the United States export surplus fell to \$2,200,000,000, at an annual rate. Decreasing exports from the United States and increasing exports of other countries reduced the United States share of world exports to 19% of the total.

The war that started in South Korea shortly after mid-year greatly affected world trading relationships. The defense programs of the western nations stimulated their purchases of raw materials. The price in world markets of these and other commodities, which had already started to rise, advanced sharply. United States imports rose rapidly and, in the third quarter of the year, United States merchandise transactions came into approximate balance for the first time since 1937. For the year as a whole the United States merchandise export surplus fell to \$1,400,000,000. Increased sales to and decreased buying from the United States, U.S. financial assistance totalling more than \$4,000,000,000 in 1950, and a capital outflow from the U.S. combined to enable other countries to add approximately \$3,600,000,000 to their gold and dollar reserves. Over the course of the year these countries regained approximately 50% of the \$7,200,000,000 in gold and dollar assets sold to the U.S. from the beginning of 1946 to the end of 1949. Headway was thus made toward currency convertibility. (See also GOLD.)

As a further step in international trade agreement negotiations, the third round of tariff negotiations within the framework of the General Agreement on Tariffs and Trade began at Torquay, Eng., on Sept. 28, 1950. (See also TARIFFS.)

**United States.**—Merchandise exports and imports of the United States were more closely in balance in 1950 than in any other year in the preceding decade. Exports of \$10,300,000,000 were 15% lower than in 1949, and imports totalling \$8,800,000,000 increased 34%. The resulting export surplus of \$1,400,000,000 was approximately one-fourth the size of the surplus in the previous year.

Export prices which had reached their post-World War II peak in 1948 declined throughout 1949 and in the early months of 1950. In June the unit value of exports began to advance and by November had increased approximately 9% over the low point reached in May. The volume of exports in the first 11 mo. of 1950 was 14% smaller than in the comparable 1949 period.

Imports into the United States rose in each quarter of the year, reflecting in the earlier months an increase in demand for consumers' goods and for raw materials both for current use and inventory restocking, accompanying improved business activity and, after the Communist aggression in Korea, the speed-up of the armament program. By the last quarter of the year imports were running at an annual rate of nearly \$10,500,000,000 in comparison with \$6,600,000,000 in 1949 and \$7,100,000,000 in 1948. The unit value index of imports began to advance in Dec. 1949, rose 5% by May 1950 and 26% by November, from November of the previous year. The volume of imports, Jan.-Nov. 1950, was 24% higher than in the same months of 1949.

In the months Jan.-Nov. 1949 the United States had an export surplus in its trade with each of the major trading areas. In the

<sup>1</sup> Volume as used in this section and the section on United States trade refers to value figures adjusted for changes in the price level.

same months in 1950 an import surplus of \$265,000,000 developed with the Latin American republics, \$101,000,000 with Asia, \$58,000,000 with Oceania and \$117,000,000 with Africa. Trade with Canada came more nearly into balance than it had in many years. Exports exceeded imports by only \$60,000,000. The export surplus in the trade with Europe totalled \$1,400,000,000 as compared with \$2,900,000,000 in the comparable period in 1949. This was the only major trading area with which a sizable surplus was sustained.

‡Not available.

in the preceding year. There occurred during the year a substantial expansion in shipments to the United States which nearly wiped out Canada's traditionally heavy import surplus with that country.

The currency changes of Sept. 1949 were of considerable importance in imports, particularly in the case of imports from the United Kingdom. In 1950 the value of receipts from the United Kingdom increased 31% over 1949. Imports also increased from other European countries, notably Belgium, the Netherlands, Germany and Sweden.

Trade with the United States accounted roughly for about two-thirds of both imports and exports. Even in 1947 imports from the United States, which totalled slightly less than \$2,000,000,000, were almost twice as large as exports to that country. Drastic import restrictions were imposed in order to end the exchange drain. In 1950 imports from the United States were slightly higher than in 1947, but the trade deficit fell to \$120,000,000. In three years the value of Canadian shipments to the United States had increased by more than \$900,000,000. In 1950 alone the value of exports to the United States rose 34% over that of 1949.

Canadian gold and dollar reserves continued to gain markedly during the year, and the improvement attracted an increased inflow of speculative capital. When the volume of incoming United States funds assumed large proportions through September, the government abandoned the official pegging of the exchange at 90.9 U.S. cents and from Oct. 1 permitted the currency to be quoted in free markets until further notice. It also suspended the remaining restrictions on imports of consumer and capital goods from the United States effective as of Jan. 2, 1951. The trade was thus made free of direct restrictions for the first time since Nov. 18, 1947.

§Imports for consumption.

**Latin America.**—The foreign trade of the Latin American republics again assumed an upward trend in 1950 after a decline in 1949 from the record levels attained in 1947 and 1948. The year began with the heavy import demand of many of the countries held in check by import controls imposed because of the shortage of gold and foreign exchange reserves. On the export side the increase in coffee prices which began in the fall of 1949 was in contrast to the declining price trend for many of the other principal export commodities of the area. However, the developments in Korea resulted in marked changes in the trade of the area in the second half of 1950, and available statistics indicated that the value of exports increased considerably in 1950 as compared with 1949, while imports showed a smaller increase.

During the latter half of 1950 world conditions brought about higher export prices and greater demand for Latin American products such as copper, tin, lead, wool and cotton. The easing of import controls, influenced by the increased supply of foreign exchange thus made available, was hastened in a number of the countries by the desire to make heavy purchases of goods in potentially critical supply before the anticipated supply short-

**Canada.**—In 1950, for the first year since 1931, Canada's imports exceeded exports. The import surplus of about \$56,000,000 (in terms of Canadian dollars, used throughout this section) was very small, however, relative to total trade. Imports totalled \$3,174,000,000, in comparison with \$2,761,000,000 in 1949; exports amounted to \$3,118,000,000 compared with \$2,993,000,000

ages and extension of United States export controls.

For the first time since 1947 the trade of the United States with the Latin American republics reverted in 1950 to its traditional status, an import balance. The excess in value of U.S. imports over exports to the area was \$240,000,000 for the first 9 mo. and \$267,000,000 for the first 11 mo. of 1950. Price rises, particularly of coffee, were principally responsible for the increase of 26% in the value of U.S. imports from the Latin American republics during Jan.-Sept. 1950, as compared with the same period of 1949. Here again the trend in the latter half of 1950 was marked, showing a rise over the comparable period of 1949 of 63% in the third quarter and 37% in October and November.

Available data indicated that the Latin American republics continued in the first half of 1950 to expand the proportion of their purchases made in countries other than the U.S. It was believed, however, that the share of the U.S. increased in the latter part of the year as supply difficulties interfered with imports from Europe and barriers against imports from the U.S. were lowered. Purchases by the U.S. accounted for about 43% of total exports from the area in 1949, and this proportion apparently increased in 1950 as stockpiling and inventory replenishment proceeded.

**Europe.**—The total value of imports into countries participating in the Organization for European Economic Cooperation (O.E.E.C.) during Jan.-Oct. 1950 amounted to \$19,500,000,000; the value of exports during the same period was \$15,500,000,000. In 1949 imports for this area amounted to \$24,800,000,000 as compared with exports of \$18,800,000,000. The export-import ratio which was .75 in 1949 rose to almost .80 for the first ten months of 1950. It was significant that western Europe had surpassed the 1938 trade ratio when the export-import ratio was .75.

Of greater importance were the noticeable shifts in the export and import patterns of the O.E.E.C. countries. In 1949 and in 1948 more than 22% of western European imports originated in the United States and Canada; for the period Jan.-Oct. 1950, imports into the O.E.E.C. countries from this area declined to 16%. Exports from western Europe to the United States and Canada rose from 6.2% in 1949 to more than 8% in 1950; in 1938 this percentage was 7%.

Trade between the Marshall plan countries and the "iron curtain" countries declined from the level of 1949. In 1938, 9.6% of western Europe's total imports came from eastern Europe, while in 1950 only 4.6% of its imports came from this area; a

similar decline occurred with regard to exports of western Europe to "iron curtain" countries (see Table V). Trade between the O.E.E.C. countries and Latin America in 1950 remained at about the same level in 1949.

Of great importance to the economic progress of western Europe was the trade among the participating ERP countries. A major step in furthering this trade was the putting into operation of the European Payments union in the middle of 1950. In effect, this union facilitated credit and multilateral clearing arrangements among the participating countries, which in turn made possible a greater interchange of goods. Imports within the O.E.E.C. area rose from 35% in 1949 to 40% in the period Jan.-Oct. 1950, while exports correspondingly rose from 46% to 49% in these periods. For the first time since the end of World War II, trade among the ERP countries reached the pre-World War II activity.

At the end of 1950, the past year and a half had witnessed, in quick succession, a major devaluation of currencies, the outbreak of the Korean war, the formation of the European Payments union, the removal of quantitative restrictions on a sizable proportion of imports from member countries, a sharp rise in prices in the latter half of 1950, and the beginning of preparations for a vast rearmament program in western Europe. The levels of production and national income in western Europe had also risen in 1950 beyond the prewar level. (See EUROPEAN RECOVERY PROGRAM.)

\*Preliminary data.

**United Kingdom.**—The value of the merchandise trade of the United Kingdom reached record levels in the first nine months of 1950. Exports of United Kingdom merchandise totalled £1,566,000,000 compared with £1,315,000,000 for the same period in 1949. Imports increased by 13% from their 1949 value and reached a total of £1,908,000,000 for the first nine months of 1950. The volume index, with 1947 as the base year, showed exports for the January-September period of 1950 to be nearly 160 compared with 139 for the same period in 1949. During the first nine months of 1950 the volume of retained imports, although slightly higher than in the previous year, was still below the prewar level.

The trade deficit with the United States which had averaged £13,500,000 per month prior to devaluation in Sept. 1949 narrowed in the first nine months of 1950. This was a result both of increased British exports to the U.S. and a tight restriction on dollar imports. The devaluation of the pound sterling in Sept. 1949 gave some impetus to these developments. A major factor

in the increase in value of U.S. imports from the sterling area was the stepped-up U.S. stockpiling of critical sterling area raw materials which drew on stocks in the United Kingdom as well as on current production in the other sterling area sources. Exports from the U.S. to the United Kingdom and the rest of the sterling area fell, in large measure because of stringent reductions in dollar imports put into effect by most of the sterling area countries at the end of 1949 when their gold and dollar reserves were at a record low. These changes in value and volume of trade resulted in large net dollar earnings which contributed substantially to the improvement in the gold and dollar reserves of the sterling area.

Britain's trade deficit with its other major dollar creditor, Canada, which in 1949 had been nearly as great as that with the United States, was decreased even more appreciably during the first nine months of 1950.

\*General imports.

†United Kingdom produce.

**Near East.**—The foreign trade of many of the near east countries during 1950 remained at a comparatively high level, according to partial data for the year. Turkey reduced its trade deficit, chiefly because of increased exports, as imports remained large. Greece's exports continued to lag, although an improvement occurred in the later months of the year. Iran encouraged imports in the latter part of the year, partly as an anti-inflationary measure, but exports did not keep pace, causing a shortage of foreign exchange. Israel's imports were affected by a shortage of foreign exchange, while exports remained at a fair level. Egypt's imports expanded in anticipation of possible shortages, and exports were aided considerably by the price rise and strong demand for raw cotton. The trade of Syria and Lebanon was disturbed by the termination of the customs union in March, which caused a shift in the geographic pattern of these countries and sharply reduced the normally large turnover between these countries.

**Far East.**—The serious imbalance between imports and exports which had characterized the postwar trade of the far east was greatly reduced during 1950. Reduction of the heavy import balance was largely the result of the following factors: continued dollar aid from the U.S., further effects of the sterling devaluation of Sept. 1949, drastic import and exchange controls in certain countries, and, after the outbreak of the Korean conflict, the strong world demand for far eastern raw materials at greatly increased prices.

Japan's merchandise trade in 1950 was characterized by an increase over 1949 in both volume and value and a marked narrowing of the gap between imports and exports compared with previous postwar years. During the year important modifications were made in control over Japan's import trade, resulting in a shift of a greater portion of trade conducted on a private basis;

Japanese nationals participated more directly in various activities related to foreign trade.

Mainland China's trade, estimated from statistics of trading partners, indicated a comparative balance with both imports and exports at about \$250,000,000 for the first three quarters of 1950, exclusive of a sizable trade with eastern Europe, on which statistical information was unavailable.

Because of drastic import and exchange controls, Philippine import trade declined about 35% in 1950. Coincident with an appreciable increase in export values following the outbreak of war in Korea, the decline in imports caused a material reduction in the heavy postwar import balance and, together with continued though lessened disbursements by the U.S., was also responsible for the largest surplus since 1945 in the international balance of payments position at the close of 1950.

Indochina continued to have a large deficit in the balance of trade. Thailand again recorded a substantial balance of trade surplus. Malaya, principal dollar earner of the sterling area, experienced a trade boom in 1950 following developments in Korea.

Throughout 1950 the foreign trade of India continued the trends which began with devaluation in Sept. 1949: decreased imports, increased value of exports, and an improved balance of trade position. The trade impasse with Pakistan, after a temporary agreement which expired Sept. 30 was not renewed, reduced the trade of India with that country drastically, confining it practically to imports of raw jute and greatly reduced exports of cotton textiles.

The trade of Pakistan on private account in the year ended June 30, 1950, showed an increase in exports and a decrease in imports from the previous year with a small export surplus. However, the significant trade on government account, which consisted almost wholly of imports, appeared likely to change the balance to an import balance. A large number of trade agreements were executed in a reorientation of Pakistan's trade as a consequence of the trade impasse with India.

**Australia, New Zealand.**—During the first ten months of 1950 there was a considerable increase in the value of Australia's exports and imports as compared with 1949; the trade balance remained relatively unchanged. Exports were £A581,000,000, a 35% rise over the £A430,000,000 ten months' total of the previous year. Imports of £A524,000,000, in contrast to £A371,000,000 in 1949, had risen 41%. New Zealand experienced much the same type of development as Australia.

**Union of South Africa.**—The year 1950 saw a marked improvement in the Union of South Africa's balance of payments position, and this was reflected by a gradual relaxation of import controls which applied mainly to goods of soft currency origin. In September, however, the government announced a further liberalization of controls as from Jan. 1, 1951, which appeared to open the way for an increased volume of hard currency imports. (See also BUSINESS REVIEW; INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT; INTERNATIONAL MONETARY FUND.)

FILMS OF 1950.—*Stuff for Stuff* (Film Program Services). (L. K. M.)

**Interstate Commerce Commission.** The duties and powers of the Interstate Commerce commission are set forth in the Interstate Commerce act, originally passed in 1887 and later amended in many important particulars. The act is divided into four parts, and deals with the regulation of rail, motor and water carriers, and freight forwarders. The regulatory powers of the commission extend, among other things, to the charges made by these carriers for transportation services; to questions involving the valuation and financial reorganization of railroads; to the

issuance of securities; to the acquisition or control of these various carriers by other carriers or persons; to their accounting practices; to the abandonment of lines of railway; and to matters involving the determination of whether public convenience and necessity require the institution of new services by motor and water carriers or by freight forwarders, or the construction and operation of lines of railway.

Commissioner Carroll Miller died on Dec. 24, 1949, and James K. Knudson was appointed to fill the remainder of his term (until Dec. 31, 1953). Commissioner Walter Splawn was reappointed for an additional term of seven years.

By executive order of Sept. 9, 1950, the functions conferred upon the president by title I of the Defense Production act of 1950 were delegated to various agencies. Under paragraph (c) of part I of the order, functions were delegated "to that commissioner of the Interstate Commerce Commission who is responsible for the supervision of the Bureau of Service of the commission, with respect to domestic transportation, storage, and port facilities, or the use thereof, but excluding air transport, coastwise, intercoastal, and overseas shipping."

Commissioner Knudson was, by order of the commission dated Sept. 11, 1950, placed in charge of supervision of the bureau of service. On Oct. 4, 1950, Commissioner Knudson issued organization order D.T.A., establishing, under the jurisdiction of the commissioner of the Interstate Commerce commission who is responsible for the supervision of the bureau of service of the commission, a Defense Transport administration at the head of which the commissioner shall be ex officio the administrator.

The carriers subject to the jurisdiction of the commission were confronted with numerous and difficult problems during the year, including the rising costs of labour and materials, postwar shifts in the movement of commodities because of change in the location of plants and substitution of commodities, and changes in competitive advantages brought about by differences in technological improvements between the different agencies of transport.

The effect of an increase in private transportation was particularly felt in the passenger field.

(J. M. J.)

**Intestinal Disorders:** see ALIMENTARY SYSTEM, DISORDERS OF.

**Intoxication, Alcoholic.** In 1950 the greatest advance in the study and treatment of alcoholic intoxication (sometimes called "alcoholism" or "problem drinking") was made in the field of public enlightenment. With the increasing acceptance of the concept of alcoholic intoxication as a personality and social disorder which should be treated scientifically as an illness rather than punitively as a crime, programs of community action in cities, counties and states sprang up all over the country.

On Aug. 17, 1950, a bill was passed by the Massachusetts legislature authorizing the department of public health to establish clinics for alcoholics and to engage in a program aimed at the prevention of alcoholic addiction. By the end of the year, 28 states had established some sort of program dealing with the problem of alcoholism. Representatives of some of these states met during the year and established the National Conference of State Programs so that they might share their experience and make their common knowledge available to other states working toward the establishment of educational and treatment programs.

Tetraethylthiuram disulphide (Antabuse) first attained prominence in Danish medical literature in late 1948. Antabuse was widely discussed in English and U.S. literature in 1949. This led to extensive experimentation and carefully considered clinical

studies on the use of this drug, particularly in metropolitan centres of the United States during 1950. Antabuse appears to act mainly through its pharmacological effect on the blood acetaldehyde levels. For optimum safety, its use should be carefully supervised. Its major benefits are considered as an adjunct to adequate psychotherapy.

In 1949 the use of myanesin was reported in the treatment of gross tremulous states. It was stated that these symptoms were controlled within 30 minutes to 1 hour after the drug was administered. This report led to extensive further work, much of which was carried out in 1950.

Adrenal cortical extract in the treatment of acute alcoholic states was being used experimentally, but by the end of 1950 no authorities had ventured a final opinion concerning the value of this drug. The interesting idea that the craving for alcohol may be physiologically related to a series of events similar to those found in hyperinsulinism but which lead eventually to those of hypoglycaemia was being entertained, but conclusive evidence was lacking in 1950. James J. Smith reported in the *Quarterly Journal of Studies on Alcoholism* (June 1950) that ACTH in doses of 25 mg. intramuscularly given every sixth hour to ten patients with relatively severe acute alcoholic intoxication led to a striking reduction in the expected duration of signs and symptoms, including insomnia, nervousness and apprehension, demands for sedation, anoxia, sweating and even visual hallucinations. Aqueous adrenal cortical extract in doses of 10 c.c. intravenously every sixth hour seemed equally effective. Two patients with Korsakoff's psychosis were unimproved by ACTH. It would thus appear, on the basis of these preliminary data, that ACTH might be of real value in reducing the period of disability in acute alcohol intoxication and bringing about a return of appetite.

The use of Cortone (registered trade-mark of Merck and Co. Inc., for its brand of cortisone) was considered by some to yield encouraging results in the treatment of alcoholic intoxication. Cortone acts directly and not by stimulation of the adrenal cortex. Therefore, the clinical response to its administration is not dependent on the functional capacity of the adrenal cortex. Injections of this drug are made intramuscularly.

Other unusual methods of treating acute alcoholic intoxication, including the administration of oxygen into the lungs in high concentration, the use of insulin in subcoma dosages and the introduction into the body by various means of several benzedrine compounds, were all used in various experiments. Up to the end of 1950 none of these methods had yielded results sufficiently positive to warrant general adoption.

The treatment of cases of delirium tremens in several large general hospitals by intravenous administration of large quantities of physiological saline and glucose solution plus massive dosages of vitamins to correct obvious deficiencies was most promising.

Most United States courts did not yet avail themselves of the chemical tests for alcoholic intoxication, but there was a trend in some courts to allow chemical tests for blood alcohol concentration as evidence of alcoholic intoxication among persons involved in motor vehicle traffic accidents. (See also LIQUORS, ALCOHOLIC; NUTRITION, EXPERIMENTAL.)

**Iowa.** Iowa, popularly known as the "Hawkeye state," was admitted to the union in 1846. Located in the north central region, it comprises 56,280 sq.mi., of which 294 sq.mi. are inland water surface. The 1950 census showed a population of 2,621,073, an increase of 3.3% over the 1940 figures. The capital, and largest city, is Des Moines, with a 1950 population of 176,954. Other chief cities are Sioux City, 84,035; Davenport, 73,640; Cedar Rapids, 72,149; Waterloo, 64,354; Dubuque, 49,528; and Council Bluffs, 45,184. The preliminary 1950 census figures showed 53.1% rural, a decrease of 4.2% from the 1940 figures.

**History.**—The following officers, all Republican, were elected or re-elected at the Nov. 7, 1950 election: governor, William S. Beardsley; lieutenant-governor, W. H. Nicholas; secretary of state, Melvin D. Synhorst; auditor, Chet B. Akers; treasurer, M. L. Abrahamson; secretary of agriculture, Clyde Spry; attorney general, Robert L. Larson; superintendent of public instruction, Jessie M. Parker. Iowa's United States senators were Bourke B. Hickenlooper (Republican; re-elected 1950), and Guy M. Gillette (Democrat, elected 1948). Iowa's eight Republican representatives in Washington were all re-elected in the 1950 election.

The voters were asked to vote on the calling of a state constitutional convention, according to the requirements of the constitution, which provides for such a vote every ten years. The vote was 3 to 1 against such a convention. The constitution of Iowa was adopted in 1857.

The Iowa general assembly meets biennially in the odd-numbered years. It convened in Jan. 1951, with a senate of 50 members, of which 41 were Republican and 9 Democratic, as a result of the 1950 elections, and with a house of 108 members, of which 93 were Republican and 15 Democratic.

**Education.**—Iowa had, during the 1949-50 school year, 4,652 public elementary school districts; 840 public high school districts; and 19 junior colleges. Students in the elementary schools numbered 364,942; in the high schools, 112,778; in the junior colleges, 1,892. The number of teachers and superintendents in the public schools in 1949-50 was 23,145.

There were 26 colleges and universities in the state, with a total enrolment for 1950 of 35,300, a decrease of about 4,000 from the 1949 figure. The majority of the colleges were privately endowed or supported by various church organizations. The state supports three institutions: the state university of Iowa at Iowa City; the Iowa State College of Agriculture and Mechanic Arts at Ames; and Iowa State Teachers college at Cedar Falls.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The 1950-51 state appropriation for old age assistance was \$13,000,000; for aid to dependent children, \$1,575,000; for child welfare, \$220,000; for emergency relief, \$30,000; and for aid to the blind, \$350,000. Contributions to the state unemployment insurance fund, as of June 30, 1950, totalled \$10,848,202; during the fiscal year 1949-50, \$6,599,392 was paid out of this fund in benefit payments, an increase of \$2,639,810 over the fiscal year 1948-49. The reserve fund, as of June 30, 1950, was \$94,719,865.

Iowa has five penal and correctional institutions, with 2,391 prisoners as of Nov. 1, 1950. The hospitals for the insane number four, with 5,853 patients; there are also two homes for the feeble-minded, with 3,532 patients. The state orphanage at Davenport, the Iowa Annie Wittenmyer home, cared for 373 children as of Nov. 1, 1950, while the State Juvenile home at Toledo cared for 193 dependent, neglected, or destitute children.

**Communications.**—Iowa had in 1950 a total of 102,343 mi. of roads; 9,745 mi. were primary roads; 13,830 mi. were county trunk roads; and 78,768 mi. were county local roads. There were 6,570 mi. of paved highway including extensions within the state; 973 mi. of bituminous surfaced roads; and 2,164 mi. of gravel roads.

The state is served by 12 major railroads with a total of 8,725 mi. of track. In 1949 these roads carried 5,180,013 passengers and 90,930,150 tons of freight. There are 355 mi. of electric interurban roads in the state; during 1949 they carried 660,695 passengers and 3,931,011 tons of freight. There were, in 1949, 109 mi. of oil pipe lines, 1,907 mi. of gasoline pipe lines, and 1,260 mi. of natural gas pipe lines in Iowa. There were 807,536 automobiles in the state in 1949. In 1950 there were ten major airports.

There were 796,823 telephones in Iowa in 1950, and 50 radio stations. There were about 70,000 mi. of electric transmission lines in Iowa, and 86.2% of all farms were electrified.

**Banking and Finance.**—There were, as of June 30, 1950, 556 state banks and 97 national banks in Iowa. Besides the 556 state banks, there were

165 bank offices, 204 small loan licensees, and 212 credit unions under the supervision of the state banking department. Total assets of the 556 state banks on June 30, 1950 were \$1,588,467,014; total deposits were \$1,478,956,843. The 97 national banks had total deposits of \$753,999,000 and total resources of \$802,586,000 as of June 30, 1950.

The revenue received from all special taxes in Iowa for the fiscal year ending June 30, 1950, was \$151,153,737. Of this total, 31% came from the state's 2% sales tax; 18.6% from the gasoline tax; 14% from motor vehicle licence fees; 12.2% from individual and corporation income taxes; 8% from state liquor store profits and the beer tax; 5.6% from use taxes assessed on articles purchased outside the state; and the balance from miscellaneous taxes. Iowa has no state debt.

**Agriculture.**—The total cash income of Iowa farmers in 1949 was \$2,045,831,000, of which \$1,600,057,000 was from livestock, \$440,473,000 from crops, and \$5,301,000 from government payments. The total income was \$319,650,000 less than in 1948. On Jan. 1, 1950, there were 35,740 auto trucks on Iowa farms; 221,659 tractors; and 81,017 mechanical corn pickers. These figures all showed an increase over the 1949 totals.

Table I.—Leading Agricultural Products of Iowa

Crop	1950	1949	Average 1939-48
Corn, bu. . . . .	463,655,000	550,608,000	527,548,000
Oats, bu. . . . .	264,737,000	244,491,000	189,957,000
Wheat, bu. . . . .	5,740,000	7,213,000	4,358,000
Rye, bu. . . . .	224,000	238,000	335,000
Potatoes, bu. . . . .	1,300,000	1,100,000	3,637,000
Hay, tons . . . . .	6,347,000	4,884,000	5,511,000
Popcorn, lb. . . . .	50,400,000	28,800,000	57,183,000
Soybeans, bu. . . . .	42,262,000	30,820,000	28,766,000

The greatest proportion of Iowa's corn crop is fed to livestock. On Jan. 1, 1950, there were on Iowa farms 11,920,000 hogs, 5,007,000 cattle, 949,000 sheep, 242,000 horses and 6,000 mules.

**Manufacturing and Industry.**—There were 3,858 manufacturing plants in Iowa in 1950, employing approximately 148,000 persons. The average weekly wage in Oct. 1950, was \$59.26. The total value of manufactured products for 1949 was \$2,150,000,000, an increase of \$150,000,000 over the figure for 1948.

**Mineral Production.**—Iowa produces only nonmetallic minerals. The latest official production figures available in 1950 were for 1948.

Table II.—Principal Mineral Products of Iowa

Mineral	Quantity	Value
Cement . . . . .	6,807,214 bbl.	\$14,424,526
Clay . . . . .	869,850 tons	9,600,000
Coal . . . . .	1,666,774 tons	7,000,450
Gypsum . . . . .	729,880 tons	1,753,545
Stone . . . . .	6,387,620 tons	8,332,682
Sand and gravel . . . . .	8,039,601 tons	3,729,488

(M. T.E.)

**Iran.** (PERSIA). An independent kingdom of western Asia, Iran is bounded east by Pakistan and Afghanistan, north by the U.S.S.R., west by Turkey and Iraq and south by the Persian gulf and Arabian sea. Area: c. 634,413 sq.mi. Pop. (no census ever taken; 1949 est.): 18,387,000. Language: mainly Persian, but some Turki and Armenian in the north, Kurd in the west, Arabic in the south and Pashtu in the east. Religion: Moslem, mainly Shia, but the Kurds (750,000) are Sunni; Christian (there are c. 50,000 Gregorian Armenians, a few thousand Catholic Armenians and 40,000 Nestorians); Jewish 80,000; and c. 10,000 Zoroastrian Parsees. Chief towns (1948 est.): Tehran (cap., 850,000); Meshed (250,000); Tabriz (214,000); Isfahan (205,000); Abadan (150,000); Shiraz (129,000); Resht (122,000); Hamadan (104,000). Ruler, Shahanshah Mohammed Riza Pahlavi; prime ministers in 1950, Mohammed Said Maraghei, Ali Mansur (from March 23) and Gen. Ali Razmara (from June 26).

**History.**—On Jan. 11, 1950, the government of Mohammed Said Maraghei resigned. The outgoing premier was asked to form a new government. Notable changes in the new cabinet were Ali Akbar Siassi, appointed foreign minister, Abbas Gholi Golshayan, appointed finance minister, and Taghi Nassr, minister of national economy. On Feb. 9 the shah officially opened the 16th session of the *majlis* and the 1st session of the senate. The *majlis* lacked the deputies of Tehran. Elder statesmen and former generals formed the 30 nominees of the shah in the senate; the other 30 were elected.

On Feb. 19, Iran and Pakistan signed a treaty of friendship providing for neighbourly relations and for most-favoured-nation treatment. On March 16 Iran also signed a treaty of friendship with India.

Results of the Tehran elections, on March 16, showed that Mohammed Mossadegh, leader of the National Front party, and his followers had won 6 of the 12 seats. Directly after this, and as a result of persistent attacks in the *majlis* and the senate, Mohammed Said Maraghei again resigned. Ali Mansur formed a new cabinet (completed April 3) in which Hussein Ala was foreign minister, Ebrahim Zand minister of the interior and Gen. Morteza Yazdanpanah minister of war.

Between May and July the soviet government sent two notes of protest to the Iranian government and received two replies. On May 15 the U.S.S.R. protested to Iran alleging unfriendly activities on the soviet border. The note referred to the formation of an Iranian oil joint-stock company for prospecting oil and complained of the presence of foreign and in particular U.S. experts for topographical, geological survey and aerial photography. The soviet note stated that these activities could create a danger to the frontiers of the U.S.S.R. and called this incompatible with the provisions of the Soviet-Iranian treaty of Feb. 26, 1921. The Iranian government replied that no abnormal situation existed between the two countries and no action was taken contrary to good neighbourly relations. It added that survey planes would not be permitted to approach the soviet border. On June 22 another soviet note repeated former charges and called the aerial survey "a measure of military significance." On July 15 the Iranian government rejected the soviet complaints but said that in order to remove friction and misunderstanding air surveys would be stopped and only Iranian surveyors employed in ground survey.

Two loans totalling £14,000,000, free of interest, were made by the Anglo-Iranian Oil company to the Iranian government, on account of current royalties (£6,000,000 in June and £8,000,000 in September).

On June 26, Ali Mansur's government resigned and Gen. Ali Razmara, army chief of staff, was appointed prime minister. The new premier was considered to be a strong man bent on social and economic reforms. General Razmara presented his cabinet to the *majlis* and on July 4 got a vote of confidence by 94 votes to 7 with 3 abstentions. On the same day Iran approved the United Nations Security council's action in Korea.

The premier's firm handling of the complicated social and economic problems of the country and his decentralization plans met with severe criticism in the *majlis* from the National Front party, which organized a vociferous opposition. But despite fierce denunciations and wild accusations of dictatorship, General Razmara stood his ground and tried to balance the policy of close relations with United States by lending a favourable ear to the soviet suggestion of renewed trade relations. Thus the commerce and navigation agreement between Iran and the Soviet Union of March 25, 1940, which had lapsed, was renewed for another year in November. The Soviet Union and Iran agreed to exchange iron and steel parts, timber, cement, textiles and newsprint for rice, tobacco, skins, dried fruit and gum tragacanth. This barter arrangement was to be conducted through the government agencies. The Soviet Union agreed also to discuss the outstanding question of the return of 11 tons of gold owing to Iran since the end of World War II.

The Export-Import Bank of Washington granted on Oct. 10 a loan of \$25,000,000 for the improvement of roads, other communications and agriculture in Iran. On Oct. 19 an agreement was signed in Tehran between the Iranian prime minister and the U.S. ambassador, whereby the United States offered Iran technical co-operation in improving living conditions in rural areas. The U.S. government allocated \$500,000 from Point Four program appropriations for the current fiscal year. This was the first appropriation of this kind and emphasis was to be on health, agriculture and education for villages near main centres of population.

The special parliamentary commission set up to consider the supplementary oil agreement signed by the government of Said Maraghei and the Anglo-Iranian Oil company but still subject to ratification by the *majlis* rejected it on Nov. 26. Under this agreement the Iranian government was to receive increased royalties of more than £22,000,000 for 1949.

**Education.**—Schools (1942-43): elementary 2,401, pupils 244,315, teachers 9,748. There were two universities (Tehran and Tabriz) and three university colleges (1949), students 5,919.

**Finance and Banking.**—Budget: (1949-50 est.) revenue 7,705,000,000 rials, expenditure 11,119,000,000 rials; (1950-51 est.) revenue 8,948,000,000 rials, expenditure 11,474,000,000 rials. Internal national debt (Dec. 1948) 5,400,000,000 rials. Currency circulation (March 1950) 6,030,000,000 rials. Gold reserve and foreign exchange (June 1950) U.S. \$240,000,000. Bank deposits (March 1950) 6,200,000,000 rials. Monetary unit: rial, with an exchange rate of 32.50 rials to the U.S. dollar (Nov. 1950).

**Foreign Trade.**—Imports (1949) 9,276,000,000 rials; exports, including oil exports of the Anglo-Iranian Oil company (1949), 17,240,000,000 rials. Main sources of imports (1949): U.K. 40%, U.S. 28%, India 5%. Main destinations of exports (1949): U.K. 24%, India 15%, Italy 5%. Main imports (1949): cotton piece goods 18.6%, cereals 9.7%, sugar 9.3%, tea 7.4%. Main exports (1949): petroleum and products 90%, carpets 3%, fruits and berries 2%.

**Transport and Communications.**—Roads (1949) 17,000 mi., of which 8,000 mi. were suitable for vehicles. Licensed motor vehicles (Dec. 1949): cars 10,680, commercial vehicles 9,140. Railways (1948) 1,750 mi. Radio receiving set licences (1949) 60,000.

**Agriculture.**—Main crops (metric tons, 1949): wheat 1,630,000; barley 650,000; cotton, ginned, 18,000; sesame seed (1948) 4,000; rice (1948) 424,000; sugar, raw value (1948) 46,500; total grapes (1948) 260,000; oranges and tangerines (1948) 60,000; tobacco (1949) 11,300; tea (1949-50) 4,500. Livestock (1948-49): cattle 2,100,000; sheep 11,000,000; horses 310,000; mules 42,000; buffaloes 10,000; camels 600,000. Wool production, greasy basis (1949) 13,000 metric tons.

**Industry.**—Fuel and power: coal (1948) 150,000 metric tons; crude oil (1949) 27,240,000 metric tons. Raw materials (metric tons, estimated annual production): copper ore 1,000; sulphur 600; red oxide 10,000; arsenic ore 500. Cement production 39,000 metric tons (1948).

**Iraq.** An independent Arab kingdom of Mesopotamia, Iraq is bounded by Syria, Turkey, Iran, the Persian gulf, Saudi Arabia and Jordan. Area: 116,600 sq.mi. Pop.: (1947 census) 4,799,500; (1949 est.) 4,990,000. Languages: Arabic 67%, Kurdish 25%, Persian 3%, Turki 2%, others 3%. Religions (approximate percentages): Moslem 91%, Christian 5%, Jewish 2.5%, others 1.5%. The Sunni Arabs are the ruling class. Chief towns (pop., est. 1947): Baghdad (cap., 552,000), Mosul (279,400), Basra (206,000), Kirkuk (148,300). Ruler, King Feisal II (born May 2, 1935); regent, Crown Prince Abdul-Ilah; prime ministers in 1950: Ali Jawdat al-Ayyubi (until Feb. 1), Tawfik al-Suwaidi and (from Sept. 16) Nuri Pasha es-Said.

**History.**—During the year 1950 there were three cabinets. The first, under Ali Jawdat al-Ayyubi (Dec. 10, 1949-Feb. 1), and the second, under Tawfik al-Suwaidi (Feb. 5-Sept. 4), were coalitions. The third, formed on Sept. 16, was presided over by the veteran statesman Nuri Pasha es-Said, the leader of the Constitutional Union party, who had held office during most of 1949. In November Nuri delivered a speech in Baghdad in which he dealt with the defense of Iraq. He gave it as his opinion that in the event of another world war Iraq would find it impossible to remain neutral. He then went on to announce that his government proposed without delay to set up a defense council for the country.

In February the chief of police was arrested for "insubordination." In April he was sentenced to life imprisonment for attempting to overthrow the government by force.

Relations with Israel remained unchanged during the year. The supply of oil through the Kirkuk-Haifa pipe line was still cut by the Iraq government; but in March a law was passed permitting Iraqi Jews to renounce their nationality and to leave the country, and in May a regular air lift of Jews emigrating to Israel began.

Following the crisis in the Arab league over Jordan's annexation of Arab Palestine in April, the Iraqi government refused to associate itself with the first Egyptian proposal to expel Jordan

from the league. It also abstained in June for "technical reasons" from participation in the Arab states collective security pact.

The negotiations initiated by the government for the revision of the terms of the Iraq Petroleum company's oil concessions in Iraq led in June to agreement on the following main points: (1) The scale of royalties was to be increased from 4s. to 6s. per ton of oil produced; and (2) payment would be in gold. There were other oil developments of importance. Following the duplication of the old Kirkuk-Tripoli pipe line with 16-in. pipes, a refinery was opened at Tripoli on Jan. 1, 1950. In May plans were adopted for a pipe line from Kirkuk to the Mediterranean port of Banyas in the Lebanon between Beirut and Tripoli.

In January a loan (secured on oil royalties) was obtained from the International Bank for Reconstruction and Development to enable the completion of the Wadi Tharthar scheme for the control of Tigris flooding, and in May the government formed the Iraqi Development board to supervise the work. The total amount involved in the project was \$12,800,000. In May Baghdad was seriously threatened by widespread flooding from the Tigris.

A second loan (£3,000,000) was negotiated in May with the British government for the completion of railway projects—in particular the rebuilding of Baghdad station and the construction of a link railway bridge across the Tigris. In September a financial agreement was negotiated with the British government which undertook to release to Iraq in convertible sterling a sum not exceeding the equivalent of \$20,000,000 for hard currency expenditure for the period from Oct. 1949 to Sept. 1950. It was agreed that the description "hard currency countries" should include Belgium, Japan and western Germany; and that the uncommitted balance in this period could be carried forward.

In January the government announced that it preferred to remain outside the sphere of the activities of the United Nations Economic Survey Mission for the Middle East, as appointed through the U.N. Conciliation Commission for Palestine, with which Iraq was not negotiating directly. But in June the government introduced a 5% tax on exports to encourage production for local needs, and in July an import ban was declared on a large selection of goods which could be produced by local industry.

(O. M. T.)

**Education.**—Schools (1948-49): elementary 1,050, pupils 150,588; intermediate and secondary 175, pupils 26,748, teachers 1,352; vocational 9, pupils 1,000, teachers 73. Institutions of higher education 10, students 4,500, lecturers 106.

**Finance and Banking.**—Budget (1949-50 est.): revenue 25,000,000 Iraqi dinars, expenditure 27,100,000 Iraqi dinars; (1950-51 est.): revenue 24,000,000 Iraqi dinars, expenditure 24,100,000 Iraqi dinars. Currency circulation (June 1950): 39,300,000 Iraqi dinars. Bank deposits (Aug. 1950) 12,500,000 Iraqi dinars. Monetary unit: Iraqi dinar at par with the pound and with an exchange rate of 0.357 dinars to the U.S. dollar.

**Foreign Trade.**—(1949) imports 40,600,000 Iraqi dinars; exports, excluding oil, 12,700,000 Iraqi dinars; including oil 26,200,000 Iraqi dinars. Main sources of imports (1948): United Kingdom 43.5%; United States 7.8%; Italy 6.4%. Main destinations of domestic exports (1948): India 19.2%; United Kingdom 17.1%; United States 13.4%. Main imports (1949): textiles 18.0%; tea and sugar 12.6%; iron and steel 12.1%; boilers 11.1%. Main exports, excluding oil (1949): cereals 45.5%; dates 22.4%; wool 3.7%.

**Transport and Communications.**—Roads (1949): 4,550 mi. Licensed motor vehicles (Dec. 1949): cars 7,000; commercial 8,500. Railways (July 1949): 1,027 mi.; passenger miles (1947-48) 329,000,000; freight ton-miles (1947-48) 367,000,000. Air transport (1949): passenger miles 5,533,000; cargo net ton-miles 116,000. Telephones (March 1949): 14,595. Radio receiving sets (1949): 6,600.

**Agriculture.**—Main crops (metric tons, 1949): barley 760,000; wheat 490,000; rice 230,000; dates 170,000; tobacco 6,000; cotton 1,000. Livestock (1948-49): sheep 7,055,000; goats 1,849,000; cattle 822,000; buffaloes 130,000; camels 291,000; horses 188,000; mules 52,000; donkeys 413,000.

**Industry.**—Industrial establishments (1948): 1,762; persons employed: 27,246. Crude oil production (1949): 4,200,000 metric tons.

## Ireland, Northern.

Northern Ireland comprises the six counties of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone; it forms part of the United

Kingdom of Great Britain and Northern Ireland, but (from 1920) has had its own parliament and executive (with limited powers for local purposes) although it is represented in the imperial parliament by 12 members. Area: 5,238 sq.mi. Pop. (1949 est.) 1,371,000. Language: English. Religions (1937 census): Roman Catholic 33.5%, Presbyterian 30.5%, Episcopalian 27%, Methodist 4.3%. Chief towns (pop., est. 1948): Belfast (cap. 450,000); Londonderry (49,000); Bangor (19,000). Governor, 1950, Earl Granville; prime minister, Sir Basil Brooke.

**History.**—Politically, the year 1950 was dominated by the general election for the imperial parliament and Sir Basil Brooke's official visit to the United States and Canada. The election disclosed no change in traditional allegiances, the Unionist party winning ten seats and Anti-Partitionists two.

On his mission to the United States, Sir Basil Brooke pledged Northern Ireland's support for the North Atlantic treaty. Underlying his visit, however, was an effort to enlist backing for the partition settlement in Ireland. In this, opposition was met from the Irish-American bloc but otherwise he was cordially received both in the United States and Canada.

Legislation was passed to ratify agreement with the Republic of Ireland on the drainage of Lough Erne for a hydroelectric scheme at Ballyshannon. Much progress was made with the development of social services; the total of permanent houses built since the war passed 20,000.

**Education.**—Schools (1949-50): primary 1,632, pupils 185,712; intermediate 12, pupils 6,692; grammar 79, pupils 26,735; technical 115, students 31,209; institutions of higher education 2, students 350; Queen's University of Belfast, students 2,686.

**Finance and Banking.**—Budget: (1949-50 actual) revenue £43,191,307, expenditure £42,908,914; (1950-51 est.) revenue £63,577,000, expenditure £47,504,000, excluding contribution of £16,000,000 to the U.K. exchequer. National debt (March 1950) £29,361,166. Currency circulation (Sept. 1950) £9,693,979. Savings and deposits (Sept. 1950) £105,000,000.

**Foreign Trade.**—(Estimates compiled from the returns of the harbour authorities and the board of customs and excise, 1949) imports £188,700,000, exports £163,900,000.

**Transport and Communications.**—Roads (1950): 13,254 mi. Licensed motor vehicles (Dec. 1949): cars 47,618; commercial 22,663. Railways: (1949) 754 mi.; passengers carried (1948) 15,244,735; goods carried (1948) 1,946,847 tons. Telephones (Oct. 1950): subscribers 42,838.

**Agriculture.**—Main crops (metric tons, 1950): oats 286,000; potatoes 1,364,000; hay 595,000. Livestock (1950): cattle 974,000; sheep 571,000; pigs 512,000; goats and kids 92,000; horses 51,000; asses 5,300; poultry 20,704,000. Food sales (1949-50): milk 88,000,000 gal.; eggs 53,000,000 doz.; beef 419,841 cwt.; veal 2,071 cwt.; pork 383,948 cwt.; mutton and lamb 92,973 cwt. Shipments of food to Great Britain (1949-50): milk 25,000,000 gal.; eggs 39,700,000 doz.; bacon and ham 276,947 cwt.; poultry 6,800 tons.

**Industry.**—Electricity sales (1949) 533,000,000 kw.hr. Merchant vessels launched (1949) 12, gross tonnage 97,353. Exports of yarns (1949): linen 67,000 cwt.; woollen 32,000 cwt.; cotton 11,000 cwt.; hemp 9,000 cwt.

(J. E. Ss.)

**Ireland, Republic of.** An Independent republic on an island west of Great Britain. Ireland has an area of 26,602 sq.mi. Pop.: (1946 census) 2,953,452; (mid-1949 est.) 2,991,090. Language: English c. 76%, Erse (Gaelic) c. 24%. Religion (1936 census): Roman Catholic 93.4%. Chief towns (1946 census): Dublin (cap., 506,635); Cork (75,361); Dun Laoghaire (44,689); Limerick (42,987); Waterford (28,332). President, Sean Thomas O'Kelly; prime minister, John A. Costello.

**History.**—The year 1950 found the republic in a mood of increasing political realism. It was a good sign of the times that the 26 counties (Republic of Ireland) and the 6 counties (Northern Ireland) co-operated in the matter of the Erne Drainage bill, a measure that in practice leads simultaneously to the drainage of land in County Fermanagh (Northern Ireland) and the distribution of light and power in hitherto electricity-starved districts of County Donegal (Republic of Ireland). Another encouraging fact was that a single general manager was appointed for that portion of the Great Northern railway that lies in the 6 counties and for the entire railway network of the 26 counties.

The first fruits of this co-ordination were luxurious express trains between Cork and Belfast, with only one main halt, at Dublin. These improved travel facilities were, however, achieved against a background of persistent financial loss by Coras Iompair Eireann, the new transport board which had been responsible to the government alone from June 1, 1950. A contributing factor was a reduction in the number of tourists.

In trade as a whole the republic showed an adverse visible balance for the first nine months of 1950 of £65,000,000 against £52,000,000 in the same period in 1949. There was a tremendous increase in exports of bacon and ham and a notable increase in cattle and textiles. Other interesting items in the export list were the first large consignment of frozen beef to the U.S.; medical supplies to Egypt, Pakistan, Iran and South Africa; leather to the U.S.; live lobsters by air to Brussels; razor blades to Australia and many other countries; and textiles to Canada.

In the face of devaluation, and allowing for invisible exports (including the valuable income from tourists), the trade figures were encouraging. The credit of the state was high, the national debt comparatively low; and Irish government securities (including a new issue of £15,000,000 worth of 3½% exchequer bonds) were increasingly supported by Irish investors.

An economic difficulty was here as elsewhere the rising cost of living; and industrial peace, which largely thanks to the Labour court had remained almost unbroken since 1948, was again endangered. The government proposed a new cost-of-living index based on a census of family budgets but this would take time to prepare, and it was not clear whether the trade unions would hold their hand. Otherwise, the government seemed in no immediate danger for at least the remaining two years of its term of office. There was much public apathy about party politics in 1950.

Tremendous public interest was aroused by a legal issue in which a Protestant father and a Roman Catholic mother disputed the custody of their children. The ruling, in which the supreme court upheld the finding of the high court, was contrary to common law as hitherto administered and was based on certain clauses in the constitution of 1937. The decision created uneasiness in Protestant circles, which feared the substitution of canon for civil law.

Other highlights were the raising of the status of the Irish high commissioner in London to that of ambassador (the new ambassador was F. H. Boland, formerly an official of the department of external affairs) and the meeting in Dublin of the Inter-Parliamentary union with delegates from 33 nations. The minister for external affairs, Sean MacBride, continued to play an active part in the affairs of the Organization for European Economic Cooperation and the Council of Europe. The Irish News agency, set up by act of parliament as a statutory company, started in July to collect and distribute news in Ireland and abroad. Offices were opened in London and others were being opened in New York.

In spite of one of the worst summers in living memory, a surprising amount of the harvest was saved. But the saving of it showed that the agricultural industry was dangerously undermanned and the drift to the towns, particularly to Dublin, still remained one of two basic Irish problems; the other was emigration to Britain. Nevertheless, the income of the farming community had trebled since 1938, and industrial production had risen by 40% in the same period. (D. L. I.)

**Education.**—Schools (1948-49): elementary 4,922, pupils 446,082, teachers 12,612; secondary 408, pupils 45,406. Universities 2 (the National university has 3 constituent colleges), students 7,221; professors and lecturers 495.

**Finance and Banking.**—Budget: (1949-50) revenue £74,000,000, expenditure £76,700,000; (1950-51 est.) balanced at £75,700,000. Na-

tional debt (March 1949): £113,000,000. Currency circulation (Sept. 1950): £54,500,000. Gold and foreign exchange (Sept. 1950): U.S. \$213,000,000. Bank deposits (quarterly average, April-June 1950): £247,000,000. Monetary unit: Irish pound at par with the pound sterling and with an exchange rate of £1=2.80 U.S. dollars.

**Foreign Trade.**—(1949) Import £129,800,000; export £60,500,000. Main sources of imports (1949): Great Britain 55.3%; U.S. 14.3%; the Netherlands 2.4%. Main destinations of domestic exports: Great Britain 77.1%; Northern Ireland 13.9%; the Netherlands 2.3%. Main imports: textiles (excluding apparel) 13.5%; machinery, electrical goods and apparatus 9.0%; nonmetalliferous mine and quarry products 8.7%; cereals and feeding stuffs 7.9%. Main domestic exports: live animals 46.0%; foodstuffs of animal origin 22.7%; drink 8.5%.

**Transport and Communications.**—Roads (1949) 49,071 mi. Licensed motor vehicles (Dec. 1949): cars 71,911; commercial 37,085. Railways (1949): 2,463 mi.; freight net ton miles 313,000,000; freight carried 4,536,000 tons. Air transport (Aer Lingus, 1948-49): miles flown 2,564,792; passengers carried 170,501; cargo (metric tons) 1,299; mail (metric tons) 91. Telephone subscribers (Sept. 1949): 42,337. Radio receiving set licences (1949): 279,275.

**Agriculture.**—Main crops (metric tons, 1949): wheat 367,000; oats 568,000; barley 162,000; rye 4,000; potatoes 2,735,000; sugar, raw value 90,000. Livestock (June 1949): cattle 4,127,000; sheep 2,182,000; pigs 675,000; horses 402,000; mules 5,000; chickens 18,524,000; turkeys 1,159,000; geese 750,000; ducks 1,062,000. Wool production, greasy basis (1949): 7,000 metric tons. Food production (metric tons, 1949): meat 125,000; milk 2,158,000; butter (co-operative creameries only) 35,000; cheese 3,400. Fisheries: total catch 25,900 metric tons in 1948, and 18,200 metric tons in 1949.

**Industry.**—Persons employed in industrial establishments (1948) 197,550. Fuel and power (1949): coal consumption 115,000 metric tons; manufactured gas 146,000,000 cu.m.; electricity 757,000 kw.hr., peat (1948) 3,631,000 metric tons. Total new houses built under state-aid (1949) 6,456. Index of industrial production (1949): 139 (1937=100).

**Irish Free State:** *see* IRELAND, REPUBLIC OF.

**Iron and Steel.** For convenience in coverage, this subject is subdivided under its three major headings—iron ore, pig iron and steel.

In general, it may be said that by 1948 the world iron and steel industry had surpassed the 1939 level, and in 1950 would apparently exceed the peak of the war period.

**Iron Ore.**—The gain in world output in 1949 was small because of a heavy decrease in the United States, which, however, was partly offset by gains in France and Great Britain. Table I shows the outputs of countries producing 1,000,000 tons or more a year. The countries listed usually account for 80%-85% of the world total.

\*Incomplete data; annual rate maintained during the months for which data were available.

The available data for 1950 do not indicate much change from 1949, except in the United States.

**United States.**—The more important statistics of iron ore in the United States are shown in Table II, as reported by the U.S. bureau of mines.

The sharp drop in production in 1949 was largely the result of strikes in the steel and coal industries. Production was more

normal in 1950, the total for the first ten months being 99,344,553 short tons.

Table II.—Production of Iron Ore in the United States

**Canada.**—The Canadian output, which includes that of Newfoundland, was 3,675,096 short tons in 1949, of which 2,550,299 tons were exported. To supply the domestic demand, however, 2,517,235 tons were imported. Through July 1950 output was 1,479,481 tons, as compared with 1,631,817 tons in the same period of 1949.

**Pig Iron.**—The outputs of pig iron and ferroalloys in countries producing 1,000,000 tons or more are shown in Table III. These countries usually account for about 95% of the world total.

\*Incomplete data; annual average maintained during the months for which data are available.

In spite of the heavy drop in the United States, the 1949 total increased, mainly because of advances in France and Germany. In 1950, as judged by the first three quarters, declines in Belgium, France and Great Britain were largely offset by small gains elsewhere, leaving most of the United States increase to boost the total.

**United States.**—The salient data on pig iron and ferroalloys in the United States are shown in Table IV, as reported by the U.S. bureau of mines.

After having been heavily reduced by strikes in 1949, blast furnace production came back to more normal levels in 1950, the

total through October being 54,404,297 tons, of which 53,850,996 tons were pig iron and 553,301 tons ferroalloys.

**Canada.**—Blast furnace production was 2,371,568 tons in 1948 and 2,365,955 tons in 1949, of which 2,154,352 tons were pig iron and 211,603 tons ferroalloys. Operations continued at about the same level in 1950 with 149,314 tons of ferroalloys and 1,903,262 tons of pig iron in the first ten months.

**Steel.**—The steel production of countries having outputs of 1,000,000 tons or more is shown in Table V. The countries listed usually account for 95%–98% of the world total.

brought the world total to a new record high. The available data for 1950 indicate a sharp advance in the world total, mostly in

FIRST INTEGRATED STEEL MILL of Chile, completed at Huachipato in 1950

STEEL PRODUCTION in the United States, 1929-50; monthly average percentage of capacity (figures compiled by American Iron and Steel Institute)

the United States.

*United States.*—The salient statistics of the industry are shown in Table VI, as reported by the American Iron and Steel institute.

The low returns of 1949, caused by the coal and steel strikes, were substantially cleared up by the end of the year, but production did not reach its full stride until the beginning of the second quarter of 1950. After that, production averaged close to 100% of capacity, and totalled 88,348,655 tons through November.

*Canada.*—Total steel output was 3,201,656 tons in 1948 and 3,186,930 tons in 1949, but advanced slightly to 2,509,473 in the first three quarters of 1950. (See also BUSINESS REVIEW; METALLURGY.)

FILMS OF 1950.—*Iron Ore Mining* (Academy Films); *Steel* (Almanac Films, Inc.). (G. A. Ro.)

**Irrigation.** The 1950 spring water supply forecast issued by the United States department of agriculture and co-operative agencies as a result of snow surveys in the high

UPSTREAM ENCASEMENT of the Davis dam and power plant on the Colorado river, Ariz., under construction in 1950. The first unit in the power plant was scheduled for completion in 1951

mountain areas indicated that there would be plenty of water in the northwest; sufficient supply in the intermountain area and the Pacific slope; scant supply for the Rio Grande valley and Arizona. Actually in the Columbia basin, Washington, Idaho, parts of Montana, Wyoming and Oregon stream flow did not equal the amounts forecast. In Utah, at the time of the spring forecasts, water supply prospects varied from excellent in the northern and northeastern parts of the state through good in the central part to poor in the south. This forecast proved fairly accurate. In Nevada and eastern California the April 1, 1950 snow surveys found snow stored water in the Sierra was quite heavy at the higher elevations but much of the snow had melted. Low snow pack in the Humboldt had melted and high snow pack ranged from slightly below normal to slightly above. However, the irrigation season precipitation was near normal in Nevada and measured runoff was sufficient for irrigation demands.

In Arizona the 1949-50 snowfall was far below normal, and stream flow during the irrigation season was poor.

The heavy precipitation in California late in 1950 presented good prospects for much better water supplies during the 1951 irrigation season. As of mid-November there were 3,195,400 ac.-ft. of water stored in Shasta lake or in excess of 800,000 ac.-ft. more than the same time the year before. Millerton lake, created by Friant dam, had in storage 90,500 ac.-ft., or more than double the quantity held the same time in 1949.

The U.S. bureau of reclamation made record-breaking progress in multipurpose water conservation during the 1950 fiscal year to help meet demands for irrigation, industrial and domestic water supplies and hydroelectric power.

Construction work accomplished during the fiscal year amounted to more than \$277,000,000, the largest annual dollar volume in the bureau's history. The major project features finished in the year included four dams—Heart Butte dam in North Dakota, Angostura in South Dakota and Medicine Creek and Enders dams in Nebraska—on the Missouri river basin project; two dams—O'Sullivan and South Coulee—on the Columbia basin project in Washington state; the Tracy pumping plant and large segments of the Delta-Mendota and Friant-Kern canals in the Central valley project in California; and Granby dam, which forms the main reservoir on the Colorado-Big Thompson project in Colorado.

When the fiscal year ended, construction was in progress on 14 storage dams, 11 power plants, 6 pumping plants, 20 mi. of tunnels, 500 mi. of main canals and about 2,200 mi. of hydroelectric power transmission lines. Concrete lining operations on 97 mi. of the Delta-Mendota canal of the Central valley project in the San Joaquin valley (California) was completed.

At the close of the fiscal year (1950), the bureau had in operation, under construction, or authorized, 81 irrigation and multipurpose water conservation projects. Among these was the Missouri river basin project with 70 units, authorized by the Flood Control acts of 1944 and 1946. Sixty of these projects or divisions of projects were producing food supplies and electric energy, or furnishing municipal-industrial water.

Crop production on farms receiving federal reclamation water was valued at \$516,329,000, exceeding \$100 per acre. The 1949 total evaluation of the 13,225,000 tons of crops and crop returns averaged \$105 per acre for the year. Including 1949 production, the cumulative value of crops grown since irrigation water was first supplied from reclamation projects in 1906 totalled \$6,583,570,000.

The total acreage irrigated as of 1950 was 4,820,600—an increase of 261,800 ac. over the previous year.

The bill authorizing construction of irrigation canals on both the east and west sides of the Sacramento valley was

signed by the president. Before construction could begin, however, the bureau would have to complete plans and final estimates of cost and secure necessary appropriations from congress. Preliminary estimates placed the cost of the main canal system at approximately \$42,000,000 with ultimate cost of the completed distribution system to approximate \$84,000,000. About 250,000 ac. of rich Sacramento valley irrigated lands would be added to the Central valley project.

The Oakdale and South San Joaquin irrigation districts (California) were jointly proposing construction of three dams and powerhouses on the Stanislaus river to provide for increased storage of irrigation water for use in that area. The dams, by name Donnell, Beardsley and Tullock, combined would be capable of storing in excess of 230,000 ac.-ft. of water and would be equipped to generate 80,000 kw. of electrical energy. With the storage provided by the Melones dam, the total water supply of the two districts would be 351,000 ac.-ft.

The Fresno irrigation district of California, considered one of the most important districts of the state with a total area of 234,724 ac., had under gravity water service during 1950, 164,548 ac. and 4,617 ac. served by water pumped from ditches. There were 1,968 ac. with no water service (residential, pumped from wells and dry farmed). There were 55,000 ac. cropped in cotton, 81,000 ac. in grapes, 26,000 ac. in deciduous figs and 45,224 ac. in melons, field crops, pasture and alfalfa all irrigated. The average size of farms within the district was approximately 28 ac. The district owned 650 mi. of irrigation canals and leased 200 mi. of canals from farmers operating within the district. Of the total mileage, 800 mi. were in earth and 50 mi. were concrete lined. The district had no irrigation water storage reservoirs but diverted directly from the Kings river under legal water rights. The district, acting as trustee for the Kings river water users, had an application on file with the Federal Power commission to develop hydroelectric power on Kings river. The district was also working on a storage contract for space in the reservoir to be created by the Pine Flat dam, which was under construction by the U.S. army corps of engineers under authorization of the 1944 Flood Control act.

**Egypt.**—In Egypt plans were being worked out for the creation of reservoirs and the reclamation of land for agricultural use under irrigation practices. The construction of dams was under consideration by the minister of public works at Wadi el Rayan on the Nile, in the Nile delta, at Lake Tana in Ethiopia and at Merwa in Anglo-Egyptian Sudan.

The crest of Lake Victoria dam at the source of the Nile was to be raised about one metre and work on that project was to start in the immediate future. The increased height would result in an increased water supply which would be used for irrigation of large areas of desert land in Egypt and the Sudan.

On the Rosetta branch of the Nile about 30 mi. from the Mediterranean sea work on the Edfina dam was well under way. This was the first dam to be designed, planned and constructed entirely by Egyptian engineers. (See also AQUEDUCTS; DAMS; FLOODS AND FLOOD CONTROL; SOIL EROSION AND SOIL CONSERVATION.) (A. T. M.)

**Islam.** During 1950 the most important event in the life of the Islamic world was the recognition of the independence of Indonesia and its admission to the United Nations, bracketing it in importance with Pakistan (*q.v.*) from the point of view of the figure of its population of about 70,000,000. Not only did this event reinforce the Islamic world politically but also Indonesia promised to become an important centre of Moslem culture.

In Aug. 1950 a cultural conference took place at Hyderabad,

Sind, Pakistan, which stated that the cultural unity of Moslem countries could be best cemented through the instituting of Arabic as the lingua franca of Pakistan and other Moslem countries.

Turkey was the first Moslem country to have achieved the democratization of its political institutions, and this was accompanied by the further revival of religious teachings. The Turkish parliament abrogated the law about the sounding of the *azan*—the call to prayers—in Arabic. An increase in the number of Turkish pilgrims to Mecca and of Turkish students at the University of Al-Azhar in Cairo was noticeable.

The celebration of the 50th anniversary of the reign of King Ibn-Sa'ud was an appropriate occasion for summarizing the results achieved by his leadership. The organization of the pilgrimage to the holy places of Islam, the extension of the ways and means of communication and the building of many hospitals and establishments of learning were among the notable features of his reign. Many students were sent to the U.S. and Europe for higher studies.

Political and economic developments accelerated considerably cultural progress in Egypt. Free education in secondary and technical schools was introduced and the struggle against illiteracy intensified. The Egyptian feminist movement "Bint al-Nil" (the Daughter of the Nile) showed further progress under the leadership of Mme. Durriya Shafiq, the aim of which consisted in allowing the women of Egypt to play their part in accordance with the principles of Moslem religion. During Aug. 22-31 the second Arab Cultural congress was held in Alexandria, Egy., at which a series of resolutions were adopted to make the curriculum of education uniform in Arab countries.

Iran did not stay behind the other Moslem countries. To two existing universities at Tehran and Tabriz were added one at Shiraz and another at Meshed. On Oct. 2 the second Islamic International Economic congress, in which all the Moslem countries took part, was held at Tehran.

In September there was held in Tunis a convention of Moslem students from North Africa at which it was decided to ask the French authorities that the diplomas of the Moslem universities of Kairouan and al-Zeitouna should have the same status as those of the French high schools.

Islam also made efforts to look beyond its frontiers, especially in the Americas. In Washington, D.C., Los Angeles, Calif., São Paulo, Braz., and Buenos Aires, Arg., sites were bought for building mosques. In Malaya, at the invitation of Ibrahim bin 'Umar al-Sakkaf (Singapore) a conference of 77 Malayan Moslems from various parts of Malaya was held on Sept. 1 at Kuala Lumpur to found an Islamic college there. In Yugoslavia a law of Sept. 27 abolished the veiling of women. (A. Md.)

**Israel.** A Jewish republic in Palestine, with undefined frontiers, proclaimed on May 14, 1948, at Tel Aviv. According to a partition plan adopted on Nov. 29, 1947, by the general assembly of the United Nations, the state of Israel was to cover 5,579 sq.mi. (with Negeb); after armistices concluded with all the neighbours during 1949 the *de facto* area of Israel was estimated at about 7,800 sq.mi. According to a census of Nov. 8, 1948, this area had a population of 782,000, including 713,000 Jews; one year later the 1,000,000 mark was reached; by June 1950 the population was estimated at 1,247,000 including 1,094,000 Jews. Chief towns (pop., Dec. 1949 est.): Jaffa-Tel Aviv (more than 300,000); Haifa (150,000). Presi-

TEMPORARY SHELTER in Israel for some of the thousands of immigrants waiting for permanent housing in 1950. The arrival by air of nearly all of Yemen's 50,000 Jews was completed in September

dent of the republic: Chaim Weizmann; prime minister: David Ben-Gurion.

**History.**—The last days of 1949 and the beginning of 1950 were dominated by the excitement caused by the decision of the United Nations general assembly on Dec. 9 to establish an international regime for the city of Jerusalem (*q.v.*) and its environs. The immediate reaction of the government of Israel was to transfer the parliament (*knesset*) to Jerusalem together with the majority of the government offices, and on Jan. 23, 1950, a resolution was adopted proclaiming Jerusalem as the capital of Israel. In the succeeding months it became clear that the U.N. decision would not be implemented and it remained a dead letter.

During 1950 the growing economic problems besetting the country became more apparent and imposed increasing hardships on the population. The economic difficulties were principally the result of the growth of the adverse balance of international trade. During Jan.–Aug. 1950, for example, imports were valued at around IL.68,000,000, while exports accounted for only about IL.19,000,000, the difference having somehow to be found from gifts, loans and remittances from abroad. Recognizing that the ordinary means of raising funds, through the United Jewish appeal, the various affiliates of the World Zionist organization and other semicharitable institutions were insufficient for the enormous task which lay before it, the government adopted the bold step of summoning an economic conference in Jerusalem from Sept. 3 to Sept. 6, attended by leading Jews from the U.S., Great Britain and South Africa. The most far-reaching proposal accepted by the conference and which was put forward by Ben-Gurion, the prime minister, was that a sum of \$1,500,000,000 should be raised during the next three years in order to finance immigration and development. One-third of this sum would be raised in Israel and the remainder abroad, principally in the United States. It was envisaged that the money should come mainly from loans and investments.

The economic difficulties were also largely responsible for the country's first serious cabinet crisis, which resulted in the fall of Ben-Gurion's government on Oct. 15. The immediate cause was the prime minister's desire to make a change in the post of minister of supply, a cabinet seat which was claimed by the Religious bloc. The underlying differences, however, were

the unpopularity of the government's austerity program and the desire of the Orthodox leaders (expressed by the Religious bloc) to exercise a greater influence in the everyday life of the country. The end of the crisis, which lasted 17 days, owed much to pressure from U.S. Jewry which was at that moment making a strenuous effort to put the country economically on its feet. The consequence was the formation of Ben-Gurion's second administration, which, very little different from his first, took office on Nov. 1. On Dec. 26 the Export-Import Bank of Washington announced a new loan of \$35,000,000 to Israel for agricultural development.

In the field of foreign affairs the overriding fact was the continuing unsatisfactory state of Israel's relations with its Arab neighbours. The hopes that prevailed in January at the conference that took place at Geneva under the auspices of the U.N. Palestine Conciliation commission that a treaty would be signed with Jordan (*q.v.*) were not fulfilled and on July 10 the commission announced the failure of its mediation efforts. Further attempts were made to bring the parties together but without success. With a view to lessening the danger of an armament race developing in the middle east, Great Britain, France and the U.S. announced on May 25 certain steps which they were taking to check the flow of arms to Israel and the Arab states.

As tension between east and west increased Israel showed more clearly, in spite of every attempt to remain aloof from the conflict, that its attachments were with the west. On Sept. 10, the U.N. accepted the government's offer to dispatch medical supplies to the U.N. forces in Korea. By the end of November, 61 countries had accorded recognition to the state of Israel, including India, which took this step on Sept. 17. (See also IMMIGRATION AND EMIGRATION.) (D. F. K.)

**Education.**—(1949) Jewish schools: kindergarten 644, teachers 927, pupils 22,894; elementary 447, teachers 3,916, pupils 85,585; secondary 38, teachers 704, pupils 10,498; technical 24, teachers 230, pupils 2,096; special 2, teachers 7, pupils 172; teachers' training colleges 9, teachers 176, pupils 1,166; institutions of higher education 4; Hebrew university (Jerusalem), professors and lecturers 208, students 1,500. Non-Jewish schools: elementary 45, teachers 165, pupils 7,091; secondary 1, teachers 11, pupils 404.

**Finance and Banking.**—Budget (1949–50 est.) revenue IL.46,400,000, expenditure IL.48,000,000. Currency circulation (Sept. 1950) IL.69,700,000. Monetary unit: Israeli pound at par with pound sterling and with an exchange rate IL.1 (Israeli pound) = \$2.80.

**Foreign Trade.**—(1949) Imports IL.87,700,000; exports IL.10,200,000. Main sources of imports (1949): U.S. 31.3%; U.K. 9.3%; Canada 3.8%. Main destinations of exports: U.K. 53.8%; U.S. 15.6%; the Netherlands 6.7%. Main imports: machinery 11%; grain and flour 8.5%; aircraft, ships and vehicles 7.6%; iron and steel manufactures 5.8%. Main exports: food, drink and tobacco 73.3%; manufactured goods

25.6%.

**Transport and Communications.**—Roads (1949) 1,194 mi. Licensed motor vehicles (Dec. 1949): cars 8,000; commercial 13,000. Railways (1949): 438 mi.; freight net ton-miles 15,000,000; freight carried 390,000 metric tons. Shipping (Dec. 1949): merchant vessels 27; total tonnage 78,649. Air transport (1949): passenger arrivals 70,706; passenger departures 23,215; freight incoming 293,416 kg.; freight outgoing 159,717 kg.; air mail dispatched abroad 55,680 kg. Radio receiving set licences (1949) 143,907.

**Agriculture.**—Main crops (metric tons, 1948): wheat 16,000; barley 9,000; maize and durra 10,400; oats 1,000; potatoes 26,000; tobacco 600; vegetables 2,500; grapes 17,800; olives (1949) 1,200; bananas (1948-49) 3,500; other fruits (1948-49) 7,400. Livestock: cattle 33,000; sheep and goats 23,000; horses and mules 5,000; asses 2,000; turkeys 17,000; ducks and geese 22,000; chickens 2,369,000. Fisheries, total catch (1948-49): weight 3,500 metric tons; value L.L.1,583,900.

**Industry.**—Electricity (1949) 329,000,000 kw.hr. Manufactured goods (metric tons, 1949): cement 241,000; refined oils 10,600; margarine 7,300; soap 5,400; flour 96,800; beer 8,936,500 l.; wine 6,500,800 l.

**Italian Colonial Empire:** see ERITREA; LIBYA; SOMALILAND.

**Italian Literature.** The widespread tendency in Italian fiction to depict nature and life as they exist in a given city district or in remote villages and farms, particularly of southern Italy, stems back directly to Verga and Pirandello. Kept alive during the fascist period by I. Silone, Elio Vittorini and Carlo Levi, strengthened by the popularity of U.S. novelists, especially those concerned with the south, this trend was given fresh impetus by the new social consciousness of the present generation of Italian writers who feel that the artist has a moral and social mission, that he must partake actively in the life of his own society in order to portray it. People being largely the result of nature and environment, these vital elements must occupy a prominent place in the novel. Documentary by nature, this type of fiction is broadly classified as neorealistic.

The new writers to win distinction in this field in 1950 included Romualdo Romano, winner of the newly established Hemingway prize, who, in *Sciocco*, painted a graphic picture of the corrosively boring life of a remote Sicilian mountain village during three windswept days; Luigi Incoronato, whose choral novel *Scala a San Petito* was set in one of those steep, narrow, winding alleys of the Naples slums; and Elio Bartolini who, in *Icaro e Petronio*, described against a backdrop of life along Italy's eastern frontier the bitter feud between two wheat smugglers. In the same vein was Carlo Bernari's *Speranzella*, a colourful picaresque novel of primitivism, innocence, politics and graft in an off-limit section of postwar Naples. Unrelated to the neorealistic movement yet focused on the ageless feudal problems that plague Calabria was Gian Paolo Callegari's historical novel *I baroni*.

Eluding classification was Carlo Levi's *L'Orologio*, an array of portraits, descriptions and disquisitions combining the skills of the painter, the poet, the essayist and the journalist. Equally difficult to catalogue was *Furor mathematicus*, a collection of writings on the most heterogeneous subjects by Leonardo Sinigalli, poet, mathematician and engineer.

The artistic charms of town and region furnished striking settings for Marino Moretti's *Il pudore*, the pathetic story of an uprooted boy and girl, reared in Ravenna, Forlì and Urbino; for Francesco Brundu's *Il salto delle pecore matte*, the tale of a provincial Sardinian caught in the maze of Roman bureaucracy; and for Carlo Coccioli's *Il giuoco*, whose characters struggle against fate in ancient and lovely Urbino.

Close scrutiny into man's soul, his psychology and moral problems characterized Bonaventura Tecchi's *Valentina Velier*, Guglielmo Petroni's *La casa si muove*, Carlo Coccioli's *Il cielo e la terra* and Michele Prisco's *Gli eredi del vento*.

Poets of repute continued to exploit the forms already evolved while new poets reflected their influence. Noteworthy publications included Giuseppe Ungaretti's *La terra promessa*, Salvatore Quasimodo's *La vita non è sogno*, Giorgio Vigolo's *Linea della vita*, Alfonso Gatto's *Nuove Poesie 1941-49*, Sergio Solmi's *Poesie*, Diego Valeri's *Lungo Tempo* and Alessandro Parronchi's *Un'attesa*.

The end of the literary year was marked by the publication of *Cinquanta anni di vita intellettuale italiana (1896-1946)*, two volumes of essays by 32 Italian intellectuals on various aspects of Italian cultural life, presented to Benedetto Croce on his 80th birthday. (M. F. C.)

**Italy.** A republic of southern Europe, bounded on land north-west by France, north by Switzerland and Austria and northeast by Yugoslavia, Italy includes not only the whole of the Apennine peninsula, but also the large Mediterranean islands

**VOLCANIC POWER PLANT** at Larderello, It., which was being rebuilt and enlarged in 1950 to utilize its new source of energy. Power was generated by harnessing steam created by rain water as it came in contact with the hot lava of an unborn volcano beneath the Larderello valley

of Sicily and Sardinia and a number of smaller islands. Area: 116,224 sq.mi., excluding Venezia Giulia, Zara and the islands (2,843 sq.mi.) ceded to Yugoslavia, the five small areas in the Alps ceded to France (273 sq.mi.) and the free territory of Trieste (*q.v.*). Pop.: (mid-1949 est.) 46,001,000. Language: mainly Italian. Religion: mainly Roman Catholic. Chief towns (pop., 1948 est.): Rome (cap., 1,613,660), Milan (1,277,013); Naples (995,257); Turin (719,528); Genoa (657,634); Palermo (470,780); Florence (377,203); Bologna (329,964); Venice (308,677). President: Luigi Einaudi; prime minister: Alcide de Gasperi (*q.v.*).

**History.**—On Jan. 12, 1950, the sixth De Gasperi cabinet, which had dragged out a rather uncertain existence after the Socialists had left it on Oct. 31, 1949, resigned. The president of the republic immediately asked De Gasperi to form a new government which he succeeded in doing by the end of the month. His seventh cabinet differed from its predecessor in certain minor ways. It had, for instance, no Liberal members, since the Italian Liberal party was too conservative to approve of the prime minister's plans for agrarian reform. On the other hand, two of the most progressive Christian Democratic ministers, Amintore Fanfani and Giorgio la Pira, left office, and the small Republican contingent of ministers was reinforced by the appointment of Ugo la Malfa, a financial expert, as minister without portfolio to co-ordinate the activities of state-controlled economic concerns.

**Communists and Fascists.**—The country was in a state of considerable turmoil which was fundamentally due, as ever, to overpopulation and the sharply uneven distribution of wealth. On Jan. 9, immediately before the government's resignation, there had been a typical crisis at Modena, one of the "red" towns of Emilia. Working people had demonstrated against the management of a metallurgical factory which, after closing for 34 days, had reopened with 250 employees instead of 565. The police intervened, and there were six killed and a good many injured among the demonstrators. The incident aroused indignation far beyond Modena; there were strikes and further clashes, and finally the factory agreed to reinstate the men who had been dismissed.

The Communist party and the still powerful General Confederation of Labour (C.G.I.L.) directed by the Communist leader Giuseppe di Vittorio made fresh efforts to exploit the position, more particularly in order that the Holy Year pilgrims should see the country disturbed. Toward the end of February an economic conference took place under Communist auspices at which a plan was put forward for the immediate engagement of 700,000 men on development work to be financed by credit and currency expansion; great play was made with this proposition by contrast with government credit policy. On March 21 two workers were shot and killed by the police at an unauthorized demonstration at the village of Lentella in the Abruzzi. The Communists immediately called a 12-hour strike from 6 A.M. on March 22 throughout Italy, which led to disturbances all over the country.

A large part of the population was naturally exasperated by the Communists' tactics. This accelerated the revival of fascism which had been marked in Jan. 1950 by the appointment of Count Alberto de Mersanich, a former Mussolinian official, as leader of the now frankly fascist M.S.I. (Movimento Sociale Italiano). Although fascism was still legally forbidden, fascist ideas became more and more popular among students and schoolboys, and groups of M.S.I. *squadristi* became openly active and were sometimes paid by employers to support their resistance to labour demands. On Nov. 21 the cabinet approved a draft bill modifying the methods used to repress neofascist activities.

**Industrial Unrest.**—A large sector of Italian heavy industry and especially the Milan and Genoa former armament and ancil-

lary concerns had ever since the end of World War II been economically impossible to rationalize and socially impossible to close down. On May 13 the government announced its decision to wind up the Mechanical Industries fund (F.I.M.) through which these concerns had been kept going. Although some European Recovery program money was to be substituted, this led to the long-threatened closing down of a series of factories. The Ansaldo shipyards at Genoa dismissed more than 4,000 people in September; altogether at least a tenth of the Genoese population was directly affected by dismissals at this time. Other factories in Milan and at Savona also dismissed large numbers.

After what had seemed like endless quarrels and negotiations between employers and all three groups of trade unions, an agreement was reached in the middle of October by which disputed cases of dismissals were to be submitted to a new board of conciliation representing both capital and labour and established experimentally until Dec. 1951. When the discussions on wages broke down on Nov. 11, this was followed by a strike on Nov. 14 which was backed by the C.I.S.L. (Confederazione Italiana dei Sindacati dei Lavoratori) as warmly as by the C.G.I.L. An agreement on wages was however reached in December.

Despite all difficulties production tended to rise even during the first half of the year, before, that is, the large-scale rearmament of western Europe following the outbreak of war in Korea. Unemployment figures somewhat diminished, although in view of the intricacies of computing underemployment in Italy it was always hard to be sure of the basis upon which such calculations were made.

In the textile industries, however, there was something like depression. This was known to be largely attributable to the lightheartedness with which Italian textile manufacturers, who had made big profits immediately after the war, had nevertheless failed to reinvest in the improvement of their plant. Both Communists and Economic Cooperation administration representatives and indeed critics on all sides blamed both government and individual manufacturers for their failure to invest more in capital equipment. Although on April 5 Giuseppe Pella, the minister of the treasury, had announced the further reduction of the bank rate from 4½% to 4%, ECA officials complained that the policy of the Italian government was still so deflationary as to wither the country's economic potentialities; at one time or another they objected to the failure to utilize available funds or to the high proportion devoted to importing foodstuffs rather than to bold investment. This criticism reached a climax in October when Leon Dayton, the recently appointed chief of the ECA mission in Italy, gave voice to it in a number of public pronouncements.

**The Land Reform.**—The Italian government's most notable achievement in 1950 was made in the direction of land reform. In the middle of March De Gasperi announced a ten-year plan with provision for the necessary funds for the relief of unemployment in, and the development of, the most backward areas of the country; the project was in due course to incorporate a measure of land redistribution such as to reduce the area of large neglected estates for the benefit of peasants hitherto without land of their own. This agrarian reform was to be carried out in three stages. The first of these involved the establishment of 1,000 or more peasant families from the wretched Ionian coast of Calabria on the near-by and fertile but uninhabited Sila plateau. This project was drawn up in Jan. 1950 and was approved by the senate in March and by the chamber of deputies in May; on Sept. 24 the first 30 peasant families received small farms in time for the autumn sowings, on a 30-yr. instalment system. Altogether the Sila plateau was expected to provide about 3,750 ac. for about 400 families.

The second stage of land reform concerned the depressed areas

of Italy as a whole, mainly, but not only, in the south and in Sicily and Sardinia. By Oct. 12 both chambers had approved the transfer of about 1,750,000 ac. of land in these regions. This land was to be taken from the largest and least productive estates by June 30, 1951; the former owners were to receive compensation according to the taxable value of the land; its development was to be financed out of the funds put aside for the implementation of the ten-year plan. The third stage of land reform was expected to lead to the transfer of nearly 2,000,000 ac. more in all parts of the country at a future date.

**Foreign Policy.**—De Gasperi and Count Carlo Sforza, the foreign minister, continued to conduct Italian foreign policy along the path of close co-operation with western Europe and above all with the United States, the fount of Italy's economic life.

In Africa Italy assumed the United Nations trusteeship over its former colony of Somaliland on April 1, 1950, for a period of ten years. This return did something to allay Italian soreness over the fate of the prefascist Italian empire. (See also ERITREA; LIBYA; SOMALILAND, ITALIAN.) (E. Wl.)

**Education.**—Schools (1947-48): elementary 38,123, pupils 4,835,566, teachers 215,501; secondary 1,188, pupils 373,608, teachers 30,568; technical secondary 2,143, pupils 310,320, teachers 27,483. Universities and institutions of higher education 27, students 180,134, professors and lecturers 3,674.

**Finance and Banking.**—Budget: (1949-50 actual) revenue 1,280,483,000,000 lire, expenditure 1,578,849,000,000 lire; (1950-51 est.) revenue 1,285,808,000,000 lire, expenditure 1,462,034,000,000 lire. National public debt (May 1950): 2,323,205,000,000 lire. Currency circulation (Aug. 1950): 984,300,000,000 lire. Gold and foreign exchange (June 1950): U.S. \$898,000,000. Bank deposits (June 1950): 1,303,900,000,-

000 lire. Monetary unit: lira (pl. lire) with exchange rate of 625 lire to the dollar.

**Foreign Trade.**—(1949) Imports 855,062,000,000 lire; exports 632,567,000,000 lire. Main sources of imports (1949): U.S. 35.2%; Australia 5.6%; Argentina 5.3%; Germany 4.4%. Main destinations of exports (1949): Argentina 12.3%; U.K. 10.6%; Germany 8.4%; France 5.7%. Main imports (1949): cereals and flour 19.6%; coal and coke 11.5%; raw cotton 10.8%; wool 8%; petroleum and products 6.2%. Main exports (1949): cotton yarn and manufactures 14.3%; fruit and vegetables, fresh and canned, 13.4%; machinery 11.8%; rayon and staple manufactures 10.2%; vehicles 7.6%.

**Transport and Communications.**—Roads (1949): 105,987 mi. Licensed motor vehicles (Dec. 1949): cars 266,928; commercial 213,849. Railways (1949): 13,377 mi.; passenger-miles 12,787,000,000; freight carried 39,000,000 metric tons. Shipping (July 1949): number of merchant vessels over 100 gross tons 1,025; total tonnage 2,444,965. Civil aviation traffic (1949): passengers departing and arriving 632,700; cargo loaded and unloaded 23,400 tons. Telephones (1948): subscribers 658,813. Radio receiving set licences (1949): 2,543,000.

**Agriculture.**—Main crops (metric tons, 1949): wheat 6,940,000; maize 2,202,000; barley 227,000; oats 415,000; rice, paddy 591,000; rye 125,000; potatoes 2,640,000; sugar, raw value 483,000; hemp 72,200; linseed 11,000; tobacco 60,000; grapes (1950) 5,906,000; olives 1,090,000; fresh figs 402,000; tomatoes 1,075,000. Citrus fruits (metric tons, 1948): oranges and tangerines 410,000; lemons, limes, grapefruit and other 284,000. Olive oil (1949): 179,000 metric tons. Wine production (1949): 35,825,400 hl. Livestock: cattle (July 1949) 8,300,000; sheep (July 1949) 10,100,000; pigs (Jan. 1948) 3,757,000; horses (1948) 720,000; donkeys (1949) 547,000; mules (Jan. 1948) 301,000. Wool production greasy basis (1949): 16,000 metric tons. Meat production (1949): total 230,000 metric tons. Fisheries, total catch (1949): 15,200 metric tons.

**Industry.**—Fuel and power (1949): coal 1,104,000 metric tons; lignite 833,000 metric tons; manufactured gas 1,584,000,000 cu.m.; electricity 20,784,000,000 kw.hr. Raw materials (metric tons, 1949): iron ore, metal content, 521,000; lead ore 58,000; zinc, smelter production, 26,400; pig iron 445,000; steel ingots and castings 2,052,000; manganese ore 24,000; bauxite 105,000. Manufactured goods (metric tons, 1949): cement, 90% of total production, 4,032,000; cotton yarn 209,000; rayon filament yarn 49,900; rayon staple fibre 36,200; jute yarns (1948) 50,000; wool yarns (1948) 41,000; all types of paper and cardboard (1949) 408,000. Production of automobiles (1949): 86,954. Index of industrial

**Ivory Coast:** see FRENCH UNION; FRENCH WEST AFRICA.

**Jamaica.** A British colony and dependencies, the colony being the largest of the British West Indian islands. Dependencies: Cayman Islands (100 sq.mi.; pop. 1949 est., 7,000) and Turks and Caicos Islands (166 sq.mi.; pop. 7,000), with local legislatures and a large degree of internal autonomy. Area (colony): 4,411 sq.mi. Pop. (1943 census) 1,237,063; (1949 est.) 1,373,000, mainly of African descent. Chief towns (pop. 1943 census): Kingston (cap., 109,056); Spanish Town (12,007), Montego Bay (11,547). Governor at the end of 1950 Hugh Mackintosh Foot.

**History.**—The Labour party, led by W. A. Bustamante, in 1950 retained its working majority in the house of representatives and debate by the house on proposals for a revision of the constitution granted in 1944 was deferred.

During the year, a bill providing for land taxation on unimproved value was introduced in the legislature. An important agricultural development was the acceptance by the Jamaica Agricultural society, a quasi-government organization, of the government's proposals that the society's extension services should be integrated with those of the agricultural department. The approval of the legislature to this arrangement was to be sought.

Industrial development continued. A law was enacted to provide special concessions, relating chiefly to income tax and customs duties, to companies engaged in the production of bauxite. Reynolds Metals, Ltd., representing United States interests, began extensive preliminary work on the erection of a pier for shipment of ore and on the provision of mining installations; while Jamaica Bauxite, Ltd., a subsidiary of the Aluminum Company of Canada, also proceeded with preparatory work. Work began on a cement factory. The tourist trade continued to be a large dollar-earner, and all hotels enjoyed good seasons.

During 1950 a first issue of £500,000 premium bonds to finance agricultural and industrial development met with a very good response. In October arrangements began for the establishment of observation posts in the Turks and Caicos Islands for use in connection with the Anglo-United States project at Cocoa, Fla., for the development of guided missiles.

**Finance and Trade.**—Currency: pound sterling with local notes. Budget (1950 est.): revenue £10,356,594; expenditure £10,491,757. Foreign trade (1949): imports £19,225,539; exports £12,137,496. Principal exports: sugar, rum, bananas, citrus, tobacco. (P. H.-Mv.)

**Japan.** An island nation located in the western Pacific, Japan has been under Allied occupation since its defeat and surrender in 1945. In accordance with the Cairo and Potsdam declarations, Japan was stripped of its former overseas possessions and reduced to the four main islands of Honshu, Kyushu, Shikoku and Hokkaido (total area: 146,690 sq.mi.) and minor adjacent islands. Total population: (est. Jan. 1, 1950) 83,073,518. Chief cities (1947 pop.): Tokyo (cap. 4,174,505); Osaka (1,559,310); Kyoto (999,396); Nagoya (853,085); Yokohama (814,268); Kobe (607,202). Principal religions: Buddhism, Shintoism. Emperor: Hirohito; prime minister: Shigeru Yoshida.

**History.**—*Inter-Allied Policies.*—During 1950 Japan continued under Allied (chiefly U.S.) military occupation, with Gen. Douglas MacArthur as supreme commander. The 13-nation Far

Eastern commission (F.E.C.) in Washington, D.C., the nominal policy-making body, played on the whole a passive role, as did the four-member advisory Allied council in Tokyo. The Soviet Union walked out of the F.E.C. in January, demanding the expulsion of the Chinese nationalist member, but returned in October. Soviet participation in the Allied council was intermittent, because of the continuing dispute over repatriation of Japanese war prisoners from the U.S.S.R. In April the Soviet Union announced that repatriation had been completed, but the United States, maintaining that more than 300,000 prisoners were still unaccounted for, in August joined with Great Britain and Australia to ask a United Nations investigation of the matter, which was voted by the U.N. general assembly in December. The Soviet Union for its part charged that the United States was secretly rearming Japan and that it was using Japanese troops in the war in Korea. Both charges were denied by the United States.

Pressure for the conclusion of a peace treaty increased in 1950 in Japan and elsewhere. On Sept. 14 Pres. Harry S. Truman announced that the United States was beginning informal conversations with interested powers on the subject. An outline of proposed peace terms released by the United States on Nov. 24 called for a U.S. trusteeship under the United Nations for the Ryukyu and Bonin Islands; the status of Formosa, the Pescadores, southern Sakhalin and the Kuril Islands would be jointly determined by the United States, the United Kingdom, U.S.S.R. and China, or failing agreement, by the United Nations general assembly; Japan would be admitted to the United Nations. The terms outlined would permit the maintenance of U.S. and other troops in Japan, by agreement with the Japanese, to safeguard Japan's security. No restrictions on Japanese rearmament were proposed. Some of Japan's former enemies found these terms too lenient, and demanded firmer guarantees against Japanese remilitarization, and further reparations. Reparations deliveries under the advance transfer program were completed in May, with \$20,000,000 worth of equipment going to China, \$8,000,000 to the Philippines, \$7,000,000 to the United Kingdom and \$5,000,000 to the Netherlands. The United States did not contemplate further reparations payments.

The primary question, however, was whether the United States and other countries should conclude a separate treaty or treaties with Japan if agreement with the U.S.S.R. (and Communist China, which demanded a voice in the treaty) proved impossible. Late in December the United States intimated in a note to the Soviet Union that it was prepared to proceed without soviet concurrence. Discussion in Japan itself during the year was focused chiefly on the issue of a separate treaty. The Japanese preferred an

"PLEASE TO SIGN THIS—WITH ANYBODY!" a 1950 cartoon by Loring of the *Providence Evening Bulletin* (R.I.)

over-all treaty, which would give Japan full international status and diplomatic freedom of action. However, Prime Minister Yoshida and his Liberal party maintained that a separate treaty was better than none, deplored further delay and favoured alignment with the western powers. The opposition parties, which hoped that Japan could maintain a neutral position in world affairs, argued for an over-all treaty, and opposed the maintenance of U.S. bases in Japan after the treaty was signed. Sentiment for an over-all treaty was strong in the first half of 1950, but the war in Korea caused a swing in the other direction, convincing many that Japan, for the sake of its own security, had no choice but to throw in its lot with the western powers. Early in July the Japanese government announced that it would collaborate with the United Nations operations in Korea by all means which lay in its power, and in a White Paper issued on Aug. 19 it stated that for Japan there was "no room for 'non-involvement' or 'neutrality.'" This was endorsed by all major parties except the Social Democrats, who, however, supported co-operation with the United Nations in Korea. On July 8, General MacArthur authorized the expansion of the Japanese police force from 125,000 to 200,000, in the interests of internal security.

As in 1949, the emphasis in occupation policy was on economic recovery rather than, as earlier, on political reform. Except in the economic stabilization program, the trend was toward greater autonomy for Japanese governmental agencies. By the end of the year more than 100 convicted war criminals had been paroled, and more than 10,000 persons had been removed from the political purge list. An F.E.C. decision of Oct. 3 gave the Japanese courts criminal jurisdiction over United Nations nationals, with some exceptions. In February Japan received permission to set up trade promotion offices in the United States and other countries willing to receive them, and also in February the supreme commander was authorized to permit Japan to take part in international conferences and agreements of a technical character. Strenuous efforts were made to promote exports, through bilateral trade agreements and other means, but Japan was still far from self-sustaining. Through June 1950 the United States had spent \$1,727,000,000 to support the Japanese economy. Planned expenditures for the fiscal year 1950-51 were \$288,000,000, as compared with \$438,000,000 in 1949-50, and it was hoped that such aid could be discontinued by 1953.

*Domestic Affairs.*—The government headed by Prime Minister Yoshida of the Liberal (formerly Democratic Liberal) party continued in office throughout the year, though slightly reorganized after the outbreak of war in Korea. In February part of the Democratic party merged with the Liberals, and in April the remainder joined with the People's Cooperative party and another group to form a new centrist People's Democratic party. The Social Democrats split apart in January but later reunited and in April adopted a left-of-centre platform. The June elections, to fill approximately half of the seats in the diet's upper house, resulted in gains for the Liberals and also for the Social Democrats, with losses for the People's Democrats and other centre groups.

Communist influence declined sharply in 1950, partly as a result of government repression. Japanese opinion was unfavourably affected by widely publicized allegations that Japanese Communists had asked the Russians to return to Japan only those war prisoners who had been indoctrinated with Communism, and Japan was alarmed by the Communist attack in Korea. Still another factor was internal dissension within the Communist party, intensified by the Cominform's January attack on Japanese Communist leaders for pursuing too moderate policies. In May General MacArthur again raised the question of whether the Communist party should be outlawed. In June he ordered that 24 leaders of the party should be barred from all political activity

JAPANESE VOTERS, the mothers with their children strapped to their backs for convenience, shown at the polls during the parliamentary elections of June 4, 1950

under the "purge" directives, originally aimed at militarists. Japanese government measures against Communists or suspected Communist sympathizers were stepped up after the outbreak of war in Korea. Though the Communist party was not outlawed, it was forced to operate largely underground. The left-wing Japan Liaison Council of Labour Unions was dissolved by the government on Aug. 30, and its principal component, the National Congress of Industrial Unions, which had lost much of its membership, voluntarily disbanded on Sept. 20. By the end of the year the great bulk of organized labour was affiliated or co-operating with the General Council of Japanese Labour Unions, under anti-Communist leadership.

In the first half of 1950, under the "austerity" economic program inaugurated in 1949 and closely supervised by the occupation authorities, the budget was balanced, prices declined slightly and production and trade registered moderate gains. But many small and medium-sized enterprises, and some larger ones, were hard hit by the prevailing deflationary policies and were forced to suspend wage payments, dismiss employees and in some cases to go out of business. The refusal of government and private employers to grant wage increases demanded by organized labour led, in the spring, to a wave of strikes and strike threats in major industries, although large strikes were virtually banned. Moderate labour leaders had some difficulty in retaining their control, and union membership fell to 5,839,000 in June 1950, compared with 6,655,000 a year earlier. In response to public demands, shortly before the June election the government promised some relaxation of its stringent financial policies.

The war in Korea altered the picture, creating a minor war boom in Japan and changing a buyers' to a sellers' market. U.S. war orders for goods and services, which reached \$143,000,000 by mid-November, stimulated industrial production, and prices

JAPANESE RESORT CITY of Atami aflame in April 1950 during a blaze ignited by a lighted cigarette. One-quarter of the city was razed and about 800 persons injured

turned upward. Japanese exports also increased as western rearmament programs created world-wide commodity shortages, although this also affected raw materials imported by Japan.

Most of the Carl S. Shoup mission's recommendations for reform of the tax system were enacted by the diet in May, except those on local taxation, which were rejected by the upper house but passed in July with some revision. Several measures were taken to encourage foreign investment, including certain tax privileges for foreign nationals.

**Finance.**—National government expenditures (general account only) were budgeted for 1950–51 at 661,406,000,000 yen, a decrease of 76,243,000,000 from the previous year—the first decline since 1934. The principal items were 90,000,000,000 yen for price subsidies (a decrease of 89,200,000,000), 109,061,000,000 yen for war termination expenses, chiefly occupation costs (a decrease of 15,618,000,000), and 105,138,000,000 yen for local government, an increase of 34,565,000,000 resulting from the reorganization of national and local finances. Revenues were expected to balance expenditures, with 444,600,000,000 yen coming from taxes and stamp revenue and 132,147,000,000 from receipts from government enterprises. In drafting this budget the government's aim was, as in 1949, to hold the line against inflation.

The Bank of Japan's outstanding note issue at the end of Sept. 1950 stood at 328,781,000,000 yen, as compared with 298,202,000,000 a year earlier. In the same period the bank's holdings of government debt declined from 237,378,000,000 yen to 205,809,000,000. Total deposits of other banks rose from 634,299,000,000 yen in Aug. 1949 to 899,171,000,000 in Aug. 1950. The official value of the yen remained throughout the year at 360 to the U.S. dollar. The gradual tapering off of price inflation in 1949–50 is shown in the following indexes:

	Wholesale prices (1934–36=100)	Consumer prices (1948=100)	Wages in manufacturing (1934–36=100)
1947 . . . . .	4,820	57.0	3,450
1948 . . . . .	12,780	104.5	9,200
1949 . . . . .	20,880	137.9	14,770
1950, Jan.-Sept. . . . .	23,540	128.3	16,950

**Trade and Transport.**—Japanese foreign trade continued to increase in 1950, aided by the war boom in the latter part of the year, but was still only about half of the prewar volume. In the first nine months of the year the excess of imports, financed by U.S. grants, was reduced by 57% from the same period of 1949. In order to dispense with foreign aid it was estimated that Japan would need at least to double its exports. In 1949 the United States provided 64% of Japan's imports, other leading suppliers being China (including Formosa), Australia, Malaya, Egypt, Indonesia, India and the Philippines. Exports were more widely dis-

tributed, with the United States taking 15%, India 13%, Great Britain 8%, Indonesia 5%, the Philippines 4% and Australia and Korea each 3%. Foodstuffs predominated among imports, followed by cotton, wool and other raw materials. Exports consisted largely of manufactured goods, with cotton textiles the leading item. The following figures are in thousands of U.S. dollars:

	Imports	Exports	Balance
1947 . . . . .	523,562	173,568	—349,994
1948 . . . . .	683,083	258,271	—424,811
1949 . . . . .	904,617	509,700	—394,917
1950, Jan.-Sept. . . . .	683,392	533,199	—150,193

Traffic on Japanese government railways was as follows in 1949 (monthly averages): passenger-kilometres, 5,815,678,000; revenue freight-ton-kilometres, 2,347,383,000. Corresponding monthly averages for Jan.-Sept. 1950 were 5,456,422,000 and 2,362,459,000 respectively. In addition, private railways carried a monthly average of 37,246,000 ton-kilometres of freight in 1949 and 35,390,000 in Jan.-Sept. 1950. Japan's merchant fleet remained less than half its prewar size, though it had increased by 50% since 1945. In Sept. 1950 the country had 2,038,210 gross tons of steel vessels of 100 tons or more. In 1949 only 13% of Japan's imports and 32% of its exports were carried in Japanese ships.

**Food and Agriculture.**—Production of staple foods in Japan in 1950 nearly equalled the record established in 1948, and exceeded by 11% the 1931–40 average. Population, however, had increased by 14% since 1940, and even before the war Japan produced only about 80% of its own food requirements. Food imports since the war accounted for a large part of its trade deficit (44% of total imports in the period July 1949–June 1950). The following figures on staple food output are given in metric tons:

	1950 Production (prelim.)	Area (prelim.) (hectares)	Production 1949
Rice . . . . .	9,430,970	2,993,800	9,380,930
Wheat . . . . .	1,338,260	761,550	1,297,270
Barley . . . . .	896,480	427,690	950,530
Naked barley . . . . .	1,062,090	589,460	1,046,820
Sweet potatoes . . . . .	5,851,950	397,450	5,912,910
Spring white potatoes . . . . .	2,362,820	187,990	2,315,790
Total . . . . .	20,942,570	5,357,940	20,904,250

**Manufacturing and Mining.**—In the fall of 1949 industrial activity in Japan resumed its upward climb. In the first nine months of 1950 utilities and mining exceeded prewar levels, while manufacturing output neared its prewar volume. By September the index of general industrial activity, based on 1932–36 as 100, stood at 110.5, against 93.7 in Sept. 1949. Other Sept. 1950 indexes on the same base, were as follows (Sept. 1949 figures are given in parentheses): utilities 171.5 (164.1), mining 111.5 (106.5), all manufacturing 96.3 (75.9), metals 130.8 (88.6), machinery 113.9 (111.7), textiles 43.7 (25.5), chemicals 128.0 (79.7), food, beverages and tobacco 77.8 (90.1). Nonagricultural employment in July was 17,740,000. In September the number of persons seeking employment was reported as 854,000, against 477,000 in Sept. 1949; these figures exclude concealed unemployment. Wages (through August) were fairly stable at a level slightly above that of 1949; real wages increased slightly, but were still far below prewar levels.

Industrial Production			
Monthly Average	1950 (Jan.-Sept.)	1949	1948
Coal (1,000 metric tons) . . . . .	3,119	3,172	2,822
Crude petroleum (metric tons) . . . . .	26,601	18,129	14,867
Gas (1,000 cubic metres) . . . . .	90,300	80,900	66,300
Electricity (million kw.hr.) . . . . .	3,610	3,415	2,959
Pig iron (metric tons) . . . . .	177,647	129,057	67,335
Steel ingots & castings (metric tons) . . . . .	380,542	259,284	142,819
Refined copper (metric tons) . . . . .	6,744	6,170	4,528
Cement (1,000 metric tons) . . . . .	328	273	155
Motor vehicles (units) . . . . .	5,714	5,538	3,197
Cotton yarn (1,000 lb.) . . . . .	40,182	28,931	22,898
Rayon staple fibre (1,000 lb.) . . . . .	11,441	4,965	2,939
Cotton fabrics (1,000 sq. yd.) . . . . .	122,302	82,072	76,990
Raw silk (bales of 132 lb.) . . . . .	11,497	13,684	11,248
Wheat flour (1,000 metric tons) . . . . .	130	146	84

**Jebb, Sir (Miles Hubert) Gladwyn** (1900– ), British diplomat, was born at Haslemere, Surrey, Eng., April 25. He was

educated at Eton and Magdalen college, Oxford. He entered the diplomatic service in 1924 and served in Tehran and Rome. He served in the foreign office 1929–40, in 1941 became acting counsellor in the foreign office and in 1942 head of the reconstruction department set up to formulate British postwar foreign policy. He was a British delegate to the Dumbarton Oaks conference, 1944, and accompanied Anthony Eden to Yalta in 1945. He was executive secretary of the preparatory commission of the United Nations, 1945, and in 1946 acted as secretary-general. In 1948 he was United Kingdom representative on the Brussels Treaty commission with the personal rank of ambassador. In March 1950 it was announced that he had been appointed permanent U.K. representative to the U.N. in succession to Sir Alexander Cadogan. In April he attended a meeting in Brussels of the consultative council of the Brussels treaty powers and later had talks with Trygve Lie, the U.N. secretary-general, in London. In May he attended discussions between Dean Acheson, Robert Schuman and Ernest Bevin, also in London, where he was later present at a meeting of the North Atlantic treaty council. He took up his post at Lake Success in June, and in September took his turn as chairman of the Security council, following Jacob Malik, U.S.S.R.

**Jerusalem.** The capital of former Palestine, revered as a holy city by Christians, Moslems and Jews alike, Jerusalem was divided by a demarcation line established in the Israel-Jordan armistice agreement of April 3, 1949. Population (1950 est.): Israel-held new city 120,000; Arab-held old city 30,000. Israeli mayor: Daniel Auster; Arab mayor: Arif al Arif Pasha, until Oct. 1950.

On Dec. 9, 1949, the general assembly of the United Nations adopted a resolution, by more than a two-thirds majority, that Jerusalem be placed under an international regime; it called on the Trusteeship council to prepare a statute for international administration of the city. In April the council adopted a draft but did not make any recommendation as to the appointment of the governor or take steps to obtain from members of the United Nations the contribution which had been assessed for the international administration. The draft statute was referred to the general assembly of 1950. The British member of the council made it clear that the British government did not regard an international regime as feasible, and on April 27, 1950, Great Britain, in granting *de jure* recognition to Israel, made a declaration recognizing the sovereignty of Israel and Jordan over parts of Jerusalem pending final determination of the status of the area.

The 1949 action of the United Nations evoked immediate opposition from Israel. A resolution was passed by the *knesset* (assembly) on Jan. 23, 1950, declaring that Jerusalem had again become the capital of Israel, and urging the government to expedite the transfer of the government offices which had hitherto been placed in Tel Aviv. Speedy action was taken. The *knesset*, which after its first sitting in Jerusalem (Feb. 1949) had held its sessions in Tel Aviv, moved. All the government offices except the ministries of foreign affairs and defense were transferred during the next months. Another step marking the resolution to integrate Jerusalem in the state of Israel was the building of a large hall for the Zionist congress and a convention centre at which exhibitions would be held. A Jerusalem economic corporation, with a capital of IL.750,000, was founded with the participation of government and public bodies for the encouragement of craft and industry; and an exhibition was opened in August to mark the intention to make Jerusalem an important centre of export industry.

In the Arab city the principal change was the reinstatement of electricity, which had been cut off during the war. Arrange-

ments were made between Israel and Jordan for the passage of Christian pilgrims in Holy Year from one area of the city to the other. The Israel delegation to the United Nations submitted to the Trusteeship council in May a proposal for a United Nations representation to be responsible for the supervision of the holy places. A similar proposal submitted to the U.N. general assembly by a group of Protestant states in December and the Belgian proposal to appoint a committee of four to study the protection of the holy places and religious interests in the Holy Land both failed to win the necessary majority.

The first Hebrew World congress was held in July, and a Hebrew world league was established with its centre in Jerusalem, in order to place the Hebrew language and culture in the centre of the life of the Jewish people.

FILMS OF 1950.—*Jerusalem, the Holy City* (Encyclopædia Britannica Films Inc.). (No. B.)

**Jet Propulsion.** The late autumn of 1950 saw the world's first all-jet fighter engagements when U.S. air force F-80 Shooting Stars and shortly after, in more spectacular fashion, F-86 Sabres tangled with Russian-built MIG-15s. Although the "15s" or "MIGs" were as fast as the Sabres and more manoeuvrable, they fell far short in these initial air battles. More importantly, however, 1950 would be remembered as the year in which the propeller-turbine engine (turboprop) came into its own in the U.S., with the Allison T-38 and (doubled) T-40 and the Pratt and Whitney T-34 successfully test-flown. The year was also notable for the effective re-entry in the turbine-engine field of Wright Aeronautical corporation, with its far-reaching co-operative arrangements with the British firms of Armstrong Siddeley Motors, Ltd., and the Bristol Aeroplane Co., Ltd., for the production and development of propeller-turbine and jet-turbine engines.

**Turbojets.**—Several radically improved versions of U.S. jet engines went into flight test or production. These included the Allison J35-AL-23 (company model 450-E1) of more than 9,000-lb. thrust. It had more compressor stages than the original J35, larger combustion chambers and an additional turbine stage; in effect it was a new engine, and would eventually receive a new military designation. It was expected to power an advanced

THE McDONNELL XF-88, twin-jet penetration fighter plane which was being considered for fast, close-support service by the U.S. air force in 1950

model of the Boeing B-47. General Electric had two new versions of its J47 engine, both referred to as all-weather jets. The J47-GE-17 had an afterburner, a high-altitude starting system and anti-icing and electronic controls; thrust was in the 7,500-8,000-lb. class. It was the announced power plant of the North American F-86D all-weather Sabre. The J47-GE-23 had most of the features of the "17," but without afterburner and with less emphasis on substitution of critical materials, to achieve quick quantity production.

Pratt and Whitney's centrifugal-flow J48 with afterburner was stepped up into the 8,000-lb. thrust class. It was flight-tested in the North American XF-93 long-range all-weather fighter, in the new F-94C version of the Lockheed two-place all-weather fighter, and the latest Grumman Panther (F9F-5). Westinghouse had a souped-up version of its J34 (company 24C) turbojet, designated J40, which more than doubled the 3,000-lb. thrust of the original engine. It was under service test in various navy jet aircraft, although no specific announcements were made. It would power production models of the F-88 Voodoo, which won the air force evaluation test for long-range penetrator-escort fighters. Wright Aeronautical corporation began development of the TJ-31 Typhoon. This was originally the Metropolitan Vickers F8 Sapphire, turned over to Armstrong Siddeley for development and production. The Typhoon was a U.S. version, with an initial rating of 7,000-lb. thrust and a potential of 9,000 lb.

Work on turbojets in the 9,000 to 12,000 lb. of thrust bracket continued throughout the year. All were axial-flow types and included the General Electric XJ-53, Pratt and Whitney XJ-57 (first turbojet of the company's own design), the Westinghouse XJ-46 and an Allison project.

At the 1950 Farnborough show the British Electric twin-jet Canberra Mk.2 tactical bomber was introduced, powered by two Rolls-Royce Avon AJ-65s. This was the first British combat jet aircraft to use an axial-flow jet engine, and it had such a high priority rating that the air ministry ordered production of the 7,000-lb. thrust Avon in two Rolls-Royce plants, and also at the Bristol and Napier companies. Tests were continued on the fast climbing Avon-Meteor. Rolls-Royce continued development on two higher-powered axial jets, the AJ-85 and AJ-105. The Avro Ashton, powered by four Rolls-Royce Nene 5s (centrifugal-flow), was also flown at Farnborough. The Ashton was a high-altitude research aircraft, developed from the Tudor 8 four-jet experimental transport.

The de Havilland Comet, powered by the D. H. Ghost, continued its highly successful operational test program, and was joined by the no. 2 production model during the year. The Ghost also powered the D. H. 112 Venom high-altitude night fighter, which went into production for the royal air force during 1950.

Avro Canada's Orenda turbojet was test-flown in July 1950. This unit, in the 7,000-lb. thrust class, would be the power plant of the Canadian production models of the North American F-86 Sabre, the Avro CF-100 twin-jet fighter and the C-102 Jetliner. The royal Canadian air force demonstrated the CF-100 at the United States air force Fighter Test branch at Wright-Patterson air force base, and checked out some U.S. pilots on the plane.

Several soviet jet engines were identified. These included the Shvetsov version of the German Jumo 004H, with an estimated thrust of between 3,000 and 3,500 lb.; and the Shvetsov version of the RB-45 Rolls-Royce Nene, a few of which were exported to the U.S.S.R. in 1946. This had a rating of around 4,500 lb. of thrust, and was said to be the power plant of the MIG-15 fighters which were encountered over North Korea, and in late 1950 appeared in squadron service in east Germany. Two other

Shvetsov series jets were reported—one was in the 7,000-lb. thrust class, and the other produced more than 10,000 lb. of thrust with afterburning; both of these had had considerable bench running, but no flight tests had been confirmed.

**Turboprops.**—The Allison T-38 (doubled as the T-40) and the Pratt and Whitney T-34 were both U.S. navy developments. Models using the Allison units in 1950 included the Convair R3Y seaplane and Douglas A2D Skyshark for navy (both test-flown), and a turboprop version of the Convair T-29 navigation trainer for the air force. Test results of Allison's Convair-Turboliner would provide data for turboprop versions of such commercial transports as the Douglas DC-6, Boeing Strato-cruiser, Lockheed 1049 Super-Constellation and the Martin 4-0-4.

The Pratt and Whitney T-34 applications by navy included a new version of the Neptune (Lockheed P2V series) and Martin P4M patrol bomber. Air force projects with this engine included the Boeing C-97 and Douglas C-124 strategic transports, and the Fairchild C-119 troop and cargo carrier. The T-34 would also fit into the program of modifying some of the commercial transports mentioned above, as its power was approximately the same as the double Allison.

In England the Bristol coupled Proteus, which develops about 7,000 equivalent s.h.p., was test-flown during 1950 as the two outboard engines in a modified Avro Lincoln heavy bomber. The first production Vickers Viscount 700 was test-flown just in time to appear at the Farnborough show. It was the world's first certificated turboprop air liner, and was powered by four Rolls-Royce radial-flow Dart RDa-3 engines of 1,400 h.p. A second prototype of the long-range Bristol Theseus-powered Hermes 5 was completed, and flight tests continued on the Armstrong-Whitworth Apollo with four Armstrong Siddeley axial-flow Mamba turboprops. The double Mamba, rated at 2,875 equivalent s.h.p., was test-flown in two royal navy antisubmarine planes—the Fairey 17 and Blackburn Y.B. 1. This was one of the Armstrong Siddeley units which Wright Aeronautical corporation added to its line of Typhoon turbine-type engines.

**Compound Engines.**—During 1950 two improved versions of piston engines plus turbines were announced—the Wright Turbo-Cyclone, based on the R-3350 engine (navy), and the Pratt and Whitney Wasp Major with General Electric CH-9 supercharger (air force). This type of power plant was especially suitable for aircraft requiring extreme range.

**Nonturbine-Type Jet Engines.**—Ramjet test work had been hampered by the lack of facilities for testing large engines. However, during the year the U.S. navy's bureau of ordnance started tests of large-scale ramjets at simulated altitudes of 100,000 ft. and at speeds up to Mach 4 (2,600 m.p.h. at altitude) in a newly completed test chamber at the Ordnance Aerophysics laboratory at Daingerfield, Tex. The new chamber permitted testing ramjets up to 48 in. in diameter. Under air force contract Wright Aeronautical corporation unveiled its new supersonic ramjet test chamber, with a capacity generally similar to that of the navy. It was believed that ramjets would be used in guided missiles and pilotless aircraft for some time to come, and would require rockets or turbojets for take-off and through the transonic zone; at speeds of around 750 m.p.h. the ramjet takes over. Defense officials revealed that an important advantage of the ramjet is its lack of critical materials.

During the year the world's first piloted supersonic aircraft (the rocket-powered Bell X-1) was presented by the U.S. air force to the Smithsonian institution. An advanced model of the rocket engine, with turbo fuel pump, was developed for the Bell X-1A by Reaction Motors, Inc. This firm also completed a rocket engine for the Republic XF-91 high-altitude jet-and-rocket interceptor-fighter. Reaction Motors, Inc., also built the

20,000-lb. thrust rocket engine for navy's Martin Viking rocket which set a new altitude of 106.4 statute miles when flown from the navy's guided missile ship U.S.S. "Norton Sound." Aerojet Engineering Corp., the other big U.S. rocket manufacturer, outgrew its \$10,000,000 plant at Azusa, Calif., and acquired land near Sacramento for a new \$6,000,000 plant. Dry-fuel rockets would be developed and produced in one, liquid-fuel rockets in the other.

The U.S.S.R. started flight-testing a new supersonic rocket-propelled fighter designed by Alexander Yakovlev and designated YAK-21. It was a modification of the German ME-163B rocket-propelled tailless interceptor built by Junkers at Dessau, in Russian-controlled east Germany. (See also AVIATION, MILITARY; MUNITIONS OF WAR.)

**Jordan.** Independent Arab kingdom of the middle east, Jordan is bounded on the west by Israel, north by Syria, east by Iraq and southeast and south by Saudi Arabia. Area (excluding Arab Palestine): 37,110 sq.mi. Pop. (1949 est.): 400,000. Capital: Amman (pop., 60,000). Arab Palestine, area c. 2,350 sq.mi., pop. about 1,000,000, was officially incorporated into Jordan on April 24, 1950. Languages (former Trans-Jordan): Arabic 97%, Circassian 2.5%. Religions (former Trans-Jordan): Moslem 91% (chiefly Sunni); Christian 8.5% (chiefly Arab-speaking Greek Orthodox). King: Abdullah ibn Hussein; prime ministers in 1950: Tawfiq Pasha Abu-Huda (until April 13), Said Pasha el Mufti and (from Dec. 4) Samir Pasha el Rifai.

**History.**—During 1950 the policy of the Jordan government regarding Palestine was seriously at variance with that of the Arab league. On April 6 Jordan opposed the United Nations' plan for the internationalization of Jerusalem which the other member states approved subject to reservations. Again on April 13 the government declared that their policy was to annex Arab Palestine subject to the approval of the Jordan parliament, whereas the other member states confirmed that the entry of Arab armies into Palestine in 1948 was a temporary measure implying no suggestion of occupation or partition.

Elections for a Jordan parliament to represent not only the former Trans-Jordan but also Arab Palestine were held on both sides of the Jordan on April 11 and on April 13 Said Pasha el Mufti formed a new cabinet. When the new Parliament met on April 24 King Abdullah, in his speech from the throne announcing the annexation of Arab Palestine, said that the situation then existing between Jordan and Arab Palestine made unification imperative; but that the annexation would not prejudice the final settlement of Palestine's "just case within the spheres of its national aspirations, of international justice and inter-Arab co-operation." This declaration was approved by the government; but on May 10 at an extraordinary session of the league, Jordan's action was opposed by Egypt, Saudi Arabia, Syria and the Lebanon who proposed Jordan's expulsion. This motion was not carried; and on May 31 the Jordan cabinet announced that it considered the unification on both sides of the Jordan as not liable to further discussion, though it did not prejudice a final settlement of the Palestine problem which remained one of the aims of Jordan's policy. At a subsequent league meeting on June 12, the six member states (Jordan being unrepresented) passed a revised resolution that Jordan must treat the area of Arab Palestine as "trust property" until Pales-

tine was "finally liberated."

On July 1 the British treasury and the Jordan currency board announced the replacement of the old Palestinian currency by a new Jordan currency and that Jordan was re-entering the sterling area.

On Oct. 12 Said Pasha el Mufti reformed his cabinet and announced that his government's foreign policy was to co-operate with and remain in the Arab league. He resigned on Dec. 3 and a new cabinet was formed by Samir Pasha el Rifai, a former prime minister.

During the year the relations between the Jordan and Israeli governments remained unchanged, as did the armistice frontiers, including the bisection of Jerusalem (*q.v.*). During the second half of the year isolated Jordan-Israeli frontier clashes produced official complaints to the United Nations from both sides.

In the economic field the government issued in June details of a five-year land development plan for Bedouin settlement and two schemes for the exploitation of the phosphate and cement industries. Negotiations also took place with the Arab American Oil company arising from the laying of the Sidon pipe line across Jordan territory, the Jordan government asking that 200,000 tons of oil should be off-loaded yearly in Jordan where the government proposed to erect a refinery for local needs. (See also ISRAEL; UNITED NATIONS.)

(O. M. T.)

**Education.**—Schools (1948): government 89, others 86, total pupils 15,201, total teachers 361.

**Finance and Banking.**—Budget: (1949–50 est.) revenue 2,251,000 dinars, expenditure 2,316,000 dinars; (1950–51 est.) balanced at 2,344,000 dinars. Monetary unit: Jordan dinar at par with the pound sterling and with an exchange rate of \$2.80 U.S.

**Foreign Trade.**—(1949) Imports 13,116,000 dinars; exports 1,053,000 dinars; re-exports 2,353,000 dinars. Principal imports (1949): cotton piece goods 9.9%; sugar 8.1%; cement 3.4%; rice 3.3%. Principal exports (1949): wheat 30%; barley 18%; fresh vegetables 9%; lentils 5%.

**Transport and Communications.**—Roads (1948) 1,470 mi. Licensed motor vehicles (Dec. 1949): cars 2,021; commercial 1,646. Railways (1948) 281 mi.

**Agriculture.**—Main crops (metric tons 1948): wheat 139,000; barley 41,000; lentils 8,000; kersennah 9,000; horse beans 9,000; millet 9,000. Livestock (1948): goats 280,000; sheep 180,000; cattle 59,000; donkeys 25,000; horses 5,500; camels 7,000; mules 2,500.

**Judaism.** In western European countries, where Judaism and Jewish life were supposed to have been obliterated during World War II, the Jewish survivors continued in 1950 to re-establish, on a much smaller scale, Jewish institutions and communal life. In the United States, appraisals of the progress of religious life in 1950 depended on the emphasis given to the manifold aspects of Judaism. If philanthropy is considered the criterion, the continued munificent support given by American Jews to local federations and to the settlement in Israel of displaced persons and persecuted coreligionists of Arab lands was impressive. At a conference in Washington, D.C., a plan to raise \$1,500,000,000 for Israel was proposed.

If the founding of new synagogues and the numbers affiliated with them are deemed criteria for the progress of Judaism, gratification was justified in 1950. Reform, Conservative and Orthodox groups all reported expanded activities, growth in memberships, extension and renovations of buildings and greater budgetary needs. At the biennial convention of the liberal wing of Judaism in Cleveland, O., it was reported that a survey revealed an increased interest in ceremonial observance by its adherents.

Many questioned, however, whether the above were true indications of a wider acceptance of the philosophical tenets of Judaism or a deepening of religious feeling. At the biennial gathering of the Conservative group in Washington, D.C., it was disclosed that a national survey on synagogue attendance showed that organized worship in Conservative synagogues was waning. The paucity of current expositions and reinterpretations of

Jewish theology and religious concepts was also cited as proof of the U.S. Jews' lukewarm and nominal devotion to Judaism. In the Orthodox camp, the situation appeared to be more sanguine.

In Israel the relation between the newly established state and Judaism was in the process of clarification and formulation. Many leaders there strove to pattern the relationship between the two along the line prevailing in the United States between church and state. The issue with which the religiously minded citizens were grappling was the role of the Torah, or Jewish law, in the Israeli commonwealth. They were seeking answers to the following queries: What importance should be assigned to the Torah? Who is to be given the authority to annul or modify Biblical or rabbinical injunctions which new conditions demand? What methods or procedures shall be followed in such changes? What are the specific laws which need to be annulled or modified? The accepted answers to these questions would constitute a guide to Jewish life the world over, as well as in Israel. The secularists, of course, maintained an attitude of total unconcern in regard to the questions.

Because of the "iron curtain," it was difficult to ascertain the status of Judaism in the U.S.S.R. during 1950. Reports indicated, however, that the attitude of the soviet government to Judaism was no different from what it was to Christianity. (See also RELIGIOUS EDUCATION.) (B. H.)

**Juvenile Delinquency.** During 1950 there were slight decreases in the number of juvenile cases appearing before the courts of Oregon, Wisconsin, Virginia and Pennsylvania. Since these areas are representative, it is possible to say there was a downward trend throughout the nation of approximately 3%, slightly greater in boys' cases than girls'. Commitments to reform schools and correctional in-

stitutions fell off about 5% for the country as a whole. The Federal Bureau of Investigation reported an increase in the number of arrests for youths between 17 and 19 amounting to about 9% in 1949.

In North Carolina Prof. Wiley B. Saunders of the University of North Carolina, Chapel Hill, Mrs. W. T. Bost, retired commissioner of public welfare of the state, and Ellen C. Winston, commissioner of public welfare, led a movement to cut down jail detention of children. In one year the number of children held in jail was reduced from nearly 1,600 to 334.

The *American Journal of Orthopsychiatry* (April 1950) reported a round table on the psychopathic delinquent child. Experts, including Frederick H. Allen, Ben Karpman, Ralph D. Rabinowitz, and Hyman Lippman, brought together the result of research. Severe emotional deprivation in infancy and childhood rather than constitutional factors account for later delinquency. Further study was planned looking eventually toward an effective treatment.

Three outstanding works on delinquency appeared during the year. Paul W. Tappan presented *Juvenile Delinquency*, a comprehensive textbook, particularly useful in statistics on volume. It gives a thorough discussion of legal aspects and a summary of the Youth Correction authority and its various modifications throughout the nation. Sheldon and Eleanor Glueck presented *Unraveling Juvenile Delinquency*, the result of ten years of research sponsored by the Commonwealth fund and other foundations. Albert Deutsch's *Our Rejected Children* evaluates the work of reformatory institutions for children and offers a challenging analysis of methods used for juvenile correction. (See also CHILD WELFARE.)

FILMS OF 1950.—*Probation Officer* (British Information Services). (M. V. W.)

**Kansas.** Kansas was admitted to the union as the 34th state on Jan. 29, 1861. It is frequently called the "Sunflower state." The total area is 82,276 sq.mi. of which 82,113 sq.mi. are land. Kansas is located in the geographical centre of the continental United States and is the geodetic centre of the North American continent, from which all geodetic surveys are made. The population of the state according to the 1950 census was 1,905,299, a 5.8% increase over the 1940 census figure of 1,801,028. The population was about equally divided between urban and rural.

Capital: Topeka, pop. (preliminary 1950): 87,626. The two largest cities in 1950 were Wichita (192,155) and Kansas City (128,821).

**History.**—Legislation passed for the year 1949 included the inauguration of a long-range highway program, reorganization of the elementary school program, a liquor control law, a new driver's licence law and the creation of a rural health program.

In the general election held in Nov. 1950 an all-Republican state and congressional ticket swept through to victory. A total of 619,310 votes was cast. Gov. Frank Carlson was elected for the regular six-year United States senate term with a plurality of 64,515. Edward F. Arn was elected governor with a plurality of 57,507 and Paul R. Shanahan was elected secretary of state over Larry Ryan, incumbent, receiving a majority of

EDWARD F. ARN, Republican, elected governor of Kansas, Nov. 7, 1950

FILM ON SAFETY METHODS being shown to New York city school children as part of a 1950 lecture campaign sponsored by the Long Island Rail Road to keep children from stoning trains, placing obstacles on the tracks or exposing themselves to harm on the right of way

27,898. Other principal state officials for 1951 were: Fred Hall, lieutenant governor; George Robb, auditor; Adel Throckmorton, superintendent of public instruction; Frank Sullivan, insurance commissioner; Harold R. Fatzer, attorney general; Richard Fadely, treasurer.

**Education.**—As of Sept. 30, 1949, there were 2,893 one-teacher schools in operation with an enrolment of 35,785. The enrolment (1949) in elementary and secondary schools was 337,914 (86,945 in secondary schools). There were 17,250 teachers employed in the state. The combined enrolment of the four state colleges and one university was 17,656. The populations of other state institutions were as follows: school for the blind 74; school for the deaf 228; Kansas vocational school (Negro) 278.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The populations of the state's welfare institutions in 1950 were as follows: hospital for epileptics 722; state training school 1,424; hospitals for tuberculars 397; orphans and receiving home 174; hospitals for insane 4,921; industrial school for girls 124; industrial school for boys 151; state penitentiary 1,431; industrial farm for women 56; reformatory for boys 473. The 1949 legislature appropriated approximately \$20,861,000 for buildings and the welfare program of 1950-51.

**Communications.**—In 1950 the state had 9,403 mi. of rural highways and 513 mi. of urban highways. Highway funds expended during 1949 and 1950 were \$49,887,316. There were 8,500 mi. of railroads; 95 municipal, 74 privately owned and 1 Civil Aviation administration airports.

**Banking and Finance.**—The budget for the biennium 1950-51 totalled \$58,042,806, an increase of \$20,828,873 over the previous budget. Sales tax (2%) collected for the 1950 fiscal year totalled \$37,430,330. The income tax for 1950 totalled \$11,767,803. The bonded indebtedness (soldiers' bonus) totalled \$4,250,000 as of June 30, 1950. There were 174 national banks, 435 state banks and 3 trust companies as of June 30, 1950. The deposits in the national banks and the insured state banks totalled \$1,456,033,547.

**Agriculture.**—Kansas agricultural production during 1950 was generally above that of 1949 and compared favourably with the average of the previous ten years. Winter wheat, Kansas' most important crop, was 14,000,000 bu. above 1949 but 10,000,000 bu. below the ten-year average. Corn, sorghum grain and soybean yields were near record and resulted in large crops. Hay production was about the same as in 1949 and 124% above the ten-year average. Production of most fruit crops was below 1949 and below average. The livestock inventory numbers on Jan. 1, 1950, were: cattle and calves 3,627,000; hogs 1,253,000; sheep and lambs 786,000; chickens 15,668,000. The cash receipts from farm marketings of Kansas agricultural products during the first seven months of 1950 were about 9% less than in the corresponding period of 1949. The cash net farm income for the year was \$940,918,000.

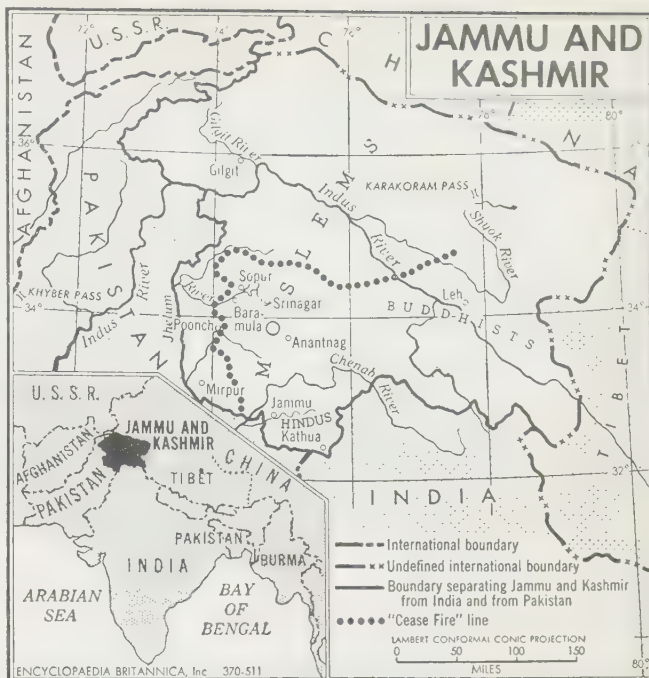

Leading Agricultural Products of Kansas

Crop	1950	1949	Average 1939-48
Wheat, bu. . . . .	178,060,000	164,208,000	188,577,000
Corn, bu. . . . .	93,188,000	73,196,000	64,779,000
Sorghum grain, bu. . . . .	42,096,000	26,404,000	20,651,000
Oats, bu. . . . .	21,120,000	18,942,000	35,197,000
Barley, bu. . . . .	3,556,000	3,757,000	12,468,000
Soybeans, bu. . . . .	6,462,000	3,436,000	1,715,000
Hay, tons . . . . .	3,273,000	3,299,000	2,604,000
Potatoes, bu. . . . .	1,060,000	1,114,000	1,920,000

**Manufacturing and Mineral Production.**—In 1950 the value of the petroleum production of Kansas was \$257,214,716 and of natural gas \$23,574,640. Kansas is also recognized for the production of zinc, cement, lead, coal and salt. In 1950 there were nearly 2,800 manufacturing and processing plants engaged in the production of more than 1,000 items. The total output was valued at approximately \$461,100,000. (F. C.N.)

**Kashmir.** Kashmir is a state in the Indian subcontinent; bounded on the northwest, northeast and east by Afghanistan, Sinkiang province of China and Tibet respectively. Area (inc. Jammu and frontier districts): 82,258 sq.mi. Pop. (1941 census): 4,021,616. Ruler: Lieut. Gen. Maharaja Sir Hari Singh.

**History.**—The trouble in Kashmir originated in Aug. 1947. The maharaja, a Dogra rajput, was highly unpopular with his subjects, 80% of whom were Moslems. Risings in favour of accession to Pakistan were savagely suppressed by the state troops, and this provided a convenient pretext to the lawless tribesmen of the northwest frontier to proclaim a *jihad*, or holy war and invade the country in aid of their coreligionists. They met with little resistance and, after plundering Baramula and murdering many of the inhabitants, they advanced upon the capital, Srinagar. The maharaja in his extremity applied for accession to India. His request was accepted by the governor general, Lord Mountbatten, and Indian troops, flown in, arrived just in time to save Srinagar from destruction. Shortly afterward the maharaja retired to Jammu, leaving the government in the hands

of Sheikh Abdullah, a Moslem who favoured the Indian congress. The Indian government asserted that the maharaja had exercised his legal right in acceding and in Jan. 1948 it laid a charge before the Security council of the United Nations, complaining that Pakistan had aided and abetted the tribesmen in invading his territory. The Pakistan representative, Sir Zafrulla Khan, retorted with accusations of genocide against the Hindus and Sikhs, whom he charged with the wholesale murder of the Moslem inhabitants and with expelling large numbers of others from their homes. In April 1948 the Indian army had taken the offensive against the tribesmen and had advanced as far as Uri on the main Rawalpindi road. This compelled the Pakistan government to take up a defensive line in order to protect its frontier and to stop the stream of refugees pouring into the country. The Security council sent a five-power commission to conduct inquiries on the spot and after negotiations which lasted until the end of the year a cease-fire agreement was arranged, by which each army was to hold the ground it occupied pending arrangements for mutual retirement; after that the wishes of the people were to be ascertained by a free and impartial plebiscite to be administered by a U.S. naval officer, Adm. Chester W. Nimitz. Meanwhile, Gen. A. G. L. McNaughton, the chairman of the Security council, drew up plans for carrying out the demilitarization of Kashmir by the simultaneous withdrawal of the Indian and Pakistan forces in successive stages over a period of five months; but this plan broke down because the Indian government insisted on regarding the *Azad*, or free, Kashmir forces who had formed the backbone of the resistance movement, as guerrillas and refused to evacuate its position until after these had been disbanded. In Feb. 1950 General McNaughton was obliged to report to the council the failure of his efforts. The Security council refused to be discouraged by the failure of the commission to bring about a decision, and in April the improvement in relations between the two countries seemed to offer a fresh opportunity of breaking the deadlock. The commission was replaced by Sir Owen Dixon, a judge of the Australian high court and formerly ambassador to the U.S., who acted as mediator. Both India and Pakistan promised him their support. Sir Owen Dixon spent three months in conferences and negotiations which, unfortunately, proved as abortive as before. As neither state was ready with a constructive plan, he was obliged to offer

a solution of his own. This took the form of a limited plebiscite. Where the desires of the inhabitants were clearly known, as in Poonch, the territory should be partitioned in accordance with their wishes, due regard being paid to geographical and other considerations; but where they were in doubt, as in the vale of Kashmir, a plebiscite should be held to ascertain them. Neither country was able to agree. Pakistan took its stand upon the United Nations resolution specifying an over-all plebiscite as the manner of settlement. India, on the other hand, claimed that Kashmir had legally acceded to the Indian union and that the Pakistan troops, as the aggressors, must be withdrawn before a plebiscite was conducted under the auspices of Sheikh Abdullah's government. As it was impossible to reconcile these widely divergent views, Sir Owen Dixon left India on Aug. 23 to report to the Security council. In his report he recommended that the council should renounce responsibility for a settlement and should inform India and Pakistan that they must come to an agreement between themselves. (H. G. R.N.)

**Kendall, Edward Calvin** (1886— ), U.S. physiologist and chemist. was born March 8 in South Norwalk, Conn. He studied at Columbia university, receiving the B.S. degree in 1908, the M.S. degree in 1909 and a Ph.D. in 1910. He joined Parke, Davis & Co. as a research chemist in 1910, then became attached to St. Luke's hospital in New York city. From 1914 he was with the Mayo clinic, Rochester, Minn. He also held after 1914 the posts of professor of physiological chemistry and head of the section of biochemistry at the Mayo foundation, University of Minnesota. In 1914 he isolated thyroxin, the active principle of the thyroid gland, for which achievement he was awarded in 1925 the Chandler medal from Columbia university. Between 1926 and 1930 he isolated glutathione from yeast. By 1938 he had isolated six hormones of the adrenal cortex, including compound E which eventually was used under the name of cortisone in the treatment of arthritic patients. Philip S. Hench and his associates of the Mayo clinic began treating arthritic patients with cortisone in 1948. He and Kendall, along with Tadeusz Reichstein of Basle, Switz., who had carried on, for the most part independently of the others, research similar to theirs, were jointly awarded the Nobel prize for medicine on Oct. 26, 1950, by Sweden's Caroline Institute of Medicine.

**Kentucky.** An east south-central state of the United States, admitted to the union on June 1, 1792, Kentucky is popularly called the "Blue Grass state." Area: 40,395 sq.mi., of which 286 sq.mi. are water. The population by the 1950 U.S. official census determination as of April 1, 1950, was 2,944,806, a gain of 3.5% since 1940. Capital: Frankfort (pop. 11,949, preliminary 1950 census figures). Other cities are Louisville (367,359); Covington (64,282); Lexington (54,449); Owensboro (33,983); Paducah (32,430); Ashland (31,228); Newport (31,015);

LAWRENCE W. WETHERBY, Democrat, was sworn in as governor of Kentucky on Nov. 27, 1950, to succeed Earle C. Clements who was elected to the U.S. senate on Nov. 7

Bowling Green (18,424); Henderson (16,760); Middlesboro (14,419); Hopkinsville (12,531).

**History.**—Gov. Earle C. Clements defeated Charles I. Dawson on Nov. 7, 1950, for the U.S. senatorship, the vote for the full term being 334,072 to 277,654. Lieutenant Governor Lawrence W. Wetherby took the oath as governor on Nov. 27. The other principal state officers were George G. Hatcher, secretary of state; A. E. Funk, attorney general; Harry N. Jones, auditor; Pearl Frances Runyon, treasurer. The general assembly increased the state income tax from 5% to 6% on taxable income of more than \$8,000, lowered the tax credit allowed married persons and the heads of families from \$50 to \$40, and raised the tax on corporations from 4% to 4.5%. A significant event was the spirited but unsuccessful fight of the public school teachers for adequate school support.

**Education.**—Public schools in 1949-50 numbered 5,090; 4,550 elementary, 113 high schools, and 427 combined elementary and high schools. Total pupils numbered 570,805, and teachers numbered 19,230. The state per capita fund was \$19,350,000, and the equalization fund was \$2,150,000. The state superintendent of public instruction was Boswell B. Hodgkin.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Unemployment insurance paid in Oct. 1950 amounted to \$650,115, an average of \$15.98 for 40,690 weeks. Old-age assistance went to 67,948 in the amount of \$1,405,365. Aid to dependent children amounted to \$895,491 for 61,164 and to the needy blind to \$53,470 for 2,430 people. The population of the correctional institutions on Sept. 30, 1950, was: reformatory, 2,134; penitentiary 1,114; women's prison 67; house of reform for boys 354; house of reform for girls 64.

**Communications.**—As of Sept. 1, 1950, the department of highways had under maintenance 570 mi. of municipal roads and 12,240 mi. of rural roads. Through its division of rural highways it aided the counties in maintaining as of Nov. 1, 1950, 12,398 mi. of county roads.

**Banking and Finance.**—On June 30, 1950, there were 92 national banks with total assets of \$636,018,000 and 296 state banks and trust companies with resources of \$953,843,874.72. The state tax receipts, according to the latest available figures, amounted to about \$106,517,635 for the fiscal year 1949-50: general fund \$56,515,404; road fund \$47,147,370; other \$2,854,861. The chief sources of tax revenue with their approximate percentages were: selected sales and gross receipts (55%); income (18%); licence and privilege (15%); property (8.6%); and inheritance and estate (2.5%). All revenue collections, including fees, tuitions and federal grants, amounted to \$161,234,319; preliminary data on expenditures indicated: general control \$25,115,703; education \$43,596,982; welfare and health \$51,420,626; and highways \$56,956,707. Kentucky closed its 1949-50 fiscal year with \$26,304,622.87 in investments, chiefly government bonds. Cash credited to various funds amounted to: road \$25,817,194.29; general \$18,255,021.67; trust and agency \$8,764,379.63; institutional improvement \$3,922,304.16; and other \$1,633,487.48.

**Agriculture.**—The leading crops in 1950 appear in the table.

#### Leading Agricultural Crops of Kentucky

	1950	1949	Average 1939-48
Corn, bu. . . . .	78,810,000	88,762,000	74,129,000
Winter wheat, bu. . . . .	3,900,000	5,268,000	5,260,000
Oats, bu. . . . .	2,832,000	3,328,000	2,078,000
Barley, bu. . . . .	1,480,000	1,638,000	1,719,000
Rye, bu. . . . .	242,000	378,000	344,000
All hay, tons . . . . .	2,633,000	2,635,000	2,258,000
Soybeans (for beans), bu. . . . .	1,890,000	2,202,000	1,102,000
Tobacco, all types, lb. . . . .	364,450,000	438,245,000	386,325,000
Potatoes, Irish, bu. . . . .	2,418,000	2,730,000	3,616,000
Potatoes, sweet, bu. . . . .	870,000	913,000	1,248,000

**Manufactures.**—In 1947, 2,244 establishments averaged 129,504 employees who received \$304,668,000 in salaries and wages. The value added by their efforts was \$740,772,000. The major industry groups for the entire state were, in value added: food and kindred products (\$288,814,000); metal products, primary and fabricated (\$81,887,000); lumber and products including furniture and fixtures (\$62,611,000); machinery including electrical (\$56,471,000); chemical and allied products (\$47,953,000); tobacco (\$41,784,000); apparel and related products (\$38,475,000); printing and publishing, with paper and allied products (\$33,440,000); petroleum and coal products (\$20,215,000); stone, clay and glass products (\$16,302,000); textile mill products (\$12,744,000).

**Mineral Products.**—During 1949 coal mines yielded 73,997,676 tons and employed 76,821 miners with a loss of 66 lives. The output of petroleum in 1949 was 8,853,311 bbl. and the estimated natural gas production was 90,000,000,000 cu.ft. (W. W. Js.)

**Kenya:** see BRITISH EAST AFRICA.

**Kim Il Sung** (1912?— ). Korean Communist leader, was in 1950 the subject of much speculation, since he allegedly was a Communist creature of soviet Russia who had assumed the name of a Korean war hero. He was believed to have been born Kim Sung Chu near Pyongyang, and to have been educated in Marxist tactics both at the Whampoa Military academy

in China and in Moscow. He was alleged to have assumed the name of a Korean guerrilla hero who disappeared in 1919. On March 17, 1949, Kim had been reported as signer for Korea of a treaty with the U.S.S.R. covering increased trade, technical assistance and soviet credits for the North Koreans. At the outbreak of the war in Korea in June 1950, Kim was repeatedly spotlighted through Communist propaganda as the leader of the so-called "people's" forces of North Korea, but his identity remained a mystery.

**Kiwanis International:** see SOCIETIES AND ASSOCIATIONS.  
**Knights of Columbus:** see SOCIETIES AND ASSOCIATIONS.

**Korea.** Korea occupies a peninsula extending from Manchuria 600 mi. southward between the Yellow sea and the Sea of Japan. Two rivers mark the northern border: the Yalu and the Tumen. Area: 85,225 sq.mi. The 38th parallel north, established in 1945 to separate soviet and U.S. troops negotiating the surrender of Japanese troops, remained a rigid barrier between the two zones until June 25, 1950, when North Korean troops violated the line by invasion. The southern zone had 44% of the area, but more than twice the population: 20,189,000 (1949 est.) to 9,102,000 (1949 est.). The capital city of the south is Kyong-song (Seoul) with nearly 2,000,000 inhabitants; capital city of the north is Pyongyang with about 500,000. Three other large cities in the south are Pusan, 473,619, Taegu, 313,705, and In-chon, 265,767, according to 1949 estimates. Religions: Buddhism, Confucianism and a unique eclectic religion, Tonghak. In 1939 there were roughly 500,000 Christians.

**History.**—The first half of 1950 was marked by important adjustments between the United States and the Republic of Korea regarding economy, reform and measures for defense, by the holding of the spring elections and by steps taken to implement the land reform laws and to equalize taxation. Tension along the 38th parallel increased and guerrilla warfare was waged by North Koreans in the South Korean provinces. Unification plans by peaceful methods were part of the platforms of all moderates in the elections in South Korea; they were also the subject of North Korean proposals in June and were considered in good faith by United Nations officials. The second half of the year was marked by the Korean war. (See KOREAN WAR.)

**U.S. Aid to Korea.**—On Jan. 19, 1950, the U.S. house of representatives defeated the \$60,000,000 Korean aid bill, an action stemming largely from opposition to the administration's China policy and from those who opposed supporting what they considered to be a corrupt South Korean regime. Both Pres. Harry S. Truman and Secretary of State Dean Acheson urged the house to repeal its veto. A new Korean aid bill linked to extension of aid to Formosa passed the house on Feb. 10. It authorized \$60,000,000 in aid which with previous authorization for an equal amount represented a reduction of \$30,000,000 from the original sum requested by the state department. Among the new stipulations to the bill was the provision that U.S. aid would terminate at once if a coalition government were established which included one or more members of the Communist party of North Korea. On April 8 Acheson sent a note to the Korean ambassador in Washington demanding greater economy in government spending and emphasizing the seriousness with which the U.S. would view any postponement of the scheduled May 30 elections.

**The Elections.**—On May 30 approximately 7,000,000 people went to the polls to vote for 210 assemblymen. Independent candidates won 120 seats and only 31 former members were returned. This was interpreted as a move against the administration of Syngman Rhee, president of the Republic of Korea, rather than as support for Communism. The terrorist acts of the police, especially after the appointment of German-educated Home Min-

"YOU CAN SEE HOW NORTH KOREA WAS INVADED," a cartoon by Herblock published in the *Washington Post* in 1950

ister Paek Sung Ok, had alienated many from support of the government. The election results were a sign of a pull away from the extreme right.

**U.N. Commission.**—Another United Nations Commission on Korea was authorized by the general assembly in spite of opposition from the Soviet Union and its satellites, but the new commission met with no better success than the former commission in its unification attempts or any of its efforts to enter or communicate with leaders in North Korea. The North Korean press and radio were extremely offensive in their attacks on the commission, branding it as a tool of the Rhee regime and of the U.S. However, in the first few days of June the North Korean government announced over the radio that it would send three envoys to the 38th parallel to discuss plans for unification with U.N. members. The U.N. appeared interested in this. Two weeks later the North Korean proposals were broadcast. They called for unification under certain conditions including the arrest of Rhee and other "traitors." The South Korean regime branded this as propaganda but offered to exchange political prisoners.

On Jan. 26 a Military Assistance agreement between the U.S. and the Republic of Korea was signed. Korea thereby became eligible for a share of the \$27,000,000 voted by congress for strengthening Korea, the Philippines and Iran against communism. By June 25, when the North Korean Communists began their invasion south of the 38th parallel, the first shipment of arms under this agreement was on the seas but had not yet arrived in Korea. In April Defense Minister Shin Sung Mo became acting premier when Lee Bum Suk resigned.

**Education.**—On April 28, 1950, an agreement between the U.S. and the Republic of Korea was signed at Seoul. It was based on the educational exchange provisions of the Fulbright act. Ten Korean technicians, the first of a group of 90, were sent to the U.S. to begin special training in industrial techniques. The cost of the project, estimated at \$36,000, was met by the Economic Cooperation Administration. In North Korea, according to radio broadcasts, emphasis was placed on compulsory education. Plans were made to give higher education to more than 41,000 students and technical training to more than 20,000 administrative personnel.

**Finance.**—The value of the won in South Korea continued to drop in

1950. Measures to halt inflation were ineffective. Currency in circulation increased from 42,600,000,000 won in Jan. 1949 to 53,300,000,000 won in October. The two-year period, March 1948 to March 1950, saw a rise of currency in circulation, from 34,000,000,000 won to 74,000,000,000 won. In South Korea the budget for the fiscal year 1950-51 was 50,833,756,000 won in revenue, plus 96,047,547,000 won special income. Estimated expenditures were 89,230,405,000 won general and 56,650,898,000 won special. In North Korea, according to information from broadcasts, the budget was estimated to be 25,222,740,000 won revenue and 26,722,740,000 won expenditure.

**Trade.**—Imbalance which characterized Korean trade in 1949 persisted throughout 1950. In South Korea imports had exceeded exports by a ratio of about 10 to 1 during 1949. By contrast, North Korea's trade was almost balanced, at least with Hong Kong. During the first four months of 1949 imports were 23,300,000 Hong Kong dollars, exports were 20,300,000 Hong Kong dollars. On Feb. 18 the Republic of Korea made an agreement to sell Japan 100,000 tons of rice at \$142 per ton. The ECA (Economic Cooperation Administration) budget for the fiscal year 1950-51 provided for \$100,000,000 worth of supplies. Of this \$42,223,600 was to be spent on fertilizers, \$4,670,000 on petroleum products and \$2,565,000 on industrial equipment.

**Communications.**—In 1944 there were 3,115 mi. of railroad track in operation, carrying 106,372,624 passengers and 27,525,654 metric tons of freight. Of the \$11,000,000 spent by ECA in July and Aug. 1950, \$4,340,000 was for communications, including locomotives, tracks and parts.

**Agriculture.**—Crops in 1950 were good and much was harvested in spite of war conditions. Rice production in the south in 1949 was estimated at 2,700,000 metric tons, nearly 5 times the barley crop and 30 times the wheat crop. Figures for 1948 were, in metric tons: rice 2,500,000; barley 352,393; naked barley 212,480; wheat 89,912; and rye 18,896. The price of rice reached an all-time high in Jan. 1950, having doubled in six weeks. Fish and marine products (shellfish, sea weeds, sea animals) were estimated at slightly less than 300,000 metric tons (1948). Agricultural production for 1949 was aided by ECA imports, \$11,600,000 being spent on fertilizers, or 29% of the entire ECA appropriation; altogether, \$24,700,000 was spent on imported fertilizers. The estimated expenditure by ECA for fertilizers for 1950 was \$34,670,870 and for 1951 it was \$42,223,600.

**Manufacturing.**—Production increased substantially during 1949 in the following items: electric insulators, amorphous graphite, brick, paper, cotton yarn, rubber shoes and salt. Production goals for 1948 in the north were claimed to have been attained in 1949. However, industrial production had been lagging considerably according to statements made by Communist officials at the end of the year. The lack of electric power, shut off by North Koreans, hampered industry in the south.

**Mineral Production.**—The major mineral resources are found in the north where iron, coal, gold and other ore deposits were exploited by the Japanese. Production of anthracite coal in South Korea during 1949 about doubled that of 1947. Three new power projects were announced by ECA on Dec. 28, 1949, to increase electric output by 59,400 kw.hr. ECA also announced in Jan. 1950 a project to increase the output of tungsten by 100 metric tons per day. (See also UNITED NATIONS.)

(E. B. Mc; W. Sm.)

**Korean War.** Toward the close of World War II, on Aug. 8, 1945, the U.S.S.R. declared war against Japan in order to participate in completing the victory of the Allies in the Pacific. Korea had been under Japanese rule since 1910, and after the signing of the World War II surrender, U.S. troops and the forces of the Soviet Union participated in accepting the surrender of the Japanese troops in Korea.

In Sept. 1945 the occupation of Korea by U.S. and soviet forces was completed. The 38th parallel was chosen as the arbitrary dividing line between North and South Korea for the surrender acceptance, with soviet forces to the north and U.S. forces to the south. The selection of this line was adopted for military purposes only and, so far as U.S. intentions were concerned, was not meant to be a barrier cutting Korea into two sections.

The United Nations resolutions, adopted without soviet concurrence, established a nine-nation U.N. Temporary Commission on Korea. These resolutions called for an election under the commission's observation to choose a representative national assembly for adopting a democratic constitution and establishing a national government.

It soon developed that a unified Korea was not the soviet intention, and on May 10, 1948, an election was held in South Korea—confined to the south because the U.S.S.R. refused to allow the U.N. Temporary commission access to North Korea.

As a result of the election, the government of the Republic of Korea was formally inaugurated on Aug. 15, 1948, at which time the United States terminated its military government in Korea and began the reduction of its occupation forces. By July 1, 1949, the Korean military advisory group consisted of approxi-

mately 500 U.S. officers and enlisted men, whose mission was the creation of defensive and internal security forces for South Korea.

At the end of Dec. 1948 the U.S.S.R. reported completion of the withdrawal of its occupation forces from Korea, but the U.N. commission was not permitted to verify this action.

In the meantime, the People's Democratic Republic of Korea had been established in the north under the Communist wing after an "election" not witnessed by the U.N. commission, and had been accorded recognition by the U.S.S.R.

In the succeeding months, especially from June 1949 to June 1950, there was an increasing number of raids by increasingly stronger forces which crossed the 38th parallel, from North Korea to South Korea, attacking smaller forces of South Koreans. Protests were made to the United Nations, and South Korean forces managed to repel these raids and to maintain the artificial boundary of the 38th parallel.

On June 25, 1950, at 4 A.M., without warning, the North Korean armed forces struck across the 38th parallel in force.

**First Phase—June 25 to Sept. 15.**—Driving down the peninsula with the main effort down the Ponchon-Seoul corridor, the North Korean infantry, led by an estimated 100 to 150 soviet-made tanks, achieved complete tactical surprise. Simultaneous secondary attacks were launched on the east coast, in the eastern mountains and in the Ongjin peninsula to the west. The initial North Korean attack was mounted with four to six infantry divisions, at least two brigades of border constabulary supported by soviet-made medium tanks and approximately the same number of soviet-made combat aircraft, the entire force totalling approximately 96,000 troops.

Republic of Korea troops, on the other hand, had along the 38th parallel approximately four divisions without armour or heavy artillery and with only 16 training aircraft. The lightly armed South Korean troops, confronted by greatly superior numbers and equipment, were forced to withdraw, and the armoured columns of the North Korean army drove within five to seven miles of Seoul on the first day.

By 9:30 A.M. of the third day, North Korean tank columns entered Seoul and street fighting for the capital city of Korea began. The South Korean government moved its capital south to Suwon.

At the request of the United States government, the United Nations Security council met on June 25. The council adopted a resolution which determined that the armed attack upon the Republic of Korea constituted a breach of the peace and called for immediate cessation of hostilities and withdrawal of North Korean forces north of the 38th parallel.

In addition, the resolution called upon all members to render every assistance to the United Nations in the execution of this resolution and to refrain from giving assistance to the North Korean authorities.

On June 27, at the time when the North Korean tank columns entered Seoul, Pres. Harry S. Truman announced that he had ordered U.S. air and sea support of South Korean troops as the beginning of the U.N. effort in Korea.

When President Truman on June 30 ordered a naval blockade of the Korean coast, the U.S. navy immediately took up blockade positions and, in accordance with the president's earlier order, began air and surface bombardment of military targets. On the same day, two reinforced rifle companies of the U.S. 24th infantry division were flown to Korea and on July 5 initial contact was made with North Korean troops in the vicinity of Osan, south of Seoul.

At the request of the United Nations, Gen. Douglas MacArthur was designated by the president of the United States on July 8, 1950, as the commander of United Nations forces in Korea.

Above: **KOREAN REFUGEES** fleeing southward across the Naktong river in Aug. 1950. Refugees posed a serious problem during the Korean war, for besides blocking highways, numerous Communists filtered in with them across U.N. lines

The South Korean government had by this time moved to Taejon, as the North Koreans took Seoul and nearby Kimpo airfield on June 28.

The U.S. air force went into action against the North Koreans in support of South Korean troops within three days of the initial attack. By the middle of July, the U.S. 24th and 25th divisions had closed with the enemy; the South Korean forces had stiffened their resistance; the navy was involved in continuous coastal bombardments and naval air strikes; and the air force was engaged in round-the-clock strikes in support of U.N. troops.

The U.N. forces had withdrawn to the south bank of the Kum river, the last natural barrier before Taejon, and dug in. Lieut. Gen. Walton H. Walker, commanding general of the U.S. 8th army, assumed command of the ground forces in Korea on July 13.

By July 15, the North Koreans had established a bridgehead across the Kum river northwest of Taejon and by July 17 had reached the outskirts of Taejon.

On July 18 the 1st cavalry division, in the first amphibious landing of U.N. forces on Korea, went ashore unopposed at Pohang. On July 20 the U.S. 24th division withdrew its rear guards from Taejon, and two days later Maj. Gen. William F. Dean, its commander, was officially listed as missing. At the same time the U.S. army's new 3.5-in. bazooka was used for the first time, with great success, against heavily armoured soviet-made tanks which since the beginning of the Korean attack had moved almost unopposed through the South Korean army.

The North Korean 4th and 6th divisions effected a strategic envelopment against Republic of Korea police forces and, driving toward western and southern ports, seized Mokpo, Kwanju, Amwon and Chinan on July 24. After shifting the direction of the attack to the east, the enveloping force drove toward the ports of Masan and Pusan.

During this period, numerically superior North Korean forces continued their pressure in all sectors, despite heavy losses sustained in air and ground actions. The U.N. forces in successive withdrawals lost Yongdong and Yongdok on the west coast and corresponding towns in the central and eastern sectors during the slow compression of the peninsula defense. It became evident that the enemy strategy was a double envelopment of the U.N. forces, at the same time maintaining pressure in the centre. The deepest penetration in this area occurred on Aug. 6 when North Korean forces were stopped eight miles west of Masan by a U.N. attack.

By this time, Australia, Canada, France, the Netherlands, New Zealand, the United Kingdom and the United States had all sent naval forces to aid the United Nations effort and the U.N. naval force maintained a continuous patrol of North Korean ports and coastline together with carrier air strikes and shore bombardments.

Heavy air attacks on rail and highway traffic during daylight by the U.N. air force compelled North Korean forces to move only at night. North Korean air activity practically ceased. The South Korean forces, overwhelmed in the early combat, had regrouped and had been resupplied and were fighting effectively.

By Aug. 4 the withdrawal of the U.N. forces to defensive positions east of the Naktong river had been completed. Severe attacks by the North Koreans probing for a crossing of the river succeeded to the extent that one North Korean division crossed south of Pugong-ni and despite heavy casualties remained there. Other crossings were forced, but in many seesaw battles back and forth across the river, U.N. forces managed generally to maintain their positions.

On Sept. 1 the North Koreans opened a general offensive against the U.S. 2nd and 25th divisions on the left flank of the

Naktong defense line with 13 infantry divisions and 2 new tank regiments. Within two days the attack spread over the entire U.N. line. Initial penetrations of 6,000 to 8,000 yd. in the north sector of the Naktong river area were contained after bitter fighting and United Nations counterattacks began to make limited progress.

By Sept. 12 the momentum of the North Koreans' attacks had been lost, and they were forced to withdraw after suffering severe casualties. Though the Naktong river had been crossed at several points, counterattacks had generally restored U.N. positions.

Throughout these engagements the United Nations forces, ever increasing in number and strength, had repulsed the heaviest attacks which the enemy was able to mount. U.N. losses were heavy but those of the North Koreans were far heavier. With the comparative stabilization of the line, the compression of the bridgehead and the preparation of the U.N. forces for the offensive, one phase of the war was considered to have ended.

**Second Phase—Sept. 15 to Nov. 2.**—In the early morning of Sept. 15, the U.S. 10th corps launched an amphibious landing on the island of Wolmi-Do, commanding the approaches to Inchon. The marines secured the island within an hour and a half, and 11 hours later Inchon was stormed by the 1st marine division, four Republic of Korea marine battalions and supporting army and navy units. The attack had been preceded by bombing and shelling of the Inchon area by naval ships and aircraft.

Within two days the U.N. forces had advanced all along the line against stubborn resistance, and Kimpo airport had been retaken. In an enveloping movement, Seoul, the capital city, fell on Sept. 26 and on Sept. 29 the Republic of Korea government moved back into Seoul.

On Sept. 16 the 8th army attacked with the mission of effecting a juncture with the troops at the Inchon bridgehead. Within four days, U.N. forces had driven almost to Chinju.

In the north sector, the U.S. 1st corps crossed the Naktong river on Sept. 19 and drove up the main Kumchong-Taejon axis and advanced about 35 mi. On the far northern and western fronts the North Korean troops began withdrawing on Sept. 22, and within six days they had withdrawn 70 mi. northward. The credit for the rapid progress on this front went to the Republic of Korea 1st and 2nd corps.

On Sept. 26 troops from the U.S. 1st cavalry division made contact with the 7th infantry division, and the 8th army and the 10th corps were united. Thus all effective escape routes in the pocket were closed, and encircled North Korean forces numbering more than half of the North Korean invaders faced death or capture.

During the next week, U.S. forces reached the 38th parallel, and South Korean troops, who crossed the parallel on Oct. 1, advanced up the east coast approximately 50 air miles north.

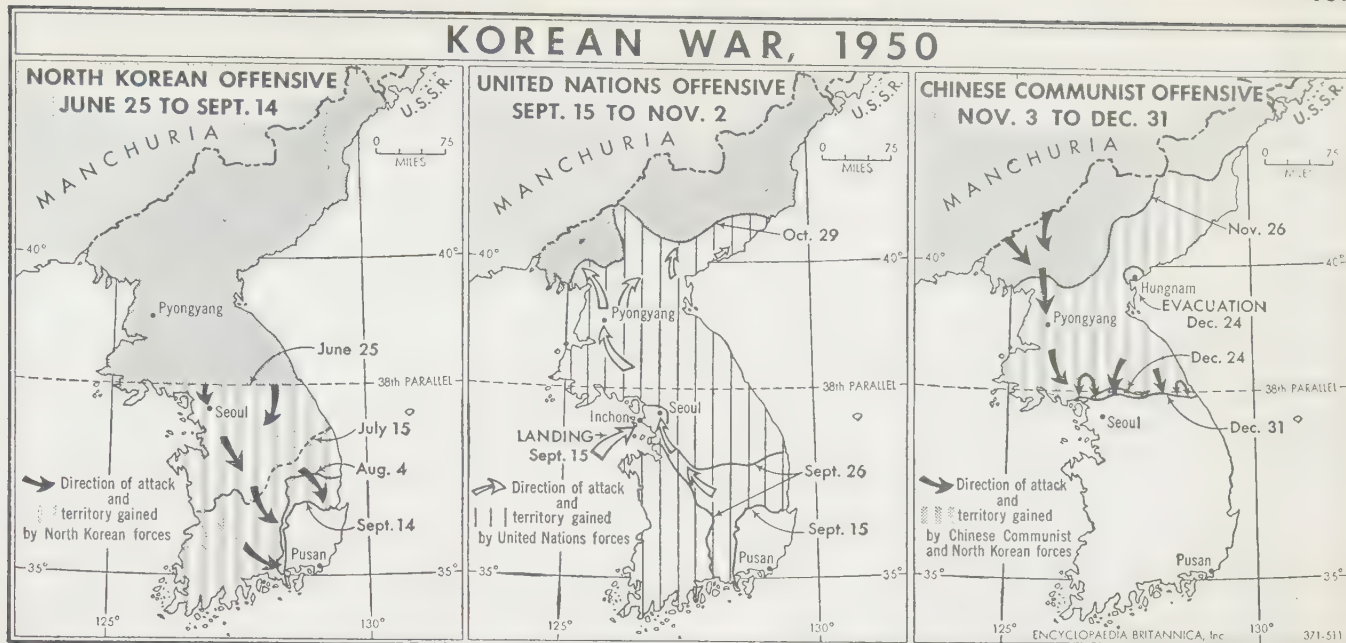

For the first 96 consecutive days of operation, the air force had flown a total of 40,456 sorties (including 1,520 sorties by royal Australian squadrons) and had delivered 29,711 tons of bombs, expended more than 23,000,000 rounds of ammunition and 63,000 rockets, carried 16,000 tons of freight and 25,000 passengers, evacuated 8,500 persons and dropped more than 51,500,000 leaflets.

By Oct. 10 the Republic of Korea 1st corps, consisting of the 3rd and Capitol divisions, captured the North Korean port of Wonsan, advancing about 15 mi. a day against elements of three divisions and numerous garrison units. The 8th army moved up the peninsula, relieved the 10th corps of the Seoul-Inchon area on Oct. 7 and continued its attack to the north.

On Oct. 15 President Truman, accompanied by diplomatic and military advisers from Washington, D.C., conferred on Wake Island with General MacArthur and John J. Muccio, U.S. ambas-

## KOREAN WAR, 1950

sador to Korea, discussing, among other things, the military situation in Korea.

An interesting high light which occurred during the early Korean fighting was the successful integration of South Korean troops into U.S. divisions. It was found that the battlewise South Koreans, accustomed to the mountainous country and acquainted with the terrain, were invaluable to the U.S. troops.

On Oct. 7 elements of the U.S. 1st cavalry division crossed the 38th parallel and drove toward Pyongyang. By Oct. 20, the capital of North Korea had fallen.

In the meantime, on Oct. 18, the Republic of Korea Capitol division entered Hamhung and Hungnam, while other U.N. forces advanced rapidly to the north, against light resistance.

Maj. Gen. Edward M. Almond now commanded all U.N. forces on the east flank in the Wonsan-Hamhung area. By the end of October more than 135,000 North Koreans had been captured.

On Oct. 26, elements of the U.S. 1st marine division landed at Wonsan, ending a six-day wait for mine clearance. On the same day the Republic of Korea 6th division gained the distinction of being the first of the U.N. forces to reach the Manchurian border (near Chosan). On Oct. 29 the U.S. 7th infantry division with Republic of Korea units landed at Iwon approximately 180 mi. N. of Wonsan.

Toward the end of October, North Korean resistance stiffened and all along the front about 50 mi. S. of the Manchurian border U.N. forces experienced greater difficulty in their efforts to reach the Yalu river and the border. On Oct. 27 Chinese Communist forces were first encountered in combat by the Republic of Korea army in the vicinity of Unsan.

On Nov. 1 the 8th cavalry regiment of the U.S. 1st cavalry division was ambushed by Chinese Communist forces near Unsan with high U.S. casualties and heavy loss of matériel. Strong enemy counterattacks throughout the front put the U.N. forces on the defensive except for limited actions. On the same day the air force encountered jet planes for the first time in the Korean war and discovered other Communist aircraft in the air and on the ground for the first time in several months.

On Nov. 4 General MacArthur reported to the press that the Chinese Communist forces had intervened in Korea and had been identified prior to Oct. 30. On Nov. 6 General MacArthur reported officially to the U.N. Security council that Chinese Communist forces were fighting in Korea. During this period the

Chinese Communists continued to assert that any forces fighting in Korea were volunteers and not organized regular Chinese units.

South Korean refugees presented throughout the campaign a difficult problem, not only because they clogged the roads and in many cases were destitute and had to be supplied with food, but also because it was difficult to distinguish bona fide refugees from Communist guerrillas.

In many cases, organized troop units operating as guerrillas infiltrated U.N. positions, requiring large numbers of U.N. troops to guard supply lines.

With the Chinese Communist intervention, the second phase of the Korean war ended, with the original invading army of North Koreans largely destroyed, their air force out of action and their sea forces nonexistent. The United Nations army combat forces representing six different nations, the U.N. air force, representing three nations, and the U.N. sea forces, representing nine nations, had advanced from a perimeter defense at Pusan practically to the Manchurian border.

Again and again the United States government and the United Nations gave assurances through the press and through diplomatic correspondence that the United Nations forces would not advance beyond the Manchurian border. Despite this guarantee, the Chinese Communist forces continued to assemble across the Yalu river. The U.N. air force had numerous engagements with enemy aircraft which, after brief passes, always retreated across the Yalu river.

General MacArthur was faced with a situation probably unparalleled in history in that he was unable, because of political considerations, either to prevent the build-up of Communist forces and their equipment and supply or to prevent air attacks from a sanctuary a few miles north of his own troop locations.

Until the commitment of the Chinese Communists in force, it appeared that the campaign was about to be ended. Approximately 140,000 prisoners had been taken. Great amounts of supplies and equipment had been seized. The backbone of the North Korean army had been broken and plans had been laid for the military occupation of North Korea.

**Third Phase—Nov. 3 to Dec. 31.**—The third phase of the Korean war started with the appearance of Chinese Communist forces south of the Manchurian border in force. The combat potential of the North Korean army had been reduced practically to

zero, and with the movement of the Chinese armies across the Yalu river and the supply and transport of its army in a build-up just north of the border, an "entirely new war" began.

On Nov. 8 the U.N. Security council invited Mao Tse-tung to send a delegation to the United Nations to answer the United States charge that Chinese Communists had intervened in the Korean war.

On Nov. 9 an enemy jet fighter was destroyed by a U.S. F-80 aeroplane. This was the first jet-against-jet engagement in history.

On Nov. 10 the United Kingdom, France, Norway, Cuba, Ecuador and the United States presented a resolution to the Security council to request the Mao government to withdraw troops from Korea, and further to assure Peking that U.N. forces would not cross the Chinese border. The Soviet Union vetoed this resolution on Dec. 1. On Nov. 11 the Chinese Communist government accepted the Security council's invitation of Sept. 29 to appear with reference to the alleged attack by the U.S. against Formosa and refused the Security council's invitation to discuss the Chinese Communist intervention in Korea.

Table I.—U.N. Units, in Addition to Those of the United States and the Republic of Korea, in Action in Korea by Dec. 31, 1950

Country	Participation
Australia . . . . .	2 naval vessels R.A.A.F. squadron 1 infantry unit
Belgium . . . . .	3 aircraft with crews
Canada . . . . .	3 naval ships 1 R.C.A.F. transport squadron 1 infantry unit Canadian-Pacific Airline facilities (commercial)
France . . . . .	1 infantry unit
Great Britain . . . . .	9 naval ships 2 infantry units Brigade group Marine commando unit 1 R.A.F. flight
Greece . . . . .	7 transport planes 1 infantry unit
India . . . . .	One field ambulance unit
Netherlands . . . . .	1 naval ship 1 infantry unit
New Zealand . . . . .	2 ships Volunteer artillery unit
Philippines . . . . .	A number of tanks One infantry unit
Sweden . . . . .	Field hospital unit
Thailand . . . . .	One regimental combat team
Turkey . . . . .	3 ships Regimental combat team
Union of South Africa . . . . .	One fighter squadron

Despite the attacks of the Chinese Communists, U.N. forces continued advances on several fronts. By Nov. 15 the 7th marines had advanced against heavy resistance and had reached the Choshin reservoir. On Nov. 20 the U.S. 7th division reached the Manchurian border at Hyesanjin. These actions, together with the Republic of Korea 6th division reaching the Manchurian border near Chosan, constituted the farthest point of advance of the U.N. forces.

On Nov. 24 the "end the war" offensive, as it was called in U.S. headlines, was launched by the 8th army, and by the next day elements of the U.S. 24th infantry division had taken Chonju. The offensive launched on Nov. 24 disclosed a tremendous build-up of Chinese Communist forces to the extent of possibly 24 divisions. Had the 8th army remained stationary and not subjected the enemy to attack, it is probable that the Chinese offensive would have been launched shortly thereafter. The attack progressed satisfactorily for two days when strong attacks largely by Chinese Communists required U.N. forces to resume defensive operations.

In the east coast sector within the 10th corps area, U.N. forces faced only sporadic resistance. However, in the western sector Chinese Communists launched a strong offensive and on Nov. 27 a major effort was made against the U.S. 8th army right flank in the Tokchon area. In spite of heavy losses, the Chinese continued their advance, employing elements of approximately eight Chinese Communist divisions while continuing holding operations on the remainder of the 8th army position with six addi-

tional Chinese Communist divisions.

Communist guerrilla activity became increasingly troublesome during this period, and nearly 30% of the U.N. troops in Korea were employed in protecting vital lines of communication. It was estimated that 30,000 to 35,000 guerrillas were in action against U. N. forces.

Wu Hsiu-chuan and his Chinese Communist delegation arrived in New York city on Nov. 24, and on Nov. 28 General MacArthur reported that all hope for localization of the conflict to North Korean troops with only token Chinese elements must be abandoned. He stated that this was undeclared war and estimated that more than 200,000 Chinese Communist troops were now arrayed against the United Nations forces in Korea.

The U.S. 10th corps, operating on the right flank out of the east coast ports of Wonsan and Hamhung, had reached the Manchurian border at several points when the Chinese Communists attacked. The forced withdrawal of the 10th corps seriously endangered the troops in the Choshin reservoir area about 50 mi. from the coast. A general withdrawal toward Hungnam was ordered, the port of Wonsan was abandoned and a huge evacuation fleet was concentrated at Hungnam. In the withdrawal to the port the 1st marine division and the three battalions of the 7th infantry division encountered from six to eight Chinese Communist divisions. On Dec. 4 these U.N. units attacked southward to rejoin the remainder of the 10th corps.

A marine battalion and later a special task force of the 3rd infantry division were charged with keeping the road to the port open and with this help together with maximum assistance from air force, marine and naval aircraft by bombing, by supplying and by evacuating the wounded, the surrounded forces blasted their way to the port.

On Dec. 10 leading elements of the column entered the 10th corps defensive positions and by Dec. 12 the concentration of the 10th corps was complete. Fighting against terrific odds in the bitter cold, the marines and the three battalions of the 7th division had marched and fought 60 mi. along a narrow and often precipitous road. From Dec. 12 to Dec. 24 the 10th corps engaged in a succession of withdrawals upon the port of Hungnam. Heavy bombardment and air strikes from naval ships assisted materially in the success of the evacuation. As the 10th corps troops and their equipment were embarked, the beachhead contracted and the 3rd and 7th divisions and later the 3rd division alone defended the beachhead. Naval guns furnished artillery support for defending troops and air force, naval and marine planes prevented enemy concentrations in sufficient numbers to endanger the defense.

By Dec. 24 the evacuation had been completed. Approximately 105,000 men, 17,500 vehicles, 350,000 tons of cargo and 91,000 Korean civilians had been evacuated from Hungnam.

In the meantime, the exposal of the right flank of the 8th army by the Communist attack on the 10th corps forced the 8th army to withdraw. The U.S. 2nd infantry division and the Turkish brigade were exposed to heavy enemy pressure but succeeded in protecting the flank.

Table II.—U.S. Casualties in the Korean War Through Dec. 29, 1950

	Total	Army	Navy	Marine corps	Air force
1. Total casualties (sum of items 3, 4 and 5)	40,176	33,184	458	6,212	322
2. Total deaths (sum of items 3, 4a and 5a)	6,761	5,377	60	1,216	108
3. Killed in action—total . . . . .	6,031	4,826	52	1,048	105
4. Wounded in action—total . . . . .	27,997	22,578	338	5,059	22
a. Died of wounds . . . . .	716	537	8	168	3
b. Other (current wounded, returned to duty, evacuated to the U.S., etc.) . . . . .	27,281	22,041	330	4,891	19
5. Missing in action—total . . . . .	6,148	5,780	68	105	195
a. Died . . . . .	14	14	0	0	0
b. Returned to military control . . . . .	720	694	2	0	24
c. Current captured . . . . .	107	104	0	0	3
d. Current missing . . . . .	5,307	4,968	66	105	168

Source: The department of defense.

During the last two weeks of December, the United Nations forces were engaged principally in regrouping in defensive positions near the 38th parallel in preparation for an anticipated enemy attack. Tenth corps troops which had been evacuated from Hungnam were moved up to defensive positions and resupplied. Local patrol action and skirmishes with the enemy in size up to approximately a regiment took place, but there was no concentrated offensive effort on either side. At the end of the year it was evident that the Chinese forces, noted for their slow build-up of men and equipment, were preparing for an all-out assault against U.N. positions.

In General MacArthur's communiqués and in reports from front-line observers, one of the most significant results of the Korean war from June 25 until the end of the year was the extent of the U.N. co-operation among air, ground and sea forces. Never before in modern war had armed forces encountered a situation in which such close co-ordination was required. United Nations ground forces, the U.N. air force and U.N. sea forces were completely integrated.

News commentators pointed out that the Korean war could not be interpreted as a prototype for future wars. The enemy, after the earlier engagements, never used air power except in negligible strength. U.N. sea forces were in complete control of both coasts of Korea. On the ground, U.N. troops were faced by large numbers of troops which had, except in earlier phases, little armour and comparatively little heavy artillery. The North Korean troops and those of Communist China were lightly equipped and lightly armed, relying upon unconventional methods of transportation and utilizing the mountainous terrain of Korea to the utmost advantage.

In this respect, U.N. forces were comparatively roadbound and consequently were frequently at a disadvantage in the mountains.

The death of Gen. Walton W. Walker, commanding general of the 8th army, in a traffic accident on Dec. 23, resulted in the assignment of Lieut. Gen. Matthew B. Ridgway, army deputy chief of staff, as commanding general, 8th army.

**Labour Party, Great Britain:** see SOCIALISM.

**Labour Unions.** Recovery from the business recession of 1948-49 and increased business activity resulting from the rearmament program of the government changed the course of economic events in the United States during 1950 and the labour policies related to them. Hourly wage rates of factory employees, which for more than a year had stood at \$1.40, began moving up again and in the last months of 1950 exceeded \$1.50. Employment rose, unemployment declined and, after the outbreak of the Korean war in June, the revised foreign policies of the government added to a renewed post-World War II boom, the powerful influences of expanded armament schedules and plans for increasing the country's armed forces. These developments fortified the position of organized labour, stiffened its demands and turned its attention to the problems of unions in a war economy.

The early labour negotiations of 1950 were concerned mainly with the issue of old-age pensions and social insurance in indus-

tries in which these matters had not been settled the year before. In coal mining, the United Mine Workers continued to inspire stoppages and to limit the number of days worked in its efforts to rehabilitate the miners' welfare and retirement fund. Intervention by the president, the appointment of a fact-finding board and the granting of an injunction failed to produce a settlement and peace. On March 5, as a result of negotiations between union and employers, an agreement was reached raising the operators' contribution to the retirement fund from 20 to 30 cents per ton of coal mined and increasing miners' wages by 70 cents a day.

A three-month strike, beginning Jan. 25, shut down the Chrysler automobile plants over much the same issue. The company was willing to set up a pension plan for its employees but was unwilling to agree to the methods of financing proposed by the United Automobile Workers. An agreement was finally reached on May 4 whereby a \$100-a-month pension was established, the company undertaking to fund its obligations for past services of older employees.

The wage and pension agreement between General Motors and the United Automobile workers, signed late in May, climaxed the year's labour settlements. In addition to liberal pension and insurance benefits, the agreement provided for the automatic adjustment of wages to changes in living costs and granted an annual increase of four cents an hour, the so-called "improvement" factor, to enable employees to share in the gains from technological progress. The inclusion of these provisions in a contract which was to run for five years was received with relief throughout the country. It was considered a key to industrial peace and an evidence of the foresight of one of the country's largest corporations. The effects of the announcement of the contract were prompt and dramatic.

Chrysler, in voluntary discussion with the union, raised wages ten cents an hour and not long after adopted the General Motors wage formula. The formula, in fact, became the favourite method of wage settlement, with the result that more than 2,000,000 employees were estimated to be working under it at the close of the year. The only misgivings of the supporters of the formula grew out of the prospects for price control and the consequent uncertainties as to the fate of an automatic plan for raising wages while prices were being frozen.

Although these agreements contributed to industrial peace, conditions continued disturbed in the railroad industry. In this industry public regulation of labour negotiation through the Railway Labor act appeared to cause labour relations to deteriorate. The railway unions were irked by the length of time it took for negotiations to reach a conclusion. The machinery of the law acted as an obstacle to direct discussion between the operators and unions; and railroad employees felt that their wages and working conditions had fallen behind the standards of other industries. The result was a succession of strikes, authorized and unauthorized, by switchmen, yardmen, trainmen, firemen, engineers and conductors on one or another of the railroads of the country. The foremost issue arose out of the introduction of the 40-hr. week. In dealing with this question, decisions by emergency boards had granted only partial compensation for the reduction in hours. Negotiations to improve these awards were interrupted by strikes. Added to this problem was the perennial one of work rules and the realization by railroad employees and their unions, as the year rolled on, that they were lagging still further in relative wages.

Organized labour's intervention in politics received another test in the November congressional elections. For this election all factions of the labour movement made long preparations. The C.I.O. and the A.F. of L. worked closely together to defeat Sen. Robert A. Taft in Ohio and to elect Sen. Elbert D. Thomas in

Utah. The results were a great surprise, particularly to the labour unions. The Democrats retained control of both the senate and the house, but by much reduced majorities. More important, however, were Taft's overwhelming victory and the defeat of Thomas, a staunch labour supporter, by Wallace F. Bennett, former president of the National Association of Manufacturers.

The C.I.O. continued to purge itself of unions which were under Communist control. During the year it expelled nine unions, including the International Longshoremen's and Warehousemen's union, the Mine, Mill and Smelter Workers, and the Fur and Leather Workers. In the electrical manufacturing industry, the International Union of Electrical, Radio and Machine Workers, set up by the C.I.O. to replace the United Electrical Workers, won control over the larger part of that industry in elections conducted by the National Labor Relations board. But the U.E.W. retained a substantial membership and a large number of contracts with employers.

The A.F. of L. was relatively free from internal dissension during 1950 and was little troubled with communistic influences. The executive board of its former affiliate, the International Association of Machinists with about 500,000 members, voted to recommend reaffiliation with the A.F. of L. This would bring the total membership of the A.F. of L. to about 8,000,000. The C.I.O. probably lost in membership during the year because of the expulsion of its nine affiliates. Estimates based on dues payments to the C.I.O. suggest that its total membership declined from 3,900,000 in Oct. 1949 to 3,500,000 in Oct. 1950.

These rival federations of labour continued their search for greater unity and co-operated closely in politics, international labour activities and in their relations with the new war agencies in Washington, D.C. Actual merger of the two organizations, however, seemed far away. (See also *AUTOMOBILE INDUSTRY; LAW; NATIONAL LABOR RELATIONS BOARD; STRIKES.*) (L. Wo.)

**Canada.**—In Oct. 1950 the federal department of labour announced there were 1,005,639 labour unionists in Canada in 1949. The Trades and Labour congress had 459,068 members in 2,865 locals; the Canadian Congress of Labour 301,729 in 1,175 locals; the Canadian and Catholic Confederation of Labour 80,089 in 424 locals.

During 1950 the large unions held conventions, at which important resolutions were passed: the Canadian Congress of Labour supported a national labour code which covered every worker, higher old-age pensions without a means test, higher income tax exemptions, price ceilings at June 1950 levels and federal health insurance; the Trades and Labour congress supported annual two-week vacations with pay for all workers, payment for workers on statutory holidays and a five-day, 40-hr. week. The Canadian and Catholic Confederation of Labour presented a brief to the federal government requesting the appointment of an ambassador to the Vatican, adoption of a national flag, continued protection of industry against foreign competition and no compulsory military training in peacetime.

Both the large labour unions had trouble with Communist elements. The Canadian Congress of Labour threw out the 25,000-member United Electrical, Radio and Machine Workers, one of its largest affiliates; and the Trades and Labour congress amended its constitution in order to oust Communists from office and to expel any union electing Communists. The Canadian labour relations board of the federal government ruled that the 6,000-member, Communist-dominated Canadian Seaman's union was no longer a trade union within the meaning of the industrial relations and disputes investigation act and was not entitled to certification as a bargaining agent. (C. Cy.)

**International Movement.**—The world trade union movement continued in 1950 to be split between the Communist-led World Federation of Trade Unions (W.F.T.U.) and the International

PREPARING PICKET SIGNS for use in a strike by 89,000 Chrysler Corp. employees which began Jan. 25, 1950, over a pension and wages dispute. The strike ended on May 4 when the United Automobile Workers (C.I.O.) won guarantees of \$100-a-month pensions

Confederation of Free Trade Unions (I.C.F.T.U.), of which the British and U.S. unions formed the main nucleus. There was no substantial change during the year in the relative positions of the two bodies, except that the Chinese trade union movement was undergoing an extensive reorganization after the change of government in China and was in 1950 actively associated with the W.F.T.U., which also continued its efforts to secure the support of the growing trade union movements in Asia and in the African colonies, as well as in Latin America. In western Europe, the trade union movements connected with the W.F.T.U. continued to command the allegiance of the main bodies of manual workers in both France and Italy, whereas the Scandinavian countries, the Netherlands, Belgium and Switzerland were practically solid on the side of the I.C.F.T.U. At the inaugural congress of that body, in Nov.-Dec. 1949, it was decided to invite representatives of the Christian trade union movements which existed in a number of countries to join the new international. The French and Belgian Christian unions were actually represented, and subsequent negotiations with the International Federation of Christian Trade Unions took place for the discussion of future relations. The I.C.F.T.U. congress had agreed to accept the affiliation of the Christian unions only on condition that, within two years, they "along with all other affiliated bodies, accept and give effect to the principle of affiliation to one Trade Union international." This condition proved to be unacceptable to the Christian international, and the future relations between the I.C.F.T.U. and the Christian unions remained uncertain.

**Great Britain.**—For the first time for a number of years the affiliated membership of the British Trades Union congress showed a slight fall, from 7,937,091 to 7,883,355. The greater part of the fall, which was not large enough to have much significance, was in the railway trade unions, where it was partly a

consequence of staff reductions, and in the other transport and general workers' groups. There was also a small decline in the engineering group, whereas most others maintained or improved their positions. The British unions reached a point at which considerable further increases in membership could not easily be achieved without invasion of new fields.

In Jan. 1950 the general council convened a special conference of trade union executives and laid before it a report on the economic situation, including wages policy. The report, while recognizing the special claims of low-paid workers, reaffirmed the need for general restraint in wage applications and called on the trade unions to follow a policy of holding wage rates stable until Jan. 1951, as long as the retail price index remained within the range of 118 and 106 (June 1947=100). At the same time, the report recommended the further extension of systems of payment by results. The conference was sharply divided and the report was adopted by 4,263,000 votes against 3,606,000—a vote which was generally interpreted as a sign that wage-restraint was breaking down. This view was confirmed by the voting on a resolution put forward at the annual Trades Union congress in Sept. 1950, proposing much less rigid limitations on wage demands. This resolution was rejected by a small majority, leaving the T.U.C. with no wage policy at all. The rejection of wage restraint did not mean that there was any immediate danger of widespread strikes for higher wages. Compulsory arbitration remained in force, in the sense that strike action was unlawful unless a dispute was previously reported to the ministry of labour and the minister failed to use his power to refer it to the National Arbitration tribunal or some other approved body.

The activities of the communist minority inside the trade unions, in face of the intensification of the "cold war," led to an increased desire to take what steps were practicable to counter "subversive movements" without limitations on trade union freedom. Communist strength was in the main concentrated in a few unions. It appeared to be greatest in the Electrical Trades union, the National Union of Foundry Workers, the Civil Service Clerical association and a few small unions of technicians. It was most manifest, however, in the docks section of the widespread Transport and General Workers' union, and this section, especially in London and Liverpool, was the chief centre of significant unofficial strike action during the year. Communism was also strong in the leadership of the Scottish miners, but not in the National Union of Mineworkers as a whole. Certain leaders, notably Arthur Deakin of the Transport and General Workers' union and George Isaacs, the minister of labour, who was secretary of one of the printing unions, were vehement in denunciation of Communist influence; and a few unions, including the Transport and General Workers' union, took action against unofficial leaders who violated trade union discipline. But most unions preferred to let matters alone, aware that the power of the Communist minority to make trouble was very limited.

**Western Europe.**—In France, trade union events in 1950 turned chiefly on the question of wages and on the peace campaign conducted by the Communist party and the Communist-led *Confédération Générale du Travail* (C.G.T.) in opposition to the development of closer Franco-U.S. relations in connection with the North Atlantic treaty. The one-day general strike called by the C.G.T.-Force Ouvrière in Nov. 1949 was followed by prolonged negotiations on the wage issue, the trade unions pressing more and more for advances to meet the rising cost of living. When, in Aug. 1950, the government announced a new minimum wage scale the C.G.T. promptly rejected the concessions offered and denounced the Force Ouvrière and the Christian unions for refusing to join with it in outright opposition. There

was, however, an evident consciousness on the part of the C.G.T. that it was not then strong enough to force matters to a crisis.

In western Germany, the Trade Union federation (*Deutscher Gewerkschaftsbund für die Bundesrepublik Deutschland*), formed in Oct. 1949 by the union of the seven federations previously in existence for the separate *Länder*, was extended in July 1950 to include the trade unions of west Berlin. The highly centralized trade union organization set up in eastern Germany had no connections at all with the west. The west German unions had not regained their full pre-Hitler strength; but they advanced considerably and were pressing hard for representation on the controlling agencies in the Ruhr and in German industry generally.

In Italy the Socialist *Federazione Italiana del Lavoro*, which broke away in 1949 from the Communist-controlled *Confederazione Generale Italiana del Lavoro*, decided early in 1950 to merge with the mainly Catholic *Libera Confederazione Generale Italiana dei Lavoratori*. The last-named had already shed its exclusively Christian basis. (See also *WAGES AND HOURS*.)

**Lacrosse.** The Johns Hopkins university team won the Wingate Memorial trophy, symbolic of the championship of the United States Intercollegiate Lacrosse association, in 1950. The Baltimore team, which had annexed the title outright in 1947 and 1948 and shared the honours with the U.S. Naval academy in 1949, placed two of its men, Lloyd Bunting and Robert Sandell, on the association's official All-America ten.

Rensselaer Polytechnic institute of Troy, N.Y., Army, Syracuse and Yale were among the other top-flight squads in a campaign that saw heavier schedules in the colleges and schools and a definite gain in popularity of the Indian game. The feature of the season was the ninth annual all-star battle between the north and the south at College Park, Md. With men from upstate New York colleges accounting for nine goals, the north triumphed in the night contest, 12-8. The losers closed with a 4-goal rally, but could not overcome the 9-2 lead gained by their rivals in the first half.

The Mt. Washington Lacrosse club of Baltimore, Md., retained its national open crown but came out second best in one of the major surprises of the year when it dropped a 7-6 decision to Army at West Point, N.Y. Yale's high-scoring squad visited England for a series of matches, the feature of its invasion coming when the Elis routed a combined Oxford and Cambridge ten, 17-4.

Philadelphia triumphed in the women's national tournament, which attracted eight teams to Vassar college at Poughkeepsie, N.Y.

**Latvia.** From Nov. 18, 1918, to Aug. 5, 1940, when it was annexed by the U.S.S.R., Latvia was an independent republic. The U.S., British and other governments, however, did not recognize the annexation. Area: 25,395 sq.mi. Pop.: (1939

est.) 1,994,500, (1950 est.) 2,100,000. Nationalities (1939 est.): Latvian 75.5%, Russian and Byelorussian 11.9%, Jewish 4.8%, German 3.2%, Polish 2.5%, others 2.1%. Religion (1939 est.): Lutheran 56.6%, Roman Catholic 23.7%, Greek Orthodox 8.9%, Jewish 4.9%, others 5.9%. Chief towns: Riga (cap.; pop. 1939 est., 393,211); Liepaja (1935 census, 57,098). Chairman of the presidium of the supreme soviet of the Latvian S.S.R. in 1950, August M. Kirchensteins; chairman of the council of ministers, Vilis T. Lacis.

**History.**—On July 22, 1950, the soviet press published a letter addressed to Stalin by the Latvian working people expressing satisfaction that Latvia as "a puppet state in the hands of the imperialists" had ceased to exist in 1940. Other changes during the decade included the reduction of the number of Latvians, it was estimated, from 1,496,000 to 1,222,000, which meant that by 1950 they represented only 58% of the alleged total population against 75.5% in 1939. According to an advertisement in *Cina*, the mouthpiece of the Latvian Communist party, on Aug. 9, out of 15 secondary schools of Riga, the language of instruction in 9 was Russian, in 2 was both Russian and Latvian and in 4 was Latvian only.

In September and October four members of the government were dismissed for "bourgeois nationalism." They were: Serghey N. Gulnitsky, deputy prime minister; Peteris I. Valeskalns, foreign minister; Karlis Strazdins, minister of education; and N. Sakss, minister for forestry. Ivan P. Ostrov, a Russian deputy prime minister, took over the ministry of foreign affairs; Vilis Samsons, a Russified Latvian and soviet guerrilla leader during World War II, became minister of education.

By March 1 there were 4,115 *kolkhozy*, or collective farms, but by mid-August this number had been reduced to 1,908, and it was expected to decrease further by the amalgamation of smaller *kolkhozy* into bigger ones. The proportion of peasant property collectivized was 95%.

In connection with the tenth anniversary celebrations it was announced that 90,000 sq. metres of housing space had been built in Riga since 1945, compared with 170,000 sq. m. totally destroyed during World War II and 220,000 sq. m. of housing built in Riga during 1934-38.

On Jan. 31 a new administrative division of the country, based on the soviet pattern, was introduced: 58 *rayons* were to supersede the 19 districts into which Latvia had been previously divided. In the elections of March 12 to the supreme soviet of the U.S.S.R. 1,358,294 (99.94%) out of a possible 1,359,051 electors cast their votes; Latvia elected 7 members to the council of the union (including Gen. Ivan H. Bagramian, commander of the Baltic military area) and 25 to the council of nationalities (among them Ilya Ehrenburg, born in Kiev and never a resident of Latvia). (See also ESTONIA; LITHUANIA.)

**Education.**—In 1950 there were 282,000 pupils in elementary and secondary schools and 27,000 students in 66 technical schools and 10 institutions of higher education.

**Finance.**—Budget: (1949 est.) revenue 1,572,000,000 roubles, expenditure 1,478,000,000 roubles; (1950 est.) revenue 1,470,000,000 roubles, expenditure 1,420,000,000 roubles.

**BIBLIOGRAPHY.**—*Newsletter from behind the Iron Curtain* compiled by the *Baltic Review* (Stockholm). (K. Sm.)

**Law.** The fight against communism in the United States continued on the legal front during 1950 through actions against alleged Communists for sedition, perjury and contempt and the enactment by congress of a drastic subversive control law. The 81st congress also enlarged the benefits of social security, raised income tax rates, extended rent control, empowered the president to proceed with a program of priorities, allotments and price and wage controls and, reconvening for two days after the end of the year, passed a group of bills which included defense measures and an excess-profits tax. The supreme court

rendered decisions striking at race discrimination in colleges and dining cars, giving the national government dominion over oil-rich Texas and Louisiana tidelands, construing due process in criminal and administrative proceedings and adjudicating various technical issues.

Only the more important legal developments of general interest are reported in this article.

**Agriculture.**—Efforts of two Puerto Rican sugar refining companies and the island's government to knock out the sugar quota system administered by the U.S. secretary of agriculture were blocked by a supreme court decision upholding the constitutionality of the Sugar act of 1948. Annual allotments of the maximum tonnage of refined sugar which could be marketed on the mainland of the U.S. from offshore sugar-producing areas were not so discriminatory or oppressive as to violate the due process clause. "This court is not a tribunal for relief from the crudities and inequities of complicated economic legislation," said Justice Felix Frankfurter on behalf of a majority of the court (*Secretary of Agriculture v. Central Roig Refining Co.*, 338 U.S. 604).

Through amendments to the Agricultural Adjustment act of 1938, congress tried to correct inequities in acreage allotments and quotas in the marketing of cotton and peanuts, provided means by which farmers might have their 1950 acreage allotments reviewed, gave the secretary of agriculture power to dispose of surplus Irish potatoes acquired under the 1949 price support program by giving them to nonprofit agencies and institutions, and made price support for 1951 and subsequent potato crops contingent upon the coexistence of marketing quotas.

**Aliens and Citizenship.**—The exclusion from the United States by order of the attorney general of the German-born wife of a U.S. war veteran for security reasons was a proper exercise of executive power unaffected by the War Brides act. Nor was the exclusion order reviewable by the courts. The barring of aliens is an act of sovereignty to be carried out by the executive department as part of its control of foreign affairs (*Knauff v. Shaughnessy*, 338 U.S. 537).

An alien who has succeeded in entering the U.S., however, is entitled to the sort of hearing prescribed by law. The supreme court said that a native of China, ordered deported for unlawful entry, should have another chance because his case had been heard before an immigrant inspector who also investigated similar cases. This combination of functions violated the rules laid down by the Administrative Procedure act, which applied since the Immigration act does not specify how such hearings should be conducted (*Sung v. McGrath*, 339 U.S. 33).

The deportation of two German-born former citizens, whose naturalization had been cancelled after they had been convicted of violating the Espionage act of 1917, was approved by the supreme court as authorized by statute. The majority of the court held that it made no difference whether they had the status of aliens at the time of their conviction or not (*Eichenlaub v. Shaughnessy*, 338 U.S. 521).

An American woman, who had signed a renunciation of U.S. citizenship when she married an Italian, was told by the supreme court that she had been "playing for keeps," even though she may not have realized it. Upon her return to the U.S. she found that she had expatriated herself (*Savorgnan v. U.S.*, 338 U.S. 491).

The Displaced Persons act of 1948 was amended to permit the entry into the U.S. of a total of 415,744 political refugees apportioned among four groups: (1) 54,744 expellees from German ethnic countries; (2) 5,000 orphans from western Europe; (3) 15,000 persons already in the U.S. on temporary visas; and (4) 341,000 other displaced persons. The requirements that 30% must be farmers and 40% must come from Balkan countries were repealed. The deadline for displaced persons to have been in camps was extended to Jan. 1, 1949, for issuing general visas to June 30.

1951, and for visas for expellees and orphans to July 1, 1951.

Congress also created the International Claims commission in the state department to hear and adjust claims of the U.S. and its nationals against foreign governments from the funds provided through previous lump sum settlements by international agreement. Special procedures were set up to handle claims arising from the appropriation of U.S. property in Yugoslavia.

**Armed Forces.**—An attack upon the legality of court-martial proceedings on behalf of a soldier convicted of rape, on the ground that the issue of his insanity had not been properly treated was rejected by the supreme court. All that was required was that this issue should be considered at some time during the proceedings, which had been done. The right to trial by jury guaranteed by the federal constitution does not apply to military trials (*Whelchel v. McDonald*, 340 U.S. 122).

The high court also denied writs of habeas corpus to 21 German alien enemies convicted of war crimes by a U.S. military commission in China for engaging in military activities against the U.S. after German capitulation and before the surrender of Japan. The judiciary had no power to inquire into the legality of the military trial. The constitution does not confer immunity from military trial and punishment upon alien enemies engaged in hostile action against the U.S. (*Johnson v. Eisentrager*, 339 U.S. 763).

Members of the armed forces cannot maintain suits against the U.S. under the Tort Claims act for injuries sustained while on active duty, resulting from the negligence of other servicemen (*Peres v. U.S.*, 340 U.S. 135). The court pointed out that its 1949 ruling in *Brooks v. U.S.*, 335 U.S. 901, permitted suits against the government by service personnel only for injuries suffered while off duty. Congress has provided other means of compensation for service-connected injuries and death.

An amendment to the Selective Service act, known as the Dependents Assistance act of 1950, provided for contributions by the government to the support of wives, children and dependent parents of enlisted men in the amount of \$45 for one dependent, \$67.50 for two and \$85 for three or more, to supplement contributions from pay of \$40, \$60 or \$80 per month, according to grade. Congress also approved a uniform code of military justice.

**Business Regulation.**—Congress attempted to plug a loophole in the Clayton Antitrust act by broadening its antimerger provision, which forbids the purchase of stock of one corporation by another for monopolistic purposes, to include a prohibition against the purchase of corporate assets for similar purposes.

The maintenance of a mandatory schedule of brokerage fees by a Washington, D.C., real-estate board was ruled by the supreme court to be an illegal price-fixing scheme in violation of section 3 of the Sherman act. Although the real-estate business does not involve the sale of commodities, it comes within the designation "trade" used in the statute (*U.S. v. Real Estate Boards*, 339 U.S. 485).

In a suit to stop manufacturers of gypsum products from fixing industry prices through patent licensing agreements, the supreme court found the lower court decree to be too narrow in scope. Instead of merely enjoining the price fixing of patented gypsum board in the eastern area of the U.S., it should have been extended to include all gypsum products moving in interstate commerce (*U.S. v. Gypsum Co.*, 340 U.S. 76).

Among regulatory actions of government agencies approved by the high court were the confiscation by the food and drug administrator of numerous shipments of mineral tablets, which he believed to be misbranded, without first holding a hearing (*Ewing v. Mytinger*, 339 U.S. 594); the awarding by the Civil Aeronautics board to a carrier of routes not requested in its application in spite of objections by a competing carrier (*CAB v. State Airlines*, 338 U.S. 572); and an order of the Federal Trade com-

mission to a business concern requiring it to submit reports showing compliance with a four-year-old cease and desist order, although the particular form of reports required had not been authorized by the decree nor by statute (*U.S. v. Morton Salt Co.*, 338 U.S. 632).

The Louisiana supreme court knocked out the state's Liquor Control act of 1948 as unconstitutional because of mandatory minimum price mark-up provisions. The court held that such price fixing in no way served the announced purpose of the statute, namely, to control the liquor traffic so that it "may not cause injury to the economic, social and moral well-being of the people of the state" (*Schwegmann Brothers v. Louisiana Board*, 43 So. 2nd 248). On the other hand, the supreme court of Arkansas sustained the state's liquor price-fixing law, and the New York legislature passed a new mandatory liquor fair-trade act to replace a former law which had been declared unconstitutional by the state's highest court. The new act required distillers, importers and wholesalers to fix minimum resale prices for their products sold through licensed retail outlets.

**Civil Rights.**—Proponents of race segregation suffered setbacks in three cases. The supreme court condemned Jim Crow practices on railroad dining cars as a violation of section 3 (1) of the Interstate Commerce act, which makes it unlawful for a railroad to subject any person "to any undue or unreasonable prejudice or disadvantage." Rules limiting Negroes to the use of two tables curtained off from the rest of the diner and compelling them to wait for vacancies at those tables constituted such disadvantage (*Henderson v. U.S.*, 339 U.S. 816).

In two other cases the court construed the equal protection clause of the 14th amendment as meaning literally "equal" when

PRESS ROOM set up in a courthouse basement at Manchester, N.H., during the trial of Hermann N. Sander, a physician, who was acquitted on March 9, 1950, of the "mercy killing" of a cancer patient. Sander's medical licence was revoked on April 19 but was restored to him on June 28

applied to the facilities of state-operated professional and graduate schools. Contentions of a Negro, who had been denied admission to the University of Texas law school, that a special law school created exclusively for Negroes did not offer educational opportunities substantially equivalent to those available to white students were sustained by the high court (*Sweatt v. Painter*, 339 U.S. 629). At the instance of a 55-year-old Negro professor, engaged in graduate study, the court also directed the University of Oklahoma to treat Negroes in the same way as white students. Assigning Negroes to a separate row of seats in a classroom or to a designated table in the library or cafeteria did not satisfy constitutional requirements (*McLaurin v. Oklahoma Regents*, 339 U.S. 637). Although the court did not expressly repudiate the "separate but equal" doctrine, previously laid down, it definitely narrowed its availability as a defense against charges of unlawful discrimination.

Adhering to its hands-off policy toward state election laws, the supreme court declined to interfere with Georgia's "county unit system" in primary elections, which in effect reduces Negro state-wide voting strength (*South v. Peters*, 339 U.S. 276), and brushed aside an attack on a new Georgia statute setting up an educational test for voters designed to cut down the total Negro vote.

A new phase of censorship was approved by the supreme court in a decision that section 245 of the federal criminal code, which makes illegal the interstate shipment of any "obscene . . . book, pamphlet, picture, motion-picture film, paper, letter, writing, print, or other matter of indecent character," applies to obscene phonograph records. The defense that the ban was intended to apply only "to objects comprehensible by sight" was rejected by the court (*U.S. v. Alpers*, 338 U.S. 680).

**Criminal Law.**—The 1949 conviction of 11 Communist leaders for conspiring to use their party to advocate the violent overthrow of the U.S. government was affirmed by the second circuit court of appeals in a 66-page opinion by Chief Judge Learned Hand. The supreme court agreed to review the case solely on the question of the validity of the Smith act, the peacetime sedition law under which they were convicted.

Several high court decisions dealt with the contempt powers of congressional committees. In a four-to-three decision the court upheld the power of the un-American activities committee to hold a member of the executive board of a voluntary association in contempt for failure to produce the group's records in answer to a subpoena. The plea that the records were under the control of the executive secretary and that compliance with the subpoena would require the co-operation of other members of the executive board was no defense (*U.S. v. Fleischman*, 339 U.S. 349). Nor could the refusal of the executive secretary of the Joint Anti-Fascist Refugee committee to produce the records of her organization before the same committee be justified on the grounds that a quorum of the committee was not present at the time set for her appearance as a witness, since she had not raised that point at the hearing. The court distinguished its 1949 ruling in the Harold R. Christoffel case as inapplicable because it arose upon the construction of a dissimilar statute (*U.S. v. Bryan*, 339 U.S. 323). The court also declined to review the contempt convictions of two Hollywood writers for refusing to tell the same congressional committee whether or not they were Communists. Neither of them had rested his refusal on the ground that his answer might incriminate him. But in another case the court made it clear that the constitutional privilege against self-incrimination is available to those who wish to claim it in good faith. A woman witness before a grand jury was justified in refusing to answer questions concerning her employment by the Communist party on the ground that she might incriminate herself. Her fear that criminal charges might be brought

against her was more than "a mere imaginary possibility" in view of the provisions of the Smith act (*Blau v. U.S.*, 340 U.S. 159).

The general secretary of the U.S. Communist party found the supreme court cold to his contention that the jury which convicted him of contempt for failing to appear before the un-American activities committee was not "impartial," as guaranteed by the 6th amendment, because it included federal employees (*Dennis v. U.S.*, 339 U.S. 162). The executive director of the National Council of American-Soviet Friendship, however, succeeded in getting his contempt conviction reversed because the trial judge had denied his lawyer an opportunity to ask prospective jurors, who were on the government pay roll, whether a so-called loyalty order would affect their ability to render an impartial verdict (*Morford v. U.S.*, 339 U.S. 258).

Officers armed with an arrest warrant, but not with a search warrant, were legally justified in searching the offices of a stamp dealer at the time of his arrest and seizing stamps in the belief that some of them had been illegally altered. Searches and seizures incident to lawful arrest do not violate the 4th amendment, the supreme court said, overruling the two-year-old *Trupiano* decision (334 U.S. 699) to the extent that it requires a search warrant whenever "practicable." The proper test is reasonableness rather than practicability (*U.S. v. Rabinowitz*, 339 U.S. 56). The court also held that due process had been satisfied when Georgia's governor on the advice of three physicians ruled that a convicted murderer was sane and thereby confirmed his death sentence, although the state law made no provision for judicial review of such decisions (*Solesbee v. Balkcom*, 339 U.S. 9). The court also reiterated its view that the failure of an accused to be offered counsel is not necessarily a denial of due process. A defendant who had pleaded guilty and made no claim that he had not been advised of his right to counsel could not later complain of unfair treatment (*Quicksall v. Michigan*, 339 U.S. 660).

The murder conviction of a Negro was reversed on the ground that his motion to quash the indictment should have been granted because Negroes had been discriminated against in selecting the grand jury. Although 15.5% of the population of the county were Negroes, there had never been more than one Negro on any grand jury during a period of five and one-half years. The 14th amendment prohibits racial discrimination in selecting grand juries (*Cassell v. Texas*, 339 U.S. 282).

On recommendation of the Kefauver committee, which investigated organized gambling, congress banned the interstate shipment of slot machines.

**Defense Measures.**—The president was empowered by the Defense Production act of 1950 to enforce priorities and allocations, stabilize wages and prices, requisition equipment, materials and facilities, control consumer and real-estate credit, settle labour disputes on a voluntary basis and take steps to expand the nation's productive capacity and supply. The new act contained antihoarding provisions and directed that wage controls should also be imposed to prevent inequities in industries where price ceilings are set. Pursuant to the authority thus given to him, the president created the National Production authority (*q.v.*) in the department of commerce to exercise priority and allocation powers not reserved to the secretaries of agriculture and the interior and the Interstate Commerce commission (*q.v.*). The president also created the Economic Stabilization agency (*q.v.*) with orders to hold the wage-price line on a voluntary basis. Time-payment buying was slowed down by new regulations issued by the board of governors of the federal reserve system effective Sept. 18, which ordered larger down payments and shorter periods for instalment purchases.

The Civil Defense act, passed by the 81st congress two days after the end of 1950, set up a three-year program for building

**TRIAL OF NINE INDUSTRIALISTS** in eastern Germany who were convicted without appeal in April 1950 on charges of smuggling assets to western Germany and of preventing the transfer to public ownership of all assets of the German Continental Gas corporation when it was nationalized in 1946. Neon diagram in the background traced the corporation's structure

atomic bomb shelters, stockpiling medical supplies, co-ordinating defense activities of state and local governments, disseminating defense information and establishing communications systems, to be in charge of an administrator with powers to seize property and requisition the facilities and services of other federal agencies.

**Housing and Rent.**—Provision was made by congress for a five-year program of repair and modernization loans through the passage of the Housing act of 1950, which substantially increased the amount of mortgage insurance available to the housing administrator, authorized revolving funds for direct loans to veterans and for faculty and student housing in colleges and universities, and provided an additional \$250,000,000 for the Federal National Mortgage association to be used in creating a secondary mortgage market by buying existing mortgages. (*See HOUSING.*)

Two respites from rent increases were granted to tenants in rent control areas through the extension of controls first to Dec. 31, 1950, and later to March 31, 1951. Provision was made for further extension to June 30, 1951, at the option of local governments.

**Internal Security Act.**—Congress created a three-pronged weapon against subversive activities through the passage of the much-debated McCarran act, which required the registration of organized Communists and fellow travellers, denied them citizenship and gave the attorney general emergency powers to detain persons suspected of planning to spy or commit sabotage. Under Title I, known as the Subversive Activities Control act of 1950, Communist-action and Communist-front organizations must list their officers and submit accounts of their receipts and disbursements to the attorney general. Action groups must also list their members. Registered organizations are denied tax deductions and exemptions. Their members are barred from federal jobs and denied passports. Such organizations must label all mail and broadcasts as sponsored by a Communist organization. Failure to register is punishable by fine not to exceed \$10,000 and imprisonment not to exceed ten years. Title I also amended various statutes relating to immigration and naturalization. It excluded from entry into the U.S. all aliens who are, or ever have been,

members of the Communist party or of any organization required to register. Resident aliens, who have been within any of the excludable categories within ten years prior to filing a petition for naturalization, must be denied citizenship. Joining a registered organization within five years after naturalization creates a presumption that the alien was not attached to the principles of the U.S. constitution and if not rebutted by other evidence will warrant denaturalization.

Title II, known as the Emergency Detention act of 1950, empowered the attorney general, in the event of invasion, declaration of war or insurrection within the U.S. in aid of a foreign enemy, to detain any person as to whom there is reasonable ground to believe that he will engage in espionage or sabotage. Membership in the Communist party after Jan. 1, 1949, may be considered in deciding the existence of reasonable grounds for detention.

**Labour.**—Two C.I.O. (Congress of Industrial Organizations) unions lost their fight against the anti-Communist affidavit requirements of the Labor-Management Relations act. The supreme court justices ruled five to one that union officers must disclose their affiliation with or membership in the Communist party as a prerequisite for using the machinery of the National Labor Relations board. But the court split three to three over the requirement of an oath disclaiming membership or belief in any organization advocating the forceful overthrow of the government (*A.C.A. v. Douds*, 339 U.S. 382).

In three cases arising on the west coast, the supreme court approved injunctions granted by state courts against picketing. A teamsters' union had been properly restrained from trying to force a garage owner, who operated without employees, to comply with union rules (*Teamsters Union v. Hanke*, 339 U.S. 470). Nor was a building service employees' union justified in picketing a hotel owner in an effort to compel him to sign a union shop agreement when his employees did not want to join the union (*Building Service Union v. Gazzam*, 339 U.S. 532). Similarly, an injunction against the picketing of a grocery store by a group called the Progressive Citizens of America in order to force the owner to hire Negro clerks in proportion to his Negro customers was not a violation of the right to free speech (*Hughes v. Superior Court*, 339 U.S. 460).

The strike-vote provision of the Michigan labour mediation

OFFSHORE DRILLING PLATFORM in the Gulf of Mexico, located on the tidal oil lands bordering Louisiana and Texas over which the federal government was given dominion by a 1950 supreme court ruling

law, which laid down certain prestrike mediation procedures, was nullified by the federal supreme court because it invaded a field pre-empted by congress under the Labor-Management Relations act (*International Union v. O'Brien*, 339 U.S. 454). The court also ruled that delay by the National Labor Relations board in exercising its power to enforce a cease and desist order did not terminate such power (*NLRB v. Pool Manufacturing Co.*, 339 U.S. 577). Nor did compliance by an employer with a similar order deprive the board of its power to enforce the order later upon the resumption of the unfair practice at which the order was aimed (*NLRB v. Mexia Mills*, 339 U.S. 563).

Workers in government-owned munition plants, operated during World War II by private companies under a cost plus a fixed fee basis, were held by the supreme court to be governed by the wage-hour law and to be entitled to overtime pay (*Powell v. U.S. Cartridge Co.*, 339 U.S. 497).

The court reaffirmed the exclusive jurisdiction of the National Railway Adjustment board to adjudicate disputes between railroads and labour unions without interference by state courts while such proceedings are pending (*Slocum v. D.L. and W.R. Co.*, 339 U.S. 239; *Railway Conductors v. Southern Railway Co.*, 339 U.S. 255). The Railway Labor act was amended to permit railroad and air line unions to negotiate for a union shop and checkoff.

**Social Security.**—Congress amended the Social Security act to extend old-age insurance to about 10,000,000 persons not previously covered, including some domestic and agricultural workers, self-employed persons and employees of state and local governments and nonprofit organizations who may come in on a voluntary basis. Self-employed farmers and certain professional

groups including lawyers, doctors and ministers were excluded. The new coverage was extended only to those domestic servants who work for an employer 24 days in a calendar quarter and receive \$50 or more in wages, and to farm hands who work at least 60 days in one quarter and receive \$50 or more, provided they have worked for the same employer continuously during the preceding quarter.

Under the new law maximum family benefits would be increased from \$85 to \$150 a month. The wage base for benefit and contribution purposes was raised from \$3,000 to \$3,600. World War II veterans were given wage credits amounting to \$160 for every month of service.

So-called "new start" provisions liberalized eligibility requirements; for instance, a worker who was 65 on Sept. 1, 1950, could qualify for benefits after working six quarters in a covered employment earning at least \$50 a quarter.

The tax rate under the new law as to employed persons would rise to 2% in 1954, 2½% in 1960, 3% in 1965 and 3½% in 1970. Self-employed persons, choosing to take advantage of old-age insurance, would pay 2½% on their income up to \$3,600 at the end of 1951 with the rate rising to 3% in 1954, 3½% in 1960, 4½% in 1965 and 4½% in 1970. (See also SOCIAL SECURITY.)

**States' Rights.**—The supreme court unanimously rejected claims of Louisiana over a strip of land 27 mi. wide extending along the Gulf coast. Relying on the precedent of *U.S. v. California*, 332 U.S. 19, Justice William O. Douglas said, "Property rights must be so subordinated to political rights, as in substance to coalesce and unite in the national sovereign. Today the controversy is over oil. Tomorrow it may be over some other substance. . . . If the property, whatever it may be, lies seaward of low water mark, its use, position, management, and control involve national interests and national responsibilities" (*U.S. v. Louisiana*, 339 U.S. 699). The justices had more difficulty in disposing of the claim of Texas that it had never ceded to the U.S. sovereignty over the marginal sea to the three-mile limit which it had acquired as an independent republic. In a four-to-three decision, the court concluded that Texas had transferred all its rights in tidelands to the national government upon its admission into the union by joint resolution of congress on an equal footing with the existing states (*U.S. v. Texas*, 339 U.S. 707).

The supreme court, however, agreed to apply the law of California in adjudicating claims by riparian owners to compensation for damage done through the impounding of the San Joaquin river in California for irrigation purposes. The construction of the Friant dam and its dependent irrigation system was a reclamation project rather than a navigation project for the purpose of determining the rights of the landowners (*U.S. v. Gerlach Co.*, 339 U.S. 725).

The high court also upheld the powers of states to forbid their residents to make bequests of property to the federal government (*U.S. v. Burnison*, 339 U.S. 87); to prohibit out-of-state corporations from soliciting insurance business by mail within the state (*Travelers Health Assn. v. Virginia*, 339 U.S. 643); and to fix the minimum price at which natural gas may be taken from the common reservoir by interstate pipe lines, or otherwise, as a conservation measure (*Cities Service Co. v. Peerless Co.*, 340 U.S. 179). But the high court ruled that a natural gas company, bringing gas into Ohio through the interstate lines of other companies, which connected with the local company's intrastate lines, was involved in interstate commerce so as to subject it to the regulations of the Federal Power commission (*FPC v. East Ohio Gas Co.*, 338 U.S. 464).

**Taxation.**—The Revenue act of 1950 became law on Sept. 23 and applied to income received after Oct. 1. The new act increased the starting rate on individual income from 16.6% to

20% and from about 82% to 91% in the top bracket and restored the maximum rate limitation to the previous level of 87%. The withholding rate on wages and salaries was raised as of Oct. 1, 1950, from 15% to 18%. The top tax rates on corporations went up from a 38% average to a new high of 45%. The so-called "notch" rates on corporate income, which applied to that part of income between \$25,000 and \$50,000, resulting in a 53% rate, were eliminated. The new statute imposed a flat 20% surtax rate on a flat normal tax rate of 20% with a \$25,000 surtax exemption. It also provided for speeding up collections of corporate income tax. The new corporate rates were made retroactive to July 1, 1950. In an effort to block a device used by educational, charitable and other tax-exempt organizations, the new law made income derived by nonprofit organizations from unrelated business activities taxable.

A further levy on corporations was enacted by the 81st congress, upon reconvening after the year's end, through an enactment boosting the tax rate on corporations earning more than \$25,000 a year from 45% to 47% and levying a tax of 77% on excess profits, which were defined as corporate earnings in excess of 85% of average profits for the three best years from 1946 through 1949. Combined normal- and excess-profits tax was limited, however, to 62% of yearly earnings.

Congress also repealed the federal tax on oleomargarine which had been on the books for 64 years. It provided, however, for the marking of this product on the package label with the word "oleomargarine" or "margarine" in large type and that oleomargarine served in restaurants must be cut in triangular pieces.

Tax decisions by the supreme court included rulings that a corporation is not liable for income tax on the sale of assets which are first transferred to stockholders in partial liquidation and are then sold (*U.S. v. Cumberland Co.*, 338 U.S. 451); that a new Maryland law imposing a 2% tax on interstate motor carriers using Maryland roads was not an unreasonable burden on interstate commerce (*Capitol Greyhound Lines v. Brice*, 339 U.S. 542); that a New Jersey statute subjecting the intangibles owned by insurance companies to a state tax up to 15% of their value was valid since such a tax might apply to U.S. bonds (*N.J. Insurance Co. v. Division of Tax Appeals*, 338 U.S. 665); that a transfer of property from a wife to her husband as part of a divorce settlement was not subject to the federal gift tax (*Harris v. C.I.R.*, 340 U.S. 106); and that a tax on marijuana of \$100 per ounce, intended to slow down traffic in that drug, was not unconstitutional as a penalty, even though its primary purpose was for regulation rather than for revenue (*U.S. v. Sanchez*, 340 U.S. 242).

**United Kingdom Legislation.**—Legislation in the British imperial parliament during 1950 naturally reflected the prevailing political conditions; the standstill before the general election of February and the stalemate that ensued upon the even state of the parties in the new house of commons thereafter.

The latter months of 1949 saw the royal assent granted to, among other measures, the British North America (No. 2) act, 1949, the Parliament act, 1949, and the Law Reform (Miscellaneous Provisions) act, 1949. The main effect of the Parliament act was to reduce the period during which the house of lords had power to delay legislation from three sessions and two years, as fixed by the Parliament act of 1911, to two sessions and one year, operating retrospectively to the session of 1947-48 when the measure was first introduced. Thus there passed into law one of the most controversial constitutional measures of modern times, fiercely debated in the commons and three times rejected in the lords until it was finally passed under the machinery of the 1911 Parliament act which it amended.

Whether its ultimate importance would be found equal to its capacity for engendering controversy remained to be seen. The British North America (No. 2) act was, on the contrary, a wholly uncontroversial measure designed to enable the parliament of Canada to amend (with some reservations) the Canadian constitution, a further step in the constitutional decentralization of the commonwealth (see below).

The third measure mentioned above, the Law Reform (Miscellaneous Provisions) act, 1949, made a series of important changes in the law relating to divorce and other matrimonial proceedings. Perhaps the most important of these were: (1) the provision, by section 4, that where a decree of nullity was granted in respect of a marriage that was voidable (as distinct from being void from the beginning), the children born to such a marriage should not necessarily be deemed illegitimate; and (2) the overruling by parliament, under section 7, of the judicial rule known as the rule in *Russell v. Russell* whereby the evidence of a spouse was not admissible to prove that marital intercourse did or did not take place between them during any period.

The legislation brought before the new parliament was not of more than second-rate importance, though much of it was extremely useful. One measure dealing with the legal aspects of international relations was the International Organisations (Immunities and Privileges) act, giving the crown power to confer by order in council diplomatic privileges on members of organizations declared by order in council to be organizations of which the United Kingdom and one or more other sovereign powers (or their governments) are members; and on judges, officials, advocates and suitors of the International Court of Justice.

On Oct. 2, 1950, there came into force in England certain parts of the Legal Aid and Advice act, 1949, namely those relating to proceedings in the supreme court of judicature or remitted from it to the mayor's and city of London court or to any county court. Thus was inaugurated an experiment in providing a public legal service administered by the legal profession itself.

**Commonwealth Legislation.**—In Canada, while there was some interesting discussion of the procedure for amending the constitution, the principal measure under consideration was a proposal, following on the British North America (No. 2) act, 1949, to group the provisions of the British North America acts, 1867-1949, and other constitutional acts under two heads: viz., (1) provisions concerning parliament, the legislature of the dominion, only; and (2) provisions concerning the provincial legislatures only. It was proposed that measures in the first category should be amended by acts of the parliament of Canada and that measures in the second should be amended by acts of the provincial legislatures.

In India the new constitution, keenly debated in the previous year, came into force and on Jan. 26 the republic of India was inaugurated by proclamation of the governor general, Chakravarti Rajagopalachari, with Rajendra Prasad as the first president. In Pakistan the process of constitution-building continued with the presentation to the constituent assembly in September of the interim reports of the basic principles committee and the committee on the fundamental rights of citizens.

In South Africa, following the example of Canada, appeals from the courts of the dominion, which for some time had fallen virtually into desuetude, were formally abolished.

**British Case Law.**—*International Law.*—An interesting action was brought in the chancery division and heard by Justice Harry Vaisey, under the name of *Republic of Italy v. Hambros Bank Ltd.*, and *Gregory (Custodian of Enemy Property)* (1950 Weekly Notes 102), and arising out of the treaty of peace concluded in 1947 between the United Kingdom, among other signa-

tory powers, and Italy. A financial agreement was concluded between the United Kingdom and Italy later in 1947 concerning the liquidation and disposition of Italian property held by the custodian of enemy property as belonging to Italy or Italian nationals. In the action the republic of Italy claimed that the terms of the financial agreement impressed certain assets in the United Kingdom formerly belonging to King Victor Emanuel III of Italy with a certain trust or fiduciary obligation in respect of which the republic was the beneficiary, and which it sought to enforce against the bank and the custodian. Justice Vaisey held that the financial agreement was in substance a treaty and that the court could not take cognizance of it. Neither of the two defendants, the judge pointed out, was a party to the agreement, and the British government, which was a party, was not a defendant. On a subsequent application in the chancery division Justice Wynn Parry authorized Hambros bank as administrator of the United Kingdom estate of King Victor Emanuel, to hand over the assets of the estate valued at more than £1,000,000 to the heirs of the king, subject to the provisions of the Exchange Control act.

The doctrine of the immunity of one sovereign or state from being sued in the courts of another, raised in *Krajina v. Tass Agency* (1949 2 All England Reports 274), came to the forefront again in *Dollfus Mieg v. Bank of England* (66 Times Law Reports 675), and though this case was decided in the court of appeal on a question of fact, the master of the rolls expressed his fears that the doctrine had been pushed too far, a matter of particular interest in view of the appointment by the lord chancellor, following on the Tass agency case, of a committee under the chairmanship of Lord Justice Somervell to consider the doctrine's proper limits. On Dec. 1 this committee's report had not been published.

A decision of great human interest as well as of some importance as an instance of the application of a well-known rule was given by the court of appeal in *Kenward v. Kenward* (66 Times Law Reports, part 2, 150). This was one of a series of cases in which English husbands who had married Russian wives while stationed in the Soviet Union sought to have their marriages annulled, the soviet authorities not permitting the wives to leave their country of origin. The court here held that it was possible to infer from the whole conduct of the Russian authorities that they took the view that marriages between British men and Russian women were not marriages to which the smallest regard would thereafter be paid. Therefore the absence of certain formalities went to the root of the matter, and the so-called marriage was never a marriage that the court would recognize because it never conformed with the law of the place where it was celebrated.

Another case arising out of the tangle of wartime and post-war international relationships was *Boguslawski v. Gdynia Ameryka Linie* (1950 Weekly Notes 335). This decision of the court of appeal, affirming that of the lower court, illustrated a limitation to the principle that the recognition by the United Kingdom government of a foreign government had retroactive effect where the question at issue was the validity of acts done by the foreign government in territory indisputably under its *de facto* control, in that the court held it to have no application to transactions effected in the United Kingdom at a time when the government from whom recognition was later withdrawn in favour of its successor still enjoyed recognition. In this case an offer had been made by the Polish government in London that had been recognized during the war to seamen who should feel compelled to leave their ships on a change of government. The foreign office certified that the former Polish government had been recognized until midnight of the night of July 5-6, 1945, and the new government thereafter. The court held that

the new government was bound by the acts of the old until it rescinded or repudiated them, and that even if this act on the part of the old government was an offer and not a contract, until it was withdrawn it could be accepted and so a contract constituted.

*Municipal Law.*—The decision of the judicial committee of the privy council in *Canadian Pacific Railway v. Attorney General for British Columbia* (66 Times Law Reports 34) was of some interest: the committee held that a hotel, owned and operated by the railway company for the benefit of the general public as well as for travellers, was not a part of their railway undertaking connecting British Columbia with other provinces and so was not within the legislative competence of the dominion of Canada under the British North America acts, and that the hotel and the hours of work in it were within the legislative sphere of the province.

There was in *R. v. Taylor* (66 Times Law Reports 1182) an extremely important statement by the lord chief justice of circumstances in which the court of criminal appeal was not bound by its previous decision. In Lord Goddard's words (at p. 1183):

"The Court of Criminal Appeal usually considers itself bound by its own decisions or by decisions of a court of co-ordinate jurisdiction. . . . The House of Lords, also, always considers itself bound by its own decisions. In civil matters it is essential, in order to preserve the rule of *stare decisis*, that that should be so; but this court is concerned with the liberty of the subject, and if in the opinion of a full court the law in a particular case had been either misapplied or misunderstood, and as a result of following that decision a person has been sentenced for an offence and imprisoned for it, it would be its bounden duty to reconsider the earlier decision and determine whether that person had been properly convicted."

In another case, *Nicholas v. Penny* (66 Times Law Reports 1122), the divisional court refused to follow a previous decision on the ground that this had not been fully argued on both sides. Thus it might not be exaggerated to suggest that in 1950 the doctrine that English courts are bound by their previous decisions had fallen a little below its high-water mark. (See also AGRICULTURE; BANKING; BUSINESS REVIEW; CONSUMER CREDIT; EDUCATION; INTERNATIONAL COURT OF JUSTICE; INTERNATIONAL LAW; PATENTS; PUBLIC UTILITIES; RELIEF; TAXATION.)

FILMS OF 1950.—*Due Process of Law Denied, Justice Under Law* (Teaching Film Custodians, Inc.); *Our Basic Civil Rights* (Coronet Instructional Films). (W. T. WE.)

**Lawn Bowling.** The National tournament was held at Los Angeles, Calif., July 3-8, 1950. In the triples the winners were: first place (Rettie Memorial trophy)—Richard Folkins (skip), Hugh Folkins and Edward Magee, Arroyo Seco club, Los Angeles and Redlands, Calif.; second place (Chicago trophy)—D. Y. Deans (skip), Reed Rogers and W. D. Brattin, Columbus Park club, Chicago, Ill.; third place (Wisconsin trophy)—William Saunders (skip), Howard Saunders and C. C. Waterbury, Laguna Beach, Calif.; fourth place (no trophy)—A. Jarman (skip), Lewis Pilcher and A. R. Stevenson, Lakeside club, Chicago, Ill.

Doubles winners were: first place (California trophy)—Richard Folkins and Hugh Folkins; second place (Lakeside trophy)—Richard Allen and Jack Rose, Long Beach, Calif.; third place (Western New York trophy)—William Saunders and C. C. Waterbury; fourth place (no trophy)—Len Hughes and Lawrence Graham, Arroyo Seco club, Los Angeles and Redlands, Calif.

Singles winners were: first place (National Singles trophy)—Richard Folkins; second place (Metropolitan New York trophy)—Hugh Folkins; third place (no trophy)—Thomas Turnbull, Santa Barbara, Calif.; fourth place (no trophy)—

W. G. Hay, Beverly Hills, Calif.

Officers of the American Lawn Bowling association (United States) for 1950, re-elected for 1951, were: W. G. Hay, president; Lewis Pilcher, 1st vice-president; T. W. Gardiner, secretary-treasurer, 8106 S. New Hampshire Ave., Los Angeles, Calif.

The moderate rise in output in 1949 carried over into 1950, with the mine production reported at 357,259 tons through October.

**Canada.**—The output of recoverable lead dropped from 167,251 tons in 1948 to 159,775 tons in 1949 and 103,587 tons through Aug. 1950. This was more of a decline than appeared on the surface, as the 1949 figure included 18,608 tons from Newfoundland, not previously included.

(See also MINERAL AND METAL PRODUCTION AND PRICES.)

(G. A. Ro.)

**League of Women Voters of the United States:** see SOCIETIES AND ASSOCIATIONS.

**Leather.** There was little change in U.S. leather production in 1950, compared with 1949 output. Increase in the use of substitute materials offset increased production by important leather-consuming industries. Restricted raw stock supplies, however, continued to discourage increases in productive capacity of the U.S. tanning industry, and production and consumption remained well balanced, with no accumulations of excessive inventories.

For the first time in a decade, U.S. tanners anticipated a gradual improvement in both domestic and imported raw stock supplies, barring unfavorable war developments. The tanning material supply situation also improved somewhat during 1950, with increased imports and further development of new domes-

#### Average U.S. Monthly Leather Production

All sheep and lamb . . . . .	2,625	2,387	2,371	2,594	3,998	2,800

1950 figures are based on an average of the first nine months' production. Compiled from data of the Tanners Council of America and the U.S. Bureau of the Census.

tic materials. Imports of quebracho from Argentina rose more than 73% during the year.

Strikes in several chemical plants affected supplies of bichromates and soda ash available to tanners, but were adjusted before the leather industry was forced to curtail operations extensively.

To protect sources of raw stock supply, the industry urged that allocations by the Economic Cooperation administration (ECA) for the purchase of raw hides and skins be reduced to the absolute minimum, or curtailed entirely. Efforts were also made to secure removal of foreign restrictions and obstacles to the movement of hides and skins. Competition by U.S. tanners with other nations for hides and skins was especially keen in 1950. Increased leather production in many countries caused restrictions on imports and high bidding in world markets. U.S. tanners observed that nations receiving financial aid from the U.S. frequently outbid U.S. tanners for raw stock imports.

Norwegian tanners consumed practically all domestic supplies of hides and skins, having increased production 100% since 1939. Leather industry controls remained in force in Sweden, as did government subsidies for imported hides. Allocations and price controls were removed from imported and domestic raw hides in Japan in 1950.

Greece and Cuba reported substantial leather-production increases.

Livestock slaughter was substantially greater in Holland, but increased hide and skin output was absorbed by increased leather production. Mexico reported a crisis in the shoe and leather industry resulting from a raw stock shortage, and issuance of export permits on all hides and skins was suspended by the ministry of the interior for the duration of the crisis. Leather production in France showed substantial gains.

Faced with strong competition from substitute materials, U.S. tanners advanced merchandising efforts throughout the industry, although bookings after the start of the Korean war were sharply increased. There was increased use of leather upholstery by the automobile industry, and a strong effort was made to increase consumption by the shoe industry, largest user of both light and heavy leathers.

The Tanners Council Research laboratory at the University of Cincinnati reported several important contributions to leather science during 1950. A training program to acquaint U.S. army quartermaster personnel with tanning processes, characteristics of different types of leather, testing methods and procedures and similar information was launched by the laboratory. (See also SHOE INDUSTRY.)

(R. B. B.)

**Lebanon.** An independent Arab republic, formerly under French mandate, Lebanon is situated on the eastern Mediterranean, bounded by Syria and Israel. Area: 3,470 sq.mi. Pop. (1949 est.) 1,238,000. Languages: Arabic is the mother tongue of about 90% of the population, but Armenian, Greek and other languages are also spoken. Religions (1947): Christian 52%, Moslem 46%, other 2%. Chief towns (pop. 1946 est.): Beirut (cap. 181,300); Tripoli (86,400); Saida or Sidon (78,800); Zahle (78,000). President of the republic in 1950: Sheikh Bishari al-Khuri; prime minister: Riad Bey al-Sulh.

**History.**—In March 1950 the long-standing dispute between

Lebanon and Syria (*q.v.*) over customs came to a head. When the two states declared their independence and the French mandate ended in 1945, the French mandatory policy of a customs union between the two countries was maintained. But Lebanese policy for free trade through Beirut quickly clashed with the Syrian demand for protective tariffs, and on March 13, 1950, Syria denounced the convention and on March 26 the Lebanon closed its frontiers to Syrian exports and removed the existing import duties from wheat, butter, cheese, cattle, vegetables, cotton and rice. Simultaneously negotiations were started to open or develop foreign markets for Lebanese exports. Up to the end of the year no solution of the dispute had been found.

In the Arab league the Lebanon associated itself with the protests against the Jordan annexation of Arab Palestine (April 24) and on June 17 signed a collective security pact with Egypt, Saudi Arabia, Syria and the Yemen, and approved a resolution, taken in the absence of Jordan, that until Palestine was "finally liberated," Jordan must regard Arab Palestine as "trust property." On July 26 the government voted a grant of \$50,000 as symbolic assistance to the U.N. forces in Korea.

On Jan. 1, 1950, the prime minister formally opened the new oil refinery at Tripoli which had been built by the Iraq Petroleum company to handle the increased supplies made available by the duplication of the original Kirkuk-Tripoli pipe line. Throughout the year the construction of the world's largest oil pipe line, spanning 1,068 mi. between the Persian gulf and Sidon, was energetically pursued. The first oil reached the Lebanese port early in December. (O. M. T.)

**Education.**—Schools (1949): primary 734, pupils 60,019; private 808, pupils 75,475; foreign 279, pupils 53,208; technical and trade 5, pupils 456; universities 2, students 2,147.

**Finance and Banking.**—Budget: (1949 est.) balanced at L.L. 75,000,000; (1950) balanced at L.L. 85,300,000. Currency circulation (July 1950): L.L. 183,000,000. Bank deposits (June 1950): L.L. 210,000,000. Monetary unit: Lebanese pound with an exchange rate of L.L. 2.21 to the U.S. dollar.

**Foreign Trade.**—(Lebano-Syrian customs union, 1949): imports L.L. 116,700,000; exports L.L. 37,800,000.

**Transport and Communications.**—Roads (1949): 1,540 mi. Licensed motor vehicles (Dec. 1949): cars 9,200; commercial 3,600. Railways (1949): 475 mi. Telephones (Jan. 1949): 13,125. Radio receiving sets (1949): 13,000.

**Agriculture.**—Main crops (metric tons, 1948): wheat 50,000; barley 27,000; maize 13,000; oats 2,000; potatoes 35,000. Fruit production (metric tons, 1949): grapes 90,000; olives 35,000; olive oil 11,000; oranges and tangerines 37,000; lemons 3,000. Livestock (1949 est.): goats 400,000; sheep 25,000; cattle 20,000; horses 10,000; donkeys 20,000; mules 5,000. Wool production (incl. Syria, on greasy basis, 1949): 6,000 metric tons.

**Industry.**—Production (metric tons, 1949): cotton yarn 6,800; cotton textiles 6,000; silk and rayon textiles 2,600; leather hides and skins 2,700; cement 251,000.

**Leeward Islands.** This British colony consists of a group of islands forming the northern part of the Lesser Antilles in the Caribbean. Politically it is divided into four presidencies: Antigua (with Barbuda), area 171 sq.mi., pop. (1949 est.) 43,000; St. Christopher-Nevis (with Anguilla), 152 sq.mi., pop. 47,000; Montserrat, 32 sq.mi., pop. 14,000; Virgin Islands, 67 sq.mi., pop. 6,500; total area 422 sq.mi., total pop. 110,500. Pop. mainly Negro. Religion: Christian, many denominations. Principal towns: St. Johns (Antigua) (cap., pop. 10,962); Basseterre (St. Christopher) (pop., 12,201). Governors in 1950: Earl Baldwin of Bewdley and (from Sept. 17) K. W. Blackburne.

**History.**—It was announced in June 1950 that the secretary

of state for the colonies had agreed to the following constitutional changes in Antigua, St. Kitts-Nevis and Anguilla: the introduction of adult suffrage; the abolition of income, property, rent and tax qualifications for voters; the retention of a simple literacy test; the abolition of property and income qualifications for candidates; and the introduction of an advisory nonstatutory committee system on various subjects. Legislation was passed in July to restore the legislative council in the Virgin Islands after a lapse of 48 years. The currency act passed by the general legislative council in July was designed to implement an agreement between the governments of the eastern Caribbean territories to provide a uniform currency in those territories.

Record crops of sugar were produced in Antigua and St. Kitts, the tonnages being 30,680 and 41,204 respectively. In August two hurricanes struck the colony causing great damage in Antigua, Barbuda and Anguilla.

**Finance and Trade.**—Currency: British West Indian dollar valued at 58.33 cents U.S. (B.W.I. \$4.80=pound sterling). Principal exports: sugar and cotton. (P. H-MY.)

**Legislation:** see LAW; UNITED STATES. See also articles on individual nations and U.S. states.

**Lemons:** see FRUIT.

**Leopold III** (1901– ), king of the Belgians, was born at Brussels, Nov. 3. He acceded to the throne on Feb. 17, 1934. In World War II, after a courageous though vain resistance by the Belgian army, of which he was commander in chief, to the German invasion launched on May 10, 1940, the king capitulated on May 28. Against the views of his government, he decided not to leave his country and retired to the palace of Laeken. On June 7, 1944, Leopold left Brussels under German escort for internment at Hirschstein, near Dresden, Ger., and on March 6, 1945, he and his family were moved to Strobl, near Salzburg, Aus. He was liberated on May 8, 1945, by the U.S. 7th army. The Belgian Social Christian party asked for his immediate return, but a section of the Liberals, the Socialists and the Communists advocated his abdication. Since the summer of 1945 King Leopold and his family had been living in Pregny, near Geneva, Switz. Leopold's insistence on his reinstatement created a deadlock, and the situation was not clarified either by the result of the Belgian general election of June 25, 1949, or by the referendum of March 12, 1950. The pro-Leopold Social Christian party having secured at a new election (June 4) a small absolute majority in both houses, a bill ending the regency of Prince Charles and thereby enabling King Leopold to resume the royal prerogatives was passed on July 20. Two days later Leopold returned to Brussels by air. A critical situation arose, however, of which the only peaceful solution was the king's decision, on Aug. 1, to transfer his prerogatives to his son Prince Baudouin (*q.v.*). The word "abdication" did not appear in the king's statement. (See also BELGIUM.)

**Leprosy.** **Epidemiology.**—In studying the family and household contacts of leprosy patients of Bombay, India, investigators observed that leprosy bacilli could be demonstrated in the skin of some people who did not have clinical evidence of leprosy. There were 573 contacts examined. Of these, 319 (54.6%) presented definite or probable evidence of clinical leprosy. Although signs of clinical leprosy were absent in 254 (44.3%), smears (snips) of the deep skin of the back and ear lobes were positive for acid-fast bacilli in 25 (9.8%). Later (one and one-

half months to one and one-half years) four of this group developed clinical signs of leprosy.

An epidemiological study from the South Pacific island of Niue again emphasized the contagiousness of leprosy. A native who had spent some time in Hawaii returned to Niue with leprosy. He directly or indirectly infected his father, two sisters, a brother and two sons. Altogether during a period of 50 years the 18 cases of leprosy which had been diagnosed in this island were attributed directly or indirectly to this native.

**Status of Therapy.**—After nine years of experience with sulfone drugs in the treatment of leprosy, physicians at the National leprosarium, Carville, La., reported that drugs which could be administered orally, such as sulfoxone (diazone), thiazosulfone (promizole) and sulphethrone, were preferred and if one drug was not well tolerated another might be substituted. In the patient with lepromatous leprosy who persisted with the treatment a slow but progressive improvement could be expected. This improvement began in the early weeks of treatment and continued with gradual recession of the skin nodules and plaques, healing of ulcers of skin, nose, mouth and larynx and gradual improvement of the distressing symptoms of nasal and laryngeal obstruction. Following this clinical improvement there was a slowly progressive reduction in the number of leprosy bacilli demonstrable in smears from the skin or nasal mucous membrane. Some cases eventually reached a stage of maximum improvement with persistent, but greatly reduced clinical activity. Others no longer had any clinical evidence of activity, but leprosy bacilli in reduced numbers could still be recovered from their skin. In some with clinical arrest, bacilli no longer were demonstrated. Of the original group of 16 patients in whom glucosulfone (promin) therapy was begun nine years before, 9 had taken regular treatments and, of these, 3 still showed positive skin smears though the number of organisms was small.

The authors added a note of caution on the possible public health hazard which might result from the use of sulfone therapy. They expressed the opinion that patients who underwent clinical recession of the disease but remained bacteriologically positive must still be regarded as open cases capable of transmitting the infection to others. This hazard might be increased by the fact that patients in whom lesions were no longer easily recognized would be more prone to carry on a normal life and thereby increase the frequency of their contact with nonleprosy individuals.

Follow-up study had been possible in 33 patients who after prolonged sulfone therapy had been declared cases of "arrested" leprosy. Some of these had returned home. It was possible to obtain follow-up examinations for periods ranging from six months to five years after the cases had been declared "arrested." Following discharge from the hospital 11 of the 33 "arrested" cases had discontinued the use of the drugs. Five of these (45%) experienced a relapse of the disease. Of the 22 who had continued using the drug after "arrest" only 1 (4.5%) relapsed. While the above numbers were too small for drawing definite conclusions, the authors thought there was a tendency for relapse unless the drug was continued indefinitely and recommended that all released patients continue using a sulfone after leaving the hospital.

**Serology.**—During the year two reports appeared comparing in serum from leprosy patients the results of several different tests for syphilis when cardiolipin and regular antigen were used in testing the same serum. All of these patients were considered nonsyphilitic. One laboratory found that the Kolmer complement-fixation test (Wassermann) in 120 serums from leprosy patients gave 53.3% positive results when regular antigen was used and only 36.6% positive results when cardiolipin antigen was used. The other laboratory using the same test found that

in 225 serums from leprosy patients regular antigen gave 44.8% positive and the cardiolipin antigen 62.6% positive, indicating a trend which was the reverse of that obtained in the first laboratory. It therefore appeared that cardiolipin antigen did not aid in solving the problem of serologically differentiating leprosy from syphilis.

Desai, "Positive Bacillary Findings in the Skin of Contacts of Leprosy Patients," *Internat. J. Leprosy*, 18:59-66 (Jan.-March 1950); F. A. Johansen and Paul T. Erickson, "Current Status of Therapy in Leprosy," *J.A.M.A.*, 144:985-989 (Nov. 18, 1950). (C. H. Bd.)

**Lewis, John Llewellyn** (1880— ), U.S. labour leader, was born Feb. 12 in Lucas, Ia. (See *Encyclopædia Britannica* for his early career.)

Early in 1950 Lewis ended a nine-month period of strikes and shortened working weeks in the U.S. coal industry when he signed, on March 5, a new contract between the United Mine Workers of America and the coal operators. The contract, which was to run until July 1, 1952, provided wage increases for the miners and increased payments by the coal operators to the miners' welfare fund. On March 15 Lloyd H. Sidener, ousted president of the U.M.W.'s Canton, Ill., local said the union had fined him \$50,000 and barred him from working because he had tried to lead a back-to-work movement after U.S. Judge Richmond B. Keech had issued an antistrike injunction against the union. Sidener declared before the National Labor Relations board that despite Lewis' telegram to end the strike, he had passed around to his locals a prearranged code signal—"The whistle blew once"—meaning that the miners should not return to work. Sidener repeated these charges before the house of representatives labour committee subcommittee. Lewis, in a letter, denied the charges. He was subpoenaed to testify on the matter, but managed to avoid the subpoena when Chairman John Lesinski of the committee withdrew the subcommittee's subpoena power on May 9.

When Pres. William Green of the American Federation of Labor offered a "no-strike" pledge for the duration of the Korean emergency, and suggested that Lewis do likewise, Lewis informed Green, Aug. 29, "we do our own no-striking." When Sen. Robert A. Taft was campaigning for re-election in Ohio, Lewis threatened to close down any mine Taft visited in his search for votes. On Dec. 23 the National Labor Relations board cleared Lewis and his union of charges of violating the Taft-Hartley labour law in imposing a three-day work week on the mines in 1949.

**Liaquat Ali Khan** (1895— ), Pakistani prime minister, was born at Karnal, East Punjab, Oct. 1. He was educated at the Aligarh Moslem university and at Exeter college, Oxford, where he took a law degree in 1921. He returned to India in 1922 and joined the Moslem league in 1923. He was a member of the United Provinces legislative council from 1926 to 1940, when he was elected to the central legislative assembly. He was elected secretary of the All-India Moslem league in 1936 and in 1943 became the deputy leader. He was appointed to the viceroy's executive council in 1946 and held the portfolio of finance. On Aug. 15, 1947, Mohammed Ali Jinnah appointed him the first prime minister and minister of defense of Pakistan. He attended the British Commonwealth conferences in London in 1948 and 1949. During 1950 the subcontinent of India was troubled with severe communal riots, mainly in Bengal, and by the continued dispute between Pakistan and India over Kashmir (*q.v.*). These problems caused Liaquat Ali Khan and Jawaharlal Nehru (*q.v.*) to meet together in Karachi and Delhi a number of times during the year, and on April 8

they signed an agreement on minorities. On May 3, Liaquat Ali Khan arrived in Washington, D.C., for a tour of the United States and Canada. From July 20 to 24 he was in New Delhi for discussions with Nehru on the working of the minorities agreement and also for tripartite discussions with Nehru and Sir Owen Dixon, the United Nations mediator on Kashmir. On Aug. 23, the day after Dixon had announced his failure to secure agreement, Liaquat Ali Khan stated, "The responsibility lies squarely on the shoulders of India."

**Liberia.** Liberia, on the great western bulge of Africa, immediately north of the equator and adjacent to the great rain forests, is Africa's only republic. Its area is approximately 43,000 sq.mi. It is bounded on the northwest by the British colony of Sierra Leone, on the north and northeast by the French colony of Guinea, and on the east by the French Ivory Coast colony and on the south by the Atlantic ocean.

The population was estimated by the United Nations as 1,648,000 as of 1949. A labour survey completed in 1950 suggested that the actual population was considerably less, with 1,250,000 a more probable total. The great majority of Liberians are members or descendants of the 23 indigenous tribes, plus a probable 14,000 to 15,000 descendants of Negro immigrants from the United States. Though English is the official language, the living languages include at least 26 tribal languages or dialects, principally from Bantu, Nilotic or Arabic bases. Monrovia, with a population estimated at 12,000, is the national capital.

The government and constitution of Liberia are modelled closely after those of the United States, though the right of property ownership is limited to "persons of African descent." Similar requirements hold for citizenship.

Pres. William V. S. Tubman began his eight-year term of office in Jan. 1944.

**History.**—Two developments of international importance marked the course of 1950 in Liberia. The first of these was

the operational opening of a major iron-mining centre in the Bomi hills area by Republic Steel corporation in co-operation with the U.S. Export-Import bank. This project involved an investment of approximately \$8,000,000 of U.S. capital and credit. The nation's first freight-bearing railroad and approximately 90 mi. of supplementary roads and highways had been completed by 1950. Also during 1950 the initial laboratory and staff dwellings for the Liberian institute, an international research centre for tropical medicine sponsored by the American Foundation for Tropical Medicine, were completed, and the first research projects were planned with the co-operation of the U.S. public health service and the Liberian government.

**Education.**—In 1950 Liberia had 206 schools in operation, including 81 government-maintained schools, 83 mission schools, 21 private schools and 21 tribal schools, the latter under supervision of the national department of education. Institutions for advanced education included Liberia college and the College of West Africa at Monrovia and the Booker T. Washington institute, Kakata, which is supported jointly by the Liberian government, the United States government, the Firestone Plantations company and six American churches and foundations.

**Finance and Trade.**—The U.S. dollar is the official monetary unit of Liberia and is supplemented by Liberian fractional coins with the dollar base freely negotiable and at par. The preliminary estimate of revenue receipts for the year ending Aug. 31, 1950, was \$4,998,865, an increase of approximately \$1,263,312 above the previous year. The estimate of foreign trade for the year ending May 1, 1950, was \$59,350,750, of which approximately 95%, or \$56,515,000, was with the United States. The latter total included exports valued at \$45,602,000 (preponderantly of natural rubber at soaring world prices) and imports amounting to \$10,913,000.

**Transportation and Communications.**—During 1950 the public road system of Liberia was extended and linked with that of French Guinea, while Monrovia was joined by highway with the heretofore segregated western province. Pan American World Airways maintained scheduled air services at Roberts field, a bomber base established during World War II, on a basis of 27-hr. direct flights from New York city via the Azores and Lisbon.

**Industry and Agriculture.**—For 1950, industrial employment including that of the Firestone Plantations company and the Bomi iron-mining developments was estimated at 55,000, an increase of approximately 10,200 above the total of the previous year. Even so, subsistence agriculture remained the preponderant source of employment, with rice, cassava, African palm oil, pineapple, bananas and citrus fruits the principal subsistence crops. In 1950 natural rubber remained the preponderant export item, with gold, piassava fibres, palm oils and kernels, kola nuts and coffee following in that order. In 1950 the Liberia company, as organized in 1947 by the Edward R. Stettinius Associates, withdrew from all operations in Liberia. (C. M. Wi.)

**Libraries.** During 1950 U.S. librarians and libraries continued their professional international activities. They participated in the CARE (Cooperative for American Remittances to Europe, Inc.) book program and were informed that the U.N.E.S.C.O. (United Nations Educational, Scientific and Cultural organization) book-coupon program was extended to libraries. They participated in U.N.E.S.C.O.'s second library seminar at Malmö, Sweden, and the first International Congress on Archives at Paris during the summer.

**Books and Publications.**—In the fall a joint committee of American Library association members and of publishers, headed by Cass Canfield of Harper & Brothers, was established to explore common problems such as postage rates, freedom of the press, exhibits and promotion, etc. A survey of "paper bounds" in pocket size disclosed surprisingly little interest in general use by libraries. Among library publications, the Army Medical library discontinued its *Index Catalog* and augmented its *Current List of Medical Literature*. The Library of Congress instituted its *Cumulative List of Works Represented . . . by [L.C.] Cards*, which would be a useful subject bibliography. The Boston Public library converted its monthly *More Books* to a quarterly of entirely scholarly content.

**Regional Deposit Libraries.**—This kind of library, not to be confused with regional libraries, grew. The Midwest Inter-Library centre at Chicago, Ill., with 14 participating college, public and research libraries in that region, was not only fully organized but broke ground for an \$850,000 building to house more than 2,000,000 volumes; it differed in many administrative respects from the New England Deposit library at Cambridge,

W. V. S. TUBMAN, president of Liberia, meeting in 1950 with T. P. Thayer of the U.S. geological survey (standing) and L. K. Christie of New York city, president of the Liberian Mining company (right), to discuss construction of Liberian railroads

Mass. A regional deposit library was also established at Denver, Colo.

**College and Research Libraries.**—The libraries of Duke university, Durham, N.C., and Northwestern university, Evanston, Ill., passed the 1,000,000-volume mark during 1950, which, according to a Duke news release, brought to 14 the number of colleges in the U.S. having libraries with 1,000,000 or more volumes; the others were Harvard, Yale, Illinois, Columbia, Chicago, California, Minnesota, Michigan, Cornell, Stanford, Pennsylvania and Princeton universities.

**Special Libraries and Collections.**—The problem (principally financial) of maintaining organizational reference libraries was evidenced in the transfers of the Carnegie Endowment for International Peace library to George Washington university (both in Washington, D.C.), the Woodrow Wilson library to the United Nations and the Russell Sage Foundation library to the College of the City of New York (all in New York city). The University of California at Los Angeles opened an English literature library, with a nucleus of Frederic T. Blanchard's collection (strong in Henry Fielding), with an endowment for the purchase of 18th-century works. Gifts and acquisitions included the Edward S. Harkness collection of rare books to the New York Public library; the James Boswell manuscripts to Yale University library; H. L. Mencken's library to the Enoch Pratt Free library, Baltimore, Md.; the Mark Twain papers to the University of California, Berkeley, which would seek funds for a building and an endowed chair; and the A. W. Stern collection of Lincolnia to the Library of Congress.

**Public Libraries.**—The Library Demonstration bill was again defeated in congress, despite the support of congressional leaders and many nonlibrary organizations. The Public Library inquiry, underwritten by the Carnegie Corporation of New York for \$200,000, was completed and most of the volumes were published. Robert D. Leigh, the director, issued his summary volume, based on his findings with the aid of 24 research (mainly nonlibrarian) assistants. To provide better library service for the entire U.S. and adequate service for the 35,000,000 who had no library service at all, he recommended that the existing 7,408 separate library systems be combined into 1,000, each having 100,000 or more volumes and with a total of 7,500 outlets; he also urged a 50% increase in expenditures (in 1948-49 less than \$100,000,000, or less than 1% of public-service expenditures, had gone to libraries in the U.S.). He thought that library schools were inadequate and recommended general 10% salary increases to attract better people to the profession.

Most state library budgets were increased and state aid was holding well; libraries were combining into county or "regional" systems, and bookmobiles were multiplying. Kansas had made a survey of its public libraries, Missouri was commencing one, and Connecticut was writing a legislative bill to implement one recommending state aid. In New York the legislature passed a \$3,000,000 grant, designed to hasten county organization. The Rotarians were busy in Alaska, aiding in supplying books to outlying districts, and Hawaiian librarians took considerable pride in their part in writing a state constitution.

Public libraries continued to grow. According to the U.S. office of education, libraries in cities of 100,000 or more population had increased, between 1945 and 1949, from 42,099,905 volumes to 46,304,469 in book stock (it must be remembered that public libraries are continually discarding worn-out and outmoded volumes, as well). Their expenditures (excluding capital outlay) had risen from \$31,686,929 to \$51,133,225, the number of borrowers had increased 14.34% and circulation was up 8.61%. The 1948 per capita expenditures of larger public libraries that had met or surpassed the American Library association's \$1.50 minimum were, according to a Toledo, O., Public

PERCY GRAINGER (right) preparing to transcribe a Danish folk song at the Library of Congress for deposit in the folklore section, one of its many special collections. The library celebrated its 150th anniversary in 1950

library release: Cleveland, O., \$3.51; Boston, Mass., \$2.88; Long Beach, Calif., \$2.32; Fort Wayne, Ind., \$2.24; Springfield, Mass., \$2.22; Oakland, Calif., \$2.09; Newark, N.J., \$2.06; Seattle, Wash., \$2.01; Tacoma, Wash., \$1.97; Toledo, O., \$1.86; Minneapolis, Minn., \$1.86; Milwaukee, Wis., \$1.70; Pittsburgh, Pa., \$1.58; and Worcester, Mass., \$1.50. Twelve western Massachusetts libraries set up regional co-operative headquarters in the Field Memorial library, Conway, with funds provided by Marshall Field.

Salaries held firm, with job classification and pay plans becoming almost universal in public libraries of any size; the *Library Journal* reported only three new plans: Los Angeles, Calif.; Des Moines, Ia.; and Tacoma, Wash. New York state moved in two directions, with rulings that all public libraries serving 5,000 or more population could employ only state-certified librarians after Oct. 1, 1950, and that retirement would be elective at age 55. California reported several appointments to prison librarianships—a neglected field.

**School and Children's Work.**—The shortage of children's librarians continued. The Children's Library association, affiliated with the American Library association, observed its 50th anniversary with a dinner at A.L.A.'s Cleveland conference, during which it honoured Frederic G. Melcher, donor of the John Newbery and Caldecott awards for outstanding children's books, the 1950 selections being, respectively, *Door in the Wall*, by Marguerite de Angeli, and *Song of the Swallows*, by Leo Politi. The American Association of School Librarians assumed divisional status in the A.L.A. Several state library associations provided "sections" for high school library assistants as a means of recruiting.

**Audiovisual.**—Was television making inroads in the reading of library books? No one seemed to know; the pitched battle was still between television and motion pictures. Record and film

collections for lending were so general as to merit no special comment, but two libraries—the City Library association, Springfield, Mass., and the Brooklyn, N.Y., Public library—purchased and began circulating framed pictures, a practice not uncommon in college libraries but not undertaken by more than a half dozen public libraries. The Library of Hawaii reported a successful patio art gallery. The Louisville, Ky., Public library was the first to have its own radio station (FM). Microcards were gaining in popularity. The Library of Congress began lending microfilms.

**Buildings and Equipment.**—The Los Angeles County library and the San Diego, Calif., Public library had extensive building programs, the latter including a new central library. The Cincinnati, O., Public library's plans were complete for a new central library. The extensive building program of the Oregon state system of higher education was under way, with the University of Oregon at Eugene receiving a large addition. Other noteworthy additions to buildings included that of Duke university (completed) and of the Providence, R.I., Public library. The St. Paul, Minn., Public library opened a children's room, and the Iowa City, Ia., Public library installed a music room.

Modernization of equipment went on apace, with all kinds of office aids being investigated and adapted. The Oklahoma City, Okla., libraries set up a drive-in depository for returning books. The public libraries of Racine and Milwaukee, Wis., were respectively borrowing and lending after teletype communication. The New York Public library's circulation department had installed completely mechanized book-processing machinery, including a conveyor. The Charlotte, N.C., Public library was doing its book-charging with a dictating machine. (See also AMERICAN LIBRARY ASSOCIATION; SOCIETIES AND ASSOCIATIONS.)

**BIBLIOGRAPHY.**—For further information about U.S. libraries, consult the *A.L.A. Bulletin*; *Library Journal*; *College and Research Libraries*; *Library Quarterly*; *Library of Congress Information Bulletin*. Important contributions to library literature were: Special Libraries Association, *Employers' Evaluation of Training for the Special Librarian* (1950); American Library Association, *Buildings for Small Public Libraries* (1950); G. Naudé, *Advice on Establishing a Library* (1950); H. E. Haines, *Living with Books* (1950); R. D. Leigh, *Public Library in the United States* (1950); *Catholic Library Practice* (1950); A. Hessel, *History of Libraries*, Eng. trans. by Reuben Peiss (1950). (K. BN.)

**Great Britain.**—The outstanding event of 1950 was the celebration by the Library association of the centenary of the passing of the first British Public Libraries act, which received the royal assent on Aug. 14, 1850. Delegates attending represented the International Federation of Library Associations, the United Nations Educational, Scientific and Cultural organization (U.N.E.S.C.O.), and more than 50 British commonwealth and overseas governments and library associations.

The public library statistics of Great Britain and Northern Ireland showed that in the financial year 1949–50, £2,170,000 or 10½d. per capita of the population was spent on books and the total cost of the service was £8,653,000 or 3s.6d. per capita, nearly £1,000,000 more than in the preceding year. The total population served was 49,430,000, leaving 58,000 in five areas (three of them in County Antrim, Northern Ireland) without service. The number of books issued from lending departments was 306,100,000, a decrease of about 6,000,000. There were 1,631 municipal libraries (including central libraries and branches), 96 county library headquarters (of which 3 were combined with town libraries), 730 county branches and 21,300 county service points, served by about 70 mobile libraries of varying types and numbers of delivery trucks. Separate local authorities numbering 586 controlled this system, possessing between them about 42,500,000 volumes and employing a total staff of 10,820 (excluding part-time staff, porters, binders, etc.). The expansion was most marked in the county library service.

The National Central library's annual report for 1949–50 showed that books lent by or through the National Central library

numbered 78,000 (compared with 75,500 in 1948–49) and, through the regional systems and the Scottish and Irish central libraries, 192,000 (191,500 in 1948–49). In addition, more than 21,000 books were lent in each of the two years by the National Central library and the National Library of Wales to adult classes, the totals in round figures thus being 291,000 for 1949–50 and 288,000 for 1948–49. More than 600 libraries co-operated in the work of the system, to which must be added more than 200 "outlier" libraries of a special or technical character which lent on request works not to be found elsewhere.

**British Commonwealth.**—Perhaps the most important development of the year was the establishment of a public library "pilot project" in Delhi, India, under the joint auspices of U.N.E.S.C.O. and the Indian government, with the purpose of demonstrating the value of an effective public library service both in adult education and in the campaign against illiteracy. If the scheme were successful, it might prove a model for the extension of public library services not only to other cities in India but also to Asia as a whole. Special attention was to be devoted to the needs of newly literate adults and to services for children. The building was to be in Old Delhi and reference, information and lending services were to be provided. U.N.E.S.C.O. would contribute a fellowship for study outside India to the Indian librarian selected as director, and the library would be opened to the public with an initial stock of about 10,000 volumes and other material early in 1951. The Karachi Library association arranged a convention in July with a view to establishing a comprehensive library service throughout Pakistan.

The Australian Institute of Librarians, founded in 1937, adopted at the end of 1949 a new constitution similar to that of the library associations in Great Britain, the U.S. and elsewhere, and was renamed the Library Association of Australia. Plans for the library of the new Australian National university at Canberra made progress; many volumes were purchased and held in readiness at Melbourne.

**Europe.**—The important collections of Hebraica in the Royal library, Copenhagen, Den., were considerably enlarged by the acquisition of the library of Lazarus Goldschmidt of London, containing 2,500 volumes—all of importance and some of great rarity—among which was a valuable series of Ethiopic printed books.

A bibliographical information service was established in Florence, It., for the purpose of organizing and co-ordinating bibliographical, historical and literary research work in Florentine libraries.

**U.S.S.R.**—Details on technical libraries in the U.S.S.R. taken from Vasilchenko's *Libraries in the Soviet Union* (Moscow, 1947) were quoted by Elsa von Schreiber in the *Zentralblatt für Bibliothekswesen*, vol. 64, Heft 3/4 (1950). The Polytechnic library in Moscow had 944,000 volumes in 1941. Apart from this library, which was under independent administration, there were four classes of technical libraries in the Soviet Union: those belonging to the ministry of higher education; those under other ministries; the libraries of the Academy of Sciences of the U.S.S.R.; and those attached to factories, institutes and cultural centres. The first group contained 31 university libraries, of which the biggest were those of Moscow, Leningrad, Kazan and Saratov, and 273 technical colleges, and, in addition, the National Scientific Technical library in Moscow, which had 1,200,000 volumes. The libraries of the second group formed a complicated system of highly specialized collections serving the activities of the ministries to which they were attached. The Academy of Sciences had in 1945 a total of 10,900,000 volumes in all its libraries. There were in 1947 approximately 3,800 libraries in the fourth group, containing more than 22,000,000 volumes, together with a system of travelling libraries disposing in 1940 of 35,000

volumes (no later figures apparently being available), relying largely on voluntary staffs and serving small scattered undertakings.

(F. L. K.)

**Libya.** A former Italian colony of north Africa, Libya is situated on the Mediterranean between Tunisia (west) and Egypt (east). Total area: 679,183 sq.mi. Under temporary British administration, introduced in 1943, Libya was divided into Tripolitania (106,471 sq.mi.) and Cyrenaica (330,259 sq.mi.); the western part of Libyan Sahara, or the Fezzan, was placed under French military administration. Total pop.: (1938 est.) 888,400 including 89,100 Italians; (1949 est.) total 1,177,000; Tripolitania 796,901, including 46,399 Italians; Cyrenaica 327,467, including 1,604 Greeks, Maltese and others; the Fezzan about 50,000. The population is Berber, intermixed with Arab strains, especially in Cyrenaica. Language: Arabic. Religion: mostly Moslem. Chief towns (pop. 1949 est.): Tripoli (144,616, including 28,485 Italians); Bengasi (59,087). On Nov. 21, 1949, the general assembly of the U.N. decided that Libya should be independent by Jan. 1, 1952, and on Dec. 10, 1949 elected Adriaan Pelt (the Netherlands) as high commissioner of the United Nations for Libya in charge of the interim administration.

**History.**—The United Nations commissioner, with his advisory council of seven representatives of member states, together with representatives of each of the territories and of minorities, started work in Libya early in 1950 on his task of advising the people in the formulation of a constitution and determination of the form of government. Cyrenaica had already been granted a wide measure of autonomy in internal matters and a local constitution under the leadership of the Emir Mohammed Idris el Senussi. Elections were held for an assembly of representatives. This was inaugurated on June 12. In the Fezzan elections to an assembly of representatives were held in February. The assembly unanimously elected Ahmed Bey Seif el Nasr as chief of the territory. The powers granted by the French administration to the chief were broadly confined to administrative matters, the French resident retaining the executive power.

The first step taken by the high commissioner, after a long tussle with the members of his council, who represented divergent political conceptions, was to form a national committee of 21 members, 7 of whom were nominated by each territory. This committee prepared plans to convoke a national assembly whose task would be to determine the form of government and to formulate a Libyan constitution. The committee decided that the national assembly should be composed of an equal number of members to be nominated from each of the three territories. This decision, although within the competence of the committee, was attacked by several delegations in the general assembly of the United Nations in Nov. 1950, when progress in Libya came under review. The general assembly eventually passed a resolution calling for greater speed in setting up a Libyan state and for the establishment of a provisional government by April 1, 1952, to which the powers of the present administrations would be progressively transferred.

The Libyan national assembly met in Tripoli on Dec. 2 and decided that the state should be a federation and that its government should be a "democratic, representative, constitutional monarchy under the crown of the emir of Cyrenaica." Having made these decisions and preliminary arrangements for the formulation of a constitution the assembly adjourned and moved *en bloc* to Bengasi to offer the emir the crown of king of Libya. The emir decided to delay the proclamation until he possessed the constitutional powers necessary to exercise sovereignty.

(F. E. St.)

**Economy.**—*Tripolitania:* Budget (1948-49, actual) revenue £4,337,416; expenditure £4,918,950. Foreign trade (1949): imports £3,458,800; ex-

ports £1,332,800. Roads (1949) 2,500 mi.; railways (1949) 122 mi.; ships entered at Tripoli (1949) 1,058,531 net registered tons.

*Cyrenaica:* Budget (1948-49, actual): revenue £2,089,392; expenditure £2,826,703. Foreign trade (1949): imports £1,894,400; exports £1,565,400. Roads (1949, including tracks) 6,600 mi.; railways (1949) 101 mi.; ships entered at Bengasi and Tobruk (1949) 857,157 net registered tons.

**Lie, Trygve** (1896- ), Norwegian diplomat and United Nations official, was born July 16 in Oslo. Between 1922 and 1940 he was identified with the Norwegian Labour party, as its legal adviser and later as a member of its national council. From 1935 to June 1939 he was minister of justice, then minister of commerce, and after the German invasion of Norway he went with the exile government to London, where he served as its minister of foreign affairs. He was reappointed minister of foreign affairs of Norway in 1945. After serving as chairman of the commission that drafted the charter for the Security council at the United Nations organization conference in San Francisco, Calif., he was elected U.N. secretary-general on Feb. 1, 1946.

Early in 1950 Lie implied that the Chinese Communists should be admitted to the U.N. by holding that U.N. policy should be to deal with whatever government exercised effective authority in any country and was habitually obeyed by a majority of the people. After conferring with Pres. H. S. Truman (April 20) and Premier Joseph Stalin of the U.S.S.R. (May 15) and with the heads of the western European states, he proposed on June 6 a 10-point, 20-year program "for achieving peace through the U.N."

When the North Korean Communists attacked South Korea on June 25, Lie, at U.S. request, convened the U.N. Security council (without the U.S.S.R., which was boycotting the council in protest at continued recognition of nationalist China); the Security council demanded that the North Koreans cease fire and withdraw, and voted that U.N. members should enforce this order. Repeatedly thereafter, during the Korean fighting, Lie sought reinforcements for the ground troops from the U.N. members. On Nov. 1 his term as U.N. secretary-general was extend-

"RETREAT FROM MOSCOW?" sceptical cartoon comment by Little of the *Nashville Tennessean*, published in May 1950 after Trygve Lie's visit to Moscow to discuss possible solutions to the so-called "cold war" with Marshal Stalin

ed, by vote of 46 to 5 in the general assembly, for three years beyond the Feb. 2, 1951, date on which it was to expire.

**Liechtenstein.** A small independent principality between Switzerland and Austria, Liechtenstein has an area of 61.4 sq.mi. Pop. (Dec. 1949 est.). 13,200, including 2,100 foreign residents. Language: German. Religion: Roman Catholic. Capital: Vaduz (pop. 2,400). Ruler: Prince Franz Josef II; prime minister, Alexander Frick.

**History.**—The principality, which is not a member of the United Nations, expressed the wish to become a party to the statute of the International Court of Justice. In Dec. 1949, therefore, the general assembly adopted by 40 votes to 2 with 2 abstentions a resolution stating that Liechtenstein would become a party to the statute on the date of the deposit with the secretary-general of the U.N. of an instrument containing: (1) acceptance of the provisions of the statute of the I.C.J.; (2) acceptance of all the obligations of a member of the U.N. under article 94 of the charter; (3) an undertaking to contribute to the expenses of the I.C.J.

Prince Franz Josef II offered for sale at a New York city gallery the only known copy of a map of America printed in 1507. It was announced on May 26, 1950, that there were no bids as the prince stipulated that the minimum must exceed \$50,000.

**Education.**—Schools (Nov. 1949): primary 13, pupils 1,599, teachers 47; secondary 2, pupils 145, teachers 8.

**Finance and Economy.**—Budget: (1950 est.) revenue 4,451,200 Fr., expenditure 4,775,949 Fr. Included since 1924 in the Swiss customs and monetary union, Liechtenstein uses Swiss currency (1 Swiss franc=22.94 U.S. cents, Sept. 1950).

**Linen and Flax.** Exports of linen fabrics from Northern Ireland reached a new high during 1950. In the third quarter of the year, they were double the 1949 shipments for the same period. The principal customer was again the United States, with the British Commonwealth countries next. Increased demand by the northern European customer-countries, notably Sweden and Denmark, partially compensated for a sharp decline in South American demand, especially by Argentina, whose purchases dropped from 1,432,000 sq.yd. in 1949 to 331,000 sq.yd. in 1950.

It was estimated that the U.S. took 42.6% of the world's production of linen fabrics during 1950, the British Commonwealth countries 24.9%, European countries 13.7%, Latin American countries 12.4% and other countries 6.4%.

Imports of linen fabric into the United States during 1950 totalled 11,700,000 lb. compared with 5,900,000 lb. in 1949. The United Kingdom, Belgium and Poland were the principal suppliers.

World consumption during 1950 ran ahead of the raw material supply. Flax growing and spinning had been curtailed sharply in recent years because of labour difficulties as well as diminishing demand. The sharp spurt in consumption found the industry in Northern Ireland alarmed over the prospects of the flax supply for 1951. Industry representatives urged that 100,000 ac. in the British Isles be planted to flax and that help be extended to farmers in the form of suitable seed and sufficient fertilizer.

In France, mill consumption rose by 10% in the first half of 1950, and in September the output of linen goods was almost 50% greater than the monthly average for 1949. Yarn output for

1951 was estimated at 30,000 tons, which would require 42,000 tons of fibre and tow. Of this, at least 16,000 tons of processed flax would have to be imported. Belgium was expected to supply most of it.

At the beginning of the year, Austrian farmers were being encouraged by their government to expand the flax crop by 25%. By December, however, it was reported that the plea had failed. The anticipated 1950 yield was 630 to 700 metric tons of long fibre and 315 to 350 tons of tow.

Among other countries mentioned in 1950 as flax producers were Poland, Czechoslovakia, British East Africa, Denmark, Cyprus and Australia. The Danish linen industry was hampered by the poorest flax crop in a decade. Not more than 500 tons of the 1,000 tons needed was expected.

Australian flax deliveries in 1950 dropped about 65% from 1947.

No reports were available on production in the U.S.S.R.

(I. L. BL.)

**Lions Clubs, International Association of:** see SOCIETIES AND ASSOCIATIONS.

**Liquors, Alcoholic.** U.S. production of distilled spirits decreased by 60,000,000 gal. in 1950. Whisky production was lower by about 31,000,000 gal. as the industry sought to level off at a stable production after war-depleted inventories had been brought into better balance with estimated demands. Similarly, production of spirits for blending and processing purposes was reduced from 93,500,000 to 77,000,000 gal. Immediately after the outbreak of the Korean war in June, the production of neutral spirits jumped noticeably and continued to climb steadily thereafter. Normal spirits inventory of about 50,000,000 gal. had been maintained up to this time, and spirits had been produced in quantities about equal to use—5,000,000 to 6,000,000 gal. monthly.

Table I.—U.S. Distilled Spirits, Fiscal Year Ended June 30, 1950

	Production (tax gal.)	Withdrawals (tax gal.)	Bottled output (wine gal.)
Whisky . . . . .	118,634,911	60,522,792	139,662,376
Gin . . . . .	4,735,862	4,661,719	13,507,101
Beverage rum . . . . .	1,780,749	290,059	610,396
Brandy, tax paid . . . . .	5,363,899	2,332,473	2,202,043
Neutral spirits . . . . .	77,597,811	76,292,258	98,815
Cordials and liqueurs . . . . .	—	—	4,485,890
Miscellaneous . . . . .	—	—	771,367
Total . . . . .	208,113,232	144,099,301	161,337,988

Note: Neither production nor withdrawal figures show volume of neutral spirits actually used for beverage purposes. Production and withdrawal equivalents may be determined by employing neutral spirits used in rectification which in fiscal 1950 totalled about 71,000,000 proof gallons.

Source: Prepared by Licensed Beverage Industries, Inc., research & statistical division, from data of the alcohol tax unit, Bureau of Internal Revenue, U.S. Department of the Treasury.

With the Korean crisis, the industry began to build up its inventories. In October the beverage-distilling industry offered to supply 10,000,000 gal. of alcohol during November and December for the government's reactivated synthetic rubber program.

In July of 1950 distillers began to produce vodka for the first time in quantity. Federal regulations were immediately extended to cover manufacture of this item.

At the end of June 1950 government original entry gauge figures (before losses) indicated 643,000,000 gal. of whisky were aging in the warehouses; allowances for leakage and evaporation losses left a net withdrawable inventory of 538,000,000 gal. For the first time since 1942 the composition of age breakdowns was in relatively favourable balance.

The amounts of all types of distilled spirits withdrawn tax paid from internal revenue bonded warehouses during the fiscal year 1950 showed but a slight increase—144,099,301 gal. compared with 141,766,697 gal. in 1949. But the net increase in withdrawals of whisky was 8,000,000 gal. This difference was di-

rectly attributable to a marked trend toward straight and bonded whisky as compared with neutral spirit blends, as shown by a decrease of 7,000,000 gal. in the withdrawals of neutral spirits for use in blending. This trend toward straights and bonds was further borne out by increased bottled output of straight and bonded whisky, from 21,469,086 wine gallons in 1949 to 31,921,876 wine gallons in 1950.

Table II.—Federal Internal Revenue Bureau Collections from Alcoholic Beverages

Calendar Year	Distilled Spirits	Beer	Wine	Total
1945	\$1,661,793,763	\$659,055,927	\$49,073,828	\$2,369,923,518
1946	1,972,860,338	642,224,380	75,898,249	2,690,982,967
1947	1,578,195,476	702,059,301	49,905,396	2,330,160,173

The straitened economy of England had a direct bearing on the rise of Scotch exports to the U.S. With the devaluation of the pound in Sept. 1949, much pressure was placed on the Scotch industry to increase its exports to hard currency countries, particularly the U.S.

Per capita U.S. consumption of distilled spirits for the fiscal year 1950 remained unchanged from the previous year, although there was a slight decrease in beer consumption and a marked increase in wine consumption.

Table III.—U.S. Consumption of Alcoholic Beverages

Fiscal year ended June 30	(Wine gallons)		
	Distilled spirits	Malt liquors	Wine
1949	150,933,996	2,663,179,622	125,578,856
1950	152,654,931	2,614,404,627	140,152,360
(Gallons per capita)			
1949	1.02	18.05	.85
1950	1.02	17.41	.93

Source: Prepared by Licensed Beverage Industries, Inc., from statistics released by U.S. Department of Commerce, Office of International Trade, food branch. Per capita figures based on U.S. Census Bureau population estimates of Jan. 1, 1949: 147,551,000 and Jan. 1, 1950: 150,161,000.

The industry remained an important producer of a substantial proportion of the nation's supply of penicillin, streptomycin and other antibiotics, as well as dried grain products for livestock and poultry feeding.

(A. J. Lr.)

**Liquor Control.**—During 1950, a law which would have prohibited the sale of promotionally advertised alcoholic liquors in Oregon was defeated in a state election. A proposal in Arizona permitting local-option elections on the sale of alcoholic liquors was also defeated. In Arkansas, one-half of whose counties were dry, a proposal to extend prohibition throughout the state was defeated. In South Dakota a proposal to prohibit the serving of food and liquor on the same premises (same room) was beaten. (This was in contrast to the New York law which says that a distilled spirits retail licensee with the right to sell for on-premise consumption may only sell where food is served.) There was little net change in 1950 as a result of local-option elections.

In Illinois the Price Posting and Credit law (limiting sale to cash only to accounts delinquent 30 days) was declared unconstitutional.

Efforts to limit liquor advertising which crosses state boundaries continued during 1950 but met with no success in congress.

The National Conference of State Liquor Authorities in 1948 appointed a committee of the states to study state alcoholic beverage laws. In 1949 the committee retained the Public Administration service of Chicago to conduct a survey. This survey was completed and published in 1950. It made a number of recommendations, all tending to raise the standard of operation.

The United States court of appeals in a unanimous opinion held that Oklahoma, one of the dryest of states, did not have a law prohibiting the importation of liquor; hence the federal

LIQUOR VATS CONFISCATED after passage of a prohibition act in April 1950 in the state of Bombay, to manufacture, own or consume alcoholic beverages. Bombay was the third Indian state to pass such a law

agencies had no authority to stop the importation of alcoholic liquors. An effort was to be made in the state legislature to make Oklahoma "bone dry." A state, according to this opinion, must prohibit all imports (except on special permit) in order to qualify under the 21st amendment to the federal constitution. States like Georgia, North Carolina and Texas would not come under federal jurisdiction (as to imports of alcoholic liquor) because they were not completely dry. In these and a number of other states, a majority of the counties were dry. In Kansas little opposition developed to the legislation authorizing the sale of liquor, which was in force for its first full year.

Fair-trade systems, which put a floor under prices, had by 1950 resolved themselves into two patterns. One was a compulsory system under which brand owners must file with the state authority minimum prices under which alcoholic liquor may not be sold to the consuming public. This system was in vogue in New York. The other was a voluntary system under which the brand owner may if he wishes file minimum consumer prices with the state authority. If he files he is bound by the filing, and the state enforces. This system was in vogue in New Jersey and Indiana. In states in which compulsory fair-trade laws had been found unconstitutional, as in Illinois, completely voluntary systems were still permissible. The distiller may contract with the retailer for minimum consumer prices. This contract is enforceable at law, but the state authority has no part in the enforcement. The controversy concerning fair trade continued to rage: the same was true, though in lesser degree, of price-posting systems, under which the distributor may or must post prices to retailers with the state authority and is then bound by such prices with provisions for amendment and refiling. (See also BREWING AND BEER; INTOXICATION, ALCOHOLIC; WINES.)

## Literary Prizes.

The following is a selected list of literary prizes awarded during the year 1950:

**United States.**—ACADEMY OF AMERICAN POETS FELLOWSHIP.—\$5,000, given annually to a distinguished U.S. poet, awarded to E. E. Cummings.

**AMERICAN ACADEMY OF ARTS AND LETTERS, AWARD OF MERIT MEDAL.**—Medal and cash prize of \$1,000 given annually to an outstanding person in arts and letters, living in the U.S., and not a member of the academy or institute, to St. John Perse, poet.

**AMERICAN ACADEMY OF ARTS AND LETTERS, HOWELLS MEDAL.**—Given every five years in recognition of the most distinguished work of U.S.

fiction during that period, to William Faulkner.

AMERICAN ACADEMY OF ARTS AND LETTERS AND NATIONAL INSTITUTE GOLD MEDAL.—For essays and criticism, to H. L. Mencken.

AMERICAN HISTORICAL ASSOCIATION, ALBERT J. BEVERIDGE MEMORIAL FELLOWSHIP.—A grant of \$1,500 to Glyndon C. Van Deusen to complete a biography of Horace Greeley.

ANISFIELD-WOLF AWARDS.—Two awards of \$1,000 each, sponsored by the *Saturday Review of Literature*, for the year's best books on race relations, to S. Andhill Fineberg for *Punishment without Crime* and to Shirley Graham for *Your Most Humble Servant*.

ARMY SHORT STORY PRIZES.—\$1,000 each, awarded by *Collier's* to Maj. Franklin M. Davis, Jr., for "The Five Alls," to Maj. Gordon B. Enders for "Kismet and the Nomad Woman" and to Maj. Melvin B. Voorhees for "The Robe and the Sword."

BANCROFT PRIZES.—For distinguished writings in U.S. history, \$2,000 each to Herbert E. Bolton for *Coronado* and to Lawrence H. Gipson for *Great War for the Empire; The Victorious Years, 1758-1760*.

BOLLINGEN PRIZE IN POETRY OF THE YALE UNIVERSITY LIBRARY.—\$1,000 to Wallace Stevens.

JOHN BURROUGHS MEDAL.—For distinguished literature in the field of nature study, to Roger Tory Peterson for *Birds Over America*.

CAREY-THOMAS AWARD.—Annual award, sponsored by *Publishers' Weekly*, to honour publishing firms. Certificate to Rand McNally and company for *Cosmopolitan World Atlas*.

CATHOLIC WRITERS GUILD GOLDEN BOOK AWARDS.—Honorary awards to Leo Brady for *The Edge of Doom*, fiction; to Thomas Merton for *The Seven Storey Mountain*, nonfiction; to Dietrich von Hildebrand for *Transformation in Christ*, religious book.

COMMITTEE ON THE ART OF DEMOCRATIC LIVING LITERARY AWARD.—Cash prize of \$500 for the novel for young readers, aged 7-16, best portraying the ways people live together democratically, to Evelyn Sibley Lampman for *Treasure Mountain*.

GUGGENHEIM FELLOWSHIPS.—158 fellowships awarded, of which 18 went to writers: Lawrence C. Powell, Rosalie Moore, Theodore Roethke, Peter H. Taylor, Janet L. Winters, Walter B. C. Watkins, Eleanor Clark, Eleanor Green, Lincoln Barnett, Diana Trilling, Jean Evans, Francis Harper, Jay Leyda, Victor W. von Hagen, James Z. Rabun, Robert D. Clark, Rosamond Gilder and Charles M. Wiltse.

O. HENRY MEMORIAL AWARD PRIZE STORIES.—\$300 first prize to Wallace Stegner for "The Blue-Winged Teal"; \$200 second prize to Gudgey Bart Leiper for "The Magnolias"; \$100 third prize to Robert Lowry for "Be Nice to Mr. Campbell."

HOUGHTON MIFFLIN LITERARY FELLOWSHIPS.—Two awards of \$2,400 each for works in progress or finished manuscripts, to Katharine DuPre Lumpkin for a novel based on the life of Eli Wright and to Rebecca C. Patterson for a study of Emily Dickinson.

"JACK AND JILL" AWARDS.—Two awards given by the Curtis Publishing company for unpublished magazine serials: \$1,000 first prize to Ruth Fosdick Jones; \$750 second prize to William Howard Church.

JEWISH BOOK COUNCIL OF AMERICA AWARD.—\$250 for the best work of fiction of Jewish interest to John Hersey for *The Wall*; \$500 for a work of nonfiction of Jewish interest to Guido Kisch for *The Jews in Medieval Germany*.

JOSEPH W. LIPPINCOTT AWARD.—An award of \$500 for notable professional achievement in any field of library activity, to Halsey William Wilson in recognition of more than 50 years of work in developing bibliographic aids.

LYRIC FOUNDATION ANNUAL AWARD.—\$1,000 prize for lyric poetry to Gustav Davidson and to Nancy Byrd Turner.

MODERN LANGUAGE ASSOCIATION-MACMILLAN AWARD.—\$500 award for a book of significant contribution to general understanding of English and American literature, to Kenneth Neill Cameron for *The Young Shelley: Genesis of a Radical*.

HARRIET MONROE POETRY AWARD.—A prize of \$500 endowed by Harriet Monroe, awarded to E. E. Cummings.

MYSTERY WRITERS OF AMERICA AWARDS.—Honorary "Edgars," busts of Edgar Allan Poe, awarded for mystery writing: for the best first mystery novel, to Alan Green for *What a Body*; for the best fact-crime writing, to Joseph Henry Jackson for *Bad Company*; special awards to John Dickson Carr for *Life of Arthur Conan Doyle* and to Sydney Kingsley for his play *Detective Story*.

NATIONAL BOOK AWARDS.—Gold medals awarded by the entire book industry to Nelson Algren for *The Man with the Golden Arm*, for fiction; to Ralph L. Rusk for *The Life of Ralph Waldo Emerson*, for nonfiction; and to William Carlos Williams for *Paterson III* and *Selected Poems*, for poetry.

NATIONAL INSTITUTE OF ARTS AND LETTERS GRANTS.—\$1,000 each to six nonmember writers, for encouragement to young artists of ability and as practical recognition for more established authors: John Berryman, Paul Bowles, Maxwell Geismar, Caroline Gordon, Shirley Graham and Hyman Plutzik.

NEW YORK DRAMA CRITICS' CIRCLE AWARD.—Honorary award given by the New York metropolitan critics for the best play produced in New York city, to Carson McCullers for *The Member of the Wedding*; for the best foreign play, to T. S. Eliot for *The Cocktail Party*; for the best musical, to Gian-Carlo Menotti for *The Consul*.

NEW YORK UNIVERSITY'S SOCIETY OF THE LIBRARIES GOLD MEDAL.—Honorary award to Kenneth P. Williams for *Lincoln Finds a General*.

PARENTS' MAGAZINE MEDAL.—Awarded for the year's most outstanding book for parents, to H. A. Overstreet for *The Mature Mind*.

POETRY AWARDS.—Major award of \$1,250 for the best book of miscellaneous verse by an author who had published fewer than three books of poetry, to Frances Minton Howard for *All Keys Are Glass*.

MARY ROBERTS RINEHART MYSTERY NOVEL PRIZE CONTEST.—Cash prize of \$2,000 for a writer who had never before published a mystery novel, to William Wiegand for *At Last, Mr. Tolliver*.

SOUTHERN AUTHORS' AWARD.—Given for an outstanding book about the south by a southerner, to Lillian Smith for *Killers of the Dream*.

SPECIAL LIBRARIES ASSOCIATION AWARD.—To Anne L. Nicholson for *Numerial Index to the Bibliography of Scientific and Technical Reports*.

YALE SERIES OF YOUNGER POETS.—Award to Adrienne Cecile Rich for *A Change of World*.

ZONDERVAN CHRISTIAN BIOGRAPHY PRIZE.—\$2,500 to Mel Larson for *God's Man in Manhattan*.

U.S. Children's Books.—CALDECOTT MEDAL.—For the year's most distinguished U.S. picture book for children, to Leo Politi for *Song of the Swallows*.

CHILD STUDY AWARD.—Honorary award of the Child Study Association of America "for a book for young people which faces real problems in their world," to Maria Gleit for *Paul Tiber, Forester*.

CHARLES W. FOLLETT AWARD.—A prize of \$3,000 given by Wilcox and Follett, publishing company, for a "worthy contribution to children's literature," to Carol Hoff for *Johnny Texas*.

JULIA ELLSWORTH FORD FOUNDATION AWARD.—\$1,250 given by the foundation and sponsored by Julian Messner, Inc., for a distinguished contribution to current literature for children, to Chester Bryant for *The Lost Kingdom*.

HERALD TRIBUNE (NEW YORK) SPRING BOOK FESTIVAL AWARDS.—Three prizes of \$200 each: for the best picture book for younger children, to Ludwig Bemelmans for *Sunshine*; for the best book for children under 12, to Carl Carmer for *Windfall Fiddle*; for the best book for older boys and girls, to Elizabeth Yates for *Amos Fortune: Free Man*.

JUNIOR BOOK AWARDS.—Presented by the Boys' Clubs of America to authors of books which were favourites of boys in 73 Boys' clubs in the United States. Medals to Elma Erlich Levinger for *Albert Einstein*; to Alfred Powers for *Chains for Columbus*; to Capt. Edward Ellsberg for *Cruise of the Jeannette*; to Robert Sidney Bowen for *Fourth Down*; to Genevieve Foster for *George Washington*; to Clara Ingram Judson for *The Green Ginger Jar*; to William Herman for *Hearts Courageous*; to Mary and Conrad Buff for *Peter's Pinto*; to Herbert S. Zim for *Snakes*; to John Lewellen for *You and Atomic Energy*. Certificates to Ethel C. Brill for *Copper Country Adventure*; to Helen Acker for *Four Sons of Norway*; to David Grew for *The Ghost Man*; to C. Fox Smith for *Painted Ports*; to Fran Striker for *The Secret of the Lost Mesa*; to Colin Lochlons for *Stretch Smith Makes a Basket*; to Russell Gordon Carter for *Teen-Age Animal Stories*; to Billy Warren for *Tony Gay on the Longhorn Trail*; to Bertrand Shurtleff for *Two against the North*.

JOHN NEWBERRY MEDAL.—For the year's most distinguished contribution to literature for U.S. children, to Marguerite de Angeli for *The Door in the Wall*.

Canada.—GOVERNOR-GENERAL'S AWARDS, silver medals awarded to Philip Child for *Mr. Ames against Time* (fiction); to Robert MacGregor Dawson for *Democratic Government in Canada* (academic nonfiction); to Hugh MacLennan for *Cross-Country* (creative nonfiction); to James Reaney for *The Red Heart* (poetry); to R. S. Lambert for *Franklin of the Arctic* (juvenile). CANADIAN CHILDREN'S BOOK OF THE YEAR AWARD, bronze medal awarded by the Canadian Association of Children's Librarians, to R. S. Lambert for *Franklin of the Arctic*. LORNE PIERCE MEDAL, awarded by the Royal Society of Canada for achievement of special significance and conspicuous merit in imaginative or critical literature, to Marius Barbeau. LEACOCK MEDAL FOR HUMOUR, to Earle Birney for *Turvey*. RYERSON PRESS FICTION AWARD, \$1,000 to Jeann Beattie for *Blaze of Noon*. TYRRELL MEDAL, awarded by the Royal Society of Canada for research in Canadian history, to John Bartlet Brebner. (R. E. Bs.)

Great Britain.—Among the awards during the year were: the JAMES TAIT BLACK MEMORIAL PRIZES (about £250 each) to Emma Smith for *The Far Cry* (fiction) and to John Connell for *W. E. Henley* (biography); from the WILLIAM HEINEMANN FOUNDATION (up to £200) to John Guest for *Broken Images* and to Peter Quennell for *John Ruskin*; the CARNEGIE MEDAL (for an outstanding book for boys or girls) to Agnes Allen for *The Story of Your Home*; the ROSE MARY CRAWSHAY PRIZE (£100) for a critical or historical work on English literature by a woman to Helen Darbishire for her Clark lectures and in recognition of her collaboration on an edition of Wordsworth's poetical works; the JOHN LLEWELLYN RHYS MEMORIAL PRIZE (£50) to Kenneth Allsop for *Adventure Lit Their Star*; the SOMERSET MAUGHAM AWARD (about £250 for a British writer under 30 to be used for foreign travel) to Nigel Kneale on the strength of his book of short stories *Tomato Cain and Other Stories*; the DENYSE CLAIROUN MEMORIAL PRIZE to Antonia White for her translation of *Une Vie* by Maupassant; the SUNDAY TIMES BOOK PRIZE (£1,000) to T. S. Eliot for *The Cocktail Party*; the WILLIAM FOYLE POETRY PRIZE (£250) to Christopher Fry for *Venus Observed*.

A new literary prize founded in 1950 was the FREDERICK NIVEN AWARD. It was instituted in memory of the Scottish writer by his widow. The sum of £100 was offered for the most outstanding contribution to literature by a Scotsman or Scotswoman; the first award went to Nancy Bryson Morrison for her novel *The Winnowing Years*. Nearly 60 ATLANTIC AWARDS were given to young or new writers whose careers had been interrupted by the war by the committee responsible for administering the funds placed at their disposal by the Rockefeller foundation.

(E. Se.)

France.—ACADÉMIE GONCOURT PRIZE to Paul Colin for *Les Jeux sauvages*; THÉOPHRASTE RENAUDOT PRIZE to Pierre Molaine for *Les Orgues de l'enfer*; FÉMINA PRIZE to Serge Groussard for *Une Femme sans passé*; INTERALLIÉ PRIZE to Georges Auclair for *Un Amour allemand*; SAINTE-BEUVE PRIZE (summer) novel, to François Gorrec for *La Septième lune*, essay, to Marcel Arland for *Mariavaux*; (winter) novel, to Jean-Charles Pichon for *Il faut que je tue M. Rumann*, essay, to Georges Poulet for *Études sur le temps humain*; ACADÉMIE FRANÇAISE PRIZE (literary) to Marc Chadourne, (essay) to Joseph Jolinon for *Les Provinciaux*; SOCIÉTÉ DES GENS DE LETTRES PRIZE to Francis de Miomandre and Luc Estaing; SOCIÉTÉ DES AUTEURS ET COMPOSITEURS DRAMATIQUES PRIZE to Denys Amiel and Jacques Bernard. (See also NOBEL PRIZES.) (M. Jol.)

**Lithuania.** From Feb. 16, 1918, to Aug. 3, 1940, when it was annexed by the U.S.S.R., Lithuania was an independent republic. The U.S., British and other governments, however, did not recognize the annexation. Area (including Klaipeda [Memel] and Vilnius [Wilno] territories): 25,173 sq.mi. Pop. (Oct. 1939 est., including Vilnius, but excluding Klaipeda) 2,970,000, (1950 est., including Klaipeda) 3,000,000. Nationalities (Oct. 1939 est.): Lithuanian 69%, Polish 16%, Jewish 10%, Russian and Byelorussian 2.5%, others 2.5%. Religion (Oct. 1939 est.): Roman Catholic 80%, Protestant 7%, Greek Orthodox 2.5%, Jewish 9.5%, others 1%. Chief towns (pop., Oct. 1939 est.): Vilnius (cap., 207,800), Kaunas (152,400). Chairman of the presidium of the supreme soviet of the Lithuanian S.S.R. in 1950, Justas I. Paleckis; chairman of the council of ministers, Mečislovas A. Gedvilas.

**History.**—In a letter published in *Izvestia* on July 22, 1950, the working people of Lithuania expressed thanks to Stalin for liberating their country from the capitalist yoke and saving them from annihilation. In fact, the main outcome of the so-called liberation was a great change in the population of the republic: between 1940 and 1950, in consequence of many mass deportations, it was estimated that the number of Lithuanians in the area including Klaipeda and Vilnius was reduced from 2,084,000 (66%) to 1,645,000 (55%). Real power in the Lithuanian government was vested in the Russian deputy prime minister, Vasily Ilyich Pisarev. During the year another Russian, Maj. Gen. Petr Mikhailovich Kapralov, was appointed minister of state security.

Collectivization of agriculture made further progress and according to *Tiesa*, organ of the Lithuanian Communist party, there were in July 6,549 collective farms, or *kolkhozy*, comprising 76% of peasant holdings. From then began a drive to amalgamate smaller *kolkhozy* into bigger ones. Although Gedvilas stated in *Izvestia* on July 21 that industrial production in 1949 was 67% greater than before World War II (but neither year nor territory concerned was indicated), he complained on June 15 before the Lithuanian supreme soviet that many all-union ministries had not fulfilled Lithuanian contracts of machinery at dates agreed upon.

It was reported that the Roman Catholic bishop of Panevėžys, Msgr. Kazys Paltarokas, died in March. This completed the extinction of the Lithuanian Roman Catholic hierarchy which in 1940 had comprised one archbishop, four bishops and the vicar-general of Vilnius. According to an official Vatican source, by July 1950, out of 1,332 clergy left free until 1947, about 1,000 had been arrested and deported.

On July 5 a decree of the presidium of the supreme soviet of the Lithuanian S.S.R. abolished the prewar districts and communes and introduced a new administrative division consisting of provinces or *oblasti* (Vilnius, Kaunas, Klaipeda and Šiauliai) and 87 *rayons*. In the elections of March 12 to the U.S.S.R. supreme soviet 1,597,561 (99.88%) out of a possible 1,599,438 electors cast their votes: Lithuania elected 10 members to the council of the union and 25 to the council of nationalities. (See also ESTONIA; LATVIA.)

**Education.**—According to Gedvilas there were in October "almost half a million" pupils in all schools, including 170 secondary and 42 higher technical institutions; there were also 11,000 students in 11 institutions of higher education.

**Finance.**—The 1950 budget was balanced at 1,352,910,000 roubles.

**BIBLIOGRAPHY.**—*Current News on the Lithuanian Situation* compiled by

the Lithuanian Legation (Washington, D.C.).

(K. SM.)

**Liver Disorders:** see ALIMENTARY SYSTEM, DISORDERS OF.

**Livestock.** Hogs and cattle on U.S. farms in 1950 continued to increase in numbers, whereas the recent decline in sheep numbers to record low levels was arrested if not reversed. Cattle increased by about 2,000,000 head, mostly beef cattle. More brood sows were kept because of the large feed grain supply. More chickens and turkeys were produced because of the favourable demand for eggs and poultry. Horses and mules continued to decline.

The total farm value of livestock at the beginning of the year was \$13,211,222,000 as compared with \$14,656,631,000 a year earlier. Cattle accounted for nearly \$10,000,000,000 of the total. Livestock prices during 1950 followed divergent trends and were somewhat reversed as compared with 1949. High-grade beef was more abundant and lower in price, considerably below the new records of 1949. Lower quality butcher stuff and feeder and stocker cattle were scarcer and higher in price, especially calves. The number going on feed in the corn belt for marketing in 1951 continued large in spite of the fact that the year ended on a note of uncertainty as to whether and when there would be price ceilings and at what levels.

Stimulated by the record carry-over of corn from the crop of 1949, the pig crops of 1950 were larger than in 1949 with the promise of a still larger one in early 1951. The spring crop of 1950 was 59,997,000 head, compared with 58,426,000 head a year earlier, and a preliminary estimate of 63,500,000 head in the spring of 1951. The fall pig crop of 1950 was estimated at 40,657,000 head, compared with 37,175,000 head a year earlier. Thus the total for 1950 was nearly 101,000,000 head, against about 96,000,000 head in 1949. As the large spring crop of hogs moved to market, prices declined seasonally to a low of about \$17 per hundredweight, but were above the low level of the previous year.

Record low sheep numbers on farms at the beginning of the year plus a lamb crop of only 18,431,000 head, 2% smaller than in 1949 and the lowest on record, set the stage for rather steady prices at a high level.

Production of poultry and poultry products on U.S. farms in 1950 was at a level higher than in any other year. Nevertheless, only 670,000,000 farm chickens were raised, other than commercial broilers, as compared with 744,000,000 in 1949; commercial broilers were 10% higher than in 1949 at 540,000,000 head and turkeys were a record at 45,000,000 head.

Livestock on U.S. Farms

(In thousands of head)

	Jan. 1, 1950	Jan. 1, 1949	Average 1939-48
Horses . . . . .	5,310	5,898	9,054
Mules . . . . .	2,153	2,348	3,450
Cattle (including calves) . . . . .	80,277	78,298	77,600
Milk cows . . . . .	24,625	24,416	26,175
Sheep . . . . .	30,797	31,654	48,112
Hogs . . . . .	60,421	57,128	61,634
Chickens . . . . .	481,190	448,676	486,369
Turkeys . . . . .	6,120	5,540	7,056

Layers on farms at the year's end were indicated as slightly less numerous than the 442,000,000 head as of Jan. 1, 1950, and production in 1951 was anticipated to be on a moderately lower level than in 1950.

World horse numbers in 1950 were estimated to have continued their slow decline. There were, nevertheless, increases in some countries recovering from extensive war damage.

World cattle numbers continued their upward trend. The estimate at the beginning of 1950 was about 771,300,000 head, a record, and about 7,000,000 head more than a year earlier, and

28,000,000 head above the pre-World War II estimate. Significant increases occurred in all continents except South America where drought affected the situation in Argentina, Uruguay and Paraguay.

World sheep numbers at the beginning of 1950 were estimated at 730,100,000 head as compared with 723,800,000 head a year earlier and 747,000,000 head prewar. Decreases in the Americas and Asia were more than offset by increases elsewhere. The large wool stock pile which existed in the early postwar period practically vanished, and in spite of an increase in world wool production the better-grade wools were much in demand at the auctions of the year at much higher prices, particularly after the war in Korea began and the United States attempted a negotiated agreement for a 100,000,000-lb. stock pile of Australian wool. (See WOOL.)

World hog production expanded in 1949, resulting in about 279,000,000 head at the beginning of 1950, or 7% more than a year earlier and only 4% below the prewar average. Significant increases occurred largely in the formerly devastated areas of Europe and the U.S.S.R. and in North America. (See also AGRICULTURE; MEAT.)

FILMS OF 1950.—*Cattle Drive* (Encyclopædia Britannica Films Inc.). (J. K. R.)

**Livestock Shows:** see SHOWS.

**Lobotomy:** see PSYCHIATRY.

**Local Government:** see MUNICIPAL GOVERNMENT.

**London.** During 1950 the steady growth of the Festival of Britain buildings transformed the London landscape on the south bank of the Thames adjoining County hall. More satisfactory to the Londoner was the improved progress with repairs to war damaged buildings, public and private. The most momentous achievement in the rebuilding of war damaged buildings was the completion of the new chamber of the house of commons, retaining the architectural style and internal arrangement of its predecessor with modern improvements in acoustics, air conditioning, etc., and with the addition in the approach to it of a commemorative Churchill arch built of bomb damaged masonry from the old chamber. It was formally occupied for the first time on Oct. 26.

For an estimated postwar need of 250,000 new homes in the county, there were provided up to March 1950, 47,000 new permanent and temporary dwellings; 6,625 bombed houses had been rebuilt and 76,645 repaired.

In the port of London the work of reconstruction of war damaged piers and wharves continued and restoration of the authority's building on Tower hill began. The total tonnage of goods that arrived in and departed from the port in the year ending March 1950 was 32,597,761, being 1,000,000 tons more than the preceding year and only 2,000,000 tons less than 1939.

The winter exhibition, 1950-51, at the Royal academy opened in December with works by Hans Holbein and painters of the 16th and 17th centuries. The carpet executed by Queen Mary and given by her for sale for dollars for the exchequer was exhibited at the Victoria and Albert museum in the summer. Kenwood house was again opened to the public; Ham house, Richmond, was given to the national trust and opened to the public with its complete furnishing of the Carolean period; Syon house, Brentford, with its gardens and park, was opened to the public by the duke of Northumberland during the summer months. In the bombed area between Cripplegate and Gresham street the discovery of foundations of a Roman fort outside the previously known Roman circuit and later included in it gave a new military significance to Roman London.

An event of prime theatrical interest was the reopening in November of the Old Vic theatre in Waterloo road, with the

THE BRITISH ROYAL FAMILY entertaining Pres. and Mme. Vincent Auriol of France at a gala ballet performance in the Royal Opera house during the latter's visit to London in March 1950

Old Vic company in *Twelfth Night*.

One of the most startling events of the year was the theft in the early hours of Christmas morning of the variously named Coronation stone, Stone of Scone or Stone of Destiny, from its place beneath the coronation chair in Westminster abbey. It was suspected from the first that Scottish nationalists were responsible, and this supposition was strengthened when on Dec. 29 an anonymous petition to the king, purporting to be from those who took the stone, was handed in at a Glasgow newspaper office. A nation-wide search, led by Scotland Yard officers, failed to uncover any trace of the missing relic by the end of the year. (D. NN.)

**Lords, House of:** see PARLIAMENT, HOUSES OF.

**Los Angeles.** Los Angeles is the fourth largest city in the United States according to the 1950 census (pop. 1,957,692, April 1950, preliminary release) and largest in area (453.47 sq.mi.); the same census gave Los Angeles county a population of 4,125,164. Mayor Fletcher Bowron, re-elected to a third term in 1949, sustained his tenure in a recall election in Nov. 1950.

With nearly 15,000 new jobs and a private capital investment approaching the \$100,000,000 mark in 1950, industrial expansion of Los Angeles county topped 1949 to continue the accelerated pace of the postwar period. A total of \$98,367,250 was invested in establishment of 128 new factories and expansion of facilities at 399 existing ones. In dollar investment 1950 was Los Angeles county's fifth largest year of manufacturing growth and topped all years prior to 1942. The 1949 total was \$93,415,500.

The year was the greatest construction period in Los Angeles county history with valuation of building permits exceeding the \$1,000,000,000 mark for the first time. The 1950 volume for 45 cities and the unincorporated area of the county was \$1,053,430,853, topping 1949 by \$300,000,000 and running nearly \$175,000,000 greater than 1948's \$859,778,274—the former record. The city of Los Angeles also had a new building high for 1950

of \$407,178,693. Los Angeles was still building more housing units than any other city except New York.

Los Angeles county again in 1949 had the highest cash farm income (\$177,104,000) of any county in the United States. Despite inroads of residential and industrial development on its farmlands, Los Angeles county since 1910 had maintained its position as the country's leading agricultural area.

Los Angeles county in Nov. 1950 had 1,692,300 persons gainfully employed, according to the California state department of employment. This represented a gain of 89,450 workers over the same month in 1949.

The total tax rate for the 1950-51 fiscal year was set at \$6.5299 per \$100 of assessed valuation, with assessment based on approximately 50% of real estate market value. The \$6.5299 figure included \$1.9351 for the county, \$1.7857 for the city, \$2.3040 for schools and other amounts for special districts. Assessed valuations, higher because of greater value of property as well as many improvements, were \$2,480,144,170 for the city and \$4,918,012,455 for the county. The 1950-51 city budget was \$235,521,955, including \$90,820,058 general; \$12,697,741 for pensions; \$10,033,559 for libraries, parks and recreation; \$135,353,296 for the harbour, water and power department and airport. Affecting this total was a deductible adjustment of \$13,382,699.

(O. A. T.)

**Louisiana.** One of the west south central states of the United States, admitted to the union in 1812 as the 18th state, Louisiana is popularly known as the "Pelican state," "Creeole state" or "Bayou state." Area 48,523 sq.mi., of which 45,177 sq.mi. are land. Pop.: (1950 census) 2,683,516, or 13.5% more than in 1940. Capital, Baton Rouge (123,957). Other important cities: New Orleans (567,257), Shreveport (125,426), Lake Charles (41,202), Monroe (38,375), Alexandria (34,685), Lafayette (33,465).

**History.**—The legislature held four sessions in 1950. The first extraordinary session (March 5-16) was called in advance of the regular biennial session primarily to approve the revised statutes of 1950, prepared by the Louisiana State Law institute under authorization of the 1942 legislature. This revision, the first since 1870, was enacted to become effective on May 1, 1950.

The regular 60-day biennial session convened on May 8. In addition to the usual appropriations for all state departments and agencies for the 1950-52 biennium, a uniform state-wide system of juvenile courts, a board of alcoholic beverage control, a commission on alcoholism, a youth commission, and a civil defense agency were created; and a motor vehicle title law, and a law requiring all future state employees to subscribe an oath to support the constitution and laws of the state and the nation were enacted.

Forty-two proposed constitutional amendments were referred to the voters for approval or rejection at the November election, the most controversial of which provided for a convention to amend the constitution of 1921. After the legislature adjourned, opposition to the proposed convention developed swiftly, the chief objection being to the provisions authorizing the governor to name a large number of the delegates and making most of the state officers ex-officio delegates, which the opposition claimed would enable the political faction in power to control the convention. These protests resulted in the calling of a second extraordinary session (August 5-11), primarily to revise the method of naming the delegates, so as to overcome the objections to the original plan. However, revision of the convention proposal did not end the opposition; a new objection was raised, that it was inexpedient to hold such a convention during the national emergency. Consequently, a third extraordinary

session was held (Sept. 12) which suspended the proposal for a constitutional convention.

Of the 41 proposed constitutional amendments 32 were approved by the voters on Nov. 2, the most important of which provided "home rule" for New Orleans.

Other important political events of the year were the re-election of Mayor De Lesseps S. Morrison of New Orleans on the reform ticket and of United States Senator Russell B. Long to a full six-year term.

The United States handed down two decisions during the year directly affecting Louisiana. One deprived the state of title to the oil-producing coastal waters of the Gulf of Mexico; the other required the Louisiana State university law school, Baton Rouge, to admit properly qualified Negroes, on the ground that facilities for legal education there were superior to those provided for Negroes at the law school operated at Southern university, Scotlandville.

State officers in 1950 were: Earl K. Long, governor; William J. Dodd, lieutenant governor; Wade O. Martin, Jr., secretary of state; A. P. Tugwell, treasurer; L. B. Baynard, auditor; Boliver E. Kemp, Jr., attorney general; Shelby M. Jackson, superintendent of education; Lucile May Grace, register of land office; W. E. Anderson, commissioner of agriculture and immigration.

**Education.**—In 1950 the 793 public schools for whites enrolled 230,637 elementary and 68,955 high school pupils and employed 11,572 teachers; the 1,254 public schools for Negroes enrolled 161,770 elementary and 21,840 high school pupils and employed 5,458 teachers. The 194 private schools for whites enrolled 54,874 elementary and 10,782 high school pupils and employed 2,012 teachers; the 94 private schools for Negroes enrolled 17,668 elementary and 1,963 high school pupils and employed 438 teachers. The state maintained 14 public trade schools, and the 1950 legislature created 11 new ones. Total state appropriation for public education at all levels was more than \$88,000,000 for the 1950-51 fiscal year, an increase of \$5,000,000 over the preceding fiscal year.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Total readjustment allowances paid to Louisiana veterans of World War II up to Jan. 1, 1950, were \$73,000,000. Civilian unemployment compensation rose from \$18,000,000 in 1949 to \$21,000,000 in 1950. Total payments made by the Louisiana division of unemployment security, for all purposes, increased from \$23,000,000 in 1949 to \$25,000,000 in 1950.

Louisiana expended \$95,000,000 in 1949 and \$100,000,000 in 1950 on public welfare, though steps were taken to tighten the eligibility rules for applicants for public assistance.

Table 1.—Louisiana Public Welfare Programs, 1950

Type of assistance	Average number on rolls	Cost for year
Old age pensions . . . . .	121,010	\$68,518,850
Needy blind . . . . .	2,404	951,350
Dependent children . . . . .	113,004	18,887,350
Foster children . . . . .	1,138	629,065
Special cases . . . . .	32,211	10,581,150
Totals . . . . .	269,767	\$99,567,765

In 1950 the state maintained eight charity hospitals; three hospitals for mental patients; three tuberculosis sanitoriums; a school for white blind, a school for white deaf, and a school for Negro blind and deaf; a training school for spastic children; a training school for the feeble-minded.

The state maintained two prison farms for its 2,500 adult offenders, separate training institutes for about 200 delinquent white boys and girls, and a training institute for about 100 delinquent Negro boys. The 1950 legislature provided for the establishment of a training institute for delinquent Negro girls.

State appropriations for maintenance and expansion of its charitable and correctional institutions were about \$22,000,000 for the 1950-51 fiscal year.

**Communications.**—In 1950 Louisiana had 18,200 mi. of public highways, 14,788 mi. of which were state-maintained, 4,788 mi. paved with concrete or blacktop and the remainder gravelled. Total expenditures for highway maintenance and new construction were \$46,463,973 in 1950, compared with \$38,500,000 in 1949. During the year 70 mi. were paved with concrete and 646 mi. with blacktop, at a total cost of \$32,064,942, while \$12,514,944 were expended for maintenance and improvement of old highways. There were 4,400 mi. of railways and 4,800 mi. of navigable waterways.

About 100 land airports and 10 seaplane bases were in operation in 1950. Nearly 500,000 telephones were in service at the end of 1950.

During the same period 16,503,485 tons of domestic freight were transported through the locks connecting the Mississippi river with the Gulf Intracoastal waterway which crosses the lower section of the state.

**Banking and Finance.**—Louisiana had 35 national banks on July 1, 1950, with total deposits of \$1,172,000,000 and resources of \$1,250,000,000; and 128 state banks, with total deposits of \$520,000,000 and resources of \$557,000,000. There were 62 savings and loan associations, with total

Table II.—Foreign Commerce of Louisiana Ports in 1950

(For year ending Aug. 1, 1950)

Ports	Exports		Imports	
	Tons	Value	Tons	Value
New Orleans . . . . .	3,368,850	\$683,900,000	3,301,400	\$436,900,000
Baton Rouge . . . . .	573,850	24,700,000	658,000	4,100,000
Lake Charles . . . . .	397,000	33,100,000	35,450	1,200,000
Port Sulphur . . . . .	323,900	6,100,000	(Not a port of entry.)	
Totals . . . . .	4,663,600	\$747,800,000	3,994,850	\$442,200,000

resources of about \$210,000,000. The state budget for the 1950-51 fiscal year, including federal grants-in-aid, was about \$400,000,000, with receipts and expenditures balanced. The state bonded debt was about \$240,000,000 on July 1, 1950.

**Agriculture.**—The total value of agricultural and truck crops in 1950 was \$275,000,000, compared with \$257,600,000 in 1949; total acreage harvested was 3,100,000, compared with 3,385,000 in 1949. The total cash income from crops, livestock and poultry and their products was about \$400,000,000, about the same as in 1949; from government payments \$11,600,000, compared with \$10,300,000 in 1949.

Table III.—Leading Agricultural Products of Louisiana

Crop	1950	1949	Average 1939-48
Cotton (bales) . . . . .	430,000	650,000	536,000
Corn (bu.) . . . . .	19,918,000	18,446,000	19,208,000
Rice (bu.) . . . . .	23,313,333	23,960,000	21,960,000
Sugar cane (tons) . . . . .	5,811,000	5,388,000	5,010,000
Sweet potatoes (bu.) . . . . .	10,290,000	8,700,000	8,615,000
Irish potatoes (bu.) . . . . .	1,386,000	1,239,000	2,446,000
Oats (bu.) . . . . .	1,952,000	2,929,000	3,124,000
Hay (tons) . . . . .	441,000	446,000	406,000
Pecans (lb.) . . . . .	9,100,000	17,000,000	9,569,000
Peaches (bu.) . . . . .	189,000	265,000	302,000
Pears (bu.) . . . . .	182,000	198,000	204,000
Citrus fruits (boxes) . . . . .	340,000	360,000	295,000
Truck crops (value) . . . . .	\$12,000,000	\$11,574,000	\$12,102,000

**Manufacturing.**—About 2,400 industrial establishments, employing 150,000 workers and paying \$325,000,000 in wages and salaries, produced finished products worth \$1,300,000,000 in 1950, compared with \$1,250,000,000 in 1949.

**Forest Products, Furs, Fisheries.**—Louisiana forests produced 961,962,000 bd.ft. of lumber and 941,151 cords of pulpwood in 1949-50 fiscal year, compared with 1,329,490,337 bd.ft. and 1,000,947 cords in 1948-49 fiscal year.

The 1949-50 trapping season in Louisiana yielded about 3,000,000 pelts valued at about \$4,000,000, compared with 3,500,000 pelts valued at \$4,650,000 for the 1948-49 season.

The total catch of Louisiana commercial fisheries—fish, oysters, shrimp, crabs, and frogs—was valued at about \$28,000,000 in 1950, approximately the same as for 1949.

**Mineral Production.**—Increased demand pushed production of some Louisiana minerals beyond previous levels in 1950.

Table IV.—Principal Mineral Products of Louisiana

Mineral	1950	1949
Petroleum (bbl.) . . . . .	201,000,000	191,000,000
Natural gas (M. cu. ft.) . . . . .	745,000,000	700,000,000
Natural gasoline (bbl.) . . . . .	8,000,000	6,000,000
Sulphur (tons) . . . . .	1,210,000	990,000
Salt (tons) . . . . .	935,000	980,000
Salt brine (tons) . . . . .	1,425,856	1,601,630
Shell and gravel (tons) . . . . .	7,404,470	7,067,636
Sand (tons) . . . . .	2,100,156	2,253,546
Stone (tons) . . . . .	22,500	286,000

The total value of mineral production in 1950 was estimated at about \$625,000,000 in 1950, compared with \$600,000,000 in 1949.

FILMS OF 1950.—*New Orleans—the Gay City* (Cornell Associates). (W. P.R.)

**Lumber.** During the year 1950 the species of trees holding the leading positions in lumber production in the United States continued to be, in order of importance, southern pine, Douglas fir and ponderosa pine. These trees alone comprised about 60% of the total lumber production of the country. Other leading species in lumber production in order of importance were oak, white pine, hemlock, spruce, red gum, yellow poplar and hard maple. Species of less importance were white fir, sugar pine, western larch, Idaho white pine, cypress, western red cedar, redwood and lodgepole pine among the softwoods, and black and tupelo gum, cottonwood and aspen, beech, elm, birch, hickory, basswood, ash, black cherry, walnut, sycamore, chestnut and alder among the hardwoods.

An important feature of lumber production was the increase in production of species formerly little used or neglected. Among them were the white and red firs in Oregon, California and

Washington; western larch and lodgepole pine in the northern Rocky mountain region; aspen in Michigan and Minnesota; and cottonwood, pecan hickory, tupelo gum and black gum in the southern hardwood forests. The states east of the Great Plains produced more lumber than the Rocky mountain and the west coast states combined.

The total lumber production for 1950 was about 37,000,000,000 bd.ft., a considerable increase over the production for 1949 and other years since World War II. This high production was caused by the great demand for housing throughout the country. Of the total lumber production, approximately 27% was of hardwoods and 73% softwoods. During recent years there had been an increase in the proportion of hardwoods over softwoods. Probably the greatest percentage increase of any one species was noted by ponderosa pine which is grown and produced as lumber in 12 of the western states. It is the most widely distributed conifer in North America.

Lumber prices during 1950 reached all-time highs, exceeding the preceding highs of 1949 and the long-time highs of 1920. These price increases were largely caused by the exceedingly heavy demand for lumber for housing. High prices for lumber were also caused by rising wages, higher freight rates particularly from the west coast and the south to the great industrial and population centres of the northwest and middle west, by car shortages which were very severe in Oregon and northern California and by unfavourable weather conditions on the west coast and parts of the south which made it difficult and sometimes impossible to get saw logs out of the woods. The use of lumber for dwellings was greatly supplemented by the use of plywood and fibreboards.

Early in October lumber prices receded notably in the common grades. For example, two of the most important items in lumber construction, namely no. 2 common 2-inch dimension fell about \$15 to \$20 f.o.b. sawmill; no. 2 common boards 1×6, 1×8 and 1×10 in., which are largely used for sheathing, underflooring and roof boards, dropped in price to the same extent. These two items make up about 30% of the principal softwoods used for lumber construction, namely Douglas fir and southern pine. The high prices for softwoods brought out greatly increased production of white pine in New England, New York, Pennsylvania and the lake states. The production of redwood and cypress also showed a marked increase.

There was a sharp increase in the volume of lumber imported during the year, but exports decreased because of tariff differentials and a smaller volume of shipments under the Economic Cooperation administration. The principal species exported continued to be Douglas fir from the west coast, followed in order of importance by southern pine from the Gulf and southeastern states and ponderosa pine from the west coast states. Other species entering the export trade were white pine, hemlock, redwood, western red cedar, cypress and spruce among the softwoods. Oak was the outstanding hardwood species exported, followed in very much smaller quantities by red gum, ash, tupelo and black gum, cottonwood, hickory, birch and walnut. (N. C. B.)

**British Commonwealth and Europe.**—The devaluation of sterling in the autumn of 1949 had the effect of a general hardening of prices throughout Great Britain, Europe and the British Commonwealth. Swedish and Finnish shippers at the beginning of the year raised their prices for deals, battens and boards for first open-water shipment by £5 per standard. Though the British Timber control negotiated no substantial contracts with these two countries, shippers held their own by selling large quantities to Dutch, Belgian and other European importers. By midsummer the price of good Swedish joinery deals had risen to £55 10s. per standard; subsequently, small contracts were negotiated for England at these ruling prices.

In June a British government buying mission visited Moscow,

and contracts were signed for 100,000 to 150,000 standards of softwoods, including goods from Archangel and the Kara sea area. A considerable softwood contract with Yugoslavia, comprising 100,000 standards, was signed by the British board of trade in March at prices showing some small advances over those of 1949. France exported a large quantity of maritime pine from forests in the Landes damaged by fire in the summer of 1949. Production of softwoods was everywhere maintained. Large quantities were still being used for internal reconstruction. Canada maintained its lumber industry in full production, most notably in British Columbia; in eastern Canada hardwood and spruce mills worked at full capacity, a large portion of the production being exported to the United States. Contracts were negotiated by British Timber control with exporters both in eastern Canada and British Columbia. Stocks of imported softwood in Great Britain at the end of July stood at 175,000 standards. Perhaps for this reason the board of trade announced in Oct. 1950 that licences to private buyers to import into Great Britain would be freely granted for Sweden, Finland, Norway, France, Brazil, etc., but that for the time being government buying would continue in the dollar countries, the U.S.S.R. and its satellites and Yugoslavia.

Meanwhile, at the beginning of the year the board of trade had granted freedom to private importers to purchase and import hardwoods from all countries except the United States and Canada. For these two latter countries licences were granted to private importers on a severely restricted scale because of currency difficulties. In the spring of 1950 a contract was negotiated between a number of British importers and Yugoslavia for about 50,000,000 bd.ft. of beech and 12,000,000 bd.ft. of oak; prices averaged from 10% to 15% more than those of 1949. Czechoslovakia and Austria exported small quantities of hardwoods.

A feature of the European hardwood trade was the very large export from France, principally of oak, beech and poplar: the grand total was in excess of 75,000,000 bd.ft. The customary standing timber sales were held in the autumn, and prices paid were considerably more than in 1949. The French government

then prohibited further exports until the position had been reviewed.

There was some falling off in the demand for West African mahogany in the early months, with a consequent easing of prices; later, however, the rearmament program brought U.S. buyers in once more with resultant firmer prices. Disturbed conditions in Burma prevented the teak trade in that country from resuming its former activities, but small shipments came forward from time to time at greatly enhanced prices. Australia produced large quantities of hardwood, principally for home consumption; there was a small export to Great Britain of jarrah, karri and Tasmanian oak. A quantity of hardwoods was exported to Great Britain from South American countries, principally Brazil and Chile, largely on a barter basis which enabled both buyers and sellers to obtain more satisfactory terms. For the first time since World War II a small quantity of Japanese oak lumber was exported to Great Britain.

Plywood production was well maintained, with a general rise in prices mainly caused by the devaluation of currencies; the U.S.S.R., Finland and Sweden all maintained their exports. A considerable number of mills for plywood had in recent years been established in tropical Africa and were now commencing production. Mills in British Columbia and eastern Canada were in full production, as the rising home market and the large export to the U.S. and Great Britain enabled manufacturers to dispose of their products satisfactorily. (See also FORESTS.)

(B. L.)

**Lutherans.** During 1950, 42 member churches of five continents were working co-operatively and actively through the Lutheran World federation. More than one out of every ten among the 60,000,000 Lutherans in the world were refugees. Groups of refugees in central Europe, the middle east and Asia were receiving physical relief, spiritual ministry, aid in resettlement and opportunities for rebuilding. More than 80,000 had been resettled in Canada, the United States, Australia and South America.

The assistance to younger churches and orphaned missions became an international operation when missionary groups of the churches of Finland, Sweden, Norway and Denmark joined with the bodies in America to support and conduct the missions in

**PONDEROSA PINE** reported to be the largest of its kind on record, after felling by the Blagen Lumber Co. of White Pines, Calif., in 1950. The tree was 350 years old and was 229 ft. high and 100 in. in diameter

Africa, Indonesia, India, Palestine and New Guinea.

The focal point of Protestant resistance to totalitarianism was eastern Germany. There 14,000,000 to 16,000,000 Lutherans were giving an evidence of their loyalty to the Christian faith and the organized church in spite of increasing pressures and persecutions. These churches, since the change from a state church to disestablishment, had organized a thorough program of Christian education, activities for the youth groups and service to pastors.

Bishop Otto Dibelius had rallied the support of almost all the pastors of the eastern zone for this battle.

The Lutheran World federation made plans for its second quinquennial assembly in Hanover, Germany, for the summer of 1952. The theme for this assembly was to be "The Living Word in a Responsible Church" with six sections giving attention to such subjects as youth and student work, evangelism and stewardship, missions and international affairs.

The leadership of several Lutheran churches changed during 1950. Bishop Lajos Ordass, the first casualty among religious leaders in eastern Europe when he was sentenced to imprisonment in 1948, was deposed as head of his diocese by a state-pressured church court. Bishop Laszlo Dezser, a Communist, was elected to succeed Ordass. Yngve Brilioth became the primate of the church of Sweden when he was elected archbishop of Uppsala upon the retirement of Archbishop Eidem. Bishop Eivind Berggrav, who led the church struggle against nazism, stepped down as primate of the church of Norway because of ill health. Henry F. Schuh was elected president of the American Lutheran Church to succeed Emanuel Poppen. Lawrence Stavig, president of Augustana college, Sioux Falls, S.D., was elected chairman of the National Lutheran council. (See also CHURCH MEMBERSHIP.) (C. E. L.-Q.)

**Luxembourg.** An independent grand duchy of western Europe, Luxembourg is bounded south by France, northwest by Belgium and northeast by Germany. Area: 1,010 sq.mi., including the 11 sq.mi. of the uninhabited Kammerwald forest and a small village annexed on April 15, 1949, as accepted under the six-power agreement on March 26, 1949. Pop. (July 1, 1949, est.) 295,000. Language: Luxembourgian (idiomatic) and (officially) French. Religion: Roman Catholic 98%. Capital, Luxembourg (pop., Aug. 1949 est., 62,000).

Ruler, Grand Duchess Charlotte; prime minister, Pierre Dupong.

**History.**—An agreement was signed in Washington, D.C., on Jan. 27, 1950, between Luxembourg and the U.S., regulating mutual aid for common defense purposes.

The full economic union of Belgium-Luxembourg with the Netherlands which was scheduled to come into force by July 1, 1950, could not be realized at that date. Ministers of the Benelux countries met in Luxembourg on Oct. 20-21 and agreed to a system of modernization for Luxembourg-Belgian agricultural production, in order to lower costs of production; the Netherlands would gradually abolish subsidies to farmers. In spite of great efforts Dutch goods imported into Luxembourg and Belgium would still be artificially raised in price by a tax, to be divided between exporting and importing countries. The principle of proceeding by stages to complete freedom of exchange for the Benelux countries was firmly maintained. Passports were no longer required for travel between the three countries.

(See BELGIUM.)

**Education.**—Schools (1948): elementary 966, secondary 7, technical, 3.

**Finance.**—Budget (1950 est.): revenue 2,996,265,000 fr.; expenditure 3,890,992,058 fr. Monetary unit: Luxembourg franc, at par with the Belgium franc, with an exchange rate of 50.50 fr. to the U.S. dollar.

**Industry.**—Total of persons employed: (June 1950) 35,355. Production

(in metric tons, 1949): pig iron 2,372,080; steel ingots and castings 2,277,858; synthetic fertilizers 502,351. (H. R. M.L.)

**Macao:** see PORTUGUESE COLONIAL EMPIRE.

**MacArthur, Douglas** (1880— ), U.S. general, was born on Jan. 26 at Little Rock Barracks, Ark. (For his early career, see *Encyclopædia Britannica*.) After the Japanese attack on Pearl Harbor which plunged the U.S. into World War II, MacArthur led U.S. and Filipino forces in defense of the Philippines until March 17, 1942, when Pres. F. D. Roosevelt ordered him to Australia. From this point he led the combined U.S. and Allied forces in the drive that rolled the Japanese back to their home islands, and he accepted the Japanese surrender in Tokyo bay on Sept. 2, 1945. Thereafter he became supreme commander of the Allied occupying powers in Japan and supervised the reconstruction and democratization of that country.

When North Korean Communists invaded South Korea in June 1950 MacArthur was ordered to help defend South Korea with U.S. air, sea and ground forces. After the United Nations Security council had branded North Korea an aggressor, MacArthur was named commander of U.N. forces in Korea. As early as July 20 he announced that the first phase of the campaign had ended and so had the North Koreans' chance for victory. On July 31-Aug. 1 he conferred with Chinese Nationalist Gen. Chiang Kai-shek on plans to defend Formosa in case of a Chinese Communist attack, but MacArthur declined Chiang's offer of troops for use in Korea. Pres. Harry S. Truman and his top advisers conferred with MacArthur on Wake Island on Oct. 14 (U.S. time) and the president announced "complete unanimity" of views on pacifying, unifying and reconstructing Korea. MacArthur on Nov. 6 notified the United Nations that his forces had come in contact with Chinese Communist forces, and termed their intervention "one of the most offensive acts of international lawlessness of historic record." On Nov. 24 he announced that a new attack being launched should, if successful, end the war; but on Nov. 28 he told the U.N. that his forces were up against an "entirely new war," implying that he needed instructions on how to deal with the Chinese Communists within their

GEN. DOUGLAS MacARTHUR greeting Mme. Chiang Kai-shek in Formosa, after conferring with Gen. Chiang Kai-shek and Chinese nationalist leaders, July 31-Aug. 1, 1950, regarding defense plans for Formosa in the event of a Chinese Communist invasion

"privileged sanctuary" behind the Korean-Manchurian border. On Dec. 11 he announced that the U.N. forces withdrawing ahead of the Chinese Reds were "relatively secure," and his field commanders in later statements implied that U.N. forces could remain in Korea indefinitely. However, MacArthur repeatedly during the Korean campaign had stressed that U.S. forces were bearing the brunt of the war, and asked for more ground troops from the other U.N. members.

**McCarthy, Joseph R.** (1909— ), U.S. senator, was born Nov. 14 in Grand Chute, Wis. After graduating from Marquette university, Milwaukee, Wis., in 1935 he practised law until 1939 when he was elected circuit judge. He was then 30 years of age, the youngest man in Wisconsin's history to hold such a post. From 1942 to 1945 he served overseas with the U.S. marines. During this time his friends put up his name for nomination to the U.S. senate, and though he received 100,000 votes, he ran second. In 1945 he was re-elected circuit judge. In 1946 he defeated Sen. Robert La Follette for the Republican nomination to the U.S. senate and in the subsequent November balloting was elected for a six-year term ending Jan. 3, 1953.

In the senate McCarthy was especially known as an investigator of communism in high places in government. His tenacious tactics and frequently sweeping accusations won for him many enemies, though he held a large popular following as well. The word "McCarthyism" became synonymous with the attitude he showed toward those suspected of Communist sympathies. He was especially dogged in his attacks on the state department and on Secretary of State Dean G. Acheson, for what he called the protection of those accused of "sabotaging" U.S. efforts to contain the U.S.S.R.

**McCloy, John Jay** (1895— ), U.S. lawyer, banker and government official, was born on March 31 in Philadelphia, Pa. He was educated at Amherst college, Amherst, Mass., and Harvard university and served in World War I and in the occupation forces in Germany after that war. He later practised law in New York city, specializing in corporation law and foreign litigation. In Oct. 1940 he was appointed expert consultant to the secretary of war, and in April 1941, assistant secretary of war. He became president of the International Bank for Reconstruction and Development in Feb. 1947, and on May 18, 1949, he was appointed first civilian U.S. high commissioner for occupied Germany.

He also acted as chief Economic Cooperation administration representative for Germany and U.S. representative on the three-power Allied council.

On April 4, 1950, he declared that west Europe must take west Germany into full partnership to thwart soviet designs on Germany, but on May 22 he said there would be "no startling changes" in Allied occupation policy. On Sept. 5 he conferred with Pres. Harry S. Truman and Secretary of State Dean G. Acheson, and said the Germans should be enabled to defend their country, if attacked.

On Dec. 27 he said he had been instructed to press for an agreement that would permit use of German troops to defend Germany "as a matter of urgency."

**Macedonia:** *see* BULGARIA; GREECE; YUGOSLAVIA.

**McGrath, James Howard** (1903— ), U.S. attorney general, was born on Nov. 2 in Woonsocket, R.I. He was graduated from Providence college, Providence, R.I., in 1926 and received a law degree from Boston (Mass.) university in 1929. He was governor of Rhode Island

from 1940 to 1945. Appointed U.S. solicitor general in 1945, he served until the next year, when he became U.S. senator from Rhode Island. From Oct. 1947 to Aug. 1949 he was chairman of the Democratic national committee. On Aug. 24, 1949, he was sworn in as attorney general of the U.S.

In 1950 McGrath figured prominently in government moves against Communists in the U.S. and against interstate crime. During a conference on organized crime in February, civic officials among the delegates estimated that a nationally organized crime "syndicate" grossed \$15,000,000,000 a year. On April 17, testifying in favour of a bill to ban interstate transmission of gambling news, McGrath said he knew of no national syndicate headed by a gambling "czar."

In March, McGrath had spoken against the release of the government's loyalty files to the senate committee investigating communism in the U.S., on the grounds that innocent persons might be injured. He later declared that the Federal Bureau of Investigation had adequate knowledge of all important Communists in the U.S., and criticized Sen. Joseph R. McCarthy of Wisconsin for the latter's charges of communism in government offices, declaring McCarthy's "witch hunts and frantic name-calling" endangered American liberties.

**Machinery, Farm:** *see* AGRICULTURE.

**Machinery and Machine Tools.** The machine tool industry of the United States soared in 1950 to the greatest heights since World War II. New orders exceeded \$700,000,000, or more than three times the amount of the previous year. Automobile makers gave the biggest impetus to machine tool operations. They had the largest retooling program in history, mostly for new "V" engines. Their expenditures ran to \$200,000,000, or about twice that of the best previous year, in the 1930s. It was not until late in the year that defense orders began to pour into builders' offices. It was estimated at the end of the year that total defense tooling would require more than \$1,000,000,000 worth of machine tools, mostly for aircraft and tank manufacturing projects. That figure included British buying.

Soon after the National Production authority was created in 1950, its machinery division began allotting defense orders for essential materials to defense contractors. These materials included machine tools. By the end of the year, however, the ratio of defense orders (carrying priorities) to total machine tool bookings hardly exceeded 15%. In anticipation of war mobilization, so-called "phantom orders" for machine tools were placed with machine tool builders in 1948. These were paper orders for specified quantities of machines. They could be activated overnight by telegram from Washington. Preparations were under way at the end of 1950 to put these orders (totalling \$800,000,000) on a live basis as the U.S. rearmament program expanded.

Great strides were made technically during 1950. Much of the progress came as a result of work on machining problems in the aircraft industry. A report was made public on the relationship of a metal's microstructure to its machinability. It showed how the optimum rate for machining a given material could be predicted if the material's microstructure and the processing of the material prior to machining was known. This report resulted from a study made by the Ford Motor company at the request of the U.S. air force. Various phases of the study were eventually taken over by the Massachusetts Institute of Technology, the Curtiss-Wright corporation and Metcut Research Associates. Cast irons, steels and high-temperature alloys were the materials studied.

High-speed machining gained new converts during the year. Milling at very high feeds revealed that neither work nor tool

**SMALLEST PRECISION SCREW** being mass-produced in 1950, as developed by the Elgin National Watch Co. of Illinois for use in adjusting military timing instruments. The screws, shown here beside a sewing needle for comparative size, were completely threaded and slotted

heated excessively. It was found that the horsepower needed for milling dropped as the speed for machining increased. One New England company discovered that it got better tool life by face milling cast iron at 500 to 700 f.p.m. than at 300 f.p.m. But when very high speeds were used, from 1,500 f.p.m. up, tool life decreased as speed increased. Tools and techniques were developed for climb-hobbing of cast-iron gears at 450 r.p.m. with 0.060-in. feed, and S.A.E. 4.135 gears at speeds up to 702 r.p.m. with 0.100-in. feed, in each case using carbide hobs 4 in. in diameter. These speeds approximated 460 and 725 f.p.m.

Speeds of machining lines and of special transfer or shuttle machines had been limited by permissible drilling speeds—just as in automatic lathes and screw machines. Several machinery builders were working on high-speed drilling machines for cast iron, using special heavy-duty carbide drills. One maker reached a feed of 1 in. per second (almost punching) with a ½-in. diameter carbide drill.

Ease of operation, flexibility of control and adaptability to job work as well as to mass production was featured in new machines during 1950. Mechanical shift levers at front and side of a vertical boring mill were eliminated, for instance, in favour of a pendant station and solenoid that activated a hydraulic-shift mechanism. A universal grinder was equipped with wheel base, headstock and work table which could be swivelled, and thus could be operated from front or rear. A lapping machine was offered which could load and unload small parts continuously and automatically. A right-angle chucking lathe was developed for facing, turning and boring thin-walled work of large diameter and short length, displacing cumbersome straight-line lathes for this class of work.

The U.S. air force set up at Adrian, Mich., a manufacturing methods pilot plant to which industry could bring its extrusion and forging problems. Hydraulic forging was done at this plant simply by pressing the metal billet between two dies with such force that it assumed the desired shape with one stroke. A 19-ft. tapered wing spar cap, for example, could be made with a forging press with only 64 lb. of material (compared with 207 lb.

used by the conventional method). Only 2 lb. then must be removed by machining, in five man-hours.

FILMS OF 1950.—*What Are Machines* (Bailey Films, Inc.). (B.Fy.)

**Madagascar.** The fourth largest island of the world, situated off the southeast coast of Africa, Madagascar is a French overseas territory. Its area and est. 1948 population (including smaller dependencies and the Comoro archipelago 849 sq.mi.; pop. 141,800) were 229,438 sq.mi. and 4,301,800 persons. The Malagasy tribes are many, the most important being the Hova (24% of the total), whose language is understood over a large part of the island; in 1948 there were 41,505 French including 15,638 from metropolitan France; Hindus, Chinese and Arabs constitute small racial minorities in Madagascar. Religion: Madagascar, Christianized to some extent but mainly pagan; Comoro archipelago, Moslem. Chief towns (pop., 1948 est.): Antananarivo, or Tananarive (cap. 171,052); Tamatave (28,194); Majunga (27,181); Diégo-Suarez (21,287). High commissioner, governor general: Robert Barges.

**History.**—The six Malagasy condemned to death on Oct. 4, 1948, for conspiracy, whose penalties were commuted to deportation for life to Mohéli (Comoros), were permitted on Oct. 2, 1950, to transfer to Calvi (Corsica). Native nationalism, although apparently quiescent, was none the less distinctly alive and was quickened by the continuous activity of the Communist party which operated particularly under cover of trade unions. It disputed the efficacy of the proposed reforms of the local assemblies, demanded faster evolution toward the status of associated state and protested against projects for European immigration. Robert Barges, the governor, directed his efforts on the one hand to the introduction of a road system and on the other to the exploitation of the Sakoa coal mines.

**Finance.**—Budget (1949 actual) balanced at 4,412,900,000 fr. C. F. A. Franc C. F. A. (Colonies Françaises d'Afrique) = 2 metropolitan francs. Franc = .2856 cents U.S. (free rate) in Nov. 1950.

**Foreign Trade.**—(1949) Imports 11,789,400,000 fr. C. F. A.; exports 7,369,500,000 fr. C. F. A.

**Transport and Communications.**—Railways (1948): 859 km. Roads (1948): 26,618 km. Motor vehicles licensed (1948): 6,087; commercial 3,990. Ships entered (1949, all ports): 5,590; cargo (metric tons 1948): unloaded 439,800, loaded 244,900. Air transport (1950, six months): aircraft landed, including internal flights, 24,069 (as against 18,927 during the corresponding period of 1949). Telephone subscribers (1949): 5,072.

**Agriculture.**—Main crops (metric tons, 1949): rice 750,400; maize 61,100; cassava 897,300; sweet potatoes 240,700; taros 129,000; potatoes 55,700; bananas 155,000; sugar cane 298,200; coffee 29,300. Live-stock (1949): cattle 5,646,000; pigs 415,700; sheep 297,800; goats 237,600; horses 2,700; mules 7,000.

**Mineral Production.**—(Metric tons, 1949): graphite 9,140; mica 939; corundum 6.8; optical quartz 6.2. Precious stones (kilograms): 445.514 including garnets 418,011 and beryls 27,061. Gold 51.7 kg. (C. A. J.)

**Maine.** The extreme northeastern state of the United States, Maine was admitted as the 23rd state in 1820, and is popularly known as the "Pine Tree state." Land area 31,040 sq.mi.; water area 2,175 sq.mi.; population (1950 U.S. census) 913,744, an increase of 7.9% over 1940. The population of the principal cities (1950 census, preliminary figures) was: Portland 76,936; Lewiston 41,142; Auburn 23,078; Bangor 31,473; South Portland 21,732; Augusta (cap.) 20,900; Biddeford 20,785.

**History.**—Gov. Frederick G. Payne (Rep.) was re-elected in 1950 for a second, two-year term to start in Jan. 1951, with a strongly Republican state legislature. Five amendments to the state constitution were approved by the voters. Also re-elected on Sept. 11 were Maine's three Republican representatives to Washington: Robert Hale, Charles Nelson and Frank Fellows.

A governor's tax committee headed by Pres. Charles F. Phill-

ips of Bates college, Lewiston, reported that more state revenues were needed and that the state should abandon the property tax in favour of local government. It suggested that the 1951 legislature enact sales or income taxation, or both. The Canadian-United States commission of inquiry studying the proposed Passamaquoddy bay tidal power project reported that a thorough engineering study would be needed to determine whether the proposal would be economically and technically practicable.

The chief officers of Maine during 1950 were: governor, Frederick G. Payne; secretary of state, Harold I. Goss; attorney general, Ralph W. Farris; treasurer, Frank S. Carpenter; auditor, Fred M. Berry; commissioner of education, Harland A. Ladd.

**Education.**—The net enrolment in the public schools for 1948-49 was 162,821 compared with 160,191 for 1947-48 and 157,456 for 1946-47. In 1948-49 there were 6,211 teaching positions, 6,117 in 1947-48 and 6,022 in 1946-47. The state maintained 1,679 urban and rural schools in 1948-49, of which 676 were one-room buildings. The total expenditure for general support of schools (1948-49) was \$22,224,848; the cost per pupil in average daily attendance (147,856 pupils) was \$155.46 for the school year. The state also maintained the University of Maine, Orono, and five teacher training institutions.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—As of Nov. 30, 1950, there was a balance in the Maine employment security fund for unemployment benefits of \$37,143,182 compared with \$39,717,477 a year earlier. For the first 11 months of 1950 benefit payments were \$8,518,283, covering 48,300 persons, as compared with \$10,165,385, covering 55,800 persons in the same period of 1949. Total benefits paid in 1949 were a record \$11,392,398, compared with \$5,482,189 in 1948. The state expended for health, welfare and charities for the fiscal years ending June 30, 1950, and June 30, 1949, \$15,155,290 and \$12,967,966, respectively. Thirteen state institutions (correctional, insane hospitals, sanatoria) for the fiscal year 1950 had a total inmate population of 5,347; the total expended for the fiscal years 1950 and 1949 was \$4,550,030 and \$4,957,454, respectively.

**Communications.**—Highways of the state (1950) were: state highways, 3,147 mi.; state-aid highways, 7,721 mi.; local highways, 10,796 mi.; total highways, 21,844 mi. In the year ended June 30, 1950, the state expended for highway purposes, exclusive of debt and interest charges, \$20,376,606, compared with \$19,531,007 for 1949.

Steam railway mileage (1947) was 2,709 mi. Maine had 38 licensed commercial airports in 1950, of which 20 had paved runways. The New England Telephone and Telegraph company reported 208,288 telephones in service as of Dec. 1, 1950. Not including trailers and tractors there were 253,483 motor vehicle registrations for 1949, with 276,875 estimated for 1950.

**Banking and Finance.**—During 1950 the Maine banking department supervised 32 savings banks, 30 trust companies, 30 building and loan and savings and loan associations, 2 industrial banks, 8 credit unions and 18 specially chartered loan companies. The following figures are for June 30, 1950: deposits of savings banks \$238,776,000, total assets \$273,640,000; trust company deposits \$228,186,000, total assets \$250,756,000; building and loan and savings and loan associations, total assets \$35,334,000. There were 33 national banks in the state, with deposits as of June 30, 1950, of \$219,080,000 and total assets of \$244,082,000. Total banking resources in Maine stood at an all-time high as of June 30, 1950, of \$815,511,237.

State receipts, expenditures and bonded debt for the fiscal year ending June 30, 1950, were, respectively: \$61,210,062, \$61,811,434, \$8,517,500. For the year ending June 30, 1949, they were, respectively: \$58,156,895, \$58,063,521, \$10,221,500.

**Agriculture.**—Gross farm income was estimated to have fallen one-fourth in 1948 and 1949, and it dropped again in 1950. The Maine potato allotment was cut 15% below 1949, and at the same time the support price was cut from \$2.10 per hundredweight on the 1949 crop to \$1.70 on the 1950 crop.

Table I.—Leading Agricultural Products of Maine

Crop	1950	1949	1939-48 average
Corn, bu. . . . .	455,000	462,000	509,000
Oats, bu. . . . .	4,802,000	3,990,000	3,274,000
Barley, bu. . . . .	210,000	155,000	113,000
Buckwheat, bu. . . . .	132,000	168,000	116,000
Hay, tons . . . . .	788,000	834,000	858,000
Potatoes, bu. . . . .	61,750,000	70,215,000	56,252,000
Apples, bu. . . . .	1,391,000	1,006,000	768,000
Beans (dry), 100-lb. bags . . . . .	45,000	57,000	70,000

**Fisheries.**—During the first nine months of 1950, landings of fish at Maine ports amounted to 298,993,554 lb. valued at \$11,234,038, compared with 200,758,483 lb. valued at \$10,774,945 for the corresponding period of 1949. Total landings for 1949 were 292,203,570 lb., valued at \$14,998,040 to the fishermen.

**Manufacturing.**—There were 1,409 industrial firms in Maine in 1949, with production valued at \$844,176,289 and 113,144 employees, of whom 74,756 were men and 38,388 were women.

**Mineral Production.**—The principal mineral products (1948) in order of value were cement, stone, clay, sand and gravel, feldspar. Other products included slate, lime, mica, peat and semiprecious stones.

Maine ranked 45th among the states in value of mineral production in 1948, with .07% of the value for the U.S.

## Malaya (Federation of) and Singapore.

The Federation of Malaya is a British dependency consisting of the settlements of Penang and Malacca and the protected states of Johore, Kedah, Kelantan, Negri Sembilan, Pahang, Perak, Perlis, Selangor and Trengganu. Area: 50,680 sq.mi. Pop.: (mid-1949 est.) 5,091,000. Singapore is a British colony comprising

the island of that name and the Cocos-Keeling Islands and Christmas Island. Area: 282 sq.mi. Pop.: (mid-1949 est.) 989,000. High commissioner for the federation: Sir Henry Gurney; governor of Singapore: Sir Franklin Gimson; commissioner-general for the United Kingdom in southeast Asia (who exercises general supervisory authority): Malcolm Macdonald.

**History.**—The struggle in the federation against the Communist terrorists operating from the jungle, about 95% of whom were Chinese, continued inconclusively in 1950. Up to the end of October 1,487 terrorists had been killed and 600 wounded; 530 suspects had been arrested of whom 130 had been sentenced to death and 136 imprisoned. On the other side, 494 regular, special and auxiliary police, mostly Malay, had been killed and 541 wounded; 1,180 civilians had been killed (including 788 Chinese and 53 Europeans) and 700 wounded; 343 civilians were missing.

On June 7 Lieut. Gen. Sir Harold Briggs, the newly appointed director of operations, whose task was to co-ordinate military, police and administrative measures against the terrorists, put into operation what became known as the Briggs plan. Its chief feature was an attempt to cut the jungle terrorists off from the supplies they had been obtaining from the population. In particular the resettlement and regrouping of scattered Chinese "squatter" cultivators, who had been an easy pray for terrorist raiding parties, went forward rapidly with co-operation and financial support from the Malayan Chinese association. Of approximately 25,000 "squatter" families involved, about 14,000 had by October been resettled within reach of police protection. But there remained rubber small holders, pineapple growers and oil-palm cultivators many of whom were widely scattered and, therefore, potential sources of supply for the terrorists. About 22,000 troops, British, Gurkha and Malay, with air support, were deployed against the terrorists as well as 130,000 regular and auxiliary police and special constables.

During 1950, especially after the outbreak of the war in Korea, and mainly as a result of United States stockpiling, the price of rubber rose steeply from 50 Malayan cents a pound in January to Malayan \$2.35 a pound in November. Despite terrorist activity against the rubber estates, the average monthly rubber production in Malaya (569,988 tons for January-October) was higher than in 1949.

A notable feature of the foreign trade of the federation and Singapore was the favourable balance of trade with the U.S., Malayan \$317,000,000 in 1949 and Malayan \$306,000,000 in January-June 1950, which provided an outstanding contribution to the U.S. dollar resources of the sterling area.

In Singapore in 1950 the illegal underground Communist organizations such as the General Labour union, the Singapore Students Anti-British league and the Malayan Communist party carried on an active propaganda campaign supported by sabotage, arms raids and occasional terrorist murders. Of more than 40 arson attempts, 20 were successful. A bomb-throwing attempt was made on the life of the governor, Sir Franklin Gimson, on April 28. The Chinese newspaper *Nan Chian Jit Pao*, which had Communist sympathies, was closed down on Sept. 21. The Singapore Chinese High school and the Nanyang Girls' school were closed after the police discovered illegal Communist pamphlets in them on June 3, but they were reopened on Aug. 14 subject to strict control by the Singapore education department.

Litigation started in May over the custody of a Dutch girl, then aged 13, who had been living as a Moslem in a Malay village, caused much feeling among Moslems. The girl, Bertha Hertogh, had been cared for and brought to Malaya by a Malay woman after her parents were interned by the Japanese in Java. While the case was pending she was married by Moslem rites to a Malay schoolteacher. On Dec. 2 the high court awarded custody to the

Dutch parents and declared the Moslem marriage null. From then a campaign of protest mounted until on Dec. 11, when the court of appeal heard an application for a stay of execution of the previous judgment, serious rioting broke out. This continued through Dec. 12 when the court refused the application and the girl and her mother left by air for the Netherlands. By the time the rioting was quelled on the evening of Dec. 13 at least 14 people, including 6 Europeans, had been killed, and 144 injured. The governor announced that a commission of inquiry would be appointed and that an immediate inquiry, to make recommendations affecting the police, would be conducted by D. W. MacIntosh, commissioner of police, Hong Kong.

**Finance and Trade.**—Currency: Malayan dollar, linked with sterling (Malayan dollar=32.67 cents U.S.). Budgets (1950 est.): (federation) revenue Malayan \$330,859,022, expenditure Malayan \$303,951,292; (Singapore) revenue Malayan \$102,810,944, expenditure Malayan \$93,078,128. Foreign trade (1949, trade between Singapore and the federation excluded): (federation) imports Malayan \$535,111,956, exports Malayan \$624,001,844; (Singapore) imports Malayan \$1,305,078,002, exports Malayan \$1,054,930,894. Principal exports: rubber, tin, coconut oil, copra, palm oil, canned pineapples and spices. (D. A. SN.)

**Malik, Jacob A.** (1906– ), soviet diplomat, was born at Kharkov, Ukraine. After graduating from the Soviet Institute of Foreign Affairs, he was appointed assistant chief of the press section at the people's commissariat of foreign affairs in 1937. In 1939 he was sent as counsellor of the soviet embassy in Tokyo, Japan, where he became ambassador on May 20, 1942. From Jan. 1946 he was political adviser to Gen. Kuzma N. Derevyanko on the Allied Council for Japan, but on Aug. 24, 1946, was appointed deputy minister of foreign affairs in charge of the far eastern department. In May 1948 he succeeded Andrei A. Gromyko as a chief soviet representative to the United Nations. On Aug. 1, 1950, after a seven-month's absence from the Security council in protest at the presence of the Chinese nationalist delegate, Malik returned to the council and was chairman during that month.

**Malta.** This British colony consists of a group of Mediterranean islands about 58 mi. S. of Sicily; only two, Malta and Gozo, are of importance. Area: Malta 94.9 sq.mi., Gozo 25.9 sq.mi. Pop. (Malta and Gozo, 1948 census): 305,991, of whom 27,680 are on Gozo. Principal towns: Valletta (cap., 18,666), Sliema (24,294), Hamrun (17,124), Birkirkara (16,070). Governor (1950), Sir Gerald Creasy; prime minister, Paul Boffa. Enrico Mizzi (from Sept. 26) and G. Borg Olivier (from Dec. 20).

**History.**—Sir George Schuster, who had been appointed to look into the long-term problems of the island's economy, went to Malta in April 1950. In May he advised the government of Malta that the island could not hope at that time to pay for the maintenance of its essential services, and shortly afterward the British government agreed in principle to provide a grant of £1,500,000 from colonial development funds over the next five years to strengthen the economic foundations of the island and to make good arrears of necessary capital expenditure. In August it was announced that \$2,300,000 of Marshall aid funds would be made available to meet almost half the cost of a new electric power plant. In June Boffa's government was defeated in the legislative assembly. At the resultant general election Mizzi's Nationalist party won 12 seats, Boffa's Labour group 11, Malta Labour party 11, Constitutionals 4, Democratic Action party 1, Independent 1. Mizzi assumed office as prime minister with a minority government on Sept. 26. When the new assembly opened on Oct. 16 the speech from the throne contained a warning that the deficit for the current year would probably rise from £187,000 to £475,000 and that reserves would dwindle to £900,000. Continued efforts to foster emigration resulted in a total of 5,178 persons leaving by Aug. 31, as compared

with 5,318 during the whole of 1949, but 4,811 babies were born in the eight months and the population was only reduced by 367.

Prime Minister Mizzi died on Dec. 20, 1950; he was succeeded by G. Borg Olivier.

**Finance and Trade.**—Currency: pound sterling. Budget (1949-50 est.): revenue £5,380,962; expenditure £5,586,683. Foreign trade (1949): imports £15,311,753; exports, incl. re-exports, £1,037,501. (K. G. B.)

\*Nine months.

The domestic output declined by about half after 1944, and was close to 130,000 tons a year from 1947 to 1949. In 1950 there was some improvement, with 109,800 tons in the first three quarters. In 1949 and in most of 1950 consumption was low, but imports were kept high, providing significant amounts to add to stocks. Imports from the U.S.S.R. had almost ceased, but there were compensating increases from India, the Union of South Africa and Gold Coast. (G. A. Ro.)

**Manitoba.** Central province of Canada and geographic centre of North America, Manitoba was established as a province on July 15, 1870; area: 246,512 sq.mi. (26,789 sq.mi. water); pop. (1946 census): 726,923, of which 389,592 were rural; (1950 est.): 795,000. Capital: Winnipeg (229,045). Other cities are: St. Boniface (21,613); Brandon (17,551); Portage la Prairie (7,620); and Flin Flon (municipal district) 7,595.

**History.**—The government of Douglas Lloyd Campbell, elected on Nov. 10, 1949, lost its coalition character through the resignation from the cabinet of E. F. Willis, and the decision of the Conservative party of Oct. 27, 1950. Two members of the party stayed with the government while the party became the official opposition in the legislative meetings of November. This special session was called to deal with the financial adjustments made necessary by the Red river flood disaster of April and May 1950. A public subscription received responses from Great Britain, the United States and Canada sufficient to alleviate the personal losses of citizens of farms, villages and greater

Winnipeg. In 1950 the legislature elected as its speaker Nicholas V. Bachynsky, the first Ukrainian to hold such an office of British parliamentary record. Col. A. C. Delaney was appointed civil defense co-ordinator for Manitoba. Legislative committees were studying revisions of the Election act, the Government Liquor Control act and the Workmen's Compensation act.

**Education.**—Students in the public schools for the school year 1948-49 totalled 110,787 of which 12,144 were in the secondary grades. A public library advisory board of representative citizens was created to advise the government upon policy. A new curriculum for public schools was being introduced to provide courses for academic, industrial, home economics, agricultural and commercial standing.

**Public Health and Welfare.**—Under the Manitoba Health plan there were, in 1950, 13 health units and 2 regional diagnostic units (Dauphin, Selkirk); there were no new hospital beds in 1950.

**Communications.**—Six radio stations continued broadcasting in Manitoba. The Canadian National and Canadian Pacific railways were the principal railways operating, with western headquarters in Winnipeg. The former operated the Hudson's Bay railway to Churchill on Hudson bay. With the Midland and Greater Winnipeg Water district in addition, there were approximately 4,900 mi. of track in Manitoba exclusive of yard miles and sidings. The Stevenson air field in the Winnipeg district was the centre for national and international services. The Manitoba government telephone wire mileage totalled 434,358 in 1950 with 137,238 subscribers in operation of which 94,052 were in the greater Winnipeg area. Plans were laid for the expansion of automatic service to subscribers outside this urban region.

**Finance.**—At March 31, 1950, the net debt of the province was \$48,409,386 with a self-sustaining debt (largely government enterprises) of \$55,565,922. Programs of expansion of telephone, rural electrification and power sites were increasing the total of the latter debt. Costs of the Red river flood damage were met from consolidated revenue and no taxation changes were made.

**Agriculture.**—Rain and snow at harvesting seriously depreciated the quality of an above-average production in 1950. Field crops were valued at approximately \$163,500,000 and total gross agricultural production was estimated at \$265,000,000, to be later supplemented by accumulated payments for recent crops by the Canadian Wheat board. The beet sugar production processed reached a record of about 150,000 tons. The fishing industry at Hudson bay proved successful and was expanded. A wild rice industry located at Lac du Bonnet on the Winnipeg river was established during the year.

**Fishing and Fur.**—Commercial fishermen numbered 5,313 in the period 1949-50, catching 29,502,600 lb. valued at \$2,820,559 (market value \$4,800,387).

Fur trappers totalled 7,377, of whom 2,332 operated on established registered trap lines; the wild catch was valued at \$3,170,470. Furs valued at \$1,334,570 were produced on 624 fur farms.

**Manufacturing.**—In 1949 the gross value of manufacturing totalled \$525,000,000, approximately 43,000 persons being employed with pay rolls totalling about \$87,000,000; 47 new industries were established in 1949 with a trend toward provincial decentralization in evidence.

**Mineral Production.**—In 1949 mineral production was valued at \$24,135,331 of which metals represented \$17,118,136. Copper, gold, zinc, cement and gypsum lead in production. (J. L. J.)

**Mao Tse-tung** (1893— ), chairman of the Chinese Communist party and chairman of the Chinese People's Republic, was born in Shao Shan, Hunan province, and educated in Changsha. He participated in 1921 in the founding of the Chinese Communist party in Shanghai. In 1931 he became political commissar of the 4th Red army, and in Jan. 1934 at the second All-China Soviet congress he became unchallenged leader of the Chinese Communists. By then Chiang Kai-shek's "annihilation campaigns" had come close to eliminating Communists in central China, but Mao led his forces into havens in northwest China on the "long march" of 1934-35.

From 1937 to 1943 he generally supervised forces combating the invading Japanese, under an uneasy truce with Chiang, and after the Japanese surrender in 1945 he supervised the forces that progressively drove Chiang's nationalists back until by the autumn of 1949 the Communists launched their new People's government.

Early in 1950 Mao spent nine weeks in Moscow conferring on a 30-year friendship and mutual defense treaty, whose terms were announced Feb. 14. Mao on June 24 said his army's demobilization would not alter plans to "liberate" Tibet and Formosa, and the Tibetan invasion subsequently began. In December there were persistent rumours that Mao had again visited Moscow, and that a joint Chinese-Korean-Russian headquarters had been set up in Manchuria to conduct the offensive in Korea. **Marine Biology.** One of the outstanding scientific achievements in marine exploration during 1950 was completed jointly by the Scripps Institute of Oceanography, La Jolla, Calif., and the Electronics laboratory of the U.S. navy. Two laboratory ships, 30 scientists and 85 crew members completed a three-month, 29,000-mi. study of the ocean bottom of the Pacific from Cape Mendocino, Calif., to Wake, Kwajalein and some of the other coral islands lying south and west of Hawaii.

In addition to studying the topographical configuration of the so-called "sunken continent" of the Pacific, the expedition gathered much physical and biological data which were considered to be significant additions to existing knowledge of this vast area. Earthquake reflection techniques were used to reveal mud and rock structures of the ocean bottom. Biologically, the mud samples dredged yielded bacteria which must have been dormant for perhaps millions of years in nature's largest "deep freeze"; when put under special culture media, the organisms became animated and grew with strength and vigour. They may be the oldest living things in the world. The atolls Bikini and Kwajalein, built by minute sea corals, were reported to be larger than the pyramids of Egypt. From the mile-deep summits of a continuous mountain range system 50 mi. wide and extending more than 1,100 mi. in length were dredged clam and snail shells and sea urchin casts, as well as specimens of mile-deep sea corals. Since the latter organisms grow normally only within 100 ft. of the sea surface, it was postulated that these recovered specimens were buried be-

neath the waves about 40,000,000 years ago. Many specimens of odd tropical deep-sea fishes, some hatchet-shaped and others with lantern-studded forms, were netted. Squid were taken in some localities.

Using a Fathometer originally designed for navigation purposes by the U.S. coast and geodetic survey, a worker from the Institute of Fisheries secured profiles of Pamlico sound of North Carolina wherein transects showed the distribution of the oyster beds of the region. The actual location of each bed was subsequently verified by conventional oyster dredgings. Thus it was concluded that such a technique could be profitably used in bed location in waters not previously commercially discovered or utilized.

In an attempt to hybridize the Japanese oyster (*Ostrea gigas*) with the native Atlantic coast form (*Ostrea virginica*), a worker at the Milford laboratory of the U.S. fish and wildlife service concluded that although hybrid larvae could be successfully produced in genetic crosses in either direction they were short-lived and all such crosses resulted in the death of almost all the larvae by the tenth day. Nonhybrid controls of each species, however, matured successfully. *O. virginica* metamorphosed in 19–25 days while *O. gigas* metamorphosed somewhat slower, requiring 26–27 days. Thus any attempt to introduce the Japanese oyster would probably not seriously affect the native oyster of the Atlantic coast.

A worker at the University of Miami Marine station, studying the growth rate of oysters in the Florida waters, concluded that in five weeks oysters attained a length of one inch, which was the equivalent of a whole year's growth in northern waters. A length of four inches was attained in 31 weeks in Florida, which would normally take four years in northern waters. Such studies would seem to be of great economic value to the commercial oyster industries.

Workers at the Bermuda Biological station found evidence that approximately 20% of the experimentally tagged spiny lobsters *Panulirus argus*, when displaced from their natural habitats and taken to various distances (some as far as 2 mi. away), returned. The results of these experiments were interpreted to mean that these marine forms exhibit a "homing instinct," and that their behaviour patterns not only are of scientific interest but have a bearing upon the species commercially.

The National Institute of Oceanography of Great Britain sponsored a ten-month expedition to the antarctic seas for the purpose of whale tagging and in search of specimens of *Latimeria*, a species of fish speculated to represent a group which dates back about 50,000,000 years.

A worker at the Marine laboratory at Miami determined by a series of experimental runs that several species of *Sargassum*, which can be harvested in unlimited amounts from Florida and other Atlantic waters, contained algin in variable but commercially profitable amounts. The limits of variability of the dry products varied from 9% to 17% in sample runs. Certain species of *Laminaria*, however, were found to be more productive of algin, the limit varying from 12% to 27%.

Records of the recovery of several rare fish were reported from the fisheries branch (department of agriculture) of Dublin, Ire. The more important included the globefish (*Lagocephalus lagocephalus*), the triggerfish (*Balistes caprisus*), the boarfish (*Capros aper*), the rare *Luvarus imperialis*, the long-finned tuna (*Orcynus germon*) and Ray's bream (*Brama raii*).

From the report of the National Museum of Wales there was recorded the recovery of a rare specimen of the globefish (*Lagocephalus lagocephalus*) and a rare specimen of the filefish, or triggerfish (*Balistes caprisus*).

A new species of sand eel was described by a worker at the Marine Biological laboratory at Plymouth, Eng. It was tentatively

LAUNCHING A DREDGE from the navy tender U.S.S. "Mulberry" off the California coast, during a 1950 geological survey of the continental shelf. One of the factors being investigated was the distribution of submarine life in relation to temperature and depth

given the name of *Ammodytes Sp. IV.*, the name referring to the distinguishing dark colour of its snout.

Marine and oceanographic problems were reviewed by scientists in two symposia during the year, one at Miami university, Miami, Fla., on Nov. 6, having to do with basic oceanographic and biological problems, and another at the Bermuda Biological station dealing with underseas research. (See also NATIONAL GEOGRAPHIC SOCIETY; OCEANOGRAPHY; ZOOLOGY.)

**BIBLIOGRAPHY.**—John S. Colman, *The Sea and its Mysteries* (London, 1950); Vern O. Knudsen, Alfred C. Redfield, Roger Revelle and Robert R. Shrock, *Education and Training for Oceanographers*, Contribution no. 519, Woods Hole Oceanographic Institution, and Contributions from the Scripps Institution of Oceanography, New Series no. 463 (1950). In a survey report on basic problems of underwater acoustics, research was made available without charge by the publication office of the National Research Council, Washington, D.C. One section of this report concerns soniferous marine life and identifies noises made by many marine forms. **Marine Corps.** The United States marine corps, established Nov. 10, 1775, by resolution of the Continental Congress, has been an integral part of the United States naval establishment since 1798. It is headed by a four-star general, who serves a four-year term as commandant by appointment of the president. The 19th commandant, Gen. C. B. Cates, assumed office Jan. 1, 1948.

The air, ground and sea missions of the marine corps during 1950 were mainly those set forth in the National Security act of 1947 as amended: (1) to provide land combat and service forces and such aviation as may be organic therein, organized, trained and equipped to provide fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the seizure or defense of advanced naval bases, and for the conduct of such land operations as may be essential to the prosecution of a naval campaign; (2) to develop, in co-ordination with the army and air force, those phases of amphibious operations which pertain to the tactics, technique and equipment employed by landing forces; (3) to provide detachments and organizations for service on armed vessels of the navy; (4) to provide security detachments for the protection of naval property at naval stations and bases; and (5) to perform such other duties as the president may direct provided that such additional duties shall not detract from or interfere with the operations for which the marine corps is primarily organized.

The fleet marine forces, composed of two divisions at reduced strength and two air wings at reduced strength, in 1950 continued their amphibious operations in Alaska, and on both coasts of the United States. They trained marine reservists and conducted demonstrations for the army Command and General Staff school, Ft. Leavenworth, Kan., and for the U.S. Naval and Military academies, while undergoing further reductions dictated by budgetary requirements. Thus on June 30, 1950, total strength of the marine corps was 74,279, including 7,254 officers and 67,025 enlisted men.

As a result of the war in Korea, the marine corps called for volunteers and began expanding in July. Organized ground reserves were mobilized in a period of 43 days. Certain air reserve squadrons were mobilized, and volunteer reserves began to be called up.

Meanwhile, the 1st provisional marine brigade—a balanced air-ground team of the 5th marine regimental combat team and marine aircraft group 33—went into action in Korea on Aug. 7, 1950.

These units were absorbed by the 1st marine division and 1st marine aircraft wing for the amphibious assault at Inchon on Sept. 15, 1950.

(C. B. Cs.)

**Marketing:** see BUSINESS REVIEW.

**Marriage and Divorce.** Throughout early 1950 marriage and divorce rates declined slightly in most countries. Part of the decline resulted from the rising cost of living; another factor was the unprecedented number of marriages and divorces among younger people immediately after World War II. The spurt in marriages in some countries during the second half of the year probably reflected the threat of another war.

From statistics for several countries it seemed evident that fully two-thirds of children affected by divorce were under age ten years.

**United States.**—With a marriage rate estimated at 11.2 per 1,000 population, a provisional total of 1,660,000 marriages was expected for 1950—an increase of nearly 5% over the preliminary total of 1,585,440 marriages for 1949 but a decrease of more than 8% from the final total of 1,811,155 marriages for 1948. The number of divorces including annulments probably would not exceed 380,000—decreases respectively of 2% and 7% from the 386,000 divorces of 1949 and 408,000 in 1948.

Table 1.—Divorces and Annulments by Duration of Marriage for Specified States; 1948\*

Duration of marriage before decree	Number of annulments and divorces	Duration of marriage before decree	Number of annulments and divorces
Under 1 yr.	5,614	14 yr.	1,677+

\*Adapted from Table 5, "Divorce and Annulment Statistics: Specified States, 1948," *Vital Statistics—Special Reports* (Aug. 7, 1950), U.S. Public Health Service. (Specified states: Connecticut, Florida, Iowa, Maryland, Massachusetts, Mississippi, New Hampshire, Oregon, South Dakota, Tennessee, Virginia, Wisconsin and Wyoming.)

†Includes estimates for Wyoming based on state total for period 6-9 yr.

‡Includes estimates for Virginia and Wyoming based on state totals for periods 10-14 yr. and 15-19 yr. respectively.

§Includes estimates for Wyoming based on state total for 20 yr. and over.

Among the findings from various studies were that, as of 1948, 20% of persons currently divorced and 18% of those married but with spouse absent had been married before, compared to 13% of the widowed, or those with spouses, who had been married more than once; that about three-fourths of divorced persons remarried within five years, usually with other divorced persons; that only 2% of U.S. college students were taking courses in preparation for marriage; that 60% of all women in *Who's Who in America* had been married at least once and 14% more than once; that one-fourth to one-third of prewar marriages were expected to terminate in divorce; that, as late as 1949, approximately 2,156,000 married couples were living in hotels, rooming houses or with relatives; that, as of April 1949, there were 2,191,000 widowed and 842,000 divorced males who had not remarried, compared with 6,582,000 widowed and 1,233,000 divorced females; that the divorce rate of couples with children was increasing more rapidly than for those without children; that 6% of men and 3% of women college students fa-

miliar with the Kinsey report reported that their conduct and behaviour had been influenced by the findings.

\*Adapted with consolidations where possible, from Table 3, "Divorces and Annulments, by Cause: Specified States, 1948," *Vital Statistics—Special Reports* (Aug. 7, 1950), U.S. Public Health Service. (Specified states: Connecticut, Florida, Iowa, Mississippi, Montana, New Hampshire, Oregon, South Dakota, Tennessee, Vermont, Virginia, Wisconsin and Wyoming.)

**Great Britain.**—British schoolmasters at a conference of their national association adopted a resolution stating their "conviction that education in sex is the natural and normal duty and the responsibility of the parents and should not be delegated to the teacher." In the field of socialized medicine, an increase of 32% in "physical incapacity" was noted among younger women and 41% among older women compared to 8% and 9% respectively for younger and older men. The British registrar-general reported about 42,402 illegitimate births during 1948 and approximately 61,050 births within eight and one-half months after the parents' wedding date, indicating premarital conception. Together these constituted about one-eighth of all births. Studies of 2,665 British women (mostly married) who went to hospitals for care after abortions (usually self-induced) revealed that 75% had undergone a previous abortion. The Royal College of Obstetricians and Gynaecologists after an investigation of birth-control practices found that, of every three couples who marry, one uses contraception from the wedding, and a second within five years.

A special committee of the home office proposed that parliament, in addition to present support, should provide other funds to the National Marriage Guidance council, the Catholic Marriage Advisory council and the Family Welfare association if they would unite in a plan of special training for marriage counsellors. On the request of the war office, the National Marriage Guidance council continued its four-day courses on "successful marriage and family life" for men and women in the armed forces.

**Canada.**—The divorce rate continued to decline except in Nova Scotia and Quebec; the highest rate was in British Columbia, with approximately twice the dominion average. Parliament refused to broaden the divorce laws; the only ground for divorce remained adultery except in Nova Scotia where cruelty was also recognized. As in Quebec, Newfoundland citizens might petition the federal government for a divorce granted only on the approval of parliament. A sweeping bill was passed by parliament banning obscene literature and children's comic books depicting crime.

**Other Countries.**—With revised laws permitting anyone over 35 years of age to adopt a child, the number of adoptions was increasing in Belgium; the divorce rate was steadily rising with grounds largely confined to cruelty and adultery. In Finland nearly a dozen marriage guidance clinics were being maintained by the Finnish Population association with more than half the clients coming only for contraceptive information. The Family Allowance administration in France was lending to large families up to 80% of the cost for labour-saving machinery in the home. A surplus of 3,000,000 women was reported in Germany. In a survey of patterns of sexual behaviour in Frankfurt, 89% of males and 70% of females stated that they had engaged in premarital

sex relations, and about 23% of husbands and 10% of wives admitted extramarital relations.

By decree of the Holy Synod of the Orthodox Church in Greece, its members were prohibited from marrying foreigners except with special permission of the ministry of public order. From the Netherlands came a report that 13% of Roman Catholics contracted mixed marriages from which only one-third of the children were reared as Catholics. In Italy, where the birth rate continued to decline, the senate approved a new law intended to halt easy marriage annulments and passed a bill to outlaw prostitution. Rota, the Vatican tribunal passing on the validity of marriages, reported that during 1936-49 it had granted 479 requests to nullify marriages and had rejected 686 cases. Poland's new family law, effective Oct. 1, adopted the principle of community property and equal rights to children born in or out of wedlock and provided that divorce "is not admissible if small children would suffer as a result." Nearly 30,000 women were receiving basic training as homemakers in Sweden's more than 300 homemaking schools.

Representing many different Christian denominations, the World Ecumenical institute held a conference in Switzerland on problems of the family; Zurich reported a divorce rate of 900 per 100,000 couples with the rate for mixed religious marriages approximately twice that of marriages involving similar religions.

In China the Communist government outlawed plural wives, concubines, child marriages and betrothals and interference with the right of a widow to remarry, and further provided that marriage and divorce could be legalized by mutual consent with both contracting parties held responsible for the welfare of any children. Israel reported a shortage of 20,000 females aged 15-34 years. In Japan, rates of marriage, birth and divorce continued to be high; because of the spread of abortions, plans were under way to provide contraceptive information to the destitute classes. More than 31,000 parent-teacher associations were reported as well as the founding of a national institute of genetics at Mishima. In Egypt, the rector of the University of Al-Azhar, Moslem university in Cairo, declared that contraception was not contrary to the doctrines of Islam. (See also BIRTH STATISTICS; LAW.)

**Marshall, George Catlett** (1880— ), U.S. secretary of defense, was born at Uniontown, Pa., on Dec. 31. He studied at the Virginia Military institute, Lexington, Va., and was commissioned a second lieutenant in 1901. He advanced through the grades to general of the army in 1944. He was made chief of staff Sept. 1, 1939, the day Germany's invasion of Poland launched World War II, and he supervised the U.S. army effort throughout the war.

Marshall resigned as chief of staff in Nov. 1945. Later that month he was appointed ambassador to China, where he spent 13 months in a futile effort to mediate the Chinese civil war. On Jan. 7, 1947, Pres. Harry S. Truman announced Marshall's appointment as secretary of state to succeed James F. Byrnes. Several months later, Marshall proposed a plan for the reconstruction of Europe with U.S. aid. This proposal, commonly called the Marshall plan, was translated into the European Recovery program enacted into law in April 1948. It played a significant part in the economic rehabilitation of western Europe, particularly France, Great Britain and Italy.

Marshall resigned from the cabinet in Jan. 1949 and in September was named president of the American Red Cross. A year later President Truman appointed him secretary of defense.

Special legislation was passed by congress to permit Marshall to take the post, since the National Security Act of 1947 prohibited an officer who had seen active duty within the preceding ten years from becoming defense secretary. His appointment was confirmed Sept. 20, 1950, and he was sworn in Sept. 21. Marshall urged the passage of a universal military training law, stating that the war in Korea had demonstrated the danger to the U.S. of its lack of a reserve of trained manpower.

## Marshall, Caroline and Mariana Islands.

The Marshall, Caroline and Mariana Islands, stretching from about 1° to 20° N. lat. and from 130° to 170° E. long., constitute, with the exception of Guam in the Marianas, the Trust Territory of the Pacific Islands. The territory contains 96 distinct island units of which 64 are inhabited, with a combined land area of about 687 sq.mi. Truk, in the centre of the territory, is 4,931 mi. W. of San Francisco and 1,832 mi. E. of Yokohama. The total resident population on June 30, 1950, was 54,843; three-fifths of the population live on the six principal island units: Saipan, the Palaus, Yap, Truk, Ponape and Majuro.

**History and Government.**—The U.S. occupied many of the islands during World War II and received a trusteeship over the territory from the United Nations in 1947. The territory is under the administration of the U.S. navy; the high commissioner is the commander in chief of U.S. naval forces in the Pacific. Admiral A. W. Radford was appointed high commissioner in April 1949. The territory is divided for administrative purposes into five administrative districts: Saipan, Palau, Truk, Ponape and Marshall Islands. Although plans existed for creating a territorial legislature, by the end of 1950 one had not been established and each district continued to have some sort of body advisory to the district civil administrator. There are 116 municipalities in the territory; municipal officers, who are natives, are elected by the people in some municipalities and are hereditary officials in others.

**Education.**—On March 31, 1950, there were 140 public schools with 275 teachers and 7,562 pupils and 14 mission schools with 63 teachers and 1,439 pupils.

**Finance.**—During fiscal year 1951 it was estimated that receipts would total \$310,000, and that U.S. appropriated funds totalling \$1,014,000 would be available. Total expenditures were estimated at \$1,324,000.

**Industry and Trade.**—The only important commercial resources are copra and phosphate rock; 9,909 short tons of copra were produced during the fiscal year ending June 30, 1950. During the same period 148,215 short tons of phosphate rock were mined. The territory's total exports in the fiscal year ending June 30, 1950 amounted to \$1,643,000, of which copra represented 48% and phosphate rock 40%; imports of all commodities totalled \$1,348,000. (See also GUAM; TRUST TERRITORIES.)

**BIBLIOGRAPHY.**—United Nations Trusteeship Council, *Report of U.N. Visiting Mission to Trust Territories in the Pacific on the Trust Territory of the Pacific Islands* (Aug. 15, 1950).

**Marshall Plan:** see EUROPEAN RECOVERY PROGRAM.

**Martinique.** The status of this former French island colony situated in the Lesser Antilles was changed in 1946 to that of an overseas *département*. Area: 427 sq.mi. Pop.: (1949 est.) 268,000. The inhabitants are mainly coloured (Negro or mixed), speak a French patois and are Roman Catholic. The capital is Fort-de-France (pop., 1946 census, 66,006). Prefect: Christian Laignet.

**History.**—The sugar quota from 1950 production reserved for export was fixed at 36,000 metric tons out of 42,000 tons produced, that is, double the figure for the previous year. This increase was caused not by a large harvest but by the decline in rum-distilling which resulted from export difficulties. From February the island received flour stocks from France and no longer from the United States. An airport was opened at Lamentin on May 15, though it had been feared that work might be inter-

rupted by lack of credit. There was a great drive to develop tourism to Martinique. In June the 10th session of the Caribbean commission was held at Fort-de-France.

**Finance.**—Budget: (1949 actual) balanced at 944,200,000 fr.; (1950 est.) balanced at 1,385,600,000 fr. Monetary unit: metropolitan franc, with an exchange rate (1950) of U.S. \$1=350 francs.

**Foreign Trade.**—(1949) Imports 8,533,200,000 fr.; exports 5,105,000,000 fr.

**Transport and Communications.**—Ships entered (1949) 681. Cargo unloaded 151,700 metric tons; loaded 103,200 metric tons.

**Agriculture.**—Main products (1950): sugar cane 509,800 metric tons; sugar 37,100 metric tons; rum 120,192 hl. (C. A. J.)

**Maryland.** One of the original states of the United States, long known as the "Old Line state," and, in later years, as the "Free state." Maryland is bounded on the north by Pennsylvania and Delaware, on the east by Delaware and the Atlantic ocean and on the south and west by Virginia and West Virginia. The total area is 10,577 sq.mi., of which 690 sq.mi are water. Population in 1950 was 2,343,001, according to the official census determination. This was an increase of 28.6% from the 1940 population. Annapolis (pop. 1950, 15,016) is the capital. Other cities in the state, with 1950 census preliminary population figures, are Baltimore (940,205), Cumberland (37,632), Hagerstown (36,232), Frederick (18,092) and Salisbury (15,109).

**History.**—On a referendum vote in Nov. 1950 the Ober law, which prohibited certain subversive activities, was approved. This law, passed in 1949, had been held invalid by the lower court, but the court of appeals had reversed this decision and had held it valid.

The following officers were elected at the Nov. 1950 election: Theodore R. McKeldin (Rep.), governor; J. Millard Tawes (Dem.), comptroller; Hall Hammond (Dem.), attorney general; John Marshall Butler (Rep.), U.S. senator. U.S. congressmen elected were: Edward T. Miller (Rep.); Gen. James P. S. Devereux (Rep.); Edward A. Garmatz (Dem.); George H. Fallon (Dem.); Lansdale G. Sasscer (Dem.); and J. Glenn Beall (Rep.).

A revised child-labour law was enacted at the 1950 session of the general assembly. There was a one-day special session on July 27, 1950, to provide for absentee voting for members of the armed forces; and a one-day special session on Nov. 10, 1950, to exempt all purchases up to 50 cents and all foods and meals from the retail sales tax.

**Education.**—In 1949-50 there were 868 public elementary and occupational schools in the state (including Baltimore city), with a total enrolment of 230,868 and a teaching staff of 6,524. There were 225 secondary and vocational schools, with an enrolment of 114,092 and a teaching staff of 4,989. In the elementary schools approximately one student in four was a Negro and in the higher schools approximately one in six was a Negro. The enrolment in Catholic schools for the entire state was 54,893 white and 2,516 Negro students. The enrolment in non-Catholic private schools was 12,246 white and 166 Negro students. Thomas G. Pullen, Jr., was state superintendent of schools.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—As of June 30, 1950, old-age assistance was being given to 12,107 persons, with a total cost for the fiscal year ended June 30, 1950, of \$5,173,637; public assistance was being given to 488 needy blind persons, with a total cost of \$233,293 for the fiscal year; aid to dependent children was being given to 6,492 families, with a total cost of \$5,878,526 for the fiscal year. Unemployment compensation benefits paid for the benefit year ending March 31, 1950, were \$31,319,231 as compared with \$12,967,372 in the preceding year.

As of June 30, 1950, there were 492 white and 344 Negro inmates in the four training schools for juvenile delinquents.

As of Dec. 1, 1950, there were 1,508 white inmates and 2,445 Negro

THEODORE R. MCKELDIN, Republican, elected governor of Maryland, Nov. 7, 1950

inmates, or a total of 3,953 inmates, in the four state penal institutions; of these, 50 were white females and 91 Negro females.

**Communications.**—The state roads commission expended \$57,481,518 for the fiscal year ended June 30, 1950. The total road mileage in the state highway system was 4,606, in the county system 11,958 and in the municipalities 1,161. In 1950 there were 1,320 line mi. and 2,800 track mi. of steam railroads and 41.4 line mi. and 52 track mi. of electric interurban railways. As of Nov. 3, 1950, there were 642,617 telephone instruments in service in the state, of which 302,829 were in the city of Baltimore. There were 2,428,000 mi. of wire mileage, of which 1,362,700 mi. were in underground cable.

**Banking and Finance.**—As of June 30, 1950, state banks and trust companies had deposits of \$862,889,000 and total resources of \$944,159,000; mutual savings banks had deposits of \$406,028,000 and total resources of \$455,884,000. There were 61 national banks in the state with deposits of \$705,274,000 and resources of \$764,410,000. The total resources of all state and national banks were \$2,164,453,000. As of Dec. 31, 1949, 362 savings and loan and building and loan associations were computed to have assets of \$316,041,000.

State appropriations for the year ended June 30, 1950, were \$140,262,792 and expenditures were \$135,303,490. State appropriations for the year ending June 30, 1951, were \$144,453,649. The total bonded indebtedness of the state as of June 30, 1950, was \$32,846,000 and there was a general fund surplus of \$7,448,391.

**Agriculture.**—During the first ten months of 1950, Maryland farmers received an estimated \$70,460,000 from the marketing of principal farm crops, as compared with \$72,174,000 for the similar period of 1949. Livestock and livestock products brought a total of \$130,219,000, during the first ten months of 1950, as compared with \$135,704,000 in 1949. Total cash receipts from farm marketings in the first ten months of 1950 amounted to \$200,679,000, compared with \$207,878,000 for the first ten months of 1949.

Table I.—Leading Agricultural Products of Maryland

	1950	1949	Average 1939-48
Barley, bu. . . . .	2,759,000	2,822,000	2,120,000
Corn, bu. . . . .	18,920,000	18,354,000	16,520,000
Oats, bu. . . . .	1,870,000	1,584,000	1,174,000
Wheat, bu. . . . .	6,086,000	6,878,000	6,817,000
Hay, all, tons . . . . .	644,000	650,000	583,000
Potatoes, Irish, bu. . . . .	1,664,000	1,587,000	1,957,000
Tobacco, lb. . . . .	40,000,000	41,250,000	32,121,000
Tomatoes, market, bu. . . . .	940,000	900,000	1,087,000
Tomatoes, processing, tons . . . . .	225,700	165,300	228,500

Snap beans, early, market, bu. . . . .	272,000	378,000	343,000
Snap beans, late, bu. . . . .	75,000	133,000	84,000
Snap beans, processing, tons . . . . .	16,500	15,700	15,000
Apples, bu. . . . .	1,352,000	1,251,000	1,526,000
Peaches, bu. . . . .	563,000	714,000	544,000
Strawberries, crates . . . . .	180,000	202,000	244,000

**Manufacturing.**—The Maryland employment security board estimated the number of manufacturing establishments as of June 30, 1950, to be 3,130, employing 224,870 persons, as compared with 218,967 as of June 30, 1949, and the nonmanufacturing establishments (covered by unemployment compensation) at 34,855, employing 346,530 persons, as compared with 320,676 as of June 30, 1949.

The total pay roll for the three months ended June 30, 1950, was: manufacturing, \$167,923,198; nonmanufacturing, \$210,987,727; making total quarterly pay rolls for the 13-week period \$378,910,925, as compared with \$351,606,283 for the similar period of 1949.

**Mineral Production.**—Production in Maryland during 1948 and 1949 is given in Table II.

Table II.—Mineral Production in Maryland

	1948		1949	
	Short tons†	Value	Short tons	Value
Clays (except for cement) . . . . .	520,535	\$ 920,431	586,453	\$ 922,822
Coal . . . . .	1,661,164	8,733,674	668,332	3,505,099
Lime (open market) . . . . .	69,032	654,635	64,299	617,696
Sand and gravel . . . . .	5,833,559	6,158,041	4,776,815†	6,028,791†

(H. E. F.)

**Massachusetts.** A north Atlantic state of the U.S., Massachusetts was admitted to the union on Feb. 6, 1788. It is popularly known as the "Bay state." Area: 8,257 sq.mi., including 350 sq.mi. of water; population (U.S. census 1950) 4,690,514. This was a gain of 8.7% over 1940. The capital is Boston (pop. 1950 census, preliminary figures, 790,863); other important cities are: Worcester (201,885); Springfield (162,601); Cambridge (120,676); Fall River (111,759); New Bedford (109,033); Somerville (102,254); Lynn (99,521); Lowell (96,523).

**History.**—State officials elected for the biennium 1951-52 were: governor, Paul A. Dever; lieutenant governor, Charles F. Jeff Sullivan; secretary of State, Edward J. Cronin; treasurer, John E. Hurley; attorney general, Francis E. Kelley; auditor, Thomas J. Buckley.

The Massachusetts legislature is called the General Court of the Commonwealth of Massachusetts. It holds sessions annually, and adjourned its 157th session on Aug. 19, 1950, the second longest in history. The grand total of appropriations for the fiscal year 1951 was \$394,000,000, an increase of \$35,000,000 over the previous year. Included in the appropriation were bond issues of \$100,000,000 for highway construction, making a total of \$200,000,000 for this purpose in two years.

A new law gave to the state's department of public works power to take by eminent domain, land adjacent to new limited-access highways in order that automobile service stations, restaurants and comfort stations might be erected under the management of the department. The law also provided that the income derived from this operation should be added to the highway fund.

The Massachusetts Commission Against Discrimination replaced the Massachusetts Fair Employment Practice commission. All of the previous powers of the commission were retained, and in addition the commission was empowered to undertake the prevention of any segregation or discrimination on account of religion, colour or race in public resorts, accommodations, hotels or housing projects.

Picketing or parading in or near any courthouse with the intention of impeding the administration of justice was prohibited by a new law. Another law granted to uniformed members of the state police the right to organize but not to strike.

Cities and towns were empowered to provide money for conveying pupils in school buses whether the children were attending any public or any private school, and particularly including schools conducted by any religious denomination. Another law prevented cities or towns from enacting ordinances or bylaws prohibiting the use of land for any church or religious purpose.

The state constitution was amended by the people in the November election. The first amendment provided that in the event of the death of the governor-elect, the lieutenant governor-elect should become governor. The succession in office then should be to the secretary of state, the attorney general, treasurer and auditor. The second amendment provided for an increase in the number of signatures required for placing an initiative petition on the ballot; a third amendment decreased the age for old-age assistance to 63 years, and increased the minimum allotment to \$75 a month. A fourth amendment, providing for a state lottery, was not adopted. It was intended that the income from such a lottery would be used to finance the additional expense of the expanded program of old-age assistance. It would therefore be necessary to raise approximately \$54,000,000 in additional funds each year to finance the old-age benefits.

**Education.**—In 1950 there were 1,764 public elementary schools with 372,091 pupils; 111 junior high schools with 73,465 pupils; 311 senior high schools with 126,198 pupils. The public schools of the state employed a total of 24,123 full-time teachers at an average salary of \$3,112.72. The total expenditure for public schools for support and outlay was \$120,641,218.36. John J. Desmond, Jr., was the state commissioner of education.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During 1950 old-age assistance was extended to an average monthly number of 101,103 persons at an estimated annual cost of \$79,631,982; an average monthly number of 13,415 families received assistance for the care of 32,365 dependent children (estimated cost \$18,258,092); general relief was extended to an average monthly number of 24,130 persons (estimated cost \$17,005,203).

For the year ending July 1, 1951, the commonwealth appropriated \$5,588,416 to maintain correctional institutions, including the state prison (596 inmates), prison colony (900 inmates), reformatory for

men (760), reformatory for women (269, including babies under two years) and state farm (2,52, including the criminally insane).

**Banking and Finance.**—Revenue receipts of the commonwealth for the fiscal year ending June 30, 1950, were \$274,091,863.40, including the sale of bonds of \$24,100,000; expenditures for state government amounted to \$289,916,757.32. This figure, however, does not include \$88,733,073.51 which was a tax distribution to cities and towns. The direct gross debt was \$141,462,300, less a sinking fund of \$5,835,774.82, for a net debt of \$135,726,525.18.

The assessed valuation of the state as of Jan. 1, 1949, was \$7,098,378,246. The estimated valuation on Jan. 1, 1950, was \$7,224,566,817.

As of June 30, 1950, bank deposits in savings banks amounted to \$3,330,066,079; total assets of commercial departments of trust companies, \$1,056,482,000; bank deposits of savings departments of trust companies, \$264,404,000; total assets of credit unions, \$72,951,105; total assets of co-operative banks, \$616,153,496.

**Agriculture.**—Preliminary figures for cash receipts from the marketing of farm products in 1949 totalled \$182,674,000. This included total crop cash receipts of \$65,477,000 and total livestock products of \$117,197,000.

Table I.—Principal Agricultural Products of Massachusetts

Crops	1950	1949	Average 1939-48
Corn, all bu. . . . .	1,520,000	1,517,000	1,693,000
Cranberries, bbl. . . . .	620,000	520,000	465,000
Apples, bu. . . . .	3,825,000	3,842,000	2,473,000
Hay, tons . . . . .	590,000	561,000	580,000
Potatoes, bu. . . . .	2,815,000	2,850,000	3,163,000
Tobacco, lb. . . . .	13,225,000	13,735,000	9,981,000
Onions, (50 lb. bags) . . . . .	432,000	441,000	—
Oats, bu . . . . .	231,000	248,000	201,000
Asparagus, (30 lb. crates) . . . . .	101,000	112,000	—

**Manufacturing.**—In 1950 there were 2,005 labour unions in Massachusetts. The total membership as of Jan. 15, 1950, was 566,389 (419,785 males and 146,604 females).

Table II.—Estimated Value of Principal Products Manufactured in Massachusetts

Products	Estimated Value, 1950
Electrical machinery, apparatus and supplies . . . . .	\$450,000,000
Woollen and worsted goods . . . . .	440,000,000
Boots and shoes, other than rubber . . . . .	356,000,000
Clothing, men's and women's, including work clothing . . . . .	321,000,000
Cotton goods . . . . .	229,000,000
Leather: tanned, curried and finished . . . . .	194,000,000
Foundry and machine-shop products . . . . .	188,000,000
Printing and publishing, book and job and newspapers . . . . .	165,000,000
Rubber goods, including rubber tires and inner tubes . . . . .	163,000,000
Bread and other bakery products . . . . .	162,000,000
Paper and wood pulp . . . . .	142,000,000
Boot and shoe, cut stock and findings . . . . .	120,000,000
All other industries . . . . .	3,428,000,000
Total value . . . . .	\$6,358,000,000

**Mineral Production.**—During 1948 mineral production had a total value of \$13,844,000, of which the chief items were: lime \$1,302,251, clay products \$1,364,000, sand and gravel \$4,418,132 and stone \$6,592,952 (exclusive of crushed sandstone). (D. A. Dy.)

## Mathematics.

The outstanding event of 1950 in the mathematical world was the International Congress of Mathematics, held from Aug. 30 to Sept. 6 at Cambridge, Mass., with Harvard university as the principal host. This was the third such congress held in North America; the first was in 1893 at Chicago in connection with the World's Columbian exposition, the second in 1924 at Toronto, Can. The 1950 congress had been postponed from 1940 because of World War II. It was the largest assemblage of mathematicians in history. The attendance was more than 2,300, with about 300 representatives and delegates from more than 40 foreign countries, in addition to those from 15 American academies and learned societies. The U.S.S.R. Academy of Science sent its best wishes for the success of the congress, but said it could not be represented.

O. Veblen, of the Institute for Advanced Study, Princeton, N.J., was president of the congress; J. Hadamard, of the Collège de France, Paris, was honorary president. The president at the Toronto congress had been J. C. Fields, who willed funds for two gold medals and substantial honorariums to be awarded at subsequent international congresses to each of the two most promising younger mathematicians for their work. These historical details are recalled because they had interesting echoes at the 1950 congress.

In 1896 Hadamard and C. de la Valle Poussin (Belgian) independently and almost simultaneously had proved the so-called

prime number theorem, using advanced mathematical analysis. How many prime numbers are there, in the long run, not exceeding a prescribed limit, say  $x$ ? The theorem states that, asymptotically, there are  $x/\log x$ , where the log is the natural logarithm; as  $x$  increases indefinitely, the implied approximation becomes uniformly sharper. A remarkable feature of this theorem was the manner of its derivation: analysis, the mathematics of continuity, was applied to the natural primes, which are a discrete set. The relevant analysis was not elementary, in that it employed the theory of functions of a complex variable, and experts in the analytic theory of numbers had long doubted whether an elementary proof was possible. Such a proof was given, most unexpectedly, by A. Selberg (Norwegian, age 33, at the Institute for Advanced Study). For this he was awarded one of the Fields medals.

The precise sense in which the proof is elementary is too technical for explanation here.

The other Fields medal went to L. Schwartz (French, age 35, of Nancy) for his development of a new branch of analysis which he called the theory of distributions. A distribution is a generalization of the classical concept of a function. The new theory had many applications to potential theory, spectral theory, partial differential equations and other departments of both pure and applied analysis. A detailed account, of which the first part appeared toward the end of 1950, was being published in French.

The congress as a whole gave an encouraging picture of mathematics at the half-century mark. There were formal addresses by 22 invited speakers, and more than 400 short communications on algebra and the theory of numbers, analysis, geometry and topology, probability, actuarial science, economics, mathematical physics, applied mathematics, logic and the philosophy of mathematics, history and the teaching of mathematics.

Among the conferences and symposia before and after the congress that on computing machines was of special interest. Although these machines were developed largely for military purposes, they had contributed notably to peaceful pursuits, from the theory of numbers to mathematical physics. Without mechanical aids some of the computations involved would have been humanly impossible. To mention only one instance, M. Mersenne's conjecture on primes of the form  $2^p - 1$ , where  $p$  is prime, had been tested out to  $p = 409$ , far beyond what a human computer could do in a lifetime. (For the nature of the conjecture, see the latest edition of W. W. R. Ball's *Mathematical Recreations & Essays*.)

Upon publication of the voluminous *Proceedings* of the congress, it would be possible to estimate the rate of progress of mathematics since the Chicago congress of 1893, and since the Toronto congress of 1924. In the meantime, a conservative appraisal credited 1950 with an unprecedented activity in all departments of mathematics and its applications, and also with the creation and development of subjects (such as modern topology, abstract spaces and functional analysis) not even mentioned in the *Proceedings* of the 1893 congress. There had also been a significant advance, since the 1924 congress, in the attack on difficult problems in applied mathematics and mathematical physics. Powerful methods unknown in 1924 were being developed, instigated partly by military necessity, to bring these practical problems within human capacity.

The next congress was scheduled for 1954, at Amsterdam, the Netherlands.

FILMS OF 1950.—*Arithmetic for Beginners* (Bailey Films, Inc.); *Decimal Fractions, How to Add Fractions, How to Divide Fractions, How to Multiply Fractions, How to Subtract Fractions, Introduction to Fractions, Percentage* (Johnson Hunt Productions); *Language of Mathematics* (Coronet Instructional Films). (E. T. B.)

**Matthews, Francis Patrick** (1887– ), U.S. government official, was born on March 15 at Albion, Neb., received his law degree in 1913 from Creighton university, Omaha, Neb., practised law and engaged in business. He was active in Democratic party work, and from 1933 to 1949 was counsel for the Reconstruction Finance corporation in Nebraska and Wyoming. On May 13, 1949, Pres. Harry S. Truman nominated him as secretary of the navy. Early in 1950 Matthews was under congressional fire over the ouster of Adm. Louis E. Denfeld as chief of naval operations, which came at the climax of interservice disputes over unification. On Jan. 30 the senate armed services committee accepted Matthews' explanation that the difference was one of policy that made harmony impossible. However, on March 1, 23 of the 32-member house armed services committee denounced the Denfeld ouster as reprisal for the latter's congressional testimony on the navy's role in unification. On Aug. 25 Matthews in a speech at Boston, Mass., declared that the U.S. should "pay any price" for world peace, "even the price of instituting a war to compel co-operation for peace." The White House and state department promptly disclaimed responsibility for any preventive war ideas.

**Maurice and Laura Falk Foundation, The:** see SOCIETIES AND ASSOCIATIONS.

**Mauritania:** see FRENCH UNION; FRENCH WEST AFRICA.

**Mauritius.** British colony and dependencies in the Indian ocean; the dependencies, of which the largest are Rodriguez and Diego Garcia, comprise a large number of islands. Areas and populations: Mauritius 720 sq.mi., (1949 est.) 447,503; Rodriguez 42 sq.mi., (1944 census) 11,885; Diego Garcia (1944) 501; other dependencies (1944) 1,077. Governor (1950), Sir Hilary Blood.

**History.**—The malaria eradication campaign was continued during 1950 with very successful results, the spraying with DDT of buildings in all the chief malarial areas being carried out during the rainy season. Surveys for the season up to April 1950 showed a reduction of 80.5% in the number of notified cases of malaria as compared with 1948, and a reduction of 99% in the number of mosquitoes found in the sprayed areas. On Aug. 25 the municipality of Port Louis celebrated its centenary and was granted a new elective constitution. As a result of negotiations held in London early in the year between the minister of food and the sugar-producing countries of the British Commonwealth, Mauritius now had a guaranteed market for most of its output until 1957. The 1950 crop was 409,764 tons in spite of the fact that workers in more than half the mills went on strike in the middle of the harvest.

**Finance and Trade.**—Currency: rupee, valued at 21 cents U.S. Budget (1950–51 est.): revenue Rs. 54,683,152; expenditure Rs. 52,617,370. Foreign trade (1949): imports Rs. 153,221,654; exports, incl. re-exports, Rs. 170,229,668. (K. G. B.)

**Meat.** U.S. total production of meats increased moderately in 1950, being estimated at 22,420,000,000 lb. compared with 21,710,000,000 lb. in 1949; the average in 1937–41 was only 17,674,000,000 lb. A still higher production of 23,370,000,000 lb. was forecast for 1951. The total civilian meat supply per capita in 1950 was estimated at 145 lb., about 1 lb. more than the previous year. Per capita consumption of beef was estimated at 63.1 lb., veal consumption was 8.2 lb. and pork consumption per capita was estimated at 69.9 lb. The spring pig crop of 1950 was 59,997,000 head, compared with 58,426,000 head a year before, the increase being in line with the record feed supply; the fall crop of 1950 was estimated at 40,657,000 head against 37,175,000 head in 1949; the spring crop of 1951 was preliminarily

### U.S. Meat Production

(In millions of pounds, dressed weight)

	1951*	1950	1949	1948	1947	Average 1937-41

Veal . . . . .	1,300	1,293	1,322	1,412	1,599	1,022
Lamb and mutton .	570	608	607	750	802	884
Pork . . . . .	11,700	10,939	10,333	10,205	10,601	8,573
Total . . . . .	23,370	22,420	21,710	21,446	23,431	17,675

\*Forecast by U.S. Department of Agriculture.

forecast at 63,500,000 head, or 6% higher than in 1950.

Lamb and mutton meat production continued near the low level of 1949 (607,000,000 lb.) or 3.9 lb. per capita, compared with an average consumption prewar of about 6.8 lb. The 1950 lamb crop of 18,431,000 head was 2% less than in 1949 and the smallest on record. Lamb feeding in the fall of 1950 was the smallest in years, and prospects for 1951 were still lower, forecast at 570,000,000 lb.

U.S. exports of meats, estimated at 94,000,000 lb. (carcass weight) during 1949–50, were slightly larger than the 75,000,000 lb. in the preceding year, but very small compared with 1,376,000,000 lb. in 1945–46 and slightly lower than the 123,000,000 lb. average prewar. Near the end of 1950 storage stocks of meat and meat products amounted to more than 400,000,000 lb., nearly 10% higher than 1949 or normal.

Prices of meat animals in 1950 followed divergent trends. In general they strengthened after the Korean war began and the retail prices of some cuts went to record high levels. Hog prices declined in much the usual seasonal fashion but the lowest levels were \$2 or more higher than in 1949. Prices to farmers ranged from a low of \$15.10 per hundredweight in January to a high of \$21.60 per hundredweight in August, dropping to about \$17 late in the year. Price supports for hogs were abandoned (perhaps temporarily) in March by administrative decision. Beef cattle prices, at a high but not record level, showed less than usual fluctuation during the year; and the spread between feeder cattle and fat cattle was much narrower than in most years. Prices to farmers rose from an average of \$19.40 per hundredweight in January to more than \$25 per hundredweight late in the year. Feeder calves were reported as selling in excess of \$40 per hundredweight and the grand champion steer of the International Live Stock show sold for a record \$12 per pound. Lamb prices held at high levels during most of the year, reaching a top average to producers of about \$26 per hundredweight late in the year and in general were higher than in 1949.

Because of the number and heavy weight of hogs, the production of lard in 1950 was forecast at 2,800,000,000 lb., as compared with 2,646,000,000 lb. in 1949 and a prewar average of 2,091,000,000 lb. Exports of lard amounted to 382,300,000 lb. in the period Jan. to Aug. 1950, as compared with 475,800,000 lb. during the same period of 1949. Prices for much of the year were higher than in 1949 but well below the nearly 20 cents per pound of 1948. Storage stocks in December of 51,710,000 lb. were above the 37,792,000 lb. of the previous year.

Poultry meat, both chicken and turkey, was produced and consumed in larger amounts in 1950, averaging 3% more for chicken and 22% more for turkey than 1949, the volume for the latter being 192% of the prewar average (1935–39 = 100). Commercial broiler production of 540,000,000 head was 10% higher than in 1949; an increase of 10%–15% over the 1950 level was forecast for 1951. Prices of broilers in the chief producing area late in the year were 22 cents–23 cents per pound to farmers as compared with 18 cents per pound a year earlier and 29 cents in March 1950; the 1948 peak price was about 40 cents per pound. Turkey prices were no longer supported by a government purchase program.

Fish was consumed in approximately the same amount as in the year before. Prices were higher, particularly in regard to some

canned types. A record storage level was reached.

Federal grade standards for steer, heifer and cow carcasses were revised effective Dec. 29, combining the recent beef grades of "prime" and "choice" under the name "prime," renaming the recent "good" grade as "choice" and setting up a new grade "good" consisting of beef from the higher quality young cattle recently graded "commercial." Beef from older cattle would continue to be graded "commercial."

World meat supplies, particularly pork, increased substantially during 1950, partly because of the continued improvement in western Europe. It was estimated that world output in 1950, also 1951, would exceed the 68,300,000,000 lb. of 1949 which was slightly in excess of prewar. Meat production in Canada increased about 6% as compared with the previous year and exports increased about 25%, larger pork supplies more than making up a beef deficit. Marketings were expected to be lower in 1951. The effects of the earlier drought situation in the Argentine continued to be noticeable; exports were suspended in July and consequently the United Kingdom cut its low meat ration by one-third, effective Jan. 1951. Tariffs on Canadian cattle exported to the U.S. were to be approximately doubled at the beginning of 1951.

(J. K. R.)

## Medical Rehabilitation of the Disabled.

Mobilization both in the United States and Great Britain brought a great interest in the medical rehabilitation of the disabled in 1950. In both nations, interest centred around increased utilization of physically handicapped workers in industry and the establishment of rehabilitation facilities which could prepare such workers for employment. As the result of manpower shortages since World War II, Great Britain had far greater utilization of impaired workers in industry, but in the United States industrial activity, coupled with the withdrawal of workers from the labour force for military service, made it apparent early in the mobilization program that the greatest untapped reservoir of manpower in the United States was its 11,500,000 workers beyond the age of 65 and the 4,000,000 to 6,000,000 persons with severe physical disabilities. The primary problem retarding the development of rehabilitation services for these groups was the shortage of trained personnel, which was made even more acute by the needs of the military services.

In the United States, the White House Conference on Children and Youth in December, discussions on universal military service and the high proportion of draftees rejected for military service because of physical disability focused attention on the need for better case finding and rehabilitation programs for youth.

In both nations, the major development during the year in direct services was in the field of cerebral palsy. As compared with only a few facilities five years earlier in the United States, in 1950 the number of centres offering services to the cerebral palsied had increased to more than 200, and medical specialists trained in cerebral palsy were available in all but four states. There were similar, although not such rapid, developments in Great Britain.

A number of new specialized facilities for medical rehabilitation of the disabled were opened in both nations. Chief among these in the United States was the movement of the Institute of Physical Medicine and Rehabilitation of the New York university-Bellevue Medical centre into its new \$2,000,000 quarters, where its research, training and treatment programs would be greatly expanded. In Great Britain, emphasis was placed on the provision of more facilities for sheltered work both in the shop

TRAINING SCHOOL of the International Refugee organization, showing a refugee who lost both legs during World War II learning the weaver's trade in 1950. His artificial limbs were also provided by the I.R.O.

and the community.

Medical rehabilitation of the disabled became a more accepted part of both medical education and medical care in both countries. Added emphasis was placed upon rehabilitation in medical education at the undergraduate, graduate and postgraduate levels, and new departments of rehabilitation were started in both large and small community hospitals.

Outstanding in its effect upon rehabilitation was the treatment of burns with ACTH. With this treatment, patients are almost immediately pain-free, and rehabilitation can be started early. This had special significance in view of the possibilities of atomic attack.

In the United States, the primary federal legislation was the increase from \$7,500,000 to \$15,000,000 a year in the funds available to the children's bureau for services to crippled children. The senate also passed legislation providing for an extension of the federal-state vocational rehabilitation program, but no action was taken by the house.

There were also increased international activities in the field of rehabilitation and services to the handicapped. In December, the general assembly of the United Nations voted to establish a co-ordinated program for the social rehabilitation of the disabled within the United Nations to co-ordinate the international exchange of information, fellowships and consultation services. Three major international conferences were held. In March the representatives of 21 nations met at an international conference of experts on the education of handicapped children in Geneva, Switz., and representatives of nine nations met in regional conference on rehabilitation in Jamshedpur, India, in December. In August the International Association for Logopedics and Phoniatrics held its first postwar meeting in Amsterdam, Neth. The International Society for the Welfare of Cripples, a voluntary organization composed of national voluntary groups concerned with services to the handicapped, established

permanent headquarters in New York. During the year, a World Federation for Physical Therapy was formed, and plans were made for a similar organization of physicians concerned with rehabilitation and physical medicine. (See also VOCATIONAL REHABILITATION, OFFICE OF.)

**BIBLIOGRAPHY.**—Earle H. Daniel, *Amputation Prosthetic Service* (1950); William R. Denton and Sidney Licht, *Occupational Therapy: Principles and Practices* (1950); Wendell Johnson, *Speech Problems of Children: A Guide to Care and Correction* (1950); Henry Kessler, *The Principles and Practices of Rehabilitation* (1950). (H. A. RK.)

**Medicine.** Of primary interest in the field of medicine during 1950 was the continued development and application of new remedies, including new antibiotics, antihistaminics, anticoagulants and drugs specifically affecting various portions of the nervous system. The United States was free from severe epidemics except for a continuous high rate for infantile paralysis. The hormone substance derived from the pituitary gland called ACTH and the hormone of the adrenal gland, cortisone, had many new applications with continued evidence of their startling effects on the human body. (See ARTHRITIS; ENDOCRINOLOGY.)

**Internal Medicine.**—Most interesting was the evidence that people with hardening of the arteries have in their blood certain giant fatty molecules and that diets high in cholesterol over a long period of time may be partly responsible for arteriosclerosis.

The suggestion was made that conditions affecting prospective mothers previous to the birth of the child in which insufficient oxygen reaches the brain of the foetus may be responsible for the birth of mentally retarded children. More evidence developed that virus infections of the mother during the first three months of pregnancy may be largely responsible for the birth of children with defective eyes, ears, hearts and brains.

Research on the common cold tended to disprove the concept that the taking of antihistaminic drugs would prevent or shorten the duration of the common cold, although many industrial physicians still insisted that the first symptoms of the cold are due to sensitivity or allergy and that antihistaminics if given early may be effective in aborting the cold.

Soviet doctors treated peptic ulcer by a technique called the long sleep method in which patients were kept under barbituric acid derivatives for several weeks. In the United States peptic ulcer continued to be a leading cause of disability, and was treated mostly by such drugs as banthine, which shuts off the stimulus from the sympathetic nervous system, and by surgical procedures for removal of portions of the stomach. Ordinary medical treatment involved also the giving of antacid substances in tablets and the elimination from the diet of substances tending to increase acidity.

Radioactive isotopes were used to study the functions of various organs and to aid in the diagnosis of tumours of the brain. Radioactive iodine was used for accurate measurement of basal metabolism. Radioactive phosphorus was given in polycythaemia with an excess of red cells in the blood and in leukemia with an excess of white cells. Radioactive tracers were also used to study the formation of the teeth and the causes of dental decay.

Anticoagulant drugs including dicumarol and heparin proved to be efficient in controlling thrombotic conditions including coronary thrombosis. Two new anticoagulant drugs called "Pari-tol" and "Tromexan" were being studied.

Studies on antibiotic drugs produced a new antibiotic called terramycin which was found to be as efficient as aureomycin for a variety of conditions, especially in pneumonia and amoebic dysentery. Chloromycetin or chloroamphenicol was found to be useful in atypical pneumonia and also the most efficient antibiotic in combating typhus fever, undulant fever and diseases

caused, like typhus, by rickettsia.

A new drug for convulsive disorders was produced called phenurone, which with tridione and dilantin and the barbituric acid derivatives achieved greater progress in handling such cases than anything previously developed. A new substance capable of digesting dead tissues in wounds and infections called "tryp-tar," derived from the pancreas, received extended study.

Progress against infantile paralysis was marked by the establishment of the existence of three different types of virus, the introduction of blood tests which, it was believed, might permit earlier diagnosis, the proof that immunization is possible and that the gamma globulin such as is used in measles is useful. However, evidence also showed that there are hundreds of cases of people infected for every one paralyzed and that the disease is exceedingly widespread so that immunity created by a mild attack serves to protect better than artificial inoculation. A virus like that of poliomyelitis called Cocksackie virus can produce a nonparalytic disease that is similar to poliomyelitis and is related to the epidemics of pleurodynia or Bornholm disease.

**Surgery.**—New operative procedures on the heart included the cutting of the constricted valves, and the use of plastic procedures on blood vessels which might provide new circulation to the heart when its blood vessels are blocked, as in coronary thrombosis.

Some surgeons claimed successful transplant of the human kidney but the majority of physicians considered the demonstration not proved.

Surgeons were studying the effects of ACTH and cortisone on wound healing, and claimed greater success in skin grafting when ACTH was given.

Surgeons discontinued direct application of sulfonamide drugs or antibiotics to wounds. A surgical procedure for implanting pituitary gland material showed that arthritis could be treated by this method.

Surveys of prefrontal lobotomy and topectomy showed a fairly large percentage of mental patients susceptible to improvement by this operative procedure on the brain. A new surgical procedure was developed for reconstructing the chest in the cases of children born with funnel chest.

**New Drugs.**—New modifications of sulfonamides were gantrisin and tibione, the latter claimed as useful in tuberculosis. New antibiotics included terramycin and an improved penicillin which was less sensitizing than those previously available. Terramycin was so named because it was developed from a fungus derived from earth. A substance called khellin which was isolated from the seeds of a plant called *Ammi visnaga* was found effective in dilating the coronary blood vessels. A drug called priscoline acts on the sympathetic nervous system to dilate blood vessels and was used in Buerger's disease and in some instances of diabetes to improve circulation. Primaquine was a drug used for treating malaria; when used with quinine it was the most effective of all treatments for this condition. Tromexan acts essentially like dicumarol or heparin in preventing clotting of the blood. Banthine acts to prevent transmission of stimuli from the sympathetic nervous system and was used particularly in the treatment of peptic ulcer and in cases of excessive sweating.

Tablets containing chlorophyll were said to be effective in preventing body odours but the proof awaited further confirmation. ACTH and cortisone were being successfully used in cases of rheumatoid arthritis, rheumatic fever, lupus erythematosus, severe asthma and other allergies, some cases of mental depression, periarteritis nodosa, gout and inflammation of the walls of the arteries in the brain; they were also used for alcoholism, narcotic addiction and a variety of other disturbances related to the connective tissue mechanism of the body. New derivatives

**BLOOD-BANK LABORATORY** in the St. Antoine hospital, Paris, where only the blood donors' arms reached in through holes in the partitions while doctors and nurses quickly tapped the veins. Donors, attended by nurses, lay on cots outside the specially equipped room

of morphine called "pethadine" and "methadone" were introduced as substitutes for this narcotic.

A report from the Veterans' administration indicated that the combination of streptomycin and paraminosalicylic acid was most effective in tuberculosis. Vitamin B<sub>12</sub> was found more effective than any other drug in the treatment of pernicious anaemia. Among the new antibiotic drugs were netropsin and thiolutin. Netropsin showed great promise as an insecticide and thiolutin had specific effects against fungi.

**Psychology and Psychiatry.**—Electroshock treatments many times daily for certain patients produced a condition called "annihilation" which apparently could relieve depression but also produced loss of memory. A drug called malononitrile affected psychic functions in disorders of the mind and was recommended in cases where electric shock was not possible.

Certain headaches are apparently allergic and accompanied by release of histamine in the brain tissues. In such cases diminished salt intake and antihistaminic drugs were found helpful.

Widespread studies with psychological methods indicated more and more instances of physical conditions related to mental difficulties. Thus obesity is often related to emotional immaturity. Mental problems were found associated with the production of glaucoma, a condition of increased pressure in the eye resulting in blindness. Specialists in psychosomatic medicine indicated the following list of diseases as those most likely to be related to mental conflicts: paroxysmal congestion of the nose with discharge of mucus, asthma, ulcers of the stomach and intestines, ulcerative colitis, high blood pressure, excessive action of the thyroid, migraine, chronic arthritis, certain skin diseases and painful menstruation. (M. Fr.)

**Great Britain.**—The controlled trial of BCG (Bacillus-Calmette Guérin) vaccination against tuberculosis begun in England in the winter of 1949 by the ministry of health proceeded successfully, and during 1950 about 15,000 people were vaccinated. The importance of diphtheria as a major public-health problem continued to decline while that of poliomyelitis increased. The decline of diphtheria was a result of the ministry of health's campaign for diphtheria immunization. Poliomyelitis was a serious menace for the fourth year in succession, and it appeared that the statistics for 1950 might nearly reach those

of the peak year of 1947 when there were 7,800 notifications and 715 deaths.

An epidemic of measles occurred though not such as to occasion alarm. Interesting observations were made on the occurrence of some rare infections in England. Q fever is an acute febrile disease first described in Queensland in 1937. It is caused by a microorganism *Rickettsia burneti* and it appears to be caught from animals, either by drinking infected milk or by inhaling contaminated dust. Sporadic cases appeared in the south of England from Kent to Devon. Toxoplasmosis is a disease caused by a protozoan parasite. When a woman is affected her offspring may show congenital abnormalities. It had been recognized in many countries since 1939 but only six cases were reported in Great Britain prior to 1950, when a further 13 cases were reported. Canicola fever was another disease that was probably more general than was thought. Six cases in Bristol were reported in addition to the six previously known in Britain. The disease is caused by a protozoan parasite, *Leptospira canicola*, which is common among dogs, and there was evidence that up to 40% of dogs in Britain are infected at some time in their life. Finally in this group of seldom-recognized disorders is undulant fever, a milk-borne disease akin to Malta fever. Sir Weldon Dalrymple Champneys, in a painstaking study of almost 1,000 cases, showed that this was far more prevalent in England than had been suspected.

In the treatment of parkinsonism Artane, Benadryl, Lysivan and Phenergan attracted attention. Further evidence that ascorbic acid can have a druglike action as well as a true vitamin effect was shown by the healing effect of large doses on corneal ulcers. Ion-exchange resins were used with promising results in cardiac oedema and might be valuable in hypertension and other diseases. Tetraethyl-ammonium bromide was shown to relieve pain in rheumatoid arthritis. Sucaryl, a new sweetening agent, was introduced for diabetics. Pentaquine was a new remedy for vivax malaria. Sir Stanford Cade reported he had found that vitamin B<sub>12</sub> alleviated cases of cancer. **Menzies, Robert Gordon** (1894– ), Australian prime minister, was born at Jeparit, Victoria, Dec. 20. He was educated in the state schools of Victoria, at Grenville college, Ballarat, and at Wesley college, Melbourne. In May 1918 he was called to the Victoria bar and high court of Australia, and 11 years later became a K.C. In 1928 he was elected to the Victoria legislative council and in the following year to the Victoria legislative assembly. He was minister without portfolio, 1928–29, and attorney general, minister for railways, and deputy prime minister of Victoria, 1932–34. In the latter year he was elected to the federal house of representatives for Kooyong, and from 1935 to 1939 was attorney general and minister for industry. He resigned in March 1939, but retained the portfolio of co-ordination of defense.

He first became prime minister on April 26, 1939, as leader of the United Australia (later Liberal) party. He resigned on Aug. 29, 1941, after the Labour party refused to join a coalition government. He succeeded J. B. Chifley as prime minister at the head of a coalition government of the Liberal and Country parties on Dec. 19, 1949. At the end of April 1950 Menzies introduced into parliament the Communist Party Dissolution bill. On July 9 he left Australia to visit Great Britain, the United States, Canada and New Zealand. In the United States he conferred with the president and with members of the cabinet, and on Aug. 1 addressed both houses of congress. He was in Ottawa for talks with Canadian ministers from Aug. 7–10, before flying to Tokyo to see Gen. Douglas MacArthur and visit Australian troops in Japan. He broadcast a report of his tour on Aug. 28.

**Merchant Marine:** see SHIPPING, MERCHANT MARINE.

**Mercury:** see MINERAL AND METAL PRODUCTION AND PRICES.

**Mesons:** see PHYSICS.

**Metallurgy.** A few of the more important metallurgical developments during 1950 are summarized in the following paragraphs.

**Aluminum.**—A new electrochemical process gave the metal a thin hard surface with a wear resistance comparable to case-hardened steel.

**Cobalt.**—A new smelter was built in Canada, and another was planned at the Blackbird mine in Idaho.

**Copper.**—Modification of the design of a blast furnace for melting scrap tripled the tonnage handled, cut coke consumption by two-thirds and reduced operating difficulties.

**Indium.**—New solders carrying from 10% to 50% of indium showed greatly improved resistance to strong alkalis.

**Iron.**—Briquetting was being tried as a substitute for sintering blast furnace flue dust and iron ore fines.

The turbo-hearth was a new process combining the principles of the open-hearth furnace and the side-blown Bessemer converter.

Newly developed methods of improving the capacity of iron blast furnaces were evaluated as follows: (1) increasing blast volume up to 25% adds 20% to capacity; (2) increasing top pressure by 60% adds 15%; (3) increasing the oxygen content of the blast by 25% adds 17%. Combinations of the three are ap-

proximately additive: 1+2, 36%; 1+3, 40%; 2+3, 35%; 1+2+3, 58%.

Cast iron treated with a nickel-magnesium alloy becomes ductile when annealed, because of spheroidizing the graphite, resulting in physical properties comparable to steel.

**Magnesium.**—This metal found new applications in the textile industry, its light weight making it desirable for loom components where weight is a factor.

**Titanium.**—Considerable progress was made in the commercial production of titanium metal in forgings, bar, sheet, strip and wire, but the price was still too high for extended application. Ingots up to 500 lb. had been made, and larger ones were anticipated.

**Alloys.**—An alloy of eight metals (cobalt, nickel, molybdenum, chromium, manganese, iron, beryllium and carbon) was being used as a substitute for osmiridium in pen points. It was non-corrosive, nonmagnetic, resistant to crystallization changes, and had a tensile strength of 368,000 lb. per square inch.

A noneutectic alloy of tin and bismuth, with negligible shrinkage and a melting range of 281°–338° F. was found especially suitable for precision casting.

**Hot Machining.**—Interesting and worthwhile results were being obtained in an experimental development of methods for machining metals at temperatures as high as 1,500° F., the temperature being maintained by high-frequency induction heating.

**Testing.**—Radioactive cobalt-60 was coming into use as a substitute for radium in radiographic work. The same gamma-ray equivalent, with a half life of 5.3 years, could be purchased for the price of two to four months' rental of a radium capsule.

Ultrasonic methods were developed for detecting segregation and mechanical defects in high-speed tool steels.

**Welding.**—Difficulties in soldering on metal surfaces plated with passivated zinc were overcome by a special method of resistance welding. (G. A. Ro.)

**Metal Prices and Production:** see MINERAL AND METAL PRODUCTION AND PRICES.

**Meteorology.** The 30th anniversary meeting of the American Meteorological society was held in St. Louis, Mo., during the first week of Jan. 1950. A symposium on atmospheric pollution opened the meeting and disclosed lively interest among engineers and scientists. In recent years contamination of the air by smoke and other waste products of industry had aroused the concern of health experts and civic authorities. Large sums had been expended to control factory effluents which cause smog and endanger the health and welfare of the community. The numerous cases of illness and the deaths which had occurred among residents in the vicinity of Donora, Pa., during Oct. 1948 as a result of several days of badly polluted air, had focused attention on research in this field. The problem was especially important because of its close bearing on the disposal of effluents from atomic energy plants. It involved knowledge of how smoke and exhaust gases are diffused from factory stacks under various meteorological conditions, and its solution required measurements and analysis of data concerning the frequency and distribution of winds from the various sectors in different layers both near and high above the ground. The problem called also for knowledge of the more erudite aspects of the subject, such as the theory of diffusion by turbulent eddies, their transfer coefficients, and eddy diffusivity profiles in the lower layers of the atmosphere. The technical papers on these subjects and discussions incident thereto pointed to practical steps a municipality might take to protect its citizens from the injurious effects of industrial waste products.

Developments in the science of the weather, of popular as well as professional interest, were reported in technical papers on short-range weather forecasting and on meteorological instruments, among them the weather radar. For the research specialist the symposiums in the American Meteorological society (A.M.S.) program at St. Louis offered papers on the vertical distribution of ozone up to heights of 50 mi., on exchange of radiant energy between earth and sky and on the dynamics of the tornado. The practical conclusion from these scientific sessions was that the anticipated improvement in accuracy and range of weather forecasts had not yet been attained although impressive progress was reported in extending the network of weather observations over much of the globe and in exploring the upper air by using rawinsondes, rockets, radar and other devices. Increased knowledge had added to the complexity of the variables which the weather forecaster had to take into account.

This conclusion did not mean that techniques of weather forecasting showed no progress. On the contrary, weather forecasts in 1950 offered detailed information of clouds, visibility, winds aloft and other elements about which little could be said a decade earlier, but forecasting had not yet been reduced to exact scientific treatment.

The foremost meteorological honour of the year, the Meisinger award, went jointly to Jule G. Charney and Arnt Eliassen for their work in dynamic meteorology and numerical prediction of weather. For his work in study of meteorological conditions conducive to ice formation on aircraft, William Lewis was given the annual Losey award in Jan. 1950 by the Institute of Aeronautical Sciences.

**Applied Meteorology.**—Artificial nucleation of clouds, the technical term for the seeding of clouds with dry ice or silver iodide to produce rain, had not yet passed beyond the experimental stages, although many commercial rainmakers and their agricultural clients in western and southwestern United States were confident that the water supply in their localities had been materially increased by rainfall precipitated by seeding the clouds. But in every case where there had been impartial investigation it was found that atmospheric conditions were favourable for rain without artificial nucleation. Many meteorologists believed that treatment of clouds with dry ice or silver iodide might tip the balance in favour of rain in certain cases of conditional stability of air and cloud masses, but they felt that such cases were infrequent and probably not of great economic significance. They believed that most of the rain reported to have been produced artificially had more likely been caused by natural meteorological conditions. This conclusion was also supported by results of official experiments in Canada and Australia where only minor quantities of rain had been observed as a result of cloud seeding. In addition, a fact sheet issued by the U.S. department of defense summarized the findings of Project "Cirrus" in a statement to the effect that research in rainmaking had not yet determined how much rain could be induced artificially or whether the amount would be of economic significance.

Over the Catskill, N.Y., watershed, experiments in cloud seeding were designed to alleviate the shortage of water in New York city. In general, the results were inconclusive; rainfall may or may not have been increased in one or two instances. In most instances the attempts to increase the rainfall in the New York experiments were said to have been quite obviously unsuccessful. Unquestioned, however, was the fact that supercooled cloud droplets could readily be converted by seeding into ice crystals which might collect and fall as raindrops, but the amount to reach the ground from such source appeared to be small. The practical possibilities of commercial rainmaking in general were

APPROACHING TORNADO photographed at a distance of 11 mi. from Coldwater, Kan., in May 1950

still undetermined.

Basic research in cloud physics to obtain more exact values of the quantities that enter into the natural formation of clouds and rain was continued by Ross Gunn of the U.S. weather bureau, with laboratory facilities and devices unique in meteorological studies. His work included measurements and recomputation of the size, distribution, electrical charge, rate of fall and other characteristics of precipitation droplets in free air. The results were published as rapidly as they were completed in order to make them available without delay for use of other investigators in theoretical and applied meteorology. The more theoretical work had appeared in the *Journal of Meteorology* of the A.M.S., the *Journal of Geophysical Research* and the *Physical Review*; the tabulated results and practical conclusions appeared in the *Bulletin* of the A.M.S.

In applied meteorology for agriculture, attention had turned to micrometeorology and microclimatology. Among the published papers during 1950 were studies both in America and in England of the effects on the growth and maturity of the potato crops caused by variations in temperature and other weather elements within very short distances above the ground or just below the surface. Students of climate continued to find much of practical interest in the work of the Laboratory of Applied Climatology of The Johns Hopkins university, Baltimore, Md. Many attended classes at the field station of the laboratory in New Jersey where the quality and quantity of peas, beans and other vegetable crops were much improved through careful adaptation of planting, harvesting and processing to the particular local

environment of weather and climate. Credit for this progress in applied climatology went to C. W. Thornthwaite, director of the laboratory.

**Research.**—The most detailed and co-ordinated flight and ground measurements ever undertaken in the mechanism of the thunderstorm were made by the air force, the weather bureau and co-operating agencies in prolonged tests during 1947 and 1948. The results, completed after laborious and painstaking analysis by a research team under the direction of H. R. Byers, head of the department of meteorology of The University of Chicago, were published by the government printing office in a volume entitled *The Thunderstorm* issued in April 1950. The voluminous data collected during the numerous measurements and observations made from aircraft during flights through thunderstorms were open to further research and analysis. Subsequent studies were to be undertaken and published by Roscoe C. Braham, lead-

ing analyst of the project. Among other conclusions, Braham estimated that less than 10% of the moisture involved in a thunderstorm development reached the ground as rain during the shower.

At one time hurricanes caused greater loss of life and damage to property in the United States than any other type of storm, but in recent years the hurricane warning service had provided advance reports of the approach of these storms and as a result losses and damage had been greatly reduced. In late years the greatest losses by storm had come from tornadoes, largely because the time and place of their occurrence were difficult to predict. Although the destructive force of the tornado is too great for ordinary buildings to withstand, loss of life could usually be averted if it were possible to foretell when and where the storm would strike. In addition to the tornado research reported in the January meeting of the A.M.S. in St. Louis, there were published during 1950 the preliminary results of studies showing a relationship between occurrence of tornadoes and a hydraulic jump phenomenon, a mechanism discovered earlier in other fields of hydrodynamics. The theory as applied to formation of tornadoes held sufficient promise to justify plans for a denser network of observing stations in the tornado belt of the midwest during the 1951 season in order to measure the atmospheric pressure jump by use of special microbarographs. It was hoped that these and other measurements would lead to

more accurate methods for predicting where tornadoes were likely to form whenever the synoptic weather situation indicated tornado-breeding conditions.

The discovery that there exists at high levels in the atmosphere a so-called "jet stream" of strong winds with rather sharp but varying geographical limits had increased the importance of upper air soundings. These soundings measured the strength of the stream from day to day and determined its altitude and location. Knowledge of its variations was essential to flight planning for high-altitude aircraft, especially for jet plane operations. This requirement necessitated the development of better equipment for sounding the upper air, and special plastic balloons were produced to carry radiosondes higher into the atmosphere. One of the handicaps had been the limitations of the radiosonde itself.

To expedite the design of improved devices for high-altitude

soundings several meteorological services, among them the weather bureaus of Finland, France, Switzerland, the United Kingdom and the United States, sent about 50 aerological sounding experts and representative radiosonde equipment to Payerne, Switz., in May 1950 for simultaneous comparative tests. Hundreds of soundings were made over a period of a few weeks. An analysis of the results gave an indication of the defects of the several types of radiosondes but failed to show an immediate solution to existing errors in the measurement of pressure, temperature, humidity and wind in the upper air.

**Synoptic Meteorology.**—Increased accuracy and broader coverage in observations of the upper air throughout the world were regarded by meteorological authorities in 1950 as the key to progress in synoptic meteorology and weather forecasting. This view was supported not only by the practical requirements of air navigation but also by the theoretical approach of researchers in dynamic meteorology who were associated with the project to develop techniques for weather prediction by a numerical process with the aid of the electronic computer. The network of observation stations established in the tropics during World War II had advanced the understanding of tropical meteorology. Meteorologists recommended that new observation stations be established in the arctic and over the oceans where, up to 1950, soundings had been too widely separated geographically and too infrequent to fill the gaps in knowledge of the circulation of the atmosphere and its characteristics which determine the formation, movement and disappearance of storms.

Some progress in the establishment of new stations could be reported by the end of 1950. Through the joint efforts of Canada and the United States an upper-air sounding station began operation in April 1950 at Alert, Ellesmere Island, only 400 mi. from the north pole. This was the most northerly meteorological station in the western hemisphere.

Two new aerological stations were also established by the weather bureau in remote places in the Hawaiian Islands in accordance with provisions passed by the 81st congress.

One of the most striking examples of the role of upper-air analysis in explaining the synoptic weather picture was seen in a study of the developments in the destructive storm which struck Ohio, Pennsylvania, New York and West Virginia in Nov. 1950. The heavy snows, extreme temperatures and gale winds caused by this storm in different parts of eastern United States broke all previous seasonal records in many localities during the five-day period from Nov. 24 to 29. More than 34 in. of snow fell on Parkersburg, W.Va. At Cleveland, O., Youngstown, O., and Pittsburgh, Pa., the average depth exceeded 20 in. Strong winds piled up snowdrifts and blocked the streets and highways in Ohio, western Pennsylvania and parts of Indiana and West Virginia. Rail traffic was interrupted by the snow and unseasonable cold. In many localities it exceeded in intensity the famous storm of 1913 in which 200 lives were lost and damage to Great Lakes shipping amounted to more than \$2,000,000. The property losses in the Nov. 1950 storm were heavy, but fortunately the loss of life was small. In the metropolitan area of New York city and nearby parts of Connecticut and New Jersey the winds attained velocities of 80 m.p.h. or more, causing high tides and the flooding of coastal areas. Preliminary summaries of storm damage in the eastern states indicated greater property losses from the 1950 storm than from the severe hurricanes of 1938 and 1944.

The November storm brought in cold air from the far north and carried temperatures to new lows for that time of year in Alabama, northern Florida, Georgia, Tennessee and the Carolinas. In Asheville, N.C., the temperature dropped to  $-5^{\circ}\text{F.}$ , which was  $9^{\circ}$  below the lowest temperature during any November since 1903.

Preceding the formation of this storm and related to it, a centre of low barometric pressure (LOW) reported over North

Dakota on Nov. 22 had reached Lake Superior by 1:30 A.M., E.S.T., Nov. 23. The wind flow following the LOW pulled in a large mass of cold air from the Mackenzie basin, in northern Canada, with temperatures of 10 to 20 degrees below zero in Montana and Manitoba. The cold front in the van of this polar air mass reached the Appalachian mountains in Kentucky, Tennessee and West Virginia early the following day. The centre of the preceding LOW had stagnated just northeast of Lake Superior and was decreasing in intensity. This synoptic distribution of pressure, temperature and wind and the associated air masses were conducive to formation of a wave disturbance on the front where it extended along the southern Appalachians. This disturbance, which developed rapidly and hastened formation of the destructive storm of Nov. 25–26, first appeared on the surface weather map at 7:30 A.M. E.S.T., on Nov. 24. At this stage it formed a small LOW over western North Carolina. During the subsequent 12 hours this barometric depression became the dominant feature on the weather map, cutting off the LOW north of the Great Lakes and completely obscuring it within the next 24 hours.

For the hidden causes of these developments it is necessary to study the wind flow and temperature distribution at altitudes of 10,000 to 20,000 ft. The 500-millibar constant pressure chart for the night of Nov. 23–24 showed at altitudes between 17,500 and 20,000 ft. a well-defined LOW corresponding to the dying surface LOW over Lake Superior. Prior to Nov. 23 the temperature field aloft surrounding the upper level LOW had been rather uniform. This signified little inflow of air masses with contrasting temperatures in the upper levels. Late at night on Nov. 23 the circumstances began to change when colder air appeared at high levels southwest of the LOW and moved rapidly through the southern and eastern sectors of the LOW accompanied by an elongation southward of the upper level depression. Temperatures aloft over Georgia and Tennessee turned  $10^{\circ}$ – $20^{\circ}\text{F.}$  colder, but over Minnesota temperatures aloft rose rapidly with strong winds from the north at about 15,000 ft. above the surface. These winds spread over the south central states during Nov. 24 and added to elongation of the upper level LOW and rapid movement of its centre southeastward where it served to intensify the surface LOW then forming over North Carolina. During the forenoon of Nov. 25 the pressure and wind fields over the upper Ohio valley changed, and the occlusion from the original LOW over Lake Superior became the warm front for a new LOW which developed over western Pennsylvania that afternoon, taking over the central role in intensification of the disturbance. At the same time a reinforcement of the high pressure and cold air mass over the Canadian maritime provinces and Labrador contributed to the intensification of the new LOW over western Pennsylvania. It not only prevented the LOW from taking the normal eastward course of movement but actually forced it westward into Ohio where it remained for more than 24 hours to produce the record-breaking snowfall for that time of year and the centre of the destructive storm of Nov. 25–26. The high pressure over the northeast was primarily responsible for the gale winds in the southern New England states, New York and New Jersey. The pressure gradient became unexpectedly steep and the winds more or less unprecedented for the type of LOW which remained centred over Ohio.

Although the several upper level charts of pressure, temperature and wind did not reveal all of the causes leading to the development of this storm, they provided explanations for its broad features which were missing on the surface weather map alone. At the close of 1950 three-dimensional weather analysis, despite its fragmentary aspects, was still the best available approach to greater accuracy in weather forecasting.

**Anomalies in the Weather of 1950.**—In most of the region south of the Ohio river and east of the Mississippi river January

T denotes a trace of precipitation, less than 0.01 in.

was warmer than in any previous year for more than half a century. Even in the north and northeast all-time January records for high temperatures were broken, for example, 72° at Ann Arbor, Mich., on Jan. 25 and 78° at Lewes, Del., the next day. A station in Maryland reported 83° that day. In the northwest, however, extreme cold and heavy snow were the features of the month. At Newport, Wash., the thermometer fell to -41° on Jan. 30, and temperatures went down to -51° in Minnesota and North Dakota. The most severe weather of the winter in northwestern United States occurred during the first week of February. In eastern Oregon and Washington thermometers read almost 35° below normal. The following week, however, temperatures rose to levels above normal almost everywhere in the United States, and unusually warm weather in the south caused premature budding of fruit trees. During the last half of February the anomalous features of January were reversed, and air masses from the far north which had penetrated only the west and mid-west in preceding weeks crossed the Appalachians and engulfed the eastern states, sending temperatures there below normal. In the west, thermometer readings were higher than normal.

For the three months of winter as a whole temperatures were below normal from central Washington eastward to North Dakota with seasonal averages as much as 10° F. colder than usual. This was a large departure from normal. In contrast, Florida

enjoyed its warmest winter season since weather bureau records began there more than 60 years earlier. Most of the southeastern quarter of the country had winter temperatures averaging 3° to 6° warmer than usual. Precipitation was much above normal in the Ohio and central Mississippi valleys but moderately subnormal in many other parts of the country. The number of snow, sleet and ice storms during January and February was somewhat smaller than usual. The month of March brought the coldest weather of the winter to many places east of the Mississippi. In New York state and the New England states extreme lows of -34° were reported. Wind and snow combined to produce blizzard conditions in central New York, and a two-day snowstorm left an average of 24 in. on the ground in Syracuse and vicinity with drifts up to 15 ft. in depth in some spots. Generally over the nation spring floods resulting from rain and melting snow occurred in many of the smaller tributaries but in most regions flooding was not as serious as usual during the season. In the north central states April brought new snowfall and in many places precipitation was two or three times the usual amount. This contributed to floods in the Red river valley of the North and its tributaries in

North Dakota exceeding any ever previously experienced. The conditions there were similar to those which caused prolonged and disastrous flooding in Winnipeg, Can., during the spring thaw. Flood stages continued during May in many of the streams of Minnesota and North Dakota and caused the heaviest flood damage ever suffered in those sections. In the northern third of the U.S. the spring of 1950 was one of the coolest on record while in parts of the southwest and in southern Florida it was the driest in 50 years or more.

In June U.S. weather as a whole was almost as close to normal as weather ever is. Local storms and floods were less numerous than usual but severe thunderstorms and floods nevertheless caused heavy losses; for example, in West Virginia a cloudburst with a 14-in. rain produced flash floods resulting in the loss of 31 lives and \$10,000,000 in property damage. July was cooler than normal except in states west of the Rockies and in New England. In Kansas it was the coolest July ever recorded. Mild summer weather extended through August and gave the lowest nation-wide average of temperature for the month in more than 60 years. The departure of -2.6° F., while not phenomenal, went with the subnormal temperatures of preceding months to mark the summer of 1950 as relatively cool. Rainfall in general was above normal, especially in central portions of the midwest.

In September and October the hurricane season brought two

severe tropical cyclones to Florida with wind gusts to 125 m.p.h., and 20 in. of rain in the Cedar Key locality where one of the hurricanes apparently circled the area on Sept. 5. During the last week of September smoke from forest fires in Alberta, Can., was carried eastward by winds at 10,000 to 25,000-ft. altitude and spread over most of the eastern states, obscuring the sun at times. The smoke eventually crossed the Atlantic and reached northwestern Europe. The cool weather of September was replaced by relatively warm weather for October, in some parts of the southwest the warmest and driest October ever recorded. West of the Rockies most of November and December were also warmer than usual, but the eastern two-thirds of the country experienced cooler weather than usual with temperatures much below normal in the central states. Record-breaking cold waves covered the plains states and penetrated to the gulf. The year closed with the freezing isotherm close to the coast from Galveston, Tex., to Mobile, Ala. This signified that most of the southern states already had severe winter weather. (See also DISASTERS; FLOODS and FLOOD CONTROL.)

FILMS OF 1950.—*Everybody Talks About It* (Teaching Film Custodians, Inc.); *Thunder and Lightning* (Young America Films, Inc.) (F. W. R.R.)

**Methodist Church.** A thorough-going survey and analysis of the organizational structure of the Methodist Church, ordered by the 1948 general conference, made great progress during 1950 in gathering and classifying material on which to base recommendations looking toward the elimination of overlapping agencies and greater efficiency and economy of operation. The survey commission utilized the services of a firm of industrial engineers.

Six episcopal areas, aided by the commission on public information, established public relations offices. The commission also began a series of seminars to aid church leaders in their press relations.

The Woman's Division of Christian Service employed an official observer to the United Nations whose duties included conducting study seminars on the grounds for visiting delegations of women, as well as keeping the 1,576,047 members of local societies informed on international affairs. The Methodist world peace commission and board of education co-operated in these and similar study seminars at Washington, D.C., and at Lake Success, N.Y., for youth groups and ministers. Other projects in the public interest by the church women were a National Citizens Roll Call (to develop informed and registered voters) and the compilation of state laws touching upon race and colour.

The 1950 enrolment (218,677) of the 122 colleges and universities in the United States related to the Methodist Church was more than double the figure of 1940. Religious work on 160 other campuses was conducted in student centres known as Wesley foundations. A postwar project in higher education for the benefit of students from outside the United States continued, and 140 students studied on fellowships in U.S. colleges in 1950; the total number that had received aid was 550.

In 1950, the centennial year of Methodism's entry into the field of institutional care for the aged, the denomination's 189 hospitals and homes ministered to 1,177,000 persons. Free service was rendered to the value of \$5,500,000. Assets of these philanthropic institutions were \$192,000,000.

The Methodist Church conducted work in 38 countries during the year with missionaries serving in 31 countries and financial assistance given 7 others. The largest number of missionaries to be accepted during the decade began either their service or final specialized training preparatory to going to their fields. For foreign service 225 were accepted and 32 for service in the U.S. and possessions.

The Korean war resulted in the loss of most of the vigorous

intellectual leaders of the Methodist Church of that country. All but six missionaries were evacuated, but no word about the six had been received by the end of the year. Hospital and college buildings were severely damaged.

Of more than 300 missionaries in China, all had left by late December except 65. Withdrawals were hastened by the intense anti-American feeling that developed near the end of the year rather than by anti-Christian feelings. The two bishops who were Chinese had taken over the administration of the areas of their two U.S. colleagues.

The woman's division opened work in Liberia during the year, and also dedicated a well-equipped hospital in Nome, Alaska, to serve Eskimos. U.S. Methodists turned over control of their Puerto Rican mission to nationals. In February Raymond L. Archer, a mission board secretary in New York, was elected bishop of the Singapore area by the Southeastern Asia Central conference.

The Methodist publishing house set up an organization of 130 scholars, working under the editorship of George A. Buttrick, to produce a 12-volume *Interpreter's Bible*. The year's business of the house again grossed a new high, \$13,500,000. The sum of \$400,000 was appropriated to aid retired ministers.

Plans were consummated for four significant national and international gatherings of Methodists for 1951: July 21-24 at Sioux City, Ia., National Town and Country conference (quadrennial); Aug. 27-31 at Purdue university, West Lafayette, Ind., National Convention of Methodist Youth (quadrennial); Aug. 28-Sept. 7 at Oxford, Eng., Ecumenical Methodist conference (normally decennial); Oct. 12-14 at Chicago, Ill., the first National Conference on Family Life. The quadrennial general conference, the supreme law and policy making body of the denomination, was to be held April 23, 1952, in San Francisco, Calif.

The membership of the 40,158 churches at the end of 1950 was 8,935,647. This did not include 734,455 preparatory members or about 850,000 members of the Methodist Church in countries outside the United States. The increase in membership over 1949 was 140,078.

Contributions for all purposes totalled \$244,676,674, an increase of \$15,379,563. Benevolences, as distinguished from local church and general administrative expenses, were \$38,508,675.

More than 2,000 new church schools were opened, bringing the total to 37,912. These schools were administered and taught by 492,170 officers and teachers.

The total value of churches, parsonages and other parish property increased by \$74,351,207 to \$1,337,190,116. Church extension officials reported 1950 as the top year in building of new churches.

Other Methodist bodies in the United States include the African Methodist Episcopal Zion, the African Methodist Episcopal, the Colored Methodist Episcopal, the Wesleyan Methodist, the Free Methodist Church of North America and the Primitive Methodist churches. Methodism is also organized independently in Great Britain, where it originated, in Australasia, New Zealand, South Africa, Korea, Brazil and Mexico. (See also CHURCH MEMBERSHIP.) (R. Sv.)

**Mexico.** A federal republic of Middle America lying between the United States of America on the north and Guatemala and British Honduras on the south, Mexico has an area of 760,373 sq.mi.; pop. (preliminary report, census 1950): 25,367,802. Capital: Mexico City. Chief cities (preliminary report, census 1950): Federal District, including Mexico City (2,527,328); Monterrey (339,634); Guadalajara (337,000); Puebla (229,976); San Luis Potosí (156,324); Mérida (155,899); Culiacán (144,550); Mexicali (141,189); León (140,000); Torreón (132,101); Ciudad Juárez (128,782); Veracruz (123,368); Mata-

ODD-SHAPED STONE STRUCTURES for grain storage at Zacatecas, Mex., a landmark along the Mexican link of the Pan-American highway. The 2,178-mi. link was opened officially on May 21, 1950, making automobile travel possible from border to border

moros (118,215); Aguascalientes (117,409); Toluca (115,422); Chihuahua (110,779); Morelia (103,516); Tampico (99,441); Saltillo (96,709); Pachuca (89,237). Language: Spanish, with an estimated 6.29% (1940) speaking Indian tongues only. Religion: Predominantly Roman Catholic. President, 1950: Miguel Alemán.

**History.**—Numerous developments and events combined to make 1950 a significant year in Mexican history. The republic enjoyed great material prosperity, traceable to many factors including (1) more balanced trade resulting from stabilization of the peso in June, 1949; (2) a record cotton yield; (3) exceptional growth in industry, and (4) an estimated \$150,000,000 income from tourism. Mexico's 1951 budget hit an all-time peak of \$360,000,000, with largest sums allocated to irrigation, communications and public works, education, and national defense.

In light of ample dollar reserves, on Jan. 1, 1951, the government removed curbs on importation of luxury items which had been prohibited since 1946, including automobiles, trucks, radios, cigarettes, nylon articles, clothing and wines. The move was an effort to stem inflation by making more items available to Mexican buyers, thus decreasing money in circulation, said Treasury Secretary Ramón Beteta. He indicated that existing curbs would be replaced by stiffer import duties on all articles except raw materials, machinery and industrial equipment.

Also in the economic field, 1950 witnessed (1) mutual renunciation of the Mexican-U.S. reciprocal trade agreement of 1942; (2) a rise of between 10% and 20% in the cost of living, despite governmental efforts to maintain ceilings on basic foods; (3) issuance of the republic's first savings bonds (100,000,000 pesos total, sold at half their face value, bearing 7.17% interest) to finance agriculture, industrial development, and low-cost housing; (4) trade pacts with 11 European nations, including agreements calling for interchange of some \$150,000,000 worth of goods with Britain, France, west Germany, Italy, Belgium and Switzerland, and earlier announcement of a \$62,000,000 export-import agreement with west Germany. Another event of great economic significance was the announcement by President Ale-

mán of a \$150,000,000 loan to Mexico from the Export-Import Bank of Washington to develop rail and highway transportation, agriculture, irrigation, communications, electric power transmission and generation.

In June the republic completed its seventh census in one day with the help of nearly 500,000 citizens, and preliminary reports indicated a growth of approximately 6,000,000 in the decade 1940-50.

In his fourth annual report to the nation on Sept. 3, Alemán announced that (1) production and employment were high; (2) the hoof-and-mouth scourge finally had been defeated; (3) agriculture was thriving; (4) Mexico would comply with decisions of the Security council of the United Nations, and that the Mexican people would participate in the solidarity of the continent and in the determination to guarantee the peace (in 1950, Mexico presented vegetable products valued at \$348,000 to the United Nations for the Korean war effort).

In the field of politics the big issue was the presidential succession in 1952, and even at this early date several prominent Mexican leaders already had been mentioned as possible candidates to succeed President Alemán. In spite of pressure from segments of the Partido Revolucionario Institucional, the government party, President Alemán himself announced on several occasions that he would not be a candidate for re-election, stressing his decision as "unbreakable" in his fourth annual message. This stand reaffirmed the "no re-election" principle which is incorporated in the Mexican constitution, and which had been an important issue in Mexican politics since 1910.

**Education.**—Education is free, compulsory and secular. In June 1950 an estimated 3,986,428 students were enrolled in 29,036 schools, compared with 1949 when 3,286,428 students were enrolled in 26,343 schools and taught by 90,212 teachers and professors. They were divided (1949) into the following categories: preschool, 98,155 students, 2,887 teachers, 837 institutions; primary, 2,997,198 students, 67,860 teachers, 24,625 schools; secondary, 80,598 students, 7,805 teachers, 466 schools; normal, 26,998 students, 2,854 teachers, 77 schools; technical, 41,928 students, 3,676 teachers, 199 schools; agricultural, 5,949 students, 701 teachers, 16 schools; universities, 35,602 students, 4,429 faculty members, 12 institutions.

The national campaign to reduce illiteracy, initiated in 1944, taught an estimated 3,250,000 adults to read and write during the period 1944-49. Illiterates (persons over 10 years of age who cannot write) were estimated in 1950 at 5,302,583, or 20.79% of the population, as contrasted with 7,543,952, or 38.39% in 1940. During the 1949-50 academic year, 825 Mexican students were enrolled in U.S. educational institutions.

**Defense.**—In 1950, funds budgeted for military and naval purposes included: defense \$30,289,010; marine \$8,510,982; and military industry \$2,264,739. In 1949, Mexico's budget provided for 55,620 men in the air and ground forces, 3,322 of which were assigned to the air force. The army, including the air force, was administered by the department of national defense. The air force in 1949 had an estimated 250 planes of all types. The navy, merchant marine and coast guard were administered by the ministry of marine. In 1950, the ministry operated 3 gunboats, 4 frigates, 1 armed transport, 13 coast guard vessels, 4 auxiliary vessels, and 6 dredges.

**Finance.**—The monetary unit is the peso of 100 centavos. In June, 1949, the peso was stabilized at 11.56 cents, U.S. currency, or 8.65 pesos to the dollar. In this article, dollar sums are calculated at 8.65 pesos to the dollar for 1950 statistics, and 7.87 pesos to the dollar for 1949 statistics (an average value for the year).

The federal budget for 1950 totalled \$317,520,013 and was distributed as follows: legislative \$2,195,700; presidency \$271,676; judicial \$1,187,398; government \$2,029,132; foreign relations \$4,777,572; treasury \$10,774,566; defense \$30,289,010; agriculture \$4,950,289; communications \$55,822,680; economy \$2,544,508; education \$36,102,120; health \$14,999,130; marine \$8,510,982; labour \$709,098; agrarian reform \$1,751,445; hydraulic resources \$28,901,730; attorney general \$503,699; national resources \$776,879; military industry \$2,264,739; special funds \$22,605,540; additional expenses \$15,280,630; public debt \$70,271,490.

The estimated national income for 1949 was \$3,252,858,000. Provisional federal tax receipts for 1949 were \$364,803,000. The public debt as of Dec. 31, 1949, was: internal \$421,388,800; external \$173,273,100, including railway debt. According to the Feb. 20, 1946, railway debt settlement agreed upon between the Mexican government and the International Committee of Bankers on Mexico, supplemented by an agreement signed Nov. 24, 1949, the original dollar debt was scaled down as follows: principal \$48,100,000; interest (1914-1922) \$100,000; interest (1923-1945) \$2,300,000; total \$50,500,000. Service payments during 1950 should have reduced the amount outstanding on principal and back interest to approximately \$48,000,000. Notes in circulation as of Nov. 30, 1950, were valued at \$295,073,200. Gross reserves of the Bank of Mexico on Dec. 31, 1950, were estimated at \$250,000,000.

As of Aug. 31, 1950, there were 352 banks, credit institutions and auxiliary organizations with 466 additional branches. Their total capital

was \$155,549,100; total resources \$1,386,716,000; total deposits \$352,485,500.

**Trade and Communications.**—Imports in 1949 totalled \$448,198,297, exports \$460,366,074. During the first eight months of 1950, imports were valued at \$342,890,100, exports at \$335,895,900. Principal imports included machinery, vehicles, scientific apparatus, mineral and metal products. Principal exports were base and precious metals, vegetable products (with cotton leading) and animal products.

The ten leading countries in Mexico's foreign trade in 1949 with their percentages of the total were: the United States (82.8), Britain (2.0), Canada (1.7), China (1.5), France (1.1), Belgium (1.0), Switzerland (0.8), Cuba (0.7), Netherlands (0.633), Sweden (0.629).

There were approximately 16,509 mi. of railroad in Mexico in 1949. In 1950, the government announced a three-year plan for improving the national railways by renovating, converting all lines to standard gauge, reconditioning and augmenting rolling stock and installing other new equipment. The improvement program was to be financed partly by a \$60,000,000 credit from the Export-Import bank. During 1950, Mexico purchased from companies in the United States 200 new steel gondolas and 67 old-type Pullman sleeping cars.

The government rail system, which includes more than 75% of the republic's rail mileage, increased its freight rates early in 1950 in an effort to avoid losses which had approximated \$5,000,000 annually.

Shipping received new impetus during 1950 with announcement by the government that it would permit 100% foreign capital investment in any international shipping firm set up within the republic. (Coastwise companies were still required to comply with earlier regulations regarding investment percentages.) In the period 1940-50, Mexico's merchant fleet expanded from 10 vessels (of 1,000 tons gross or over) with a gross tonnage of 23,815, to 21 vessels grossing 106,000 tons.

As of March 1950, there were approximately 14,212 mi. of passable highways in Mexico, of which 12,630 mi. were all-weather roads including 8,417 mi. of paved road. Mexico's link in the Pan-American highway was completed to the Guatemalan border in May, providing through service from Laredo, Tex. Motor vehicle registration as of Dec. 1949, was: passenger 160,580; buses 16,169; trucks 106,321; motorcycles 5,298.

In 1949, two United States air lines (American Airlines and Pan-American World Airways) and one Central American air line (Transportes Aéreos Centro-Americanos or T.A.C.A.) were operating in Mexico. There were three major Mexican air carriers—Cia Mexicana de Aviación (a Pan-American World Airways affiliate), Aeronaves de México, S.A. (in which Pan-American World Airways participated), Líneas Aereas Mexicanas, S.A. (L.A.M.S.A.), which was wholly owned by United Air Lines—Aerovías Guest and 31 smaller Mexican air lines operating within the country. For domestic carriers, business was up approximately 20% in 1949 over 1948 volume, while international carriers enjoyed a 15% increase. During 1948, 22,085,925 mi. were flown by all lines, and 815,118 passengers were carried.

In May 1950, the republic's two telephone companies (the \$22,000,000 Cia Telefónica y Telegráfica Mexicana, an International Telephone and Telegraph subsidiary, and the \$30,000,000 Teléfonos de México, a Swedish company) merged. In 1949, the republic had 239,749 telephones.

In the field of radio, 1950 marked the advent of television in Mexico, with station XHTV formally inaugurated on Sept. 3 when it televised President Alemán's annual message to the nation. In 1949, there were 205 standard broadcasting stations and 1,221,360 radios in use.

**Agriculture.**—In 1950, private-property farmers were encouraged to take full advantage of new lands being made available under the government's huge irrigation program, as the government made an effort to increase production through encouragement of the profit motive.

The year 1950 saw abolishment of the government's subsidy on wheat imports, originally granted to keep the price down on home markets. By the end of 1950 it appeared that the dreaded hoof-and-mouth disease had been eliminated from the infected area. No outbreak of the scourge appeared during 1950 in the region where 17,000,000 animals had been vaccinated in the costly campaign which involved expenditures totalling \$24,000,000 in 1949 and \$15,000,000 in 1950.

In the 1949-50 season, Mexico's production of 12 leading field crops increased some 661,380 tons over production in 1945-46. Harvests of maize, wheat, beans, rice, sugar, vegetable fats, linseed, cocoa, tomatoes, barley, fruits and coffee yielded approximately 6,364,500 in 1949-50, with a total value approximating \$527,700,000. Cotton production increased from 396,000 bales in 1945-46 to 913,000 bales in 1949-50.

Agricultural production for 1949-50 (in tons) included: maize 2,535,290; wheat 518,081; sugar 750,000; beans 231,483; chick peas 99,207; bananas 606,265; pineapples, fresh, exported 154,322 (a new record); coffee 72,751; henequen 113,537 (tons); barley 138,890; tobacco 27,557; rice 203,925; sesame 99,207; cotton 913,000 (bales); tomatoes 335,000; linseed 50,500; cottonseed 187,500; vanilla 220,460 (lbs.).

The estimated number of animals in 1949 included: cattle 14,500,000; sheep 5,100,000; goats 8,900,000; hogs 5,600,000; horses 2,511,175 (1940 census); mules 932,522 (1940); donkeys 2,341,539 (1940). (In 1948 it was estimated that the 1940 totals had increased by 25%.)

**Manufacturing.**—The total value of Mexican industrial production for 1949 was \$406,971,561 (with the following industries excepted, as unreported: alcohol; refined sugar; cabinetmaking; cookies, crackers, food

pastes; bricks, tile, etc.; floor and wall tiles; and working clothes).

During 1949, 305,561 U.S. tourists spent about \$135,000,000 in Mexico. Tourist revenue for 1950 was expected to total \$150,000,000. During the first eight months of 1950, 257,878 U.S. travellers entered the republic, as compared with 205,862 during the same period in 1949.

**Mineral Production.**—Total mineral and metal production (excluding petroleum) for 1949 was 763,098 tons with an estimated value of \$221,840,000. Production of the most important metals (in tons) was: lead 220,764; zinc 178,402; silver 1,538; copper 57,246; gold 12.6; antimony 5,753; manganese 23,771; graphite 23,812; iron 246,573; arsenic 3,576.

Mexico's petroleum industry produced 60,909,910 U.S. barrels in 1949, and authorities forecast a 72,000,000-bbl. production in 1950 for the greatest annual output since 1926. The year saw many significant developments in the industry, including purchase of \$1,000,000 worth of pipe from France to finish the Tehuantepec isthmus line; announcement by Petróleos Mexicanos (Pemex), official government agency which controls the industry in Mexico, of plans to drill 300 new wells annually with equipment purchased in France, west Germany and the United States; a record budget for Pemex of \$155,100,000 to enable the agency to undertake vast drilling and construction projects; announcement by Pemex of \$13,300,000 profits for 1949; an increase in the industry's output in 1950 to 250,000 bbl. per day against the former output of 185,000 bbl. per day, with goal of 350,000 bbl. per day by 1952; discovery in October of four important new petroleum areas in Veracruz and Tamaulipas; and announcements by Pemex of surveys indicating oil potential in Baja California.

In August, the new \$30,000,000 Salamanca refinery (capacity 30,000 bbl. per day) was dedicated.

**FILMS OF 1950.**—*Lund of Romance* (Paul Hoefer Productions); *Mexico—Ciudad Encantadora, Tierra Mexicana* (International Film Bureau). (C. D. HE.)

**Michigan.** One of the north central group of states of the U.S., Michigan was the 26th state admitted to the union; it is popularly known as the "Wolverine state." Land area: 58,216 sq.mi. (excluding 39,960 sq.mi. of Great Lakes water surface); pop. (1950 census): 6,371,766, a gain of 21.2% since 1940. Of the state's population in 1940, 65.7% was urban and 34.3% rural. Whites composed 95.9% of the population, nonwhites 4.1%. Capital: Lansing (pop. 91,964). Larger cities were (1950 preliminary census): Detroit (1,838,517); Grand Rapids (175,647); Flint (162,800); Dearborn (94,529); Saginaw (92,352).

**History.**—The legislature, called into special session by Gov. G. Mennen Williams on March 15, 1950, did not formally adjourn until Dec. 30. Having completed its most important item of business on May 20, that of making appropriations, the legislature, instead of following the usual procedure and setting the constitutional *sine die* adjournment date for June, left the final date open. The Republican leaders thus remained free, when the June 20 session came, to recess the legislature until later in the summer and to return any time they chose. There were, in fact, several meetings in August, September and November before it was decided, on Nov. 10, to remain in session until Dec. 30, with a full session slated for Dec. 4. Despite the extended length of the special session, little was accomplished except for the passage of appropriations measures.

Governor Williams expressed disapproval of the legislature for failing to act upon his recommendations for marketing aid to farmers, changes in the standards of unemployment compensation, a broader fair employment practices law, improvement of facilities in mental hospitals, tuberculosis hospitals and other state institutions, and better standards of support for the state university, Wayne university and the various state colleges.

The governor was particularly vigorous in his criticism of the legislature's budgetary policy. He had recommended a budget of \$340,000,000, but the legislature, following the unique procedure of combining all appropriations within a single measure, adopted a budget of \$271,300,000 for 1950-51. Approximately \$70,000,000 below the minimum set by the governor, the appropriation was also \$15,000,000 below the 1949-50 figure.

A referendum on article 1 of the Public acts of 1949, which would permit the manufacture and sale of yellow margarine in Michigan providing certain requirements were satisfied, was endorsed by a vote of 1,090,000 to 562,034.

In the November election for the governorship, Williams, who

#### Industrial Production of Mexico

Industry	Value of product, 1949	Industry	Value of product, 1949
Vegetable oils . . . . .	\$26,154,940	Cotton thread and cloth . .	\$91,157,420
Rubber goods . . . . .	23,639,410	Woolen thread and cloth . .	18,002,930
Drygoods . . . . .	7,619,664	Silk and rayon thread . . .	13,094,740
Shoes . . . . .	7,472,412	and cloth . . . . .	27,601,130
Cement . . . . .	15,485,090	Soap . . . . .	34,456,920
Matches . . . . .	5,114,943	Flour . . . . .	15,886,370
Beer . . . . .	39,050,520	Paper . . . . .	8,206,559
Cigarettes and cigars . . .	26,442,240	Glass . . . . .	
Canned goods . . . . .	7,195,643		
Iron and steel . . . . .	40,390,630	Total . . . . .	\$406,971,561

had won the Democratic nomination unopposed, had as his opponent Harry F. Kelly, who had served as governor from 1943 to 1946. The closeness of the contest led both parties to express a desire for a recount, which got under way on Dec. 2. Both parties set up elaborate machinery to safeguard their interests, and the many technical questions raised were hotly argued. From the outset, Williams' lead grew. On Dec. 13, when, with more than three-quarters of the state's precincts recounted, Williams' margin had risen to 4,243 votes, Kelly conceded defeat; further recounting was abandoned. The official figures gave Williams a margin of 1,154 votes.

For the other state offices the Republicans had made a clean sweep. The following were elected: William C. Vandenberg, lieutenant governor; Fred M. Alger, Jr., secretary of state; Frank G. Millard, attorney general; D. Hale Brake, state treasurer; and John B. Martin, Jr., auditor general.

**Education.**—In 1949-50 elementary school enrolment was 678,090 with 22,734 teachers; secondary school enrolment 363,490, with 14,388 teachers. There were 4,860 school districts. There were 52 institutions of collegiate rank, with a combined enrolment of 122,808 as of June 30, 1950. The state superintendent of public instruction in 1950 was Lee M. Thurston.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The various state institutions of correction and their populations as of June 30, 1950, were as follows: State Prison of Southern Michigan, 5,909; Michigan reformatory, 1,241; Marquette Branch prison, 880; Detroit House of Correction, 389 (male, 107; female, 282); Cassidy Lake Technical school, 172; wayward minor boys in custody, 14. Total expenditures of the department of correction amounted to \$6,883,082.06 (including \$234,649.53 for capital expenditures).

The department of social welfare reported that the old-age assistance case load increased steadily from 99,186 recipients in Jan. 1950 to 100,695 in Sept. 1950. Decreases of 1,352 cases in October and 992 in November were attributable chiefly to the fact that increased O.A.S.I. benefits became available through amendments, effective in October, to the federal Social Security act. Aid to dependent children reached a peak in May 1950, with a case load of 28,112 families. This case load decreased from June to December by an average of 220 families monthly. The case load under direct relief reached a post-World War II peak of 54,771 cases in March 1950; by November the number had fallen to 26,138.

As of June 30 there were 1,510 children who were wards of the state under the supervision of the Michigan Children's institute. As of the same date 48 blind persons were employed at the Michigan Employment Institution for the Blind. The Boys' Vocational school at the end of October was caring for 348 socially maladjusted boys; the Girls' Training school had an enrolment of 250 girls.

**Communications.**—During the 11 months from Jan. 1 to Nov. 30 the sum of \$26,533,600 was expended for road and bridge construction, exclusive of right of way. During the fiscal year July 1, 1949, to June 30, 1950, \$13,300,000 was spent for road maintenance and \$564,000 for bridge maintenance. During the first 11 months of 1950, 886,607 passengers were transported by ferry across the Straits of Mackinac, a decrease of 40,240 when compared with the same period in 1949.

**Banking and Finance.**—As of Oct. 4, 1950, 343 state banks had total assets of \$2,792,800,988.47; three industrial banks, \$10,540,398.08; seven trust companies, \$40,741,905.26. Total assets of 78 national banks in Michigan on June 30 were \$3,096,570,000. Sixty-nine building and loan and savings and loan associations (35 state-chartered, 34 federally chartered) with 82 offices in the state had total assets on June 30 of \$373,860,862.

**Agriculture.**—Michigan's 1950 production of field crops dropped below the high 1949 level, but continued to be well above average. Total production of the crops was higher, however, than for any other year since 1942. Potatoes continued the sharp upward trend of recent years, with a new record of 180 bu. per acre, to give the largest production since 1946. Fruit production amounted to 441,900 tons, 12% less than in 1949, but 26% above average. In the production of both sweet cherries and red tart cherries, new records were set.

Table I.—Leading Agricultural Products of Michigan

Crop	1950	1949	Average 1939-48
Corn, all, bu. . . . .	64,796,000	85,920,000	56,482,000
Winter wheat, bu. . . . .	29,666,000	35,019,000	21,544,000
Oats, bu. . . . .	58,460,000	56,700,000	51,134,000
Potatoes, bu. . . . .	17,460,000	17,160,000	18,136,000
Apples, commercial, bu. . . . .	7,020,000	11,735,000	6,776,000
Peaches, bu. . . . .	4,080,000	3,500,000	3,606,000
Barley, bu. . . . .	3,910,000	3,562,000	4,960,000
Beans, dry edible (100-lb. bags) . . . . .	3,990,000	5,709,000	4,405,000
Hay, tons . . . . .	3,794,000	3,362,000	3,779,000

**Manufacturing.**—Prosperity in manufacturing and business was enormously enhanced by the fact that the automotive industry—outstanding leader in Michigan—experienced the biggest year in its history. Production, retail deliveries and wages to employees reached levels more than 20% higher than those of 1949. Net earnings far exceeded any previous record. The year was also conspicuous in the number of worker-pension and other welfare measures taken by the industry. In general, the industrialization of Michigan went on apace. Through the agency of the state's economic development department, 14 new industries were brought into the state during the year. Sales tax collections for 1950 exceeded \$221,000,000,

an all-time record. By the end of the year the four largest automotive manufacturers and many other industrial plants were devoting a considerable fraction of their efforts to defense contracts.

**Mineral Products.**—Production figures (preliminary) for 1948 and 1949 are shown in Table II.

Table II.—Mineral Products of Michigan

	1949		1948	
	Quantity	Value	Quantity	Value
Iron ore, long tons . . . . .	10,737,137	\$57,722,248	12,896,478	\$53,246,591
Petroleum, bbl. . . . .	16,517,333	45,610,021	16,870,000	47,860,000
Cement, bbl. . . . .	12,747,791	28,823,055	11,116,911	23,533,001

(L. G. V. V.)

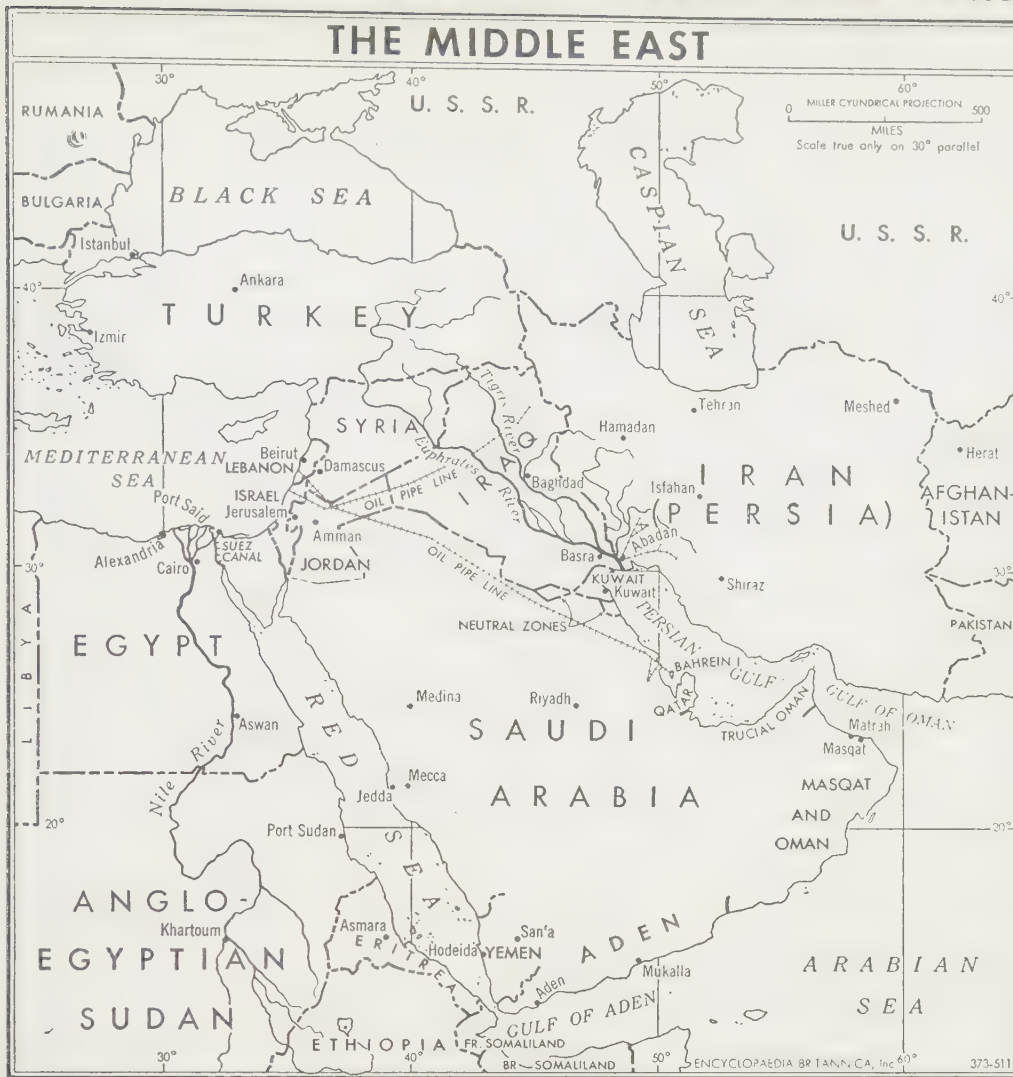

## Middle Eastern Unity.

In the two world wars of the 20th century the middle eastern region, stretching roughly from the western borders of Egypt to the western borders of India and from the Black and Caspian seas in the north to the Arabian sea and the Indian ocean in the south, played an important role. Its strategic importance rests upon the fact that it is the junction of the three continents of the old world and of its intercontinental land, sea and air routes. The road from Egypt to India was the road which all the great world conquerors coveted, after Alexander the Great set the example. Napoleon, Hitler and Mussolini attempted to follow him; these attempts at intercontinental control were in each case thwarted by the successful British defense of the strategically important middle east. Russia has during the last 200 years viewed the middle east as its potentially first and most important field of expansion, and in recent years the Soviet Union has intensified this drive. The strategic value of the middle east has been enhanced in recent decades by the discovery and exploitation of vast oil deposits in that region, which are regarded by many experts as the richest oil deposits in the world.

The growing international tension after 1946 increased the importance of the middle east for the defense of the free world. It is significant that the doctrine of aid to any country striving to maintain its freedom against aggression, as formulated by Pres. Harry S. Truman on March 12, 1947, was applied first in Greece and Turkey. With the growth of Communist unrest and success in the far east and with the plans for an integrated defense force for western Europe, the in-between area of the middle east gained in importance in 1950. But the middle eastern countries by themselves were much too weak and in many cases too backward economically to withstand aggression. They could hope to maintain their freedom only in close co-operation. For that reason several suggestions and efforts were made in 1950 to integrate the middle eastern countries. Two of them, Turkey and Greece, were invited to associate themselves with the appropriate phase of the planning work of the North Atlantic treaty organization with regard to the defense of the Mediterranean. Both governments accepted this role of consultant to the North Atlantic organization. But for geographic reasons their inclusion into a regional arrangement centring around the North Atlantic seemed impractical. The middle east had to develop its own regional arrangements. Such a process presented great difficulties; even its beginning was hindered by jealousies and hostilities among these countries, especially the deep-seated antagonism between the Arab nations and Israel; on the other hand the Islamic faith, to which most of the middle eastern peoples adhere, was a possible integrating factor.

A nucleus of such a middle eastern integration could be found in the Arab league, a regional organization of seven nations (Egypt, Jordan, Lebanon, Syria, Iraq, Saudi Arabia and Yemen) bound by historical, geographical, political and cultural ties. The legal committee of the United Nations general assembly voted on Oct. 5, 1950, to extend a permanent invitation to the secretary-general of the Arab league to attend assembly

from Pakistan, the most populous Islamic country. Though the Mohammedan far eastern nation of Indonesia was represented, the conference was composed on the whole of middle eastern countries, Afghanistan, Egypt, Iran, Iraq, Jordan, Lebanon, Pakistan, Saudi Arabia, Syria and Turkey. Its discussions expressed the wish that the United Nations should establish an economic commission for the middle east to help in the modernization and intensification of the agriculture of that region.

But these conferences were only a first and very modest beginning on the road toward integration. One of the obstacles to its growth was the fact that some Arab leaders, especially in Egypt, envisaged rather the creation of an Arab nation or a federation of Arabic-speaking peoples which would reach from Morocco on the Atlantic ocean to the western frontiers of Iran. The secretary of the Arab league, Abdul Rahman Azzam Pasha, inclined to this school of thought. The creation of an independent new state of Libya by decision of the United Nations strengthened this trend, for Libya was expected to join the Arab

sessions as an observer. The roll call ballot showed 43 votes in favour, 1 against and 7 abstentions. Six members of the Arab league were also members of the United Nations. With other Asiatic nations they took a leading part in Dec. 1950 in trying to arrange for a truce in Korea. In general, however, the Arab league saw its main task in safeguarding the interests of the Palestinian Arabs. It demanded, basing the request upon the resolution of the United Nations general assembly of Dec. 1948, the return of the Arab refugees to their Palestinian homes and payment of the indemnity owing to these refugees. The Arab league was, however, trying to expand its field of activities, though yet with little success. A cultural conference of the Arab league which met at Alexandria, Egypt, at the end of August, called in a resolution for the substitution of classic Arabic for the colloquial dialects used in the everyday life of the various Arab nations. This written classic language presented a vital bond of unity among the Arab nations and even among all the Islamic peoples.

The Arab league is, however, only a regional organization in the middle east, not the broader regional organization which would have to embrace, in addition to the Arab lands, Turkey, Iran, Pakistan, Israel and other countries. At the Arab cultural conference in Alexandria, there were represented also the two small Arab countries of Kuwait and Bahrein which do not belong to the Arab league. Of much broader scope was the Moslem economic conference which met in Tehran, Iran, in Oct. 1950, following another similar conference in Karachi, Pakistan, in Nov. 1949. The initiative for these conferences came

league, to sign its collective security pact and thus to prepare for the emergence of an African-middle eastern Arab commonwealth. On the other hand, the real strength in the middle eastern region and in Islam lay with Pakistan and Turkey. A close co-operation of all middle eastern nations would be necessary not only for their mutual defense against aggression but also for the strengthening of their economic and social structure.

An event of major importance not only for the middle east but for western Europe was the opening on Dec. 2, 1950, of the 753-mi. oil pipe line from Saudi Arabia to Sidon in Lebanon. This trans-Arabian pipe line was built by the Arabian American Oil company (Aramco) over a period of almost three years. It connected the oil fields of northeastern Saudi Arabia with the Lebanese port on the Mediterranean. A branch line led to Ras Tanura, a port on the Persian gulf. This new pipe line was not only of great strategic importance for the Mediterranean and western European area but it was also expected to accelerate the economic growth of Lebanon and other Arab states. (See also FAR EASTERN UNITY; EUROPEAN UNION; NORTH ATLANTIC COMMUNITY; also articles on the various middle eastern countries.)

data as can be included in one page. Many of the less important products and many of the smaller producers cannot be included for lack of space, but the coverage is sufficiently comprehensive to indicate the general distribution and the relative importance of the producing countries.

Table II is a compilation of the prices for the leading minerals and metals as quoted on the New York and London markets at the opening and closing of the year 1950. After Feb. 1949, when production began to catch up with the post-World War II demand, the prices of many mineral commodities dropped sharply, especially the major nonferrous metals. While there was some recovery in the third quarter of 1949, another decline followed in the fourth quarter and extended into 1950. As a result, in March 1950 the *Engineering and Mining Journal* composite price index for nonferrous metals stood at 132.60, as compared with a peak of 185.75 in Feb. 1949. Except for 131.20 in June 1949, this was the lowest figure since the advances that followed the abandonment of price controls in 1946. The military operations in Korea followed shortly, and the demand incident to defense rearmament brought a prompt reaction on prices, raising the index to a new record high of 186.00 in November, with prices still advancing.

(G. A. Ro.)

## Mineralogy.

A new lead-copper mineral from the Mammoth mine, Arizona, was described by J. J. Fahey, E. B. Daggett and S. G. Gordon (*American Mineralogist*, 35:93-98). The name *wherryite* was assigned to this new mineral in

honour of Edgar T. Wherry, professor of plant ecology at the University of Pennsylvania, Philadelphia, and first editor of the *American Mineralogist*. M. A. Peacock and John McAndrew reported on the new natural nickel-lead sulphide, Ni<sub>3</sub>Pb<sub>2</sub>S<sub>2</sub>, from Trial Harbour, Tasmania (*ibid.*, 35:425-439). This mineral was sent to them by P. Ramdohr, who named it *shandite* after S. J. Shand, Scottish petrologist, who was for a period professor at Columbia university.

C. B. Slawson discussed "Twinning in the Diamond," much of which is of a multiple character (*ibid.*, 35:193-206), and C. B. Slawson and J. A. Kohn described the "Maximum Hardness Vectors in the Diamond" (*Industrial Diamond Review*, 10:168-172). "The Mining and Heat Treatment of Zircons" was reported by W. C. Buckingham (*Journal of Gemmology*, vol. ii, pp. 177-187). In an extended article R. Keith Mitchell discussed the "Cleavage and Structure of Gem Minerals" (*ibid.*, vol. ii, pp. 237-274). The "Diagnostic Importance of Inclusions in Gem Stones" by Edward Gübelin, with 48 illustrations, was a valuable contribution (*ibid.*, vol. ii, pp. 281-303). "Exploring the World of Gems" by W. F. Foshag (*National Geographic Magazine*, vol. xcvi, pp. 779-810), with 34 illustrations, 24 in natural colours, was of great popular interest.

A *Roman Book on Precious Stones* by S. H. Ball became available during the year. The book is based upon an English modernization of Pliny's 37th book of the *History of the World*, which is a treatise on gems. The life of Pliny, his standing as a mineralogist and the status of gemmology and jewellery in his time are discussed by Ball. A section of the book contains

Ball's extensive notes which explain, amplify or correct many of Pliny's statements and illusions. The famous translation of Georg Agricola's *De re metallica* (1556) by former Pres. Herbert C. Hoover and Lou H. Hoover, which was published in 1912 and had long been out of print, was issued in a new edition. This is a valuable history of the scientific development up to the middle 16th century and serves as a source book in mineralogy, geology and mining and mechanical engineering. E. E. Wahlstrom's *Introduction to Theoretical Igneous Petrology* stresses the application of physical chemistry to rocks. *Einfuehrungen in die Mineralogie (Kristallographie und Petrologie)* by C. W. Correns (Berlin) is designed primarily for advanced students and specialists. Paul Ramdohr's *Die Erzminerale und Ihre Verwachsungen* (Berlin) is a comprehensive treatise on ore minerals. It contains a wealth of information concerning their properties, occurrence and methods used for their determination.

The Sept.-Oct. 1950 number of the *American Mineralogist*, pp. 615-958, was dedicated to Esper S. Larsen, Jr. A copy was presented to him at the annual meeting of the Mineralogical Society of America in Washington, D.C., on Nov. 16, 1950, in advance of official publication. Larsen was professor of petrology at Harvard university from 1923 until his retirement in 1949. Thirty-eight friends and former students contributed articles, which included an appreciation of the work and influence of Larsen and 31 scientific papers dealing with various phases of mineralogy and petrography. There was also a bibliography of 106 papers by Larsen.

The recipient in 1950 of the Washington A. Roebling medal of the Mineralogical Society of America was Norman L. Bowen of the Geophysical laboratory of the Carnegie institution, Washington, D.C., an authority on the application of physical chemical methods and theory to the study of mineral and igneous rocks. (See also CHEMISTRY; MINERAL AND METAL PRODUCTION AND PRICES.) (E. H. KR.)

**Mining:** see MINERAL AND METAL PRODUCTION AND PRICES. See also under various minerals.

**Minnesota.** The most northern state of the United States, popularly known as the "Gopher" or "North Star" state, Minnesota is 84,068 sq.mi. in area including 4,059 sq.mi. of water. The population total on April 1, 1950, as determined by the U.S. bureau of the census, was 2,982,483, an increase of 6.8% over the 1940 population of 2,792,300. The preliminary 1950 population figures for principal cities include: St. Paul, the capital (309,474); Minneapolis (517,277); Duluth (104,066); Rochester (29,634); St. Cloud (28,375); and Winona (25,965). The 1950 population was comprised of 89% native-born whites, 10% foreign-born whites and 1% Negroes and other races.

**History.**—During 1950, the Minnesota Efficiency in Government commission, known as the "Little Hoover" commission and patterned after the Hoover commission of the federal government, completed a report and recommendations on efficiency in state government departments and agencies. This report and recommendations were to be presented to the 57th session of the Minnesota legislature early in 1951.

The Nov. 1950 election of principal state officers resulted in the following vote for each candidate: governor, Luther W. Youngdahl 635,800 votes, Harry H. Peterson 400,637 votes and Vernon G. Campbell 10,195 votes; lieutenant governor, C. Elmer Anderson 588,777 votes, Frank Murphy 401,148 votes and Susie W. Stageberg 19,043 votes; secretary of state, Mike Holm 686,364 votes and Mrs. A. J. McGuire 344,173 votes; state auditor, Stafford King 627,754 votes and Elmer A. Borgschatz 371,665 votes; state treasurer, Valdimar Bjornson 542,019 votes and

Paul A. Rasmussen 444,548 votes; attorney general, J. A. A. Burnquist 575,736 votes and Orville L. Freeman 429,320 votes.

**Education.**—Minnesota public school districts spent about \$121,586,460 for education during 1949-50. For that year, \$47,966,510 was available from state funds derived from the revenue of trust funds and earmarked taxes. The 7,117 school districts of the state maintained 7,687 elementary schools, 641 secondary schools, 10 junior colleges and 15 teacher training departments. There were also 5 public state teachers' colleges in operation.

These schools had an enrolment of 324,743 pupils with 12,174 teachers in the elementary grades; 171,602 pupils with 8,533 teachers in the secondary grades; 1,603 students with 136 teachers in junior colleges; and 205 students with 15 teachers in teacher training departments. Dean M. Schweickhard was commissioner of education.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Persons given financial assistance in Nov. 1950 totalled 97,800, approximately 7,600 less than in Nov. 1949. This trend reflected higher employment levels for 1950. However, in the same period, the amount of assistance granted these persons showed an increase resulting from higher medical grants, \$3,915,848 in Nov. 1950, compared with \$3,902,257 in Nov. 1949. For the year ending June 30, 1950, a total of \$46,400,307 was granted to a monthly average of 104,700 persons. In Sept. 1950 approximately 4,200 old-age assistance recipients were also receiving old-age and survivors insurance; approximately 600 families in aid to dependent children were also receiving these payments, while only 20 aid to the blind recipients were receiving both types of payments. As of March 31, 1950, 13,494 children were receiving services from Minnesota welfare agencies. Of this total, 9,526 received services primarily from public welfare agencies, while 3,968 received services primarily from private welfare agencies.

During 1949, approximately 769,000 workers were covered by the Minnesota Employment and Security law. An estimated \$15,440,000 was paid in unemployment compensation benefits during 1950. At the same time, approximately \$675,000 was paid in unemployment and self-employment benefits to World War II veterans under the Servicemen's Readjustment Allowance program.

**Communications.**—Minnesota's highway transportation facilities aggregated approximately 121,000 mi., including 11,893 mi. of state trunk highways, 42,522 mi. in county road systems, 56,757 mi. of township roads, 7,868 mi. of municipal streets. State highway department expenditures for the fiscal year ending June 30, 1950, exclusive of principal and interest payments on bonded indebtedness totalled \$41,971,466.

On Dec. 31, 1950, there were 22 railroads operating in the state of Minnesota with 8,350 mi. of main-line trackage of which 15 mi. was electrified. In addition these roads operated 4,304 mi. of second main-line, sidings, yard and switching trackage. Minnesota had 80 municipally owned airports, 37 privately owned commercial airports, 21 privately owned commercial seaplane bases and 258 privately owned landing strips.

**Banking and Finance.**—Resources of Minnesota banks increased 3.4% or \$106,629,000 to \$3,196,070,000 on July 1, 1950, as compared with \$3,089,441,000 on July 1, 1949. The 499 state banks, 1 mutual savings bank and 4 trust companies had deposits of \$991,144,000 and resources of \$1,067,656,000, increases of \$29,693,000 and \$35,512,000 respectively since July 1, 1949. The 179 national banks had deposits of \$1,973,545,000 and resources of \$2,128,414,000, increases of \$61,125,000 and \$71,117,000 respectively since July 1, 1949. The state had 41 chartered savings and loan associations with deposits of \$98,345,000 on July 1, 1950, compared with deposits of \$86,860,113 on July 1, 1949, an increase of \$11,485,000. The 30 federal savings and loan associations had resources of \$266,440,000 on July 1, 1950, an increase of \$45,609,000 over the \$220,831,557 reported on July 1, 1949.

Total operations of the state government (exclusive of public debt redemption, stores for resale, annuities and pensions, land and interest in land) amounted to \$486,479,797 for the fiscal year ended June 30, 1950, as compared with \$222,478,172 for the fiscal year ended June 30, 1949. The state's total indebtedness in bonds and certificates of indebtedness on June 30, 1950, was \$129,815,331.11, an increase of \$78,111,708.34 over the debt on June 30, 1949, of \$51,703,424.77. Sale of the veterans' adjusted compensation bonds in July of 1949 to pay the Minnesota veterans' bonus accounted for most of this increase.

The four principal trust funds of the state—internal improvement land, swamp land, permanent school and permanent university funds—the income from which is devoted largely to schools, reached \$189,900,176 on June 30, 1950, as compared with \$177,282,747 on June 30, 1949.

**Agriculture.**—Butter production in 1949 was 252,621,000 lb. compared with 222,657,000 lb. in 1948, an increase of almost 30,000,000 lb. For the calendar year 1949, cash receipts from farm marketings totalled \$1,191,207,000 with \$838,765,000 from livestock and livestock products and \$352,442,000 from crops.

#### Leading Agricultural Products of Minnesota

Crop	1950	1949	1939-48 Average
Corn, all, bu. . . . .	194,218,000	248,512,000	214,392,000
Oats, bu. . . . .	188,737,000	183,224,000	171,594,000
Barley, bu. . . . .	36,934,000	25,464,000	34,108,000
Wheat, all, bu. . . . .	15,410,000	19,971,000	22,109,000
Flaxseed, bu. . . . .	13,255,000	16,280,000	13,487,000
Potatoes, bu. . . . .	17,640,000	17,000,000	18,349,000
Soybeans for beans, bu. . . . .	16,384,000	12,762,000	5,995,000
Hay, all, tons . . . . .	5,494,000	5,021,000	6,402,000

**Manufacturing.**—In Oct. 1950 Minnesota's manufacturing employment reached 204,740 and showed an increase of 10.7% or almost 20,000 persons in manufacturing employment above the 184,951 reported for Oct. 1949. Nonagricultural employment in 1950 ranged from a low of 752,284 in February to an all-time high of 825,100 in September. Latest

census of manufacturing reports indicated 4,567 manufacturing establishments to be operating in Minnesota in 1947. An estimated 6,000 were operating in 1950.

**Mineral Production.**—During 1950 an estimated 65,000,000 tons of iron ore were shipped from Minnesota by rail-water and all-rail methods of transportation. This constituted an increase of approximately 8,200,000 tons over the 56,825,957 tons shipped during the calendar year 1949. (L. W. MH.)

**Mint, United States:** see COINAGE.

**Miquelon:** see FRENCH UNION.

**Missions, Foreign (Religious).** For Christian foreign missions the most acute crisis of 1950 accompanied the fighting in Korea. The invasion of South Korea by North Koreans brought distress to Christians as well as to others. The counteradvance by the United Nations forces and North Korean resistance made for much destruction of property and disruption of normal life, including church life. Much church property shared in the damage wrought by bombings, looting and fires. Some church leaders were carried off by the North Koreans and presumably killed.

In China, because of the Communist regime, the missionary situation continued to deteriorate. The exodus of missionaries was accelerated, partly because of overdue furloughs, partly because of the conviction of Chinese Christians in some localities that the presence of missionaries was a handicap to the churches, and partly because of the restrictions on the travel of foreigners imposed by the Communists. The Communist government was fairly tolerant of Chinese Christians and churches, although at least one striking case of the execution of Chinese Catholics was reported, but made it clear that the churches must sever ties with foreign "imperialists" and must be quite independent of all foreign control. Chinese Communists sought to woo Protestant Christians, but with only limited success. Several outstanding Protestants signed statements denouncing the connection of missions with "imperialism" and insisting that the churches conform to the program of the Communist regime. A few Chinese Protestant leaders also denounced the United States in its action in connection with Korea. Christian schools were required to teach courses in the principles of the new order set up by the Communists. Drastic restrictions were placed on religious instruction and Christian services in connection with these schools. Numbers of Christian hospitals were secularized by Communist officials. Yet hundreds of missionaries remained in China; in most areas churches continued many of their activities, including especially their religious services; and here and there Christian groups showed a decided growth.

The open-mindedness of the Japanese to Christianity which had characterized the years since World War II was still noticeable, but was not so marked as it had been a year or two earlier. The number of missionaries from abroad mounted. Catholic somewhat outnumbered Protestant missionaries. In April 1950 the former totalled about 1,400, from 32 different countries, the large majority coming from Germany, Canada, France, the United States, Italy and Spain, in the order named.

In Indochina and Burma the political situation continued to work adversely to missions. In India conditions, in some areas difficult for Christians since independence, slightly eased. Pakistan, although avowedly a Moslem state, was not actively anti-Christian. Africa was still the scene of rapidly growing Christian communities, and that in spite of rising racial antagonism to Europeans in some areas. Catholics of the United States were making Latin America their chief foreign field and were sending more missionaries to that region than to any other. These were principally to serve Catholic populations, for the latter were inadequately supplied with priests from their own ranks.

The Holy Year was for Catholics an opportunity for special gatherings in Rome on missions. (K. S. L.)

**Mississippi.** A southern state of the U.S. admitted to the union in 1817, Mississippi is popularly known as the "Magnolia state"; area: 47,716 sq.mi. (47,420 sq.mi. land and 296 sq.mi. water); pop. (1950): 2,178,914, a decrease of 0.2% since 1940; capital: Jackson (97,674). Other eight cities of more than 20,000 population (1950 preliminary census figures): Biloxi (37,034); Greenville (29,914); Gulfport (22,428); Hattiesburg (29,432); Laurel (24,988); Meridian (41,709); Natchez (22,678); Vicksburg (27,344).

Of the state's population in 1940, 432,882 or 19.8% were urban; there were 1,106,327 whites; 1,074,578 Negroes; 2,177,324 native-born; 6,472 foreign-born.

**History.**—For 1948-52 the chief elected officers of the state were: governor, Fielding L. Wright; lieutenant governor, Sam Lumpkin; secretary of state, Heber A. Ladner; attorney general, J. P. Coleman; state tax collector, Mrs. Thomas L. Bailey; state treasurer, Robert W. May; state auditor, Carl N. Craig; state superintendent of public education, J. M. Tubb.

The regular biennial session of the state legislature convened in Jan. 1950. Three important questions of state-wide interest occupied the attention of the legislature. A long-time state road-building program, which was the subject of an extraordinary session of the legislature in 1949, was enacted. Appropriations were made for more adequate support for schools and colleges, both for whites and for Negroes. Legislation was enacted authorizing the expansion of the two-year school of medicine of the University of Mississippi, located at Oxford, to a full four-year school, the enlarged medical school to be a division of the university but to be located in the city of Jackson.

**Education.**—In 1949-50 there were 1,069 white elementary schools in Mississippi and 3,029 Negro elementary schools, a total of 4,098. The enrolment in elementary schools was 464,659, of whom 216,090 were whites and 247,750 Negroes. The state had 480 approved white high schools and 148 approved Negro high schools. The enrolment of these approved high schools plus enrolments in nonaccredited schools gave a total enrolment of 83,002 in 1949-50. There were 9,585 white elementary and high school teachers (including superintendents and principals) and 6,640 Negro elementary and high school teachers (including superintendents and principals), a total of 16,225 teachers. The total enrolment in white elementary and high schools was 279,433, in Negro elementary and high schools, 268,228.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—From July 1, 1949, to June 30, 1950, the state department of public welfare paid \$14,227,745 to 73,599 recipients of old-age assistance; \$843,274 to 3,147 recipients of aid to the blind; and \$3,233,135 to 15,341 families for 42,645 dependent children. Special child welfare workers were assigned to 16 county departments of public welfare, to Columbia Training school and to Oakley Training school. There was a training unit in one county to which child welfare workers were assigned for special training before being assigned to a county unit. The state-county program of foster boarding care for children was augmented.

Through its division for the blind, the department maintained a state-financed program of sight conservation, restoration and services and continued its program of training adult blind persons to work on factory-type sewing machines. The division continued to serve as the channel for federal funds for vocational rehabilitation of blind civilians.

**Communications.**—In 1950 the state maintained 7,346.6 mi. of highways. In 1950 the counties maintained approximately 53,838.6 mi. In the fiscal year 1949-50 the state maintenance expenditures were estimated as \$4,073,891.18. The total mileage of railroads in the state on Dec. 31, 1949, was 4,363.73.

**Banking and Finance.**—On June 30, 1950, there were 177 state banks in Mississippi, with 23 branch banks and 39 branch offices; there were 24 national banks. The resources of the state banks were \$561,298,348.19 and the total deposits were \$519,686,400.57; the resources of the national banks were \$217,717,339.80, and the total deposits were \$203,776,689.02.

Table I.—Leading Agricultural Products of Mississippi

Crop	1950	1949	Average 1939-48
Cotton (500-lb. bales) . . . . .	1,340,000	1,487,000	1,653,000
Cottonseed, tons . . . . .	536,000	612,000	688,000
Corn, bu. . . . .	60,473,000	47,725,000	43,725,000
Hay, tons . . . . .	1,041,000	988,000	1,098,000
Sweet potatoes, bu. . . . .	4,300,000	3,990,000	5,271,000
Sugar-cane syrup, gal. . . . .	1,300,000	2,030,000	2,971,000
Sorgho syrup, gal. . . . .	864,000	700,000	1,664,000
Pecans, lb. . . . .	3,625,000	10,000,000	6,617,000
Soybeans, bu. . . . .	6,768,000	1,782,000	1,212,000

The balance in the general fund account as of Dec. 31, 1950, was \$20,668,675.67. The special fund account as of Dec. 31, 1950, was \$16,617,315.73. On Dec. 31, 1950, the full faith and credit debt of the

state of Mississippi was \$8,914,000; outstanding highway bonds (payable from gasoline tax) amounted to \$65,758,000 on Dec. 31, 1950, making a total debt of \$74,672,000.

**Agriculture.**—The 1950 census reported 251,378 farms. The 1945 census reported 19,616,533 ac. in farms. In 1950 the cropland harvested was 5,789,000 ac. The 1949 receipts from farm marketings were \$490,236,000, of which \$376,282,000 were from crops and \$113,954,000 from livestock products; the value of farm products consumed in farm households was \$102,852,000. (See Table I, page 463.)

**Manufacturing.**—The value of manufactured products in Mississippi for the year 1949 was \$664,400,000 as compared with \$174,900,000 in 1939. Income from pay rolls and profits totalled \$216,100,000 in 1949 as compared with \$27,437,088 in 1931.

**Mineral Production.**—The total value of mineral production in 1949, including natural gas, sand and gravel and other mineral products, was \$112,218,826.

Table II.—Principal Mineral Products of Mississippi

Mineral	Value, 1949	Value, 1948
Natural gas . . . . .	\$ 7,548,491	\$ 2,289,136
Sand and gravel . . . . .	3,502,536	2,744,217
Petroleum . . . . .	94,380,000	108,732,500
Other mineral products . . . . .	6,787,800	420,000

On Dec. 31, 1948, there were approximately 1,355 producing oil wells in the state. The value of petroleum for the year 1949 was \$94,380,000 and for 1950 it was \$93,990,936. (A. B. Bu.)

**Missouri.** A west north central state of the U.S., Missouri was admitted to the union in 1821; it is popularly known as the "Show Me state." Area: 69,674 sq.mi. of which 404 are water. Pop.: (1950 census) 3,954,653; (1940 census) 3,784,664 (51.8% urban, 48.2% rural); 3,425,062 (90.5%) native white, 114,125 (3%) foreign-born white and 244,386 (6.5%) Negro. Capital: Jefferson City (1950 census, preliminary count, 24,990). Largest cities (1950 census, preliminary count): St. Louis (852,623); Kansas City (453,290); St. Joseph (75,572); Springfield (66,302); University City (39,595); Joplin (38,515).

**History.**—In a referendum on a special election on April 4, 1950, the proposal to increase the state gasoline tax was defeated.

In the election of Nov. 7, 1950, the Republicans lost one of their two seats in the U.S. senate but gained two seats in the U.S. house of representatives. The popular vote for U.S. senator was: Thomas C. Hennings, Jr. (Dem.), 685,732; Forrest C. Donnell (Rep., incumbent), 592,922. Ten Democrats and three Republicans were elected to the U.S. house of representatives. The Republicans made slight gains in the state legislature but the Democrats retained control of both houses. Ten Republicans and 7 Democrats were elected to the state senate, making a total of 21 Democrats and 13 Republicans. Eighty-five Democrats and 69 Republicans were elected to the state house of representatives. An amendment to the state constitution was adopted whereby school taxes in a district could be increased by a majority vote (instead of two-thirds).

The major state officers (1950), all Democrats, were: Forrest Smith, governor; James T. Blair, Jr., lieutenant governor; Walter H. Toberman, secretary of state; W. H. Holmes, auditor; M. E. Morris, treasurer; J. E. Taylor, attorney general.

**Education.**—For the school year ending June 30, 1950, the public school system consisted of approximately 6,000 elementary schools, with 499,126 pupils and 17,330 teachers; 712 secondary schools, with 145,331 pupils and 6,642 teachers. For the same school year expenditures for public schools totalled \$110,875,561, of which \$41,849,137 was from state and federal funds. Hubert Wheeler was state commissioner of education.

Under the G.I. Bill of Rights and the Vocational Rehabilitation act for disabled veterans, 35,301 veterans of World War II were enrolled in schools and colleges in the state, 16,897 were receiving farm training and 5,215 job training in Nov. 1950.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the year ending June 30, 1950, unemployment insurance totalled \$23,513,357, paid to 295,500 persons. In Sept. 1949, 29,089 received payments and in Sept. 1950, 15,206. For the year ending June 30, 1950, old-age assistance amounted to \$66,627,001, aid to dependent children \$16,023,757, general relief \$6,403,771, and blind pensions \$1,376,772. In June 1950, 131,457 persons received old-age assistance, 26,127 families (65,102 children) aid to dependent children, 17,105 persons general relief, 2,788 persons blind pensions. During the year ending June 30, 1950, the state penitentiary had an average of 2,920 inmates per day, the reformatory (Algoa) 354, and the expenditures for

these institutions amounted to \$2,066,269. On June 30, 1950, the three state training schools (Boonville, Chillicothe and Tipton) had a population of 263 boys and 152 girls, and for the year ending June 30, 1950, their expenditures totalled \$679,948.

**Communications.**—On Dec. 31, 1949, Missouri had 18,341 mi. of state highways and 87,917 mi. of rural roads. During 1949 the state highway department spent \$51,469,247 (state and federal funds), of which \$26,562,972 was for construction and \$11,485,417 was for maintenance. In 1946 railroad mileage totalled 6,832 mi. There were 1,145,957 telephones in use on Dec. 31, 1950.

**Banking and Finance.**—On June 30, 1950, Missouri had 494 state banks, with deposits of \$2,165,698,000 and resources (loans and investments) of \$2,043,637,000; 79 national banks, with deposits of \$1,297,105,000 and resources (loans and investments) of \$1,280,678,000; 155 savings and loan associations, with resources of \$210,304,611.

During the fiscal year ending June 30, 1950, the receipts of the state treasury totalled \$248,515,002; disbursements \$251,755,473. The state debt (road bonds) on July 1, 1949, was \$44,000,000 and on June 30, 1950, \$36,000,000.

**Agriculture.**—During 1949 cash income from crops and livestock was \$944,357,000, and cash income from government payments was \$5,493,000. The value of Missouri's 1949 crops was \$530,981,000 and the value of the 1950 crops, harvested from 13,633,400 ac., was estimated at \$591,067,000. Unfavourable spring weather reduced the 1950 acreages of most crops; but the acreage and yield of soybeans were the largest on record, and of oats the largest since 1942. The yield of cotton was smallest since 1935.

Table I.—Leading Agricultural Products of Missouri

Crop	1950	1949	Average, 1939-48
Corn, bu. . . . .	187,110,000	173,963,000	137,551,000
Winter wheat, bu. . . . .	24,516,000	35,028,000	22,358,000
All hay, tons . . . . .	4,823,000	5,095,000	4,215,000
Cotton, bales . . . . .	253,000	462,000	373,000
Oats, bu. . . . .	55,242,000	41,136,000	45,072,000
Soybeans, bu. . . . .	27,393,000	17,997,000	8,046,000

**Manufacturing.**—The number of persons employed in Missouri's manufacturing industries in 1947 was 327,515, and salaries and wages totalled \$827,184,000. The value added by manufacture of products in 1947 totalled \$1,623,145,000, compared with \$581,804,000 in 1939, when the previous U.S. census of manufactures was taken.

Table II.—Principal Industries of Missouri

Industry	Value added by manufacture 1947	Value added by manufacture 1939
Food and kindred products (including malt liquors, meat packing, etc.) . . . . .	\$331,753,000	\$128,606,000
Transportation equipment (including motor vehicles) . . . . .	173,131,000	40,558,000
Apparel and related products . . . . .	130,549,000	43,127,000
Chemicals and allied products (including drugs and medicines) . . . . .	129,257,000	53,208,000
Leather and leather products (including footwear) . . . . .	117,333,000	56,958,000
Printing and publishing industries . . . . .	116,327,000	49,733,000
Fabricated metal products . . . . .	112,587,000	35,353,000
Machinery (except electrical) . . . . .	109,412,000	23,519,000
Electrical machinery . . . . .	89,212,000	28,299,000

**Mineral Production.**—In 1949 the value of Missouri's mineral production was \$111,287,000, an increase of 2.8% over 1948. The quantity of lead produced in 1949 was 24.7% more than in 1948, and the quantity of zinc 8.5% less.

Table III.—Principal Mineral Products of Missouri

Mineral	Value, 1949	Value, 1948
Lead . . . . .	\$40,296,952	\$36,619,104
Cement . . . . .	19,347,814	17,911,257

**Molybdenum:** see MINERAL AND METAL PRODUCTION AND PRICES.

**Monaco.** A sovereign principality on the Mediterranean coast, 9 mi. E. of Nice, Monaco, is bounded on all land sides by the French *département* of Alpes Maritimes. Area: 369.9 ac. Pop. (1946 census): 19,242, including 1,975 Monacans, 10,522 French and 6,745 other foreigners; (1949 est.) 23,000. Ruler, Prince Rainier III; minister of state, Pierre Voizard.

**History.**—Strong resentment of what was regarded as a persistent French attempt to whittle away the independence of

Monaco led to the resignation in Dec. 1949 of all 18 members of the national council. The main criticism was directed against Jacques Rueff, minister of state, who was accused of "half-heartedness" in his handling of negotiations to secure a revision of the 1945 conventions between France and Monaco (these had brought the principality into line with the financial control imposed in France). On Jan. 8, 1950, elections took place at which, out of the 922 male electors (the women of Monaco having no parliamentary vote), 736 went to the poll. Rejecting both *rouge* and *noir*, they backed the moderate National coalition, led by Louis Aureglia, which won 11 seats outright. The remaining seven seats were filled at the second round on Jan. 15. The only Communist candidate was again beaten and so were right-wing Independents. On May 12 the offices of the Communist party in Monaco were raided and closed down by the police.

**Education.**—Schools (1949-50): primary 9, pupils 1,494, teachers 85; secondary 3, pupils 312, teachers 38.

**Finance.**—Budget: (1949-50, actual) revenue 878,100,000 fr., expenditure 935,300,000 fr.; (1950-51 est.) revenue 924,400,000 fr., expenditure 884,800,000 fr. (1 franc = .2857 U.S. cents.)

**Monetary Units:** see EXCHANGE CONTROL AND EXCHANGE RATES.

**Mongolian People's Republic** (formerly OUTER MONGOLIA). Chronologically the first soviet-dominated people's republic (founded on July 11, 1921), Mongolia is bounded N. by the Asiatic part of the Russian S.F.S.R. and E., S. and W. by China. Area (official figure): 606,000 sq.mi. Pop.: no census has ever been taken and estimates vary from 850,000 (soviet, 1941) to 2,078,000 (Chinese, 1945); U.N. 1949 est. 2,000,000. Language: Mongol. Religion: Lama-Buddhism. Capital: Ulan Bator, formerly Urga (pop., 1941 est., 70,000). Chairman of the presidium of the Little Hural, Bumatsende; chairman of the council of ministers and commander in chief, Marshal Choi-Balsan.

**History.**—Although nationalist China recognized the independence of Mongolia on Jan. 5, 1946, Sino-Mongolian diplomatic relations were established by Communist China only on July 9, 1950, when Chi Ya-tai, first Chinese ambassador, arrived at Ulan Bator. During April the Mongolian ambassador to Moscow exchanged letters with his colleagues there of Albania, Bulgaria, Czechoslovakia, the German Democratic Republic, Hungary, Poland and Rumania by which diplomatic relations between Mongolia and other people's democracies were established. Up to the end of the year, however, no envoys had been exchanged.

According to official figures published in 1946, and attributed to the year 1941, Mongolia had a total of 27,500,000 head of livestock, including 15,900,000 sheep, 5,500,000 goats, 2,800,000 cattle, 2,600,000 horses and 700,000 camels. As the target of 50,000,000 head set for 1945 had never been approached, the five-year plan adopted in 1947 fixed for 1952 the target of 31,000,000 head of livestock, which was still the basis of Mongolian economy. Choi-Balsan said in February that during 1949 livestock had increased by 1,345,822 head, including 1,315,900 raised by individual *arats* or peasants. At the same time the State Planning commission announced that in 1949 the total livestock had increased by 6.5% in comparison with 1948. This would suggest that in Jan. 1950 the livestock numbered only 22,051,000 head and would not substantiate the claims of success in livestock breeding made in Choi-Balsan's report.

Unfavourable soil and climate determined a small-scale agriculture. In 1948 the area under cultivation was estimated at 750,000 ha. and the 1949 increase was reported to be 7.4%, the main crops being oats, millet, spring rye, wheat and barley.

The combined industrial plant at Ulan Bator in 1950 pro-

duced 100 different articles compared with 10 in 1934. No figures were published of coal production at Nalaikha, linked by a narrow-gauge railway with Ulan Bator, but it was estimated that the 1950 extraction amounted to about 1,000,000 tons.

**Education.**—In 1950 there were 368 primary, 32 seven-year and 11 secondary schools with a total of 71,000 pupils. There were also 14 vocational secondary schools with a total of 2,800 pupils. From the Mongolian state university 80 physicians, veterinary surgeons and teachers graduated during the year. Illiteracy (1949): 55.4%.

**Finance.**—Budget (1950 est.): balanced around 300,000,000 tughriks. The Mongolian tughrik, divided into 100 munghe, was at parity with the rouble. The theoretical exchange rate, therefore, was (as from March 1, 1950) U.S. \$1 = 4 tughriks. (K. Sm.)

**Monnet, Jean** (1888— ), French economist and diplomat, was born at Cognac, Charente. During World War I he was French representative on the Inter-Allied Maritime commission and from 1919 to 1923 deputy-secretary general of the League of Nations. In 1925 he became European partner of a New York investment bank. In 1933 he began to serve as financial adviser to China. At the start of World War II he was made chairman of the Franco-British Co-ordination committee. In June 1940 it was he who suggested to Winston Churchill the idea of the Franco-British union. After the capitulation of France, Monnet left for Washington, D.C., where he was appointed to the British Supply council. Early in 1943 he moved to Algiers, where he became a member of the newly organized French Committee of National Liberation. After the liberation of France he headed a commission preparing a comprehensive plan for the reconstruction and modernization of the French economy. By Nov. 1946 the main features of the Monnet plan had been completed; in Jan. 1947 it was officially adopted by the French government for execution and Monnet was appointed commissioner-general of the plan. When on May 9, 1950, the French government launched the Schuman plan for a European coal and steel pool, Monnet, who had played an outstanding part in its elaboration, was chosen leader of the French delegation.

**Montana.** A northwestern state of the United States, Montana is popularly known as the "Treasure state." Land area: 146,316 sq.mi.; water area 822 sq.mi.; pop. (1950 census): 591,024, an increase of 5.6% over the population of 1940. Principal cities, with preliminary 1950 census figures: Helena, the capital (17,498); Great Falls (39,006); Butte (32,904); Billings (31,725); Missoula (22,320); Bozeman (11,252); Anaconda (11,221); Kalispell (9,694). The urban population was 251,428 or 42.5%, compared with 37.8% in 1940.

**History.**—Incumbents in the principal state offices in 1950 were John W. Bonner (Dem.), governor; Paul Cannon (Dem.), lieutenant governor; Sam W. Mitchell (Dem.), secretary of state; Arnold H. Olsen (Dem.), attorney general; Mrs. Alta Fisher (Dem.), treasurer; John J. Holmes (Dem.), auditor; and Mary M. Condon (Dem.), superintendent of public instruction. In the biennial election of 1950, John E. Henry (Rep.) was elected state treasurer for the unexpired term of Neil Fisher who died in 1949; and Leonard C. Young was elected railroad and public service commissioner. Republicans gained control of both houses of the state legislature. Albert Angstman and Harry J. Freebourn were elected associate justices of the supreme court without party designation. Mike Mansfield (Dem.) and Wesley D'Ewart (Rep.) were re-elected representatives to congress.

Constitutional amendments providing for the separation of the bureau of labour and industry from the bureau of agriculture, and for the raising of the limitation of indebtedness of school districts, cities, towns or townships from 3% to 5% were approved by a substantial majority of the voters. A referendum measure prohibiting the operation of slot machines

HUNGRY HORSE DAMSITE in Montana, showing workmen preparing to make the season's first placement of concrete in April 1950

within the state carried by a vote of 140,309 to 55,348. Initiative measure no. 54, providing for \$22,000,000 (to be raised by an excise tax on cigarettes) for an honorarium or adjusted compensation for residents of the state in active duty in the armed forces of the United States in World War II, was carried by a vote of 108,251 to 75,211.

**Education.**—There were 1,326 elementary schools in Montana in 1950, with an enrolment of 80,768 and a teaching staff of 3,633. There were 179 high schools with 25,200 students and 1,467 teachers. The total amount spent on the operation of these schools was \$24,200,000. An additional \$7,800,000 was spent for debt service, capital outlay and other miscellaneous items, making a total expenditure of \$32,000,000 for public school education in Montana in the 1949-50 school year.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Approximately 24,000 persons received public assistance in 1950. Grants totalling \$11,574,695 were distributed as follows (figures in parentheses indicate the average number of recipients per month): old-age assistance (11,770) \$7,440,740; aid to dependent children (8,707) \$2,372,079; aid to needy blind (526) \$362,143; subsistence (1,425) \$647,258; medical care (841) \$158,534; hospitalization (516) \$550,329; burials (34) \$43,612. Unemployment benefits of \$4,696,695 were paid to 24,993 persons, an average of \$17.31 per week for 10.5 weeks, or \$187.92 per claimant. Correctional institutions with their average populations and total expenditures in 1950 were: Montana state prison, 553 inmates, \$319,164; state industrial school, 130 inmates, \$181,309; vocational school for girls, 44 inmates, \$92,284.

**Communications.**—In 1950, the state highway commission maintained 8,826 mi. of highways, of which 940 mi. were unsurfaced. State highway expenditures in 1950 were \$17,441,770, including federal aid. The local rural mileage system totalled 61,310 mi. The total number of airports listed on the U.S. aeronautical charts for Montana in 1950 was 119, not including 200 fields intermittently used by farmers and ranchers within the state boundaries. The railway mileage was 5,241. The number of telephones was 144,700.

**Banking and Finance.**—There were 111 banks in the state in 1950. The 39 national banks had total deposits of \$273,735,000, and their total assets were \$287,582,000. State banks had total deposits of \$262,729,048, and their total assets were \$275,979,642. There were 16 building and loan associations with assets of \$26,739,518. For the fiscal year ending June 30, 1950, the net state revenue, all sources, was \$76,528,641, and

the expenditures were \$70,996,586. The gross debt of the state on July 1, 1950, was \$7,351,000 and the net debt \$6,350,687.

**Agriculture.**—The value of crops harvested in Montana in 1950 reached a record of \$309,307,000, which was \$3,500,000 above the previous high value recorded in 1948. Wheat accounted for 57% of the year's aggregate, followed by hay with 24% and barley with 7%. Crops were removed from 9,272,000 ac., or 578,000 ac. more than in 1949. The value of all livestock in Montana was estimated at \$265,218,000, as compared with \$320,730,000 in 1949.

Table I.—Leading Agricultural Products of Montana

Crop	1950	1949	Average 1939-48
Wheat, bu. . . . .	93,958,000	64,080,000	64,048,000
Hay, tons . . . . .	2,999,000	2,415,000	2,589,000
Barley, bu. . . . .	23,772,000	12,052,000	13,945,000
Sugar beets, tons . . . . .	743,000	697,000	836,000
Oats, bu. . . . .	15,984,000	8,091,000	12,612,000
Potatoes, bu. . . . .	2,590,000	2,325,000	1,996,000
Alfalfa seed, bu. . . . .	112,000	148,000	117,300
Corn, bu. . . . .	3,838,000	1,572,000	3,119,000
Dry beans, 100-lb. bags . . . . .	181,000	242,000	268,000
Flaxseed, bu. . . . .	648,000	295,000	1,424,000
Mustard seed, lb. . . . .	15,540,000	8,600,000	25,174,000
Seed peas, 100-lb. bags . . . . .	71,000	60,000	321,000

**Manufactures.**—The total value added by manufacture (1947 census) in the 652 manufacturing establishments in Montana in 1947 was \$92,258,000, as compared with \$38,828,000 for 552 establishments in 1939. Reports of the state unemployment compensation commission showed that during the two years 1949 and 1950 an average of 18,200 persons were employed in manufacturing in Montana, with total wages of \$57,250,080 in 1949 and \$55,388,633 in 1950. The decline in 1950 resulted from heavy winter layoffs in the lumber industry and slowness in metal processing during the first six months of the year. Official estimates by the state unemployment service listed total employment figures for all Montana industry, aside from agriculture, as 148,200 for the 1950 fiscal year. Electrical power to a total of 3,130,000,000 kw.hr. was generated in the state in 1950.

Table II.—Industrial Products in Montana

Products	1949	1948
Cheese, lb. . . . .	2,965,000	2,818,390
Butter, lb. . . . .	8,025,000	8,636,503
Ice cream, gal. . . . .	2,964,000	2,721,302
Beef sugar, cwt. . . . .	1,940,000	1,879,766
Beer, bbl. . . . .	200,594	206,082
Gasoline, gal. . . . .	255,169,417	194,137,832
Electric power generated, kw.hr. . . . .	2,840,116,000	2,924,704,115
Lumber, bd. ft. . . . .	?	598,000,000

**Mineral Production.**—The total yield of the five major metals in Montana in 1950 was 37% greater than in 1949, despite a decrease of 5% in copper production caused by an insufficient number of miners in Butte. Zinc, with the best record, increased 22% in quantity, lead 4%, silver 1% and gold 1%. A substantial increase in the price of copper accounted for its greater value in 1950 than for the previous year. The value of production during 1950 and 1949 is shown in Table III.

Table III.—Principal Mineral Products of Montana

Mineral	Value, 1950	Value, 1949
Copper . . . . .	\$22,339,200	\$21,216,900
Zinc . . . . .	18,431,400	13,011,200
Lead . . . . .	4,675,000	5,668,350
Silver . . . . .	5,782,000	5,423,968
Gold . . . . .	1,862,000	1,634,500
Total value . . . . .	\$53,089,600	\$46,954,918

Crude oil production in Montana in 1950 amounted to 8,046,022 bbl., as compared with 9,225,000 bbl. in 1949. The coal tonnage produced was 2,454,752 in 1950 and 2,763,000 in 1949. Natural gas deliveries to pipe lines at wells in Montana fields were approximately 37,469,799,000 cu.ft. in 1950. (E. E. B.)

**Montreal.** A city in the province of Quebec, Canada, first called Ville Marie, Montreal was founded in 1642. The population of the city proper, estimated by *Lovell's Directory* (1950), was 1,453,041 and of greater Montreal 1,695,485.

The port of Montreal is the largest in Canada. Deep-sea vessel arrivals in 1950 (commercial) numbered 1,211, with a net tonnage of 4,491,795. The number of coastal or inland vessel arrivals (commercial) in 1950 was 3,439, with a net tonnage of 3,747,846. In addition there were noncommercial vessels (such as warships, pleasure boats, yachts, etc.) numbering 146, with a net tonnage of 23,973.

The total of cargo tonnage which passed through the port during 1950 was 15,315,533; this consisted of 8,579,034 inward (foreign 6,292,018, domestic 2,287,016) and 6,736,499 outward

(foreign 3,435,195, domestic 3,301,304).

The assessed value of real estate, as of April 1950, was \$1,500,-714,217, of which \$1,137,224,347 was taxable and \$363,489,870 was exempt from taxation.

In 1950 building permits were issued for 6,232 new buildings having a value of \$99,136,588, and for 2,778 repairs having a value of \$13,731,588.

Bank debits for 1950 were \$32,847,407,939 and bank clearings were \$16,303,554,024.

(J. A. MA.)

**Montserrat:** see LEEWARD ISLANDS.

**Mormons.** During 1950 the missionary work of the church reached the highest point in its history. At the end of the year 6,400 missionaries were in the field, serving in Canada, Newfoundland, the United States, Mexico, Guatemala, Costa Rica, Panamá, Brazil, Argentina, Uruguay and Paraguay in the western hemisphere; in Japan and China in the far east; in Australia, New Zealand and Samoa in the south seas; in Tahiti, Tonga and Hawaii in the Pacific; in South Africa; in the British Isles, Scandinavia, Finland, Denmark, Germany, the Netherlands, Belgium, Switzerland and France in Europe; and in the near east.

During 1950 112 church buildings were erected in organized stakes and missions. Also during the year, approximately 40,000 persons were helped as to food, clothing and shelter. Wards and stakes set up additional projects for supplying wants of the needy.

(See also CHURCH MEMBERSHIP.)

(J. R. CL.)

**Morocco, French.** A sultanate of northwest Africa, with both Mediterranean and Atlantic coast lines, divided into three unequal parts, the French protectorate described from 1947 as potentially an associated state of the French union, the Spanish protectorate (see SPANISH COLONIAL EMPIRE) and the international zone of Tangier (*q.v.*). French protectorate: area 153,870 sq.mi., pop. (1947 census) 8,224,997, (1949 est.) 8,594,000; Spanish protectorate: area 17,713 sq.mi., pop. (1949 est.) 1,336,000; Tangier: area 232 sq.mi., pop. (1949 est.) 150,000.

Arabs and Berbers constitute the overwhelming majority of the population; they are Moslem and speak Arabic or Berber. Chief towns (pop., 1947 census): Rabat (cap., 161,416); Casablanca (551,222); Marrakesh (238,277); Fez (200,946); Meknès (159,811). Ruler, Sultan Sidi Mohammed ben Youssef III; grand viziers in 1950, Si Kaddur ben Ghabrit and (from Sept. 20) Si Mamri.

French resident general, General Alphonse Juin.

**History.**—From 1947 Morocco could claim the status of an associated state if it indicated willingness to join in the French union, but the Nationalist Istiqlal (Independence) party, which regarded the sultan as champion of its ambitions, was opposed to this and sought the country's independence. In the course of the Dec. 1950 session of the native section of the council of government, when charged with examining the budget, the elected councillors belonging to the Istiqlal party launched a bitter attack on the work of the protectorate. Gen. Alphonse Juin, the French resident general, expelled them from the assembly (Dec. 12).

During his stay in France (October–November), the sultan entered into negotiations with the government for the revision of the treaty of protectorate. He considered inadequate the reforms proposed and in a cabinet communiqué noted the points of disagreement (Oct. 22). A joint commission was to continue negotiations.

**Finance.**—Budget (1951 est.): ordinary balanced at 37,783,000,000 fr.

extraordinary (equipment) 22,617,000,000 fr. Monetary unit: Moroccan franc=metropolitan franc. U.S. \$1.00=350 francs.

**Foreign Trade.**—(1949) Imports 103,320,000,000 francs; exports 53,515,600,000 francs.

**Transport and Communications.**—Railways (1948) 2,111 km. Roads (1948): 9,181 km.; tracks 32,000 km. Motor vehicles licensed (Dec. 1948): cars 24,470, commercial 19,956. Ships entered (1949, Casablanca) 6,030; cargo (1949, all ports, metric tons): unloaded 2,125,000; loaded 5,449,000. Air transport (1949): aircraft landed 5,603; passengers carried, arrivals 65,406, departures 69,520; cargo carried 7,059 metric tons; mail 269 metric tons. Telephone subscribers (May 1949) 29,500.

**Agriculture.**—Main crops (metric tons, 1949): wheat 638,000; barley 1,368,800; oats 39,100; maize 399,900; sorghum (millet) 43,400; wine (hl., 1950 est.) 500,000. Livestock (1948): cattle 1,449,000; sheep 8,474,000; goats 6,009,000; pigs 97,000; horses 155,000; asses 555,000; mules 141,000; camels 165,000.

**Industry.**—(1949) Fuel and power: anthracite 346,500 metric tons; electricity 333,000,000 kw.hr.; crude oil 17,479 metric tons. Raw materials (metric tons, 1949): phosphate rock 3,620,000; iron ore 372,000; manganese 228,400; cobalt 2,000. Cement (1949) 266,100 metric tons. Rugs (1949) 81,900 sq.m.

**Morocco, Spanish:** see SPANISH COLONIAL EMPIRE.

**Mortgages, Farm:** see FARM CREDIT ADMINISTRATION; FARMERS HOME ADMINISTRATION.

**Mortgages, Home:** see HOUSING.

**Moscow.** Capital of the Union of Soviet Socialist Republics and of the Russian Soviet Federated Socialist Republics, Moscow had in 1950 an estimated population of 7,000,000.

During the year, eight modern skyscrapers were in varying stages of erection in the city, and it was hoped to complete them all by 1952. Four of them including a 26-story luxury hotel of 1,000 suites and 246 flats, were going up along the Dorogomilovskaya Moscow river embankment, three were situated on the Sadovoyering road and the eighth, the extensive new university building, in the Lenin hills. The tallest of them was a 32-story pillar-shaped administrative building which was being erected on Zaradye; a 20-story structure on Smolensk square was to house a number of soviet institutions; while a second hotel of 17 stories, on Kalanchevskaya street, would cater to travellers using the Kazan, Leningrad and Yaroslavl main-line stations. The Kremlin's battlemented walls and mediaeval turrets also had a "face lift," the first major one for 80 years. In the work of restoration more than 100,000 coloured glass tiles, corresponding in form and colour to the ancient tiles, were used to cover the tops of the towers.

All the missing white stone gargoyles, allegorical statues and obelisks were restored.

Another notable architectural event was the removal in August of the Pushkin monument, weighing 70 tons, from Tverskoy boulevard to Strastnoy (now Pushkinsky) square—a distance of about 100 yd.

A 12½-mi. "great circular" line of the underground railway, which would service 18 districts of the capital, was in construction during 1950 and was to be completed in 1952.

(R. Js.; X)

**Motion Pictures.** The U.S. motion picture industry recognized in 1950 that the fact, and no longer the theory, of television confronted it. No clear-cut plan to deal with the new competition had evolved. Some industry leaders emphasized theatre television, but not much was done toward that end. Others felt that the industry should gear itself toward the production of television films—a course naturally unpalatable to film theatre owners. Exhibitor feelings were outraged even by the televising of ancient motion pictures.

Film statistics, never crystal-clear, were increasingly difficult of analysis in 1950. *Variety*, a leading trade magazine, estimated that, despite the continuing box-office decline, a

10% increase in profits was indicated. Tabulations of nine companies pointed to profits of \$34,722,422 as against \$31,328,117 for comparable periods (in five instances twelve months, in four instances nine months) in their 1949 fiscal years. Six of the companies showed increases, three decreases.

Opinions varied widely as to the box-office decrease from 1949's approximate \$1,350,000,000 take. A falling-off of nearly 4% seemed a favourite estimate. After a rise in business coincident with the start of the Korean conflict, the box office was reported falling considerably in the closing months of 1950.

Despite its difficulties, the industry in 1950 turned out products which many observers regarded as an all-time high in quality. Emphasis on economy in production continued, but studios were not averse to investing heavily in pictures deemed worthy of exceptional expenditure. Location photography was especially stressed, a new record being set for distance and diversity in location sites. Desire to make use of frozen funds in other countries was responsible only in part for this trend. Producers felt that to turn out the highest quality product, authentic location photography was in many cases mandatory. Illustrative of this tendency was an advertisement of Metro-Goldwyn-Mayer proclaiming, "The Sun Never Sets on Leo, the M-G-M Lion!" It cited *King Solomon's Mines*, with photography in Africa; *Kim*, in India; *Pagan Love Song*, in Hawaii; and *Quo Vadis*, in Italy. The latter picture took rank as one of the most expensive in the history of the industry. The cost of *Quo Vadis*, largely filmed at Rome with thousands of extras and utilizing both foreign-earned and U.S. currency, was expected to pass the \$7,000,000 mark. More than \$3,000,000 was spent by 20th Century-Fox on *Dawn of Decision*, photographed at Munich, Germany.

In October, the U.S. government, in its concern for conserving essential defense materials, placed a ban on construction in entertainment fields. This included construction of new motion picture theatres, and set a limit of \$5,000 on remodeling. Strong protests against the ruling were made by the industry, which cited the proved influence of motion pictures in strengthening public morale in time of war.

Organizational changes in 1950 included the merging of Eagle-Lion and Film Classics, which became Eagle Lion Classics. New production organizations included two of outstanding importance. Producer Jerry Wald left Warner Bros. to unite with Norman Krasna, their product to be released by RKO Radio. Stanley Kramer, who had produced such distinctive pictures as *Home of the Brave*, *Champion* and *Cyrano de Bergerac*, joined forces with Sam Katz, former Metro-Goldwyn-Mayer executive and before that a theatre owner.

In the long-continuing government antitrust action, the U.S. supreme court refused to review the decision of the New York statutory court calling for divestiture of exhibition from production-distribution interests. Paramount and RKO had already entered into consent decrees. In the cases of Loew's (Metro-Goldwyn-Mayer), 20th Century-Fox and Warner Bros., the three remaining companies which had not settled their differences with the government, detailed plans for separation of theatre interests were yet to be worked out. In February, the government antitrust action against Technicolor was terminated by a consent decree in which the company agreed to license its patents.

There was little change in the complex foreign situation. A new agreement was negotiated with England which was regarded as slightly more favourable to the U.S. industry. In contrast to previous years very few foreign pictures of any great import reached the United States. The best of them was *The Third Man*, made especially noteworthy by the famous "Third Man Theme" background played on a zither.

The drive-in theatre showed a marked increase in strength during the year. It was estimated that there were more than 2,000 such theatres in the United States and Canada, and they were being opened at the rate of two a week as of mid-July 1950.

There was decreasing emphasis on psychological, horror and gangster pictures in favour of productions aiming at entertainment for the whole family. It was intended to regain the family trade, on which the great structure of motion pictures originally had been built. This patronage had been largely lost, too many polls revealing that the bulk of attendance at film theatres was being supplied by teenagers and young couples.

*Father of the Bride* started a trend toward family comedy. An unusual development was in the field of animal comedy, in *Francis* centring around an army mule, and in *Harvey*, an invisible rabbit. *Destination Moon* and *Rocketship X-M* were the novelty pictures of the year, having for their theme journeys through interstellar space.

The outstanding pictures of 1950 were *All About Eve*, *Born Yesterday*, *Harvey*, *Broken Arrow*, *Caged*, *Cinderella*, *Cyrano de Bergerac*, *King Solomon's Mines*, *The Magnificent Yankee*, *Sunset Boulevard*, and *Halls of Montezuma*.

Gloria Swanson, glamour queen of two decades before, scored the greatest comeback in film history when she returned to the screen to star in *Sunset Boulevard*, one of the most discussed pictures of the year. Among the players who rocketed to prominence were Howard Keel in *Annie Get Your Gun*, Mala Powers in *Cyrano de Bergerac*, Peggy Dow in *Harvey*, Jeff Chandler and Debra Paget in *Broken Arrow* and Nancy Olson in *Sunset Boulevard*.

The *Motion Picture Herald's* annual poll showed the following stars as the leading box office attractions in 1950: John Wayne, Bob Hope, Bing Crosby, Betty Grable, James Stewart, Abbott and Costello, Clifton Webb, Esther Williams, Spencer Tracy and Randolph Scott.

The New York film critics made the following selections for 1950: best picture of the year, Darryl Zanuck's *All About Eve*; best foreign-language picture, *Way of Love*; best actress, Bette Davis in *All About Eve*; best actor, Gregory Peck in *Twelve O'Clock High*; best director Joseph Mankiewicz for *All About Eve*.

Reflecting the increase in the number of pictures turned out in 1950, the Production Code administration approved 381 U.S. features during the year as compared with 360 in 1949. Approval also was given 48 foreign-made films in 1950 as compared with 54 in 1949.

The Academy of Motion Picture Arts and Sciences announced in March 1950 the following awards for 1949 (see accompanying page of photographs for the 1950 awards):

Best picture, *All the King's Men*, a Robert Rossen production, Columbia; performances: actor, Broderick Crawford in *All the King's Men*, actress, Olivia de Havilland in *The Heiress*, Paramount, supporting actor, Dean Jagger in *Twelve O'Clock High*, 20th Century-Fox, supporting actress, Mercedes McCambridge in *All the King's Men*; best direction, Joseph L. Mankiewicz for *A Letter to Three Wives*, 20th Century-Fox; writing (screen play), Joseph L. Mankiewicz for *A Letter to Three Wives*, writing (motion picture story), Douglas Morrow for *The Stratton Story*, Metro-Goldwyn-Mayer, writing (story and screen play), Robert Pirosh for *Battleground*, Metro-Goldwyn-Mayer; best art direction: black and white, Harry Horner and John Meehan for *The Heiress*, colour, Cedric Gibbons and Paul Groesse for *Little Women*, Metro-Goldwyn-Mayer; best cinematography, black and white, Paul C. Vogel for *Battleground*, colour, Winton Hoch for *She Wore a Yellow Ribbon*, Argosy Pictures-Corp., RKO Radio; best sound recording, Thomas T. Moulton for *Twelve O'Clock High*; short subjects: cartoon, *For Scentimental Reasons*, Warner Bros. (Edward Selzer, producer), one-reeler, *Aquatic House-Party*, Paramount (Jack Eaton, producer), two-reeler, *Van Gogh*, (Gaston Diehl and Robert Haesens, producers); best film editing, Harry Gerstad for *Champion*, Screen Plays Corp., United Artists; best scoring of a musical picture, Roger Edens and Lennie Hayton for *On the Town*, Metro-Goldwyn-Mayer; best scoring of a dramatic or comedy picture, Aaron Copland for *The Heiress*; best original song, "Baby, It's Cold Outside" from *Neptune's Daughter*, Metro-Goldwyn-Mayer (music and lyrics by Frank Loesser); best special effects, *Mighty Joe Young*, Arko Prods., RKO Radio; best set decoration: black and white, Emile Kuri for *The Heiress*, colour, Edwin B. Willis and Jack D. Moore for *Little Women*; costume design: black and white, Edith Head and Gile Steele for *The Heiress*, colour, Leah Rhodes, Travilla and

COURTESY, PARAMOUNT FILM CORP.

Marjorie Best for *Adventures of Don Juan*, Warner Bros.; best documentaries: short subjects, *A Chance to Live*, March of Time, 20th Century-Fox (Richard de Rochemont, producer) and *So Much for So Little*, Warner Bros. Cartoons, Inc. (Edward Selzer, producer); feature, *Daybreak in Udi*, British Information Services, produced by Crown Film Unit; foreign-language film award, *The Bicycle Thief* (Italian); special awards: Bobby Driscoll, as the outstanding juvenile actor of 1949, Fred Astaire, for his unique artistry and his contributions to the technique of musical pictures, Cecil B. De Mille, distinguished motion picture pioneer, for 37 years of brilliant showmanship, Jean Hersholt, for distinguished service to the motion picture industry; special awards, scientific or technical: Academy statuette, Eastman Kodak company for the development and introduction of an improved safety base motion picture film; honourable mention—Loren L. Ryder, Bruce H. Denney, Robert Carr and the Paramount sound department for the development and application of the super-sonic playback and public address system, M. B. Paul for the first successful large-area seamless translucent backgrounds, Herbert E. Britt for the development and application of formulas and equipment producing artificial snow and ice for dressing motion picture sets, Andre Coutant and Jacques Mathot for the design on the Eclair Camerette, Charles R. Daily, Steve Csillag and the Paramount engineering, editorial and music departments for a new precision method of computing variable tempo click tracks, International Projector corporation for a simplified and self-adjusting take-up device for projection machines and Alexander Velcoff for the application to production of the infra-red photographic evaluator.

(L. O. P.)

**Educational Motion Pictures.**—How effective are educational films in achieving their intended purposes? How much film can a group absorb at one sitting? How simple and compact should the vocabulary of the sound track be? Can films be used to build group morale?

Since World War II an important trend had been developing in communications research with special emphasis on research dealing with the instructional, informational or training sound motion picture. The studies conducted by the Research branch, Information and Education division, war department, during World War II, and reported in *Studies in Social Psychology in World War II*, v. 3—*Experiments on Mass Communication* by C. I. Hovland, A. A. Lumsdaine and F. D. Sheffield, greatly assisted in defining problems to be attacked.

Research was begun shortly after World War II, using modern experimental methods, on what precisely it is that makes films effective or ineffective for instructional purposes. Parallel and to some extent integrated research programs were set up at the Pennsylvania State college, State College, Pa., and at Yale university.

The basic method which was developed involved the production of series of experimental films. Different versions of films on a common subject were so produced as to control systematically a number of variables. Thus, after testing these experimental film versions and variables on matched groups, it was demonstrated that they could be quantitatively related to the amounts and kinds of learning which result from the film instruction alone. Accordingly, it was becoming possible to define the factors which, in the film medium, contribute either positively or negatively to learning or to attitude and opinion changes.

The Instructional Film Research program of the Pennsylvania State college under the direction of C. R. Carpenter was sponsored by the departments of the navy and army. Of the 50 research projects undertaken, 20 had been completed by the close of 1950. Facts and principles were being formulated on the basis of objective research data which were expected to aid in improving the effectiveness of films for defined instruction with a given audience. Furthermore, it was reasonably well established that some kinds of training could be accomplished by means of films without expert or even very competent instructors. This was an important conclusion.

Genuine excitement had greeted the pioneer series of films on emotional development and treatment of emotional disorders—*Feeling of Rejection*, *Feeling of Hostility*, *Over-Dependency*, by the National Film Board of Canada.

*Human Beginnings*, *Human Growth* and *Human Reproduction* stirred interest in the relationship of sex development to physical and emotional maturity and gave an unembarrassing "out there" experience which made communication about sex development of

children and young people healthier and more intelligent.

Films such as *The Quiet One*, *Preface to a Life*, *Problem Children* and *City of the Sick* were highly praised and widely distributed.

These films made tangible the intangible. They enabled teachers and parents to live through experiences with children and young people ahead of the time when critical decisions had to be made in the classroom and in the home. They gave an opportunity for rehearsal of ways in which common situations could be met. Indeed, if the excellent available films were widely and intelligently used, a high proportion of adults would know how to attack some of the difficult problems of mental health education.

The year 1950 witnessed the meteoric rise of television. What does this have to do with the development of educational motion pictures? Films and television can profoundly influence each other. Television, like radio, may reproduce too many forgettable experiences and make the viewer sponge-minded rather than critical and evaluative: How can the public, especially young people, learn how to evaluate thoughtfully this new and dynamic method of visual presentation?

Schools and colleges have an important obligation to guide taste and develop discrimination. They can develop critical viewing instead of gullibility and passivity. This means among other things the introduction into the school of units on the teaching of motion picture and television discrimination. Indeed, a recent study of most of the commonly used high school textbooks in English showed that about one-half of them included instructional material in motion picture discrimination.

Educational films can be presented to develop thoughtful reaction. Children and young people can be taught that an educational film must be skilfully presented, that it must be simple enough to be clearly understood, that it must make a relatively small number of points and make them well and that it must use to the greatest possible extent the unique powers of the film medium.

Further, the educational film must not be judged by entertainment standards. It must be judged by the standards of good design in exposition, by the standards of the film medium itself.

A fruitful trend in film production that during 1950 was still limited in scope was the production of motion pictures as an integral part of a teaching program. Thus the Encyclopædia Britannica Films on reading are not an addendum or an appendage, but are an integrated and inseparable part of the teaching process. The research program carried on at Pennsylvania State college also suggested the possibility of certain training films which could be used without the direct aid of a supervising teacher. These films might prove useful in certain subsidiary areas of instruction where simple skills and the like could be easily learned through film. Thus the time of the teacher in a class might be devoted to teaching the more complicated and difficult aspects of a subject.

Studies made by the U.S. office of education showed that most schools in the United States were equipped with sound projectors. This was an accomplishment of great significance, because more attention could be given to the production, selection, utilization and evaluation of the films used for teaching purpose. Such a program, one could confidently predict, held great promise for the improvement of education in the United States.

During 1950, producers in the United States were producing educational films for world-wide use. For example, there appeared during the year a catalogue entitled *UNESCO—Motion Pictures Suitable and Available for Use Abroad*. About 2,500 copies were printed and distributed to foreign countries and to U.S. embassies. This list was a direct outgrowth of an international effort by U.N.E.S.C.O. to produce an international film cata-

logue. The United States was the first to respond to this request. A similar program was beginning in Great Britain.

The preparation of lists of films for world-wide use offers many complications. First of all, there must be specialized catalogue lists like the one issued by the Educational Film Library association, *Index to Selected Film Lists*. Second, there must be evaluated lists of films for domestic use, such as were provided by the Educational Film Library association. Third, there must be evaluations of films based on their probable usefulness abroad such as were carried out by the U.S. state department through a nation-wide committee under the direction of I. A. Wright. And finally, producers must, either themselves or through some organization, make arrangements for sales abroad.

Nor is this the end. There must be improved facilities for sending films abroad, especially freedom from onerous tax and other barriers. Here the Agreement for Facilitating the International Circulation of Visual and Auditory Materials of an Educational, Scientific and Cultural Character, which by 1950 had been signed by more than 20 countries, would be of great importance. At the end of the year the agreement had not yet been ratified by enough countries to bring it into effect but it was believed that this might occur during 1951. (Ed. D.)

**Technical Developments.—Theatres and Projection.**—There was a remarkable increase, particularly in the United States, in the construction of outdoor drive-in theatres. These theatres held as many as 1,800 automobiles and one in Chicago, Ill., had four screens, each 50 ft. wide, so that the same picture was shown at the same time to four audiences from four different projectors in a centrally located booth. There was one loudspeaker for each car position and new types of speakers were developed to provide adequate sound quality and to stand up under continued exposure to the weather. The problem of producing pictures bright enough to be seen from car positions in the last row brought the introduction of larger projection lamps, methods for removing heat from the light beam and for cooling the film aperture, and also brought new large-aperture projection lenses.

One notable development was made in Switzerland. It consisted of a carbon arc with the flame held in a fixed position by several streams of air blown around the incandescent crater. Light distribution was improved, and products of combustion which normally degrade the performance of an arc lamp were either eliminated or blown away by the forced draft. Another lamp development from the same laboratory introduced a new arc lamp using a negative carbon in the form of either a disk or a ring, providing a much longer burning time than previously had been available.

The Island theatre, built in Bermuda, had a somewhat larger than normal screen in which the conventional black border did not appear. The architects who designed the theatre reasoned that the motion picture suffered artistically from the confining effects of the black frame and that the motion picture cameraman should be allowed freedom of expression on a larger canvas.

Another development was the first public showing of Cinerama, a U.S. development which projects an enormous picture from three projection machines at one time. Sound, recorded in synchronism with the original picture, is reproduced from five loudspeakers, providing a remarkable directional characteristic and enhancing the spectator's illusion of observing the action through a very large picture-window.

**Theatre Television.**—A new process developed in Switzerland and demonstrated during 1950 combined the advantages of the direct projection theatre television system, introduced in the United States by RCA, and the film storage system, introduced by Paramount Television Productions, Inc. This was the Eidophor system, in which a supplementary carbon arc light source pro-

jects an instantaneous television picture that is traced by a conventional electron gun upon the surface of a viscous fluid which responds by variations in its thickness to an electrostatic charge.

A combination of three electron guns was reported able to produce a projected television picture in full colour.

**Sound Recording.**—Motion picture producing companies in all countries converted their original recording facilities from photographic to magnetic recording process. Some used one-quarter inch tape, not perforated but driven in exact synchronism with a perforated picture film through the use of a control frequency recorded as the original scene was being photographed. Other producers used 16-mm., 17½-mm., and 35-mm. magnetic films. One U.S. manufacturer of magnetic recording materials introduced strip-coating in which a thin strip of magnetic material is applied to a conventional motion picture film either before or after the picture image is photographed, making magnetic sound available for release prints. A combination of magnetic and photographic tracks on the same film was being investigated as a practical means of providing stereophonic sound for conventional motion pictures at very low production cost.

**Scientific Photography.**—The Éclair Camerette introduced in France during 1949 appeared again during 1950 in the form of Éclair Aquaflex, 35-mm. underwater motion picture camera. The camera is fitted with a water-tight housing, a high pressure air bottle used to maintain positive air pressure inside the camera, completely flexible external controls and a set of fins and rudder that permit the underwater cameraman to guide the camera as he swims along. Reports of use tests by the United States navy include underwater photographs with clearly discernible detail at a depth of 85 ft., with an exposure of one-fortieth second, using readily available commercial motion picture film.

Use of high-speed motion picture photography as a tool of scientific instrumentation was widely reported during 1950. Research with guided missiles, highly dangerous explosives and extremely high-speed aircraft requires the use of high-speed motion pictures for observation. Picture rates up to 100,000,000 per second, although not commonplace, were used in several instances and represented a great technical advance in this photographic field. (B. Nc.)

**Canada.**—The chief development of 1950 was the reorganization of the National Film board, effected by an act of parliament. W. A. Irwin replaced Ross McLean as film commissioner on Feb. 1, 1950.

The most significant 1950 releases of the board were: *White Fortress*, the story of Canada's stepped-up health program; *Cadet Holiday*, the training of Canadian army cadets; *Life Under a Leaf*, the lives of vegetable insects; *Cliff Hangers*, Canadian alpine adventures; and *Challenge—Science Against Cancer*.

LeMay Templeton productions (a Paramount affiliate) filmed *Quebec*, a Technicolor version of the abortive 1837 rebellion; Quebec productions shot sequences of *The Scarlet Key*, starring Linda Darnell and Charles Boyer, and *Son Copain*, starring Patricia Roc and Paul Dupuis. The Doherty theatrical interests of Toronto, Ont., teamed up with the Hirliman television interests of New York city to produce films aimed at the U.S. television market.

A national trade union film committee was organized to make available to all trade unions films and filmstrips suitable for union use. The association of motion picture producers and laboratories of Canada announced it would sponsor an annual Canadian film festival beginning in 1951 for amateur, nontheatrical, and theatrical class films. By 1950 there were 265 film libraries in Canada, a 500% increase over 1945. (C. Cv.)

**Other Countries.**—The uneasy economic situation which had developed in 1949 in many of the European film production in-

dustries tended to expand in 1950. British producers were forced to cut their costs considerably at a time when the level of costs in general was steadily rising. The main tendency in France, Italy and Great Britain, which remained the most important production centres in western Europe, was to play safe both in choice of subject and in film technique.

Fewer film festivals were held in western Europe in 1950 than in 1949. The chief competitive festival for western Europe was held in Venice, Italy; that for eastern Europe in Karlovy Vary, (Karlsbad), Czechoslovakia. The Venice festival lasted for a considerable time with separate festivals for specialized documentary films, films on art and children's entertainment films; the French production *Justice est faite* won the Grand Prix. Several congresses were held during the year, including that of the International Scientific Film association in Florence, Italy (where, earlier in the year, a congress on film music had taken place). The newly formed Federation of Film Clubs and Academies, representing the senior film-makers of a number of European countries and countries outside Europe, also met for the first time in Venice.

**Great Britain.**—The quota of 45% fixed in 1948 as the proportion of British films which almost all exhibitors were to show, had to be reduced to 40% for 1949–50 and to 30% for 1950–51. The producers laid the blame for the state of decline mainly upon the excessive entertainment tax which took about fourpence out of every shilling paid by the public into the box office, whereas the producer himself earned only about twopence.

Realizing the producers' difficulties, the government increased its allocation to the Film Finance corporation during 1950 by £1,000,000, and announced later in the year a scheme known as the Eadie plan, through which another sum, estimated at more than £125,000,000, would be made available to producers during 1950–51 out of a fund formed by a special entertainment tax remission. Grants from the Film Finance corporation during 1950 could be made to independent producers ranging from distinguished film-makers to the humblest maker of low-grade films; in respect of the latter case the policy met with considerable criticism and was gradually changed in order that greater emphasis should be placed on quality. Nevertheless, during 1950 the J. Arthur Rank organization which had hitherto produced approximately half of the country's output reduced production to less than a quarter of its former scale.

However, neither in documentary nor in feature film production was 1950 a poor year. Feature films included *The Blue Lamp*, *Chance of a Lifetime*, *Madeleine*, *The Magnet*, *Morning Departure*, *Odette*, *Seven Days to Noon*, *State Secret*, *Trio* and *The Wooden Horse*. At the Venice festival British documentaries, mainly on technical and scientific subjects, won six first awards.

**Commonwealth.**—Apart from India, whose feature film output remained very substantial, the distinctive work of the commonwealth film industries (those of Canada, Australia and New Zealand in particular) was in the documentary field.

In Australia the National Film board was kept intact when the department of information was disbanded by the newly elected Liberal government. With Stanley Hawes as producer in chief, typical subjects were *Flight Plan*, *Arnhem Land* (Stone-Age life in the far north), *A Pint of Milk* and *Know Your Children*. In New Zealand the National Film unit had produced since the end of World War II, a weekly *Review* for the theatres as well as a considerable output of documentary subjects. Other important film-producing organizations in the commonwealth were the Malayan Film unit, the film unit of the Ceylon government and the Films division of the Indian ministry of information.

**Czechoslovakia.**—The state production of films continued during 1950; output remained at approximately 20 feature films a year. The aim of the industry, which was organized under the

ministry of information, was to increase the production of feature films eventually to 50 subjects a year and to increase the production of short films and documentaries proportionately. Although Czech and short films predominated in the theatres, Czechoslovakia remained the best centre in the Communist bloc for the exhibition of films from western Europe. Czechoslovakian productions of note during 1948–49 included *The Case of Dr. Kovar*, a story set in a hospital in the pre-World War II years and concerned with the struggle between two doctors; a Slovakian comedy, called *Katka*, in which a village girl leaves the traditional way of life of her people in order to work in a factory; and *The Great Chance*, a film about Czech youth and the construction of a railway.

**France.**—The year 1950 was interesting if not outstanding for French production, but it was clear at the Venice festival that France was considered to be the country whose entries were generally on the highest artistic level. *Justice est faite*, directed by André Cayatte, won the Grand Prix. It was a well-presented composite drama which showed how a young woman doctor on trial for a "mercy-killing" was pronounced guilty by the jury because peculiar individual circumstances influenced the decision each juror had to make. Two films which caused more discussion than *Justice est faite* were Jean Cocteau's *Orphée* and Max Ophüls (known in Hollywood as Opuls) *La Ronde*. *La Ronde* was also a composite film based on Arthur Schnitzler's famous story of the roundabout of love—half fantasy, half Viennese romance. Cocteau's film was another of his modernizations of classical myths, in this case Orpheus' search for the lost Eurydice in the underworld. Other French films of the year included: *La Cage aux filles* (with Danielle Delorme) a story with the background of juvenile delinquency; *La Marie du port* (with Jean Gabin), a love drama directed by Marcel Carné; *Un Homme marche dans la ville*, a strong melodrama of jealousy notable for the work of its actor-director Marcello Pagliero; *Dieu a besoin des hommes* (with Pierre Fresnay), a religious drama set on a Breton island; and *Ballerina*, a film of the ballet directed by Ludwig Berger. In the documentary field, *La Vie commence demain*, a full-length study by Nicole Védres of contemporary life and thought in France, was the most ambitious production of the year.

**Germany.**—German production developed steadily after World War II and amounted in 1949 to about 60 films. Among the German productions of 1949–50 was the fantasy *Der Rat der Götter*, directed by Kurt Maetzig, in which capitalism in Germany is attacked. Gunther Neumann, the writer of *Berliner Ballade*, wrote the script of a new film called *Herrliche Zeiten* (Gorgeous Times), which surveyed the past 50 years of German history.

**Italy.**—Average production costs in Italy, though they rose by about 20% during the few years before 1950, were still less than half the average for British feature films. It was therefore comparatively easy for Italian producers to recoup their costs in the home market and to earn profits in the various outlets abroad, which included America. There was a remission of tax on Italian productions of merit of up to about 18%, which also assisted producers, and 3% of the total box-office receipts of the program in which it was placed went to each Italian documentary film which obtained commercial distribution. This greatly facilitated the production of artistic documentaries, though the returns to the producer varied considerably with the popularity of the feature film, Italian or foreign, with which the particular documentary was paired for exhibition.

The outstanding Italian feature films of the year included *Domenica d'Agosto*, directed by Luciano Emmer (already well-known for his beautifully made documentaries on Italian art subjects); *Prima comunione*, a comedy directed by Alessandro Blasetti; and a series of important films with background which derived from Italy's contemporary social problems—*Il Mulatto*

(the children of Negro soldiers in Italy), *Donne senza nome* (the lost women of Europe), *Il Cammino della speranza* (emigrants from southern Italy seeking a new life north of the Alps), *Cuore senza frontiere* (human problems in Trieste) and *Domani è troppo tardi* (the sexual education of adolescent youths). Other much-discussed films included *Stromboli* and *St. Francis*, both directed by Roberto Rossellini, and *Non c'è pace tra gli ulivi*, directed by Giuseppe de Santis.

**Scandinavia.**—The film industry in Sweden, the principal Scandinavian film-producing country, suffered considerably after the imposition in 1948 of an addition to the already heavy entertainment tax levy, which in 1950 reached a total of between 30% and 45% according to the price of the seats. Sweden produces between 30 and 40 films a year.

Among the more important films of 1949–50 were *Just a Mother*, directed by Alf Sjöberg (who made *Frenzy*, perhaps the best known postwar Swedish film abroad), *Thirst* and *Prison*, directed by Ingmar Bergman, and *Singoalla*, directed by the French film-maker Christian-Jaque in three language versions.

**U.S.S.R.**—The annual output of feature films by soviet studios had never been large, though the development of regular production by many of the constituent republics of the union in their own languages and reflecting their own way of life added considerably to the number of films made in the union as a whole. Meanwhile, the chief studio of the union, Mosfilm of Moscow, undertook a production in the soviet far east with *Far from Moscow*, which was about the laying of an oil pipe line in those areas during World War II. Mark Donskoi made *Alitet Goes to the Hills*, based on a novel about the early years of the soviet government in the northern Chiskot peninsula, while K. Yudin made a film in colour about stud farms in the Caucasus. Biographical films continued to be produced; *Popov* told the story of a Russian radio pioneer, and *Zhukovsky* (in colour) dealt with the life of a famous 19th-century aircraft designer. Other films were of a more controversial nature; *Secret Mission*, for example, purported to show how the western Allies attempted negotiation for a separate peace with Germany at the end of World War II.

**Yugoslavia.**—Yugoslavia, conscious of its unique position as a Communist country outside the soviet orbit, continued to develop its film industry at high speed. The industry had been founded in 1945, and technicians and artists alike had to be trained in film making at the same time that they produced their films. Most films reflected the traditions, the recent history or the current developments of Yugoslavia. Recent films included *Red Flower* (prisoners of war in German concentration camps); *The Magic Sword* (folk legend); *Trieste* (a contemporary political film); and *The Unconquered People* (the Yugoslav army).

FILMS OF 1950.—*Sound Service Test Films* (Motion Picture Research Council). (R. MAN.)

**Motor-Boat Racing.** Motor-boat racing during 1950 was dominated by the performance of an outstanding boat which set a new world speed record and took international racing honours. This was the unlimited class hydroplane "Slo-Mo-Shun IV," owned by Stanley S. Sayres, designed by Ted Jones and built by Anchor Jensen, all of Seattle, Wash., and powered, like most unlimited hydroplanes, with a 1,710-cu.in. Allison aircraft engine.

"Slo-Mo-Shun IV," built late in 1949, made her first bid for fame on June 26, 1950, on Lake Washington in Seattle, in official speed trials run by the American Power Boat association. Driven by her designer, Ted Jones, she ran the required two one-mile record heats at an average speed of 160.3235 m.p.h.

The old record was 141.74 m.p.h., made 11 years earlier by Sir Malcolm Campbell driving "Blue Bird II" in England.

"Slo-Mo," as she was nicknamed, proved equally successful in race course competition. On July 22 she won the Gold cup, American unlimited hydroplane classic, against all the best boats of her class, setting new records of 78.216 m.p.h. for the 90-mi. Gold cup course and 80.897 m.p.h. for a 30-mi. heat.

The 21st Harmsworth trophy race for the international unlimited speedboat championship was run at Detroit, Mich., Sept. 2. "Slo-Mo-Shun IV" won it rather easily, and her average speed for the race, 100.68 m.p.h., made it the first 100-m.p.h. boat race in history. Lou Fageol drove "Slo-Mo" in that race, Jones being beached with an injured hand.

A damaged shaft bearing disabled "Slo-Mo" in the Silver cup race following the Harmsworth at Detroit. The winner was Jack Schafer's "Such Crust I," driven by Danny Foster, which turned several laps at speeds fractionally over 100 m.p.h.

"Slo-Mo-Shun IV" was not entered in the President's cup at Washington, D.C., Sept. 17, which was won by the new "Miss Pepsi," owned by Walter and Roy Dossin of Detroit, a boat powered with two Allison engines. Though a disqualification had spoiled her chances for the Silver cup, "Miss Pepsi" had set a new five-mile lap record of 107.654 m.p.h. in that event. Driven by Chuck Thompson, she won the President's cup at speeds which, while below those made at Detroit, were records for the Potomac river course. (W. H. TR.)

**Motor Transportation.** For most segments of the U.S. motor transport industry, the year 1950 was distinguished by the output of an unprecedented volume of goods and services. More vehicles were built than in any previous year—8,015,750, compared with 6,255,401 in 1949. The wholesale value of the industry's production of cars and trucks reached \$10,495,000,000, exceeding the previous high of 1949 by 28%. Employment and pay rolls also reached new levels with production workers in automotive plants averaging 715,000 for the year and pay rolls aggregating \$2,700,000,000—an increase of 22% above 1949. Although total automotive production reached an all-time high, truck and bus output fell to 2.5% below the 1948 record of 1,376,155 units. Overseas shipments of automotive vehicles, never a significant item, amounted to only 280,000 units in 1950 and accounted for only 3.5% of the industry's total output.

The high level of production reached in 1950 was generally reflected in increased highway use. Automobiles, trucks, and buses operated a total of 456,000,000,000 mi. over U.S. roads and streets. This striking increase of more than one-third over the pre-World War II level of highway use (333,000,000,000 mi. in 1941) resulted from higher annual mileage per vehicle and more vehicles in operation.

Registrations reached 48,484,000 by the end of 1950—9% higher than the previous record of 1949. Included in this total were 39,710,000 passenger cars, 8,550,000 trucks and 220,000 motorbuses licensed to operate.

Despite greater production, the average age of motor vehicles had not dropped back to the pre-World War II level. The average age of vehicles declined slightly in 1950 to about eight years, yet more than 40% of all automobiles and 33% of all trucks in use were ten years old or more. Only 17% of the cars and 18% of the trucks fell into that old-age bracket in 1941.

With respect to general transportation significance, motor vehicles remained pre-eminent in the urban and interurban movement of people, and were adding steadily to the proportion of freight carried. In 1949 automobiles accounted for 85.5% of all intercity passenger traffic as compared with 79.7% in 1948.

PORT AUTHORITY BUS TERMINAL in New York city shown nearing completion in Aug. 1950. Occupying a square block, it was built to serve approximately 136,000 passengers, 85% of them commuting on intercity lines. The terminal was officially dedicated on Dec. 14, 1950

Between 1948 and 1949 intercity bus traffic dropped from 6.5% to 4.7% of total intercity passenger travel. Although responsible for a declining share of the total, intercity buses handled about one-third of the intercity passengers moved by all public carriers in the United States. Bus volume amounted to 21,000,000,000 passenger-miles annually, as compared with the wartime peak of 27,500,000,000 when travel by private automobile was severely curtailed. The decline in traffic was accompanied by rising costs, particularly labour costs which made up more than half the total operating expenses. The narrowing gap between revenues and costs had led to some cuts in service and scattered fare increases. However, fares for intercity bus travel remained relatively low by comparison with other public carriers—roughly 2 cents per passenger mile.

The long-term trend toward substitution of motorbuses for conventional streetcars continued in 1950. Thus in 1939 railway operations accounted for 64% of transit passenger revenue while motorbuses produced only 33%. By 1949 the distribution had shifted to 40% and 52% respectively. However, the transit industry as a whole had been experiencing declining patronage and rising costs since the end of World War II. Transit rides declined from a peak of about 23,000,000,000 in 1946 to about 19,000,000,000 in 1949. The first ten months of 1950 recorded a further drop of 9.4% below the similar period in 1949, indicating a total for the year of 17,000,000,000.

The fleet of some 8,000,000 motor trucks in the U.S. in 1950 was divided according to major use approximately as follows: 56% privately owned nonfarm trucks, 27% farm trucks, 13% "for hire" trucks and 4% publicly owned vehicles. The importance of these vehicles as prime movers of freight increased rapidly after World War II. There was a pronounced trend toward heavy-duty operation. Thus between 1941 and 1948 the ton-miles carried by single-unit trucks on main roads decreased 21% as contrasted with a 69% increase in traffic moved by heavy-duty vehicles. This development was the product of an increase in the number of heavy-duty vehicles, more extensive operation, and a higher payload carried per vehicle. The importance of the latter factor was indicated by the fact that the

production of heavy-duty trucks had been increasing at a much faster rate than had that of other types. Total sales of all types of trucks in 1950 exceeded the 1949 figure by only 14%, as compared with an 80% increase in the sales of trucks of gross weight in excess of 19,500 lb. (heavy-duty).

This trend toward the concentration of highway freight movement in the heavy-duty long-distance phase of transportation was reflected in the relative shares of intercity freight traffic handled by the various transport agencies. At the peak of World War II the railroads handled 72.8% of intercity ton-miles of freight traffic as compared with 4.6% carried by "for hire" and private highway vehicles. By 1949 the relative shares had shifted to 61.4% and 10.8% respectively. Estimates indicated that the trend continued throughout most of 1950.

The intensity with which U.S. highways had been used since World War II created many problems for motor transportation. Modernization of the highway plant and expansion of its carrying capacity did not keep pace with traffic volume. Not only had heavy-duty traffic tended to increase at a faster rate than total highway use, but this portion of total volume had concentrated progressively on the main routes which constituted a relatively small portion of total highway mileage. The result was critical traffic congestion, physical deterioration of the highway plant and a sharp rise in motor vehicle accidents. (See also ACCIDENT PREVENTION; AUTOMOBILE INDUSTRY; RAILROADS.)

**Municipal Government.** Although civilian defense dominated the U.S. municipal scene toward the close of the year, traffic and parking problems tended to eclipse all others in the majority of cities throughout 1950.

**The Traffic Problem.**—The most widespread remedy was the provision of off-street parking facilities in some form or other, often in conjunction with the use of parking meters; in some cities zoning amendments were adopted requiring all new buildings generating traffic to provide appropriate off-street parking space. Among the more striking developments during the year was the Harrisburg, Pa., plan for construction of a parking lot in the middle of the Susquehanna river; negotiations for construction by a private firm of a subsurface garage under the Boston common; a Los Angeles proposal for an underground garage below Pershing square; and New York city's plans for atomic bomb shelters under buildings, parks and playgrounds which in peacetime could serve as parking garages. At the close of 1950, New York city officials announced in addition a spectacular new traffic control program tied in with city defense, involving at the start construction of at least ten garages of 600- to 1,200-car capacity with a single level deep underground for use as bomb shelters, financed in part by revenues to be derived from more than 30,000 parking meters; the entire project to be under sole direction of the new City Parking authority authorized in 1950 and activated toward the close of the year.

San Francisco also consolidated its problems in the hands of a parking authority, which visualized a program of 6,000 additional parking spaces for immediate need and 14,000 by 1970, to be carried out by private enterprise.

**Organized Crime.**—Largely through the initiative of the American Municipal association, which called for federal investigation of the entire problem of interstate gambling rackets and

allied operations and for legislation prohibiting the transmission of gambling devices and betting information across state lines, a senate crime investigating committee was appointed in May under the chairmanship of Sen. Estes Kefauver. Following hearings in key cities throughout the country, the committee, while not prepared to state whether or not anything resembling a "national crime syndicate" really existed, found that well organized criminal groups were operating throughout the country with "interlocking ownership and directorship between all groups," and that organized crime was wielding "a very sinister and very great" influence on public officials. Chicago appeared to be "perhaps the one most important centre of criminal activities," although extensive organizations existed in New York city, Philadelphia, Los Angeles, Miami, San Francisco and many other cities. In all cities, the committee found, the situation was made possible through the "connivance and acquiescence of local enforcement officers." Several shake-ups occurred as a result of the committee's disclosures, particularly in the police departments of New York and Philadelphia, while a purging of the Chicago police department appeared imminent. A legislative ban against shipment of slot machines into all states except those specifically legalizing them was adopted by congress at the close of the year.

**Intergovernmental Relations; Annual Conferences.**—There were extensions of intergovernmental action into important new fields such as the investigation of organized crime and gambling by the federal government, previously mentioned, and the inauguration of a federal-state-local civilian defense program. Old-age and survivors social security benefits were extended to those municipal employees not already covered by an existing retirement system, subject to the consent of each state.

The Advance Planning program—revived in 1949—was re-directed toward the close of the year to relate it more specifically to the defense program. However, several budget cuts, made necessary by the national emergency, reduced the amounts of various federal-aid programs, exclusive however of highway aid.

The American Municipal congress was held Dec. 3 to 6, 1950, by the American Municipal association, an organization uniting 10,500 cities and towns through state associations and by direct city membership. At the same time the U.S. congress was in the throes of enacting a comprehensive civil defense program and opportunity was afforded municipal leaders attending the conference, who had insisted on such legislation, to present the views of the association at the congressional hearings. The policy statement adopted unanimously by the conference called for: (1) transfer of the new Civil Defense administration to the department of defense, to be placed on a par with army, navy and air force agencies; and (2) the establishment of direct relationships between the municipalities in critical target areas and federal authorities. Neither of these views, held to strongly by municipal leaders, prevailed in the ensuing legislation. The conference also went on record in various matters involving federal-local or state-local relations, some in connection with the national defense program, and adopted a comprehensive statement of policy on highways, traffic and parking, defining federal and state relations and prescribing local action. A handbook on *Federal Services to Cities and Towns* was published in 1950 by the association. The annual conference of the United States Conference of Mayors was held in May. The Third Inter-American Congress of Municipalities met at New Orleans, also in May.

**Finance.**—While municipal budgets practically doubled during the decade 1940-50, a tendency toward stabilization of operating expenditures set in between 1949 and 1950 and was reflected in 1950-51 budget figures. At the same time, increased

outlays for new projects deferred during World War II and immediate postwar periods raised the level of municipal budgets in a majority of cases. A number of cities established their budgets on a work program or performance basis in 1950, notably Los Angeles and Los Angeles county, San Diego, Calif., Kansas City and Slater, Mo., Phoenix, Ariz., Kissimmee, Fla., and Richmond, Va.

Census bureau data on the 1949 finances of the 397 cities with a population exceeding 25,000, published in 1950, likewise confirmed a falling off in the postwar trend of constantly increasing revenues and expenditures. The revenue figures reflected a gradual trend away from the general property tax toward new sources of municipal revenue, while the marked gains in debt and capital outlays measured the progress in postwar spending for capital improvements.

There were no spectacular new grants of local taxing powers in 1950. New York state extended to all cities authority to levy the nine local nonproperty taxes theretofore restricted to cities of more than 25,000 population and all counties; villages of more than 5,000 population were empowered to levy the 1% tax on gross income of public utilities. Mississippi legislation authorized retail sales taxes in the state's 12 largest cities, subject to local referendum; at least six cities had adopted this state-collected tax by the end of the year. In Louisiana, permission to levy local sales taxes, previously limited to New Orleans, was extended to all cities. Juneau, Alsk., imposed a retail sales tax in July.

In the income tax field, the voters of Dayton, O., approved the local pay roll income tax after its invalidation by the supreme court for want of such approval. The voters of Portland, Ore., on the other hand, rejected such a proposed tax by almost 3 to 1. The expiration of the \$7,000,000-a-year city earnings tax in St. Louis, Mo., on July 17 precipitated a fiscal crisis necessitating a \$2,800,000 cut in municipal spending for 1950. Paducah, Ky., adopted a 0.5% income tax effective July 1. Pennsylvania's supreme court invalidated Philadelphia's attempt to broaden the base of its pay roll tax by applying it to investment income.

Increased state aid had been granted by most of the 44 state legislatures meeting in 1949; the most frequent increases were for schools, highways and welfare; aid for general purposes through state-shared taxes also increased.

The average unadjusted property tax rate showed only a negligible increase for 1950: 0.08%, compared with 2.8% for 1949 and 5.7% for 1948, according to a study of 232 cities of more than 30,000 population. Adjusted tax rates for these cities decreased 10%, but this decline was attributed largely to a change in the method of computing the adjusted rates which, while preventing comparison with preceding years, provided a more valid basis of comparison for the future. Assessed valuations for these cities increased only 2.2% in 1950, compared with 4.9% in 1949 and 11.3% in 1947; the increase over the period 1946-50 was 21.4%. Tax collections for 100 reporting cities showed an insignificant increase in the percentage collected: 96.87% in 1950, compared with 96.82% in 1949.

Outstanding gross debt in 1950 reached a record high on all local government levels. City obligations, which comprised more than half of all local government debt, reached \$10,100,000,000, compared with \$9,500,000,000 in 1949 and \$8,900,000,000 in 1948. About 48% was for publicly owned enterprises and the remainder for general government purposes.

As reflected by the *Bond Buyer's* index of 20 municipal bonds, municipal bond yields were at a level approaching that of 1945; high point for the year was 2.07% in the first week of 1950, and the low point 1.70% on both Dec. 21 and Dec. 28. The index was below 2% for more than half the year. These figures reflected the good standing of municipal bonds as well as

changes in the federal tax structure.

**Personnel.**—While city government employment continued its postwar growth, there was an approach to stabilization of the average earnings of city employees. City employees as of Oct. 1950 numbered 2% more than Oct. 1949, while pay rolls increased 3.6%; the increase in 1949 over Oct. 1948 was 3% in number of employees and 4% in pay rolls. In 1947 and 1948, however, pay rolls rose more than three times as fast as number of employees because of widespread increases in city salary scales. Average earnings, which increased 8% in 1948 and 11% in 1947, rose only 1.4% in 1949 and 1.8% in 1950.

U.S. City Employees and Pay Rolls

Year	Total	Number of Employees (In thousands)		Total	Monthly Pay Roll (In millions of dollars)	
		School	Nonschool		School	Nonschool
1950	1,306	203	1,104	287.1	58.8	228.3
1949	1,280	198	1,082	277.1	57.4	219.7
1948	1,249	211	1,039	266.0	59.8	206.2
1947	1,202	205	996	236.3	55.0	181.2
1946	1,155	199	955	205.8	45.9	160.0

Data from Census Bureau reports; figure for Oct. 1950 is preliminary.

**Civil Defense and the Cities.**—The part municipal officials played in the passage in December of federal legislation setting up a permanent federal Civil Defense administration is mentioned briefly above. Of particular interest to municipalities was the provision prohibiting contributions by the federal government to proposed dual-purpose structures of a self-liquidating nature, such as underground garages or subways that could double in an emergency as bomb shelters, although Reconstruction Finance corporation loans for such purpose were authorized, as were also contributions for any section of a structure to be used exclusively for civil defense.

Civil defense test exercises were held in three widely separated cities, Washington, D.C., Seattle, Wash., and Chicago, in June, July and September, respectively, under the auspices of the National Security Resources board. They were attended by state and local government officials from many parts of the country. The Chicago Civil Defense corps published the Chicago experience under the title *Chicago Alerts* (226 pp.). St. Paul, Minn., scheduled a similar test in December under the auspices of state civil defense officials. A survey by the United Press published Dec. 15, 1950, indicated that while no cities were yet ready to handle an atomic attack, ten of the biggest cities were "well along" in their preparations, with Chicago leading the way; the others were: New York city, Philadelphia, Washington, Milwaukee, Detroit, Kansas City, Seattle, Minneapolis-St. Paul and Boston. Many other cities, especially smaller ones not reported, were presumed to be doing equally well, though many more had not taken even preliminary steps, pending anticipated participation by the federal government. A report on *The Status of Civil Defense in American Cities, November 1950*, incorporating verbatim reports of officials of nearly 150 cities, was published by the American Municipal association (159 pp.).

**Housing; Rent Control.**—The public housing and urban redevelopment programs authorized under the Housing act of 1949 were well under way in 1950, though the former had to be somewhat curtailed because of the war crisis.

At the close of 1950, 849 communities with a combined population exceeding 25,000,000 and containing 3,750,000 rental units had voted to continue federal rent ceilings until June 30, 1951. In communities failing to take such action by March 31, 1951, rent ceilings would expire on that date. It was estimated that as of Nov. 1950 about 7,000,000 housing units had been decontrolled since adoption of the first decontrol measures in 1949: about 1,500,000 by the housing expediter, 1,300,000 by local government action, 3,500,000 by state action and the remainder by county action and by local rent advisory board recommenda-

tions. A major controversy developed in Los Angeles between tenant and landlord groups after the action to decontrol was taken by the city council; landlord groups finally organized to help the policing of rent decontrol by hearing tenant complaints. The rise in rents for the first ten months in 1950 was 2.2%. (See also HOUSING.)

**Council-Manager Cities.**—The number of council-manager cities, exclusive of counties, in continental United States totalled 953 as of Dec. 31, 1950, according to figures released by the International City Managers' association. There were 52 adoptions during the year, compared with more than 70 in both 1949 and 1948, and four abandonments, compared with eight in 1949. (See also ELECTIONS, U.S.; TOWN AND REGIONAL PLANNING; also under individual large cities.) (A. M. DS.; L. GU.)

**Canada.**—Figures released in Oct. 1950 showed that while in 1939 Canadian municipalities received \$315,000,000 in taxes (30% of all taxes collected by federal, provincial and municipal taxing bodies), in 1950 municipalities received \$500,000,000 in taxes (13% of all collected). But in the period, new heavy loads of spending responsibility were placed upon municipalities in the education, health, welfare, highway-construction and traffic-control fields. To allocate the 1949-announced federal grants to municipalities in lieu of taxation (on federal property), the federal department of finance set up a municipal grants division. About 100 municipalities were involved. On June 29, 1950, parliament voted \$1,655,000 as an initial allocation.

Provincial municipal developments included: the union of Alberta municipalities in an annual meeting urged the provincial government to hand out bigger grants or devise new forms of taxation for municipal needs; a royal commission studied municipal problems in Saskatchewan and recommended that the provincial government: (1) give up the public revenue tax in favour of the municipalities; (2) pay municipal taxes on crown companies; (3) boost the gasoline tax by two cents and accelerate its road program, and (4) establish a municipal advisory commission to investigate possible grants to municipalities; the Manitoba municipal and public utility board declared that municipalities should find greater sources of revenue or learn to live within the income derived from normal tax sources; Ontario set up a continuing provincial-municipal committee to study the fiscal relationships between the two levels of government, published a booklet to guide municipalities in setting up civil defense organizations and established a \$50,000,000 corporation to help municipalities to build incinerator, sewage and waterworks systems; New Brunswick municipal bodies sought a \$3 per capita grant as their share of the provincial sales tax proceeds.

FILMS OF 1950.—*Local Government* (British Information Services). (C. CY.)

**Munitions of War.** **U.S. Army.**—The most critical modern equipment item in the U.S. army in 1950 was the tank. Compared with the estimated 40,000 medium and heavy tanks of the Communist countries, the United States had approximately 6,000 combat-worthy tanks of light and medium varieties. Except for prototypes and a quantity of the new Patton tank, the United States had purchased no new tanks since the end of World War II. However, the army had a long-range tank program whereby there would be developed a family of superior tanks. Ordnance experts of the U.S. army believed that the United States had the best light tank in the world. It also had the prototype of a new medium tank and designs for a superior heavy tank. By using highly improved weapons and superior ammunition, both the light and heavy tanks had been armed to wreak devastating destruction upon even the heaviest of enemy tanks.

Of the 1,595 munitions plants built by the United States during World War II, 270 were retained, owned and managed by the

Left: MACHINING TANK TURRETS for the 50-ton British "Centurion," details of which were first released in 1950. It was the only tank designed after World War II in mass production, and was the standard tank of the royal armoured corps

Below: THE BIG BAZOOKA, U.S. anti-tank weapon firing 3.5-in. rocket missiles, which was first placed in military service in Korea during the summer of 1950

Above: SHOCK-RESISTANT PLASTIC LINER for a helmet assembly made up of liner and aluminum shell (the latter not shown in photo) which was being tested by the U.S. army in 1950 prior to standardization. Lighter than the World War II helmet, it afforded greater protection in terms of head area covered and of resistance to impact

Right: U.S. TROOPS using ropes to pull a "daisy chain" of anti-tank mines into position. Their delaying action was being carried out on a bridge approach outside Yongdong, South Korea, in July 1950

department of defense. In addition, 200 plants were placed in a national industrial plant reserve and either retained as "stand-by" or leased or sold with the stipulation that they would be maintained in such condition that they could be reconverted to war-time production in 120 days.

Some of the outstanding munitions items of the year 1950 follow in brief discussion.

**Aluminum.**—The Glenn Martin Aircraft company of Baltimore, Md., perfected a coating for aluminum which made it twice as wear-resistant as case-hardened steel. It was called M-H-C and was applied by an electrochemical process.

**Anti-aircraft.**—Bofors of Sweden produced a new anti-aircraft gun, a 120-mm., high and low angle, quick firing weapon. For the first time the fully automatic principle was adapted to a gun larger than 40-mm.

**Barium Titanate.**—This newly-developed material for sound and ultrasonic equipment replaced mica and other crystals. Its sensitive atoms respond quickly to the slightest change in pressure, temperature or electrical field. Light shining on a crystal causes the atoms to rearrange themselves. The dielectric constant for this new material had been placed as high as 5,000 as compared with 7 for mica.

**Battery.**—The signal corps laboratories at Fort Monmouth, N.J., developed a new magnesium-cuprous chloride battery, activated by tap water, for high-altitude meteorological research. It weighed 400 g., would operate in temperatures as low as  $-65^{\circ}\text{F}$ ., had a capacity of 12 watt-hr. and a unit size of 16 cu.in.

**Bombs.**—Two developments in the guided missile field included a 12,000-lb. bomb that could be guided all the way to its target, and several self-propelled guided missiles with ranges in excess of 500 mi., capable of as much destruction as ten unguided bombs of the same explosive power.

**Cameras.**—A new camera was tested at Aberdeen Proving Ground, Md., to take pictures, in colour or in black and white, at one 100-millionth of a second. It was expected that it could be speeded up to one ten-billionth of a second. Special aerial cameras were used to take photographs at 100,000-ft. altitudes. Balloons carried the aerial cameras in specially built containers which had their own pressurization, air circulation and heating means. Pictures were taken automatically every 50 sec. up to 100,000 ft. and, after five hours at this height, equipment was dropped by parachute.

**Electricity.**—The ordnance laboratory at White Oak, Md., confirmed the existence of a sheet of electric currents 66 mi. above the surface of the earth. They apparently flowed like an ocean tide and were believed to be the explanation for variation in radio waves.

**Gas.**—Acetogen, a new type of cutting gas made from super-refined purified petroleum gases, provided a  $5,400^{\circ}\text{F}$ . temperature for cutting purposes. Noninjurious and nontoxic, it was found to be far superior to acetylene.

**Generators.**—Chatham Electronics corporation produced two new electric generators of 6 kv. and 20 kv. to replace old cumbersome and short-lived batteries as a high-voltage supply for snooperscopes, sniperscopes and similar infra-red sighting instruments. Compact and weighing only ten pounds, these generators were powered by a spring motor which operated for an indefinite time.

The former batteries lasted three hours.

**Helmet.**—A new helmet assembly was developed by the quartermaster corps. It consisted of an aluminum shell and a shock-resistant plastic liner. Lighter in weight than previous types, it afforded greater protection to the individual, both in the area of the head covered and in resistance to impact.

**Medical.**—While conducting research into communicable diseases, army scientists discovered an antibiotic called actidione,

so detested by rats and mice that they actually die of starvation or thirst rather than eat or drink anything containing it.

**Microscope.**—An X-ray type of microscope, developed by the General Electric company, made visible the internal details of material through which light cannot pass. The microscope consisted of an X-ray tube and a pair of curved mirrors of platinum-covered quartz. The mirrors bent the beams so that they cast a magnified X-ray image of the sample on a photographic film.

**Mica.**—Synthetic mica with essentially the same properties as natural mica, but able to withstand much higher temperatures, was successfully crystallized at the national bureau of standards in Washington, D.C.

**Oils.**—The Lockery company developed a new molybdenum-base lubricant which could be added directly to crankcase or other oils which would carry it to friction surfaces.

**Plastics.**—A urea plastic-cellulose, developed under war conditions, was being used with paint to retard fires. Army boots were being treated with a new plastic coating to improve their looks and increase their resistance to wear. The new coating was an acrylate plastic, contained no inflammable solvents, and could be applied without heat.

**Polymer.**—A new synthetic rubber, developed especially for arctic use, would bounce and not shatter at  $-75^{\circ}\text{F}$ .

**Ration.**—Fifty picked men from the army's Alaska command conducted a rigidly controlled test of a new arctic trail ration designed by the quartermaster corps. Although light in weight, it provided 5,324 cal. a day, compared with the standard ration of 3,600 cal. furnished to troops in temperate climates.

**Resin.**—A new protective type resin, called HPM, was developed by the Glenn Martin Co. Durable enough to withstand laundering or dry cleaning, it remained soft and pliable to the touch and capable of being adapted to meet flame-resistance requirements for clothing.

**Rockets.**—A new anti-aircraft type of rocket believed capable of destroying planes at altitudes above 60,000 ft. was undergoing tests. A rocket fuel was developed by the Allied Chemical and Dye corporation from a former chemical "orphan," nitrogen tetroxide.

**Salvage.**—At five army ordnance plants platinum and rhodium were salvaged from war-surplus material. These metals were found in the form of dust within ammonia-oxidation units. Up to May 1, 1950, more than 1,770 troy ounces had been collected. Properly refined, this would yield 1,300 troy ounces of platinum worth \$69 an ounce and 41 oz. of rhodium worth \$120 an ounce.

**Signal Corps.**—In its policy of miniaturizing matériel so that it could be handled easier than similar equipment in use during World War II, the signal corps produced a crystal rectifier the size of a match head; a field switchboard that weighed only 22 lb.; subminiature radio tubes; and a radio receiver and transmitter, which was so small that it would fit into a king-sized cigarette package, including power supply, antennae and four tubes with a total weight of 11 oz. and a sending and receiving range greater than 200 yd.

**Stock Pile.**—The aluminum and magnesium advisory committee of the U.S. munitions board set as an objective a stock pile of 150,000,000 lb. of aluminum to be accumulated during the fiscal year 1950. The success of this program could be judged from the fact that by Jan. 1950 acceptance had been pledged for 24,000,000 lb. from the Reynolds Metal company and 36,000,000 lb. from the Permanente Metals corporation.

**Truck.**—The "Eager Beaver" was a new Reo-built  $2\frac{1}{2}$ -ton truck designed for high speed on and off the highway; it could operate normally in subzero cold, blistering heat, or with its engine completely submerged in water. It could carry a 10,000-lb. load on the highway at 60 m.p.h., or negotiate a 60% grade with the same load.

**X-Ray.**—General Electric corporation at Milwaukee, Wis., perfected two radically new lightweight "knockdown" X-ray machines designed for use under strenuous military conditions.

**Zinc.**—A new zinc was developed at the General Electric plant in Schenectady, N.Y.; by the addition of small quantities of copper and beryllium to the zinc, it acquired a springy, resilient quality.

(R. S. T.)

**U.S. Navy.**—The year 1950 saw a continuation of emphasis on development of new and improved weapons in the fields of air warfare, antisubmarine warfare and air defense, in order to provide the navy with effective firepower to meet any threat which might be posed in a future war.

Considerable effort was directed also toward developing interim weapons to meet immediate and anticipated short-term needs of the operating forces. For example, the navy's new 6.5-in. anti-tank aircraft rocket, with shaped-charge warhead, was developed specifically to knock out the soviet-built tanks encountered by the United Nations forces in Korea. The new rocket was developed, tested and produced at the Naval Ordnance Test station, Inyokern, Calif., in only 22 days, from preliminary designs drawn up earlier by the bureau of ordnance.

In offensive air warfare the striking power of naval aircraft was appreciably stepped up. New aircraft machine guns and fire control systems were replacing obsolescent equipment. New folding-fin rockets, small enough to be carried in modern high-speed planes in quantity, had far greater range and speed than the aircraft rockets of World War II. These rockets, launched either singly or in salvo from a new type rocket launcher, were capable of bringing under fire aircraft targets from beyond the target's effective defensive firepower.

Active programs were underway to develop radically new anti-submarine warfare weapons and to provide for the modernization and more effective utilization of existing equipment. One new type of torpedo, for use from surface ships and submarines, was undergoing evaluation and was released to limited production. A new shipboard launcher, capable of firing antisubmarine rockets with improved underwater ballistics at a high rate of speed, was developed.

Development of fully automatic intermediate calibre rapid-fire anti-aircraft guns, with accompanying improved fire control systems, had reached a point where introduction into the fleet in the near future was anticipated. These fast-firing high-velocity weapons would give the fleet a significant increase in anti-aircraft defense.

Important progress was made in solving a number of the problems connected with guided missiles development. The bureau of ordnance had a missile which would greatly increase the fleet's defense against attacks by modern aircraft. This missile had reached the evaluation stage and was in limited production. It was to be the primary armament on a cruiser which the navy was converting to a guided missiles ship.

(A. G. NE.)

**Air.**—The outstanding development in the field of air munitions during 1950 was the setting up of a new super-agency in the U.S., the Office of Guided Missiles (OGM). K. T. Keller, president of the Chrysler corporation, was named as director, and Maj. Gen. Kenneth D. Nichols, wartime engineer of the atomic Manhattan project, as deputy director. The OGM reports directly to the secretary of defense and the Armed Forces Policy council, and is charged with the responsibility of co-ordinating all guided missile research and development and planning for standardization of the lowest possible number of practicable types for production. In the initial budget for fiscal 1951 the defense department was allocated approximately \$200,000,000 for guided missiles. About \$600,000,000 additional funds for this purpose were scheduled for the supplemental defense appropriation. OGM plans called for a build-up to a \$2,000,000,000 guided missile

program for fiscal 1952, and a \$3,000,000,000 program for 1953-54. This latter sum was more than was spent by the air force and navy for procurement, research and development of piloted aircraft in fiscal 1950.

A prime purpose of the Office of Guided Missiles is to co-ordinate research and program the merger of several missile developments carried on by army, navy and air force. It fosters incorporation of technique, methods, design and engineering of one missile with those of another (or others) to develop a single usable weapon. A good example of this was the combining of the Martin Matador air defense missile, successfully tested by the U.S. air force, with navy's Regulus to form an improved missile, Matador-Regulus. Certain features of an army-developed missile might be added, and the final combined weapon would be put into production and used by all three services. How necessary this was can be seen from the fact that in the spring of 1950 the air force had 19 guided missile projects under development, the navy 15, and the army 7. Some of the air force and navy projects were refinements of wartime prototypes.

The following were reported to be nearly ready for production and service use, some of them before the end of 1951: Douglas WAC Corporal, General Electric Hermes A-1, Fairchild Lark and the army-developed LOKI. For immediate emergency use for long-range work, the air force had Banshee, a B-29 remote-controlled drone that could carry a 10,000-lb. bomb load. All three services had activated training units to handle the missiles when they were delivered, in the meantime using advanced experimental models. Co-ordination with the weapons systems had also begun; for example, anti-aircraft guided missiles (such as the Boeing GAPA, to be ready in 1952) were being co-ordinated with the parallel development and production of radar intercept nets, techniques and plans for utilization.

Industry devised new tools and techniques to speed up developments in the uncharted guided missiles field. One of the most important of these was unveiled in November as Project Typhoon—the result of a joint program of the special devices centre (office of naval research) and the Radio Corporation of America. It provided a rapid, precise, automatic computer for simulating missile flight for studying and evaluating guided missile performance.

In July 1950 a new radio-guided winged rocket was successfully flown off the Welsh coast. It was the prototype of a high-altitude anti-aircraft missile being developed at the royal aircraft establishment, Farnborough. Details of similar developments by the soviets were hard to obtain, but intelligence reports indicated that great efforts were being expended on missile development to neutralize possible long-range bombing attacks by the U.S. strategic air force. (See also ARMIES OF THE WORLD; AVIATION, MILITARY; JET PROPULSION; NAVIES OF THE WORLD.)

(N. F. S.)

**Murray, Philip** (1886— ), U.S. labour leader, was born in Blantyre, Scot., May 25, and in 1902 moved with his family to the U.S. where he was naturalized in 1911. He became a member of the international executive board of the United Mine Workers of America in 1912 and was the union's international vice-president from 1920 to 1942. He was also president of the United Steelworkers of America after 1942. In 1940 he succeeded John L. Lewis as president of the Congress of Industrial Organizations (C.I.O.). He helped launch several rounds of wage and hour demands after World War II, and in 1947 publicly violated the Taft-Hartley labour law to institute a test case, but was not prosecuted on technical grounds. During the 1948 national elections Murray first attacked Pres. Harry S. Truman's labour policy, but later backed Truman.

In Feb. 1950, Murray sent \$500,000 to the United Mine Workers as a gift from the steelworkers' union. In April he

sounded a new call for labour unity, and in June told a C.I.O. political action committee rally in Washington to collaborate locally with A.F. of L. and other labour groups. On Aug. 8 it was announced that Murray was appointed one of a 12-member committee on U.S. mobilization to advise W. Stuart Symington, chairman of the National Security Resources board. Later in 1950 Murray supervised a "purge" of Communist elements in C.I.O. unions that cost the organization more than 500,000 members. He was re-elected president of the C.I.O. at its national convention Nov. 20-24.

**Museums.** For museums in the United States, 1950 was a year of rapid but generally well-planned growth. More than 25 new museums were established or opened. Many older museums modernized and expanded their exhibits, and others enlarged or replaced their buildings. Museum services were extended in useful directions.

Most of the new museums were located away from the great urban centres. A historical museum was established in Cherokee, Ia., and its modern \$100,000 building was under construction. Texas Technological college, Lubbock, opened its museum of regional history and economy in a new \$500,000 structure. In Columbia, S.C., and St. Petersburg, Fla., new museums were opened. The International Folk Art museum was organized as a unit of the Museum of New Mexico in Santa Fe, but with a separate building in progress. Historic structures which were established as museums ranged from Hampton, a great Georgian mansion near Baltimore, Md., to a log cabin in Homestead National monument, Neb. Among them was Castle Clinton in New York city which had in turn guarded the harbour, served as a receiving station for immigrants from Europe, and been a famous aquarium. The restoration of the old fort as Castle Clinton National monument was begun.

The installation of modern exhibits continued to be a major activity. In some museums the whole scheme of exhibition was being revised, as at the Cleveland Museum of Natural History where the displays were being designed to interpret the Ohio environment familiar to its visitors rather than distant lands. Others opened new exhibit halls on timely subjects, such as television in the Chicago Museum of Science and Industry and water conservation in the Philadelphia Academy of Natural Sciences. There were new galleries of mediaeval Renaissance decorative arts at the Wadsworth Atheneum, Hartford, Conn., and on pre-Columbian art at the Minneapolis Institute of Arts. A lawyer's office of about 1830 was installed at the Farmers' museum, Cooperstown, N.Y., and an early schoolhouse was added to the Mystic (Conn.) Seaport restoration.

There were notable improvements in museum buildings. The Daughters of the American Revolution museum, Washington, D.C., moved into new quarters. So did the Ventura County (Calif.) Pioneer museum. The Boston Museum of Science and the Detroit Historical museum started large buildings. The Ohio State museum, Columbus, and the National Gallery of Art, Washington, D.C., completed \$1,000,000 construction projects. Other museums had important building operations in all stages of development.

Museums used their resources for public service in varied ways. The Museum of Modern Art, New York city, encouraged good design in home furnishings by arranging special exhibitions in collaboration with the Merchandise Mart (Chicago), and assembling a travelling collection of well-designed modern American pieces under the title "Design for Use, U.S.A.," to be displayed in Great Britain and Europe. Several leading art museums took steps to increase their support of contemporary art in the United States through purchases and special exhibitions. The Fogg Museum of Art, Harvard university, undertook

months of work to unroll an ancient scroll from Palestine. The Chicago Natural History museum sent out 14 expeditions to various parts of the world. (See also SMITHSONIAN INSTITUTION.) (R. H. Ls.)

**Accessions to Art Galleries and Art Museums.**—High prices were paid for significant paintings during 1950, as indicated by the fact that the City Art museum of St. Louis, Mo., spent \$130,000 for Rembrandt's "Portrait of a Young Man" (1662). Another notable painting by Rembrandt went to the Cleveland (O.) Museum of Art at a price reputed to be \$135,000. This was the "Portrait of a Student," dating from the 1650s, given for sale to the Metropolitan Opera association by the children of Otto H. Kahn in memory of their father who was for years a patron of the opera.

Cleveland also purchased a charming early German painting, "The Visitation" (about 1515), by Albrecht Altdorfer. The background is a delightful example of landscape painting in the days before landscapes were done independently.

An outstanding picture, "The Game of Skittles" (about 1665), by Pieter de Hooch (1629-83) was given to the Cincinnati (O.) Museum of Art by Mary Hanna, leading Cincinnati collector.

The Columbus (O.) Gallery of Fine Arts purchased Paul Cézanne's "Victor Choquet" (1878-80), a remarkably solid and richly toned portrait of the man who was one of the first to recognize Cézanne's importance as an artist.

Boston's Museum of Fine Arts purchased "Poppies in a Bottle" (about 1600), one of the earliest still-life paintings in existence. This was attributed to the great Italian master, Michelangelo da Caravaggio (1573-1610).

One of the rare art bargains was found by the director of the M. H. de Young museum in San Francisco, Calif. In a small shop in Italy Walter Heil discovered a painting by the Venetian master Gentile Bellini and purchased it for a few hundred dollars. The subject was identified as Leonardo Loredano, doge of Venice from 1501 to 1521.

As a gift from William Randolph Hearst, the Los Angeles County museum acquired an imposing painting by Sir Anthony van Dyck of "Rinaldo and Armida," illustrating Torquato Tasso's epic poem, *Jerusalem Delivered*.

The death of Mrs. Edward S. Harkness released the bequest of her husband of five outstanding paintings to the Metropolitan Museum of Art in New York city. These included a portrait of a member of the Wedigh family by Hans Holbein the younger (1497-1543), a "Self-Portrait" (1480) by Cosimo Rosselli (1439-1507), "Portrait of a Woman" attributed to Antonio Pollaiuolo (15th century), "Elizabeth Farren" by Sir Thomas Lawrence and "Madame Grant," later the princess de Talleyrand, by Marie-Anne Vigée-Lebrun (1755-1842).

The Metropolitan also acquired the "Boy Blowing Bubbles" (about 1735) by Jean-Baptiste Chardin (1699-1779).

Mrs. Edsel Ford presented to the Detroit Museum of Arts a "Madonna and Child" of unglazed terra cotta (dated about 1430) by Luca della Robbia. This was one of the most outstanding examples of 15th-century Italian sculpture ever to enter an American museum.

"St. Martin and the Beggar" by El Greco (1541-1614) was presented to the Art Institute of Chicago by Mr. and Mrs. Chauncey McCormick. Painted just after 1600, this was one of six versions, two of which were in the National gallery in Washington, D.C.

The Toledo (O.) museum acquired a fine 17th-century Dutch picture, "Landscape with Cattle" (1665) by Solomon van Ruysdael (c. 1600-70), and an early "Still Life" (1867) by the French Impressionist painter Camille Pissarro (1830-1903). (See also ART EXHIBITIONS; ART SALES.) (F. A. Sw.)

**Great Britain.**—In London, the British museum reopened the

Egyptian sculpture gallery in July, the Science museum reopened its national aeronautical collections in June and the Bethnal Green museum (a branch of the Victoria and Albert museum) was partly reopened after being closed since 1939. Great improvements were made in the National gallery, which reopened gallery 29 in August.

In the provinces there were many reopenings of galleries or museums closed for a decade, among the more important being the Turner House gallery, Penarth (branch of the National Museum of Wales); Gunnersbury Park museum, Acton; York Art gallery, first floor gallery; the Museum of the History of Science, Oxford; and Cannon Hill Park museum, Birmingham, which was redesigned as a museum of local history. New museums were opened at Oxford (New Museum of Eastern Art), Ince Blundell hall, Lancaster, and Crows Nest Park Art gallery at Dewsbury.

**Europe.**—In Italy more than a score of museums were completely reorganized. The ministry of public instruction republished the *Annuario dei musei e gallerie d'Italia* (Rome, 1950).

In Germany, a tremendous amount remained to be done to bring museums back to pre-World War II standards. At Hanover, both the Kestner museum and the Landesmuseum had only a portion of their collections open to the public. At Düsseldorf, the Shipping museum, the art and historical collections of the city, the Löbbecke museum and the Hetjensmuseum were fully open, but the Museum of Political Economy was still closed. At Cologne, where both the great museums were destroyed during World War II, the collections were brought together in a remarkable temporary exhibition. At Heidelberg, the Kurpfälzisches museum was reinstalled in the 18th-century baroque palace which it occupied before the war.

In Turkey, the Seraglio museum, Istanbul, was opened and showed a remarkable series of furniture, china, costumes, etc. At Ankara the Archaeological museum was being reorganized and was expected to be fully opened in 1951. An archaeological park was projected.

**International Conferences.**—Possibly the outstanding gathering of 1950 was the biennial conference of the International Council of Museums, which was held in London in July. Representatives from more than 30 countries attended. Particular attention was paid to problems of conservation and to the treatment of children in museums.

Among the other important conferences of the year were the

**TREASURE HUNT** designed to familiarize children with the contents of the City Art museum, St. Louis, Mo., as part of a 1950 summer program. Each child was given three post cards picturing objects in the museum which they then hurried to find—without running

technical meetings arranged by the United Nations Educational, Scientific and Cultural organization (U.N.E.S.C.O.). A conference on the care of paintings was held at Rome in Dec. 1949, and a conference on museum technique at Stockholm, Swed., in May, 1950. U.N.E.S.C.O. further sponsored a new international agreement under which paintings, sculptures, films and other works of art would pass freely from country to country.

The year also saw the setting up of the International Institute for the Conservation of Museum Objects, assisted by a grant from the Nuffield foundation of £500 a year for five years. The first president was George Stout of the Worcester Art gallery, U.S.

(S. F. Mm.)

**Music.** During 1950 festivals commemorating the bicentennial of the death of Johann Sebastian Bach were held all over the world. Particularly rich were the celebrations in Germany, both in the western zone and in the soviet zone. The International Music congress met for the first time after World War II at Lüneburg. There was an International Bach festival in Vienna, Aus., with the participation of 10 choral societies, 4 orchestras and 60 soloists. Albert Schweitzer was honorary president of the Bach festival in Strasburg. Virtually every orchestra in England, America, Switzerland, Italy, the Scandinavian countries, the Netherlands, Belgium, Australia and Latin America featured Bach's oratorios, chamber works and instrumental compositions.

Among Bach festivals, one organized by Pablo Casals in the little village of Prades near the Spanish frontier in France attracted world attention. Musical pilgrims came from many countries to hear Casals perform Bach's unaccompanied cello suites and conduct the orchestra in the performances of the Brandenburg concertos.

Beside the Bach festivals, there were 90 summer music festivals in Europe devoted mostly to contemporary works; 22 festivals in the United States and a smaller number in other countries. The Festival of the International Society for Contemporary Music, held in Brussels, Belg., in June, led the way in the field of advanced musical composition. Among the more notable works presented at the Brussels festival were the *Second Cantata* by the Austrian composer, Anton von Webern; the choreographic suite, *Jacob's Dream*, by Darius Milhaud; *Vistula Cantata* by Roman Palester, the Polish composer; *Sinfonia Giocosa* by the Norwegian Klaus Egge; and the challenging work, *L'Explication des Métaphores* by the Warsaw-born Schoenberg disciple, René Leibowitz.

A festival of British contemporary music was presented at Cheltenham in July, featuring a piano concerto for the left hand by Sir Arnold Bax, a piano trio by Edmund Rubbra, a string quintet by Richard Arnell and an oboe quintet by William Wordsworth, great-grandson of the poet.

The year 1950 was distinguished by international musical exchange and visits by foreign organizations. The orchestra of La Scala Opera of Milan, the Orchestre National de la Radio Diffusion Française, and the Radio Symfoniorkestret of Denmark gave performances at the Edinburgh festival in August. The Royal Philharmonic orchestra of London made a tour of the United States in the autumn, under the direction of Sir Thomas Beecham. The Helsinki opera visited Stockholm in March, where it presented the Finnish opera, *East Bothnians*, by Leevi Madetoja. The Stockholm Opera reciprocated by going to Helsinki; it also visited Iceland and gave that northern island country its first operatic performances. The Vienna Philharmonic travelled to Egypt. On the last day of the year, the Israeli Symphony orchestra arrived by plane in the United States, for a tour of 55 concerts in 40 cities, under the direction of Serge Koussevitzky, Leonard Bernstein and Eleazar de Carvalho. The Israeli symphony, comprising 90 musicians, natives of 20 countries, became in 1950 a major symphonic organization.

In Australia Eugene Goossens, conductor of the Sydney Symphony orchestra, inaugurated a series of open-air concerts; the opening concert was attended by 25,000 persons. A festival of works by Australian composers was held in Adelaide in May.

In Latin America a new orchestra, Orquesta Sinfonica do Rio de Janeiro, was founded in Brazil. Operatic productions occupied the attention of music lovers in Argentina, Chile, Colombia and Peru. A season of operas was given in El Salvador. In Mexico, a new symphonic body, Mexico City Philharmonic, made an auspicious beginning.

In Japan the penetration of western music was the most signal phenomenon. The Fujiwara opera group presented the opera *The Old Maid and the Thief* by Gian-Carlo Menotti. For the first time, *The Mikado* by Gilbert and Sullivan was given in Japan for the general public. This operetta was heard in Tokyo in 1946 in a performance limited to occupying forces, to avoid offending the Japanese. The Nippon Philharmonic gave a performance of the *Sixth Symphony* of Roy Harris, and George Gershwin's *Concerto in F*.

In France an important musical event was the production of the new opera *Bolivar* by Darius Milhaud, presented in Paris on May 12. *La Main de la Gloire* by Jean Françaix was produced in Bordeaux. A festival of old and new music was given at Aix-en-Provence in July, presenting a new *Piano Concerto* by Francis Poulenc, and the lengthy symphonic work, *Turangalila*, by Olivier Messiaen.

In England the Committee for the Promotion of New Music, organized in 1943, developed its activities and presented concerts with a critical discussion in which the audience took part.

In Italy the opera *Il Prigionero* by a radical Italian modernist, Luigi Dallapiccola, was presented at the Florence festival in June. The Florence International Congress of Music held a discussion of music for films, with Ildebrando Pizzetti as chairman. An important event was the Venice Biennial, which featured several works in the 12-tone technique: Vladimir Vogel's *Seven Aspects of a Dodecaphonic Series*; Arnold Schoenberg's *A Survivor of Warsaw* (which was repeated in response to audience request), a *Study for Kafka's The Trial* by Maderna and a piano concerto by Mario Peragallo.

The vogue of the 12-tone method of composition in Europe was signalized by several gatherings devoted especially to that form of modern music. The Second International Congress for Twelve-Tone Music was held in Locarno, Switz. (The first con-

gress took place in Milan, It., in 1949.) A *Tagung für Zwölfton-Musik* was held in Munich, Ger., in October.

The revival of modern music in Germany was particularly spectacular in view of its virtual prohibition under the Nazi regime. Numerous works of the modern school written since about 1935 were heard in Germany for the first time. Paul Hindemith visited his native land for the second time. His *Concerto for Horn and Orchestra* was given a world *première* in Baden-Baden. Ernst Krenek toured Germany and Austria as composer, conductor, pianist and lecturer. His opera *Tarquin* received its first complete performance in Cologne. Another native who returned for a visit to Germany was Ernst Toch. Edgar Varèse was invited to lecture in Darmstadt; his unique score *Ionization*, written for percussion instruments only, was performed in Germany for the first time.

The once famous Donaueschingen festival resumed its activities after many years. Five world *premières* by German composers were given: *Second Symphony* by Karl Amadeus Hartmann; a *Fantasy* on the name Bach by Wolfgang Fortner; *Sonata* for two pianos by Harald Genzmer; and works by Gisela Klebe and Otto Erich Schilling.

At the Salzburg festival, 70 delegates from 30 nations were in attendance. The world *première* of the opera *Romeo and Juliet* by the Russian-born German composer Boris Blacher was heard.

The Holland festival during the summer presented a rich fare of classical and modern music in Amsterdam, The Hague and other cities. Belgium, Denmark, Sweden, Norway and Finland contributed their share to musical production.

The first performance of four songs for voice and orchestra by Richard Strauss was posthumously given in London on May 22 with Kirsten Flagstad as soloist and Wilhelm Furtwaengler conducting. On Oct. 29, the British Broadcasting corporation presented for the first time a purported work by Beethoven, *Rondo in B flat* for piano, which was discovered among 18th-century manuscripts.

In the U.S., two festivals of contemporary American music were given in May, at Rochester, N.Y., and at Columbia university, New York city. The Rochester festival presented Robert Delaney's *First Symphony*; the Columbia festival featured the *First Symphony* by William Bergsma and *Twelve Poems of Emily Dickinson* by Aaron Copland.

After several years of suspension, the Elizabeth Sprague Coolidge festival presented a group of concerts at the Library of Congress in Washington, D.C. The first performances of *Five Fables* for voice and small orchestra by G. Francesco Malipiero, and string quartets by Aaron Copland and William Schuman were given.

The Cumberland Forest festival was inaugurated by Roy Harris at Sewanee, Tenn., presenting chamber works by classical and modern composers.

Ernest Bloch was honoured on the occasion of his 70th birthday by a six-day festival of his works in Chicago, which presented a panorama of his creative production, including a new orchestral work, *Scherzo Fantasque*, conducted by Bloch himself.

Several chamber operas by U.S. composers were given successful performances in 1950. *The Triumph of Joan*, a lyric drama by Norman Dello Joio, was presented for the first time at Sarah Lawrence college, Bronxville, N.Y., on May 9; Indiana university, Bloomington, produced two small operas, *The Veil* by Bernard Rogers and *The Jumping Frog* (after Mark Twain) by Berlin-born Lukas Foss.

*The Consul*, an opera by the Italian-American Gian-Carlo Menotti, produced in New York at the Ethel Barrymore theatre on March 15, with a libretto by the composer, who also directed the production, became a commercial success and

aroused hopes that a new lyric opera theatre might be feasible on Broadway. The appealing story of displaced persons in a totalitarian country vainly trying to secure a visa to freedom, set to dramatic music in a modern Italian tradition, made *The Consul* even more successful than Menotti's previous short operas *The Medium* and *The Telephone*.

With Dimitri Mitropoulos in charge of the New York Philharmonic-Symphony, more modern music was performed by that organization. An impressive innovation was his production, with some stage effects, of Schoenberg's cantata, *A Survivor of Warsaw*.

Among first performances given by U.S. orchestras was David Diamond's *Third Symphony* (Boston Symphony orchestra); Peter Mennin's *Fifth Symphony* (Dallas Symphony orchestra); and Ernst Krenek's *Fifth Symphony* (Albuquerque Symphony orchestra).

Musical developments in the U.S.S.R. and in the countries under the cultural influence or domination of the U.S.S.R., reflected the shock wave set in motion by the Feb. 1948 decree against musical modernism. Dmitri Shostakovich, Aram Khachaturian and others named in that decree as "formalists" later redeemed themselves by producing music acceptable to official tastes. Sergei Prokofiev wrote an oratorio, *On Guard for Peace*, but he was still under a cloud.

In the summer, more than 100 works by soviet composers were performed in Leningrad; there were similar presentations in other Russian cities. There was an increased number of compositions with Lenin and Stalin in the title; alternatives were the Kremlin and *Patriotic War*. But the reception of these works was unfavourable, and the composers were urged to write music more vigorous in order to match the subject matter.

In Czechoslovakia, more western music was played than in the U.S.S.R.; but a tendency to supply political titles was notable. A cantata by Miroslav Barvík, *Hands Off Korea* was produced in Prague. Another cantata by a Czechoslovak composer was titled *Stalin's Order*. Songs bore the titles *Great Mao-Tse-tung*, *Glory to the Tanks* and *Peace Cantata*. Classical Czech music was cultivated. Apart from Anton Dvořák and Friedrich Smetana, works rarely heard abroad by Josef Suk, V. Novák and the nonagenarian Prague composer Josef Bohuslav Foerster were given.

In Bulgaria, the *Third Piano Concerto* by Pantcho Vladigerov was performed for the first time, with the composer as soloist. In Hungary the music of Zoltán Kodály had most performances. Béla Bartók's works of folk inspiration were honoured. Of the younger generation, Paul Kadosa was a rising figure in modern Hungarian music.

A decided shift toward folk-inspired music was also observed in the educational policies of Rumanian musicians. Among new

PABLO CASALS, renowned Spanish cellist, who appeared as conductor-soloist at the Bach bicentennial festival in Prades, Fr., in June 1950, his first public appearance after three years of silence

Polish composers the folkloric trend was also apparent. The national substance rather than political orthodoxy was emphasized by the theorists of the U.S.S.R., Poland, Hungary, Rumania and Bulgaria in their advice to composers. This accounts for the fact that the music of Sergei Rachmaninoff, who was an outspoken enemy of the soviet regime, was widely performed and that J. Sibelius was accepted as a composer for the masses, and his well-known opposition to Communist philosophy and soviet practices was tacitly ignored. (N. Sv.)

**Popular Music.**—A majority of the successful songs of the year 1950 either echoed some older music or represented a deliberate revival of material already established in the past.

The most embarrassing index to public taste was supplied by the spectacular popularity of a naive piece of pure "corn" called "Goodnight, Irene," which could justifiably claim to be the song of the year. Nobody knows where or when it started. A press agent named Howard Richmond promoted "Goodnight, Irene" to the top of the Hit Parade and the leading spot among the best-selling records of 1950.

Another hit was the "nickelodeon" song, "Music! Music! Music!" which jizzes the closely related old tunes of "Down South" and "Good-bye, My Lady Love," with an echo of another ancestor dealing with gin as a stimulant and a bit of a Hungarian rhapsody for its "release." Richmond also made a success of the

RUDOLF BING chatting with ballerinas of the Metropolitan Opera company of which Bing became general manager in 1950

baffling "Tzena, Tzena, Tzena," whose background is in the folk music of Israel.

Equally astonishing was the vogue of the "Third Man Theme," played on the zither by its composer, Anton Karas, for the motion picture *The Third Man*. Its tune consists mostly of three notes of the chromatic scale, reminiscent of the old "Abba-dabba-dabba" and the start of the "Floradora Sextet."

The high-ranking "Harbor Lights" was written by Jimmy Kennedy and Hugh Williams in 1937 and some even earlier hits by Bert Kalmar and Harry Ruby enjoyed a revival through their use in the supposedly biographical motion picture, *Three Little Words*, with top honours going to a song called "Nevertheless," dated 1931. An encouraging comeback was made by the far superior "Bewitched, Bothered and Bewildered," written by Richard Rodgers and Lorenz Hart for their musical comedy, *Pal Joey*, in 1941.

Among other song hits of 1950 depending on old rather than new materials were "There's No Tomorrow," copying the Italian "O Sole Mio" note for note, "If I Knew You Were Coming I'd've Baked A Cake," echoing the verse of "A Hot Time in the Old Town Tonight," "Dear Hearts and Gentle People," whose title goes back to Stephen Foster, "La Vie en Rose," based on an old instrumental waltz of the same name and a curious "novelty" called "The Thing," whose tune duplicates that of an English folk song, "The Lincolnshire Poacher," with a suggestion also of the ancient "Vive la Compagnie."

Less obviously indebted to music of the past, but without much originality or distinction, were the two songs most often heard on the Hit Parade, "My Foolish Heart" and "Mona Lisa," both characterized by a pseudo nostalgia of the maudlin type. Other titles of the year in Tin Pan Alley, commercially successful but aesthetically insignificant, were "It Isn't Fair," "Sam's Song" (recorded by Bing Crosby and his son Gary), "Simple Melody," "All My Love," "I Wanna Be Loved," "Sentimental Me" and, in the closing days, "Tennessee Waltz."

The musical stage of 1950 had its share of box-office success, headed by the Runyonesque *Guys and Dolls*, to which Frank Loesser contributed some striking words and music, without

seriously endangering the continued appeal of the well established *South Pacific* and *Kiss Me, Kate*. An elaborate political satire, *Call Me Madam*, was generally considered below the standards of its creators, Howard Lindsay, Russel Crouse and Irving Berlin, with credit for its survival going almost entirely to the ebullient performance of Ethel Merman. The fanciful *Out of This World* also gave the impression of falling below the mark usually set by the gifted Cole Porter, while *Michael Todd's Peep Show* contented itself with living up to the implications of its leering title. A late arrival called *Bless You All* raised the level somewhat, so that the final score for musical comedy could be called above the average.

Gordon Jenkins and the Weavers rose to commanding positions in the field of recorded popular music during 1950, with Bing Crosby holding his own among individual singers and Guy Lombardo similarly entrenched on the instrumental side. The King Cole Trio, Andrews Sisters and Ames Brothers were also popular recording combinations. (S. Sp.)

**Music in Industry.**—The year 1950 was a significant milestone in the steady growth of music in industry, for it marked the publication of the first comprehensive report on the extent, influence and effect of functionally arranged music in industrial America.

Based on a nation-wide survey of more than 35,000 workers in varied types of skills and industries, this report was the initial authentic, large-scale investigation into the functional effectiveness and program acceptability of music specifically designed for industrial use. The findings of this four-year research study, conducted by Muzak corporation, confirmed the importance of specially orchestrated program content and repertory scope for the effective presentation and reception of industrial music. It revealed how vitally necessary the factor of audience acceptability was in work music programs to achieve desired results as expressed in terms of greater employee efficiency, better job attitudes and reduction of occupational fatigue and boredom.

Industrial acceleration for federal defense work late in 1950 added impetus to the installation of plant-wide music systems, thereby indicating the recognition by management of functional music as a production stimulant. Music amplification systems also served a dual role for paging, announcements, shift signals, executive speeches, fire drills, etc.

Other fields of business and commerce made use of specialized music programs for "atmosphere psychology." Such establishments included retail stores, show rooms, transportation terminals, doctors' and dentists' offices, hospitals, clinics and sanitariums. (X.)

**Recordings.**—During 1950 all the major U.S. record companies, and at least 65 small concerns, as well as the firms of Decca in England and Oiseau-Lyre in France, manufactured and sold LP (long-playing) 33 $\frac{1}{3}$ -r.p.m. recordings. RCA Victor, Columbia, London, Capitol, Decca and MGM sold 45-r.p.m. and 78-r.p.m. recordings in addition to LP's. Experts in the industry were agreed that the LP system, introduced in mid-1948 by Columbia, had met with popular acceptance in the U.S. But the same experts were not in agreement on the merits of the 45-r.p.m. system introduced at about the same time by RCA Victor, nor were they agreed on the extent of its acceptance among record buyers. Those manufacturers principally concerned with the promotion and sale of recorded popular songs and dance music were confident however that 45's would soon make obsolete all existing 78-r.p.m. recordings.

English Decca (the "London" label in the U.S.) released full-frequency range recordings of Johann Strauss's *Die Fledermaus* and Mozart's *Requiem*. RCA Victor brought out a new and complete *Rigoletto*. The Prades festival marking the reappearance of

cellist Pablo Casals on the continent was recorded by Columbia and provided Bach collectors with a ten-disk set of LP's which included the complete Brandenburg concertos and the three sonatas for cello and piano.

The small independent companies prepared and released many first recorded performances of important works, but often the technical quality of the records or the musicianship of the performers was less than satisfactory. Of these small companies, Dial, Westminster, EMS, REB, the Haydn society, Cetra-Soria and Vox were the best and their recordings were in some instances distinguished.

**FILMS OF 1950.**—*A Time for Bach* (A. F. Films, Inc.); *Children's Concert, Vocal Music* (Encyclopædia Britannica Films, Inc.); *Hawaiian Musical Shorts* (Nu-Art Films, Inc.); *Lost Chord* (Admiral Pictures, Inc.); *Mexican Serenade* (Sterling Films, Inc.); *Stars and Stripes* (International Film Bureau); *The Schumann Story* (Teaching Film Custodians, Inc.); *To Hear Your Banjo Play* (Brandon Films, Inc.); *University of Illinois Concert Band* (Visual Aids Service, University of Illinois).

**Narcotics and Narcotic Traffic.** The most persistent difficulty in the path of international control of opium has been to devise an acceptable method of limiting production of raw opium to meet medical and scientific requirements only. A factor in this difficulty has been the importance of the opium poppy harvest in the economies of the producing countries. The United Nations Commission on Narcotic Drugs of the Economic and Social Council appointed an *ad hoc* committee which met with representatives of the four principal opium-producing countries, Turkey, Iran, Yugoslavia and India, and succeeded in formulating an interim agreement whereby these countries agreed on specific yearly production quotas under supervision of the United Nations, the establishment of monopolies in the producing countries for control of the production of opium, and the founding of an international monopoly for buying and selling opium.

The joint committee of the principal opium-producing countries and the principal drug-manufacturing countries convened at Geneva, Switz., in Aug. 1950 and adopted as the basis of its discussions the proposition that opium production could and should be limited to medical and scientific requirements and that such limitation could best be achieved by means of an international monopoly.

As soon as the first international instrument for the control of narcotic drugs came into force, some provisions of existing conventions became obsolete while some others did not work satisfactorily in practice. However, the international control machinery did work, although its complexity made more and more difficult its adaptation to constantly changing conditions. The unification of the existing instruments therefore became a necessity. This simplification could not be achieved simply by a reduction in the number of control bodies. The problem was to create a system of clearly defined international obligations flexible enough to adapt itself to changing conditions without undue delay. The Commission on Narcotic Drugs during its third session asked the secretary-general to prepare the way for this new convention. Therefore, the secretariat drew up monographs intended to facilitate the work of the representatives of the governments and, at its fourth session, the commission studied this documentation and decided "to request the secretary-general to eventually publish general preparatory documentation on the single convention in printed form, in view of its permanent

value and interest to scholars and officials" (document E/1361). In the *Bulletin on Narcotics*, vol. ii, no. 1, in Jan. 1950 the United Nations secretariat presented three studies which were part of the monographs mentioned.

**Drug Addiction.**—The World Health organization Expert Committee on Habit-Forming Drugs held its second session in Jan. 1950 in Geneva, Switz. The committee expressed grave concern about reports that the world production of heroin was still on the increase and adopted a resolution which recommended that the executive board take steps to secure information on the use or dispensability of diacetylmorphine (heroin) in the various countries, soliciting the aid of the World Medical association and any other organ fitted to participate in this effort. The committee again emphasized its opinion that Keto-Bemidone is particularly dangerous from the standpoint of addiction liability.

The committee drafted the following definition of drug addiction: "Drug addiction is a state of periodic or chronic intoxication, detrimental to the individual and to society, produced by the repeated consumption of a drug (natural or synthetic)."

Evidence on the addiction potentiality of various drugs was considered and evaluated.

**Barbiturates.**—A report on chronic barbiturate intoxication considered by the expert committee showed that the production of barbiturates greatly exceeded the amount needed for therapeutic purposes. The following is quoted from the report: "Since chronic barbiturate intoxication resulted in the development of tolerance and dependence, as manifested by a characteristic abstinence syndrome, it must be concluded that the barbiturates are capable of producing addiction."

**Analysis of the Illicit Traffic.**—It would appear that the principal sources of illicit raw opium were Iran, Thailand, Turkey, China, Mexico and India. Turkey was one of the principal sources of heroin. The Egyptian authorities made exceptionally large seizures of Turkish and Syrian opium and hashish. Syria was a transit route for raw opium sent from Turkey to Egypt. Syria was also a major producer of hashish, most of which was smuggled from Syria to Egypt. Thailand and Indochina still permitted the smoking of opium. (See also DRUG ADMINISTRATION, U.S.)

**National Geographic Society.** In the second half of 1950, the National Geographic Society, jointly with the University of Miami, Fla., launched a year-round program of research on the microscopic marine organisms known as plankton. F. G. Walton Smith, head of the university's Marine laboratory, was named director and Hilary B. Moore of his staff was named associate director. The field work began with seining of plankton at various levels down to 400 fathoms in and at the edge of the Gulf Stream between southern Florida and the Bahamas. The research program was expected to develop data of value to commercial fisheries and new information on the behaviour of the Gulf Stream, along with new general knowledge in the field of marine biology.

During the year several discoveries in astronomy resulted in the course of the National Geographic Society-Palomar Observatory Sky survey, a four-year project for photo-mapping the heavens initiated in mid-1949. Two dwarf stellar systems previously unrecorded were noted in remote space beyond the constellation Leo on plates exposed with the 48-in. Schmidt wide-angle telescope being used for the survey. One was the smallest galaxy so far known, Albert G. Wilson and R. G. Harrington reported in June in announcing their discoveries. Both were marked for further study with the 200-in. Hale telescope at Palomar. A new comet of the eighth magnitude (not visible to the naked eye) was observed in the constellation Ophiuchus. The California Institute of Technology, Pasadena, Calif., was co-sponsor of the survey. When completed in 1953, its 2,000 or more photographic plates of the heavens would provide prints to comprise a sky atlas of unprecedented scale and precision.

The society in 1950 continued for the fifth straight year its program of cosmic ray research jointly with the Bartol Research foundation of Philadelphia's Franklin institute. For the second year the principal studies were conducted at the high latitude (59°) of Churchill on Hudson bay, with the co-operation of the National Defense board of Canada. Under the direction of Bartol physicist Martin W. Pomerantz, 32 carefully planned

flights of free balloons were made 20 mi. and more into the top layer of the atmosphere, carrying Geiger counters, ionization chambers and other instruments for the purpose of recording the cosmic rays, their nuclear explosions, temperature, altitude and other data. Evaluation of the findings was still in progress at the year's end. Pomerantz disclosed in a scientific paper near the end of the year, however, that earlier experiments in the research program had developed evidence indicating that an increase in intensity of cosmic radiation occurs at the top of the atmosphere within 20 hr. of a major solar eruption. An accompanying phenomenon of considerable scientific interest was that the volume of solar radio noise also intensified at the same time, encouraging the theory that the eruptions caused both effects. The data strongly indicate, Dr. Pomerantz suggested, that the sun may be the source of virtually all the cosmic radiation reaching the earth.

Investigation into the nature of the aurora borealis, or northern lights, continued during the year. Carl W. Gartlein was director of the National Geographic Society-Cornell University study of the aurora, carried on since 1938 at Cornell and New York state and Canadian field points.

Published in the *National Geographic Magazine* during 1950 were approximately 980 colour pictures of scenes and natural history subjects in all parts of the world, and reproductions of paintings.

Four large wall maps in colour were prepared by the society's cartographic division and distributed as supplements to the magazine. The areas covered were: Northwestern United States and neighbouring Canadian provinces, South America, Africa and western Europe. The western Europe map was announced as the first of a three-map series that would give the most detailed coverage of Europe ever provided by the society.

Among 300 releases which the society's news bulletin service sent to its list of about 800 newspapers, press associations, radio news staffs, etc., requesting this service were 32 giving the geography behind the news of United Nations battle action in Korea. Three of the 32 were accompanied by maps of Korea—south, central, and north—prepared especially for newspaper use and giving detail on the peninsula's rail and road communications.

From the news bulletins, the geographic school bulletins were prepared and sent weekly to 35,000 teachers for classroom use.

The society's members at the year's end numbered approximately 1,950,000. The headquarters are at 16th and M Streets, N.W., Washington 6, D.C. Officers: president and editor, Gilbert Grosvenor (who at the year's end was in his 52nd year as editor); vice-president and associate editor, John Oliver La Gorce; secretary, Thomas W. McKnew; treasurer, Robert V. Fleming. The society's research committee: chairman, Lyman J. Briggs; vice-chairman, Alexander Wetmore. (G. Gr.)

**National Guard.** During 1950, the volunteer militia of the states, the national guard, was called upon by Pres. Harry S. Truman to release from state control for federal service six of its divisions, numerous nondivisional units, including anti-aircraft artillery units and medical companies. The air guard received orders calling four fighter bomber groups and one tactical reconnaissance group plus an undisclosed number of air supporting groups to active duty.

Major organizations of the guard reporting to camps in September were the 28th infantry division of Pennsylvania, the 40th of California, the 43rd of Connecticut, Rhode Island and Vermont, the 45th of Oklahoma, the 196th regimental combat team of South Dakota and the 278th regimental combat team of Tennessee.

The other two divisions, the 31st of Alabama and Mississippi

and the 47th of Minnesota and North Dakota, alerted on Dec. 16, were scheduled to leave for camp on Jan. 16, 1951.

The 296th infantry regiment of Puerto Rico was ordered to active military service in Sept. 1950 with remaining elements of the 296th regimental combat team alerted for active military service during January.

For security reasons, developing after hostilities began in Korea, the national guard's over-all strength at the end of 1950 was not revealed. The last published strength on June 30, 1950, showed a total of 372,000 officers and enlisted men serving in 4,863 army and 514 air units located in communities throughout the 48 states, District of Columbia and territories of Hawaii, Puerto Rico and Alaska.

More than 300,000 national guardsmen participated in the annual 15 days of summer field training.

To increase further the military proficiency of its men and to keep them abreast of the latest methods of the regular services, the national guard had 20,473 of its army members pursue resident courses of instruction in service schools and 2,710 of its air force members attend service schools during the fiscal year 1950.

In order to alleviate a shortage of junior officers in army units, a program was introduced enabling enlisted men to train for commissions at home, and upon completion of this training course, to take a practical test conducted by the senior army instructor.

To conform with the U.S. air force's combat wing structure developed after World War II, the air national guard reorganized its 12 wings, 27 tactical groups and 84 tactical squadrons into 27 combat wings, each with a single combat group. The number of squadrons, 84, remain the same.

Public law 783, the Armory bill which was passed by the 81st congress on Sept. 11, 1950, authorized the construction of armories and facilities in which to train guardsmen and to store military equipment.

**National Labor Relations Board.** The National Labor Relations board, in its second full fiscal year of enforcing Title I of the Labor Management Relations act, 1947 (commonly known as the Taft-Hartley law), experienced an increase of 10% in the filing of representation and unfair labour practice cases.

The five-member board issued formal decisions in 2,951 cases of all types during the 1950 fiscal year. Of these, 2,481 were in representation cases, 417 in unfair practice cases and 51 in union-shop authorization cases. Of the unfair practice cases, 315 involved charges against employers and 102, charges against unions.

The general counsel of the board, who has independent responsibility for the investigation of unfair practice cases and their prosecution before the board members, issued formal complaints in 708 cases. Of these, 552 involved charges against employers and 156 involved charges against unions.

One of the major problems confronting the board since its inception had been the extent to which it should assert its jurisdiction under the law. This question came into new prominence as a result of the amendments to the act in 1947. The board, however, had long taken the position that it better effectuated

the purposes of the act "not to exercise its jurisdiction to the fullest extent possible under the authority delegated to it by Congress, but to limit that exercise to enterprises whose operations have, or at which labor disputes would have, a pronounced impact upon the flow of interstate commerce." In Oct. 1950, after long study of the pattern emerging from past decisions, the board announced in a series of decisions unanimous adoption of a set of explicit standards to govern its exercise of jurisdiction.

Among the unfair labour practice cases coming to the board members, several involved the question of what information a collective bargaining agent of employees is entitled to ask of the employer in order to be able to conduct negotiations intelligently or to safeguard its contract against violations. The board, with court approval, had held previously that a union was entitled to information on any merit increases made to individual employees in the bargaining unit it represented. Reaffirming this rule, the board held in one case that the union was entitled to this information even though it had made a contract giving the employer power to make merit raises without consulting the union. The board ruled, however, that the employer was not required to furnish such information in the precise form requested by the union in order to meet this requirement of the law.

The conduct of individual employees and their labour organizations also raised questions in a number of cases. In one case, the board reaffirmed its general policy of holding a union to a no-strike pledge, and a majority held that an employer was within his rights in refusing to bargain with a union which had failed to fulfil all its obligations under a no-strike clause. In this case, the majority found, the union had pledged itself not only to refrain from instigating or authorizing strikes, but had promised to endeavour to bring about the return to work of any employees going on strike. The majority ruled that the employer in the case was free to refuse to deal with the union because it had failed to fulfil the latter obligation.

Of the unfair labour practice cases filed during the fiscal year 1950, slightly more than three out of four involved charges against employers. Out of 5,809 such cases, allegations were made against employers in 4,472 and against unions in 1,337.

All told, the agency closed 5,615 unfair practice cases during fiscal 1950. Of these, 5,098 (or more than 90%) were closed in the field without the necessity of board decision, hearing or other formal action.

To remedy discrimination against employees, awards of back pay totalling \$1,090,280 were made to a total of 2,272 employees to reimburse them for loss of wages resulting from the illegal discrimination. This compares with 1,994 employees receiving back pay totalling \$605,940 in fiscal 1949. Reinstatement to a former job or one equivalent was offered to 2,111 employees as a result of board action in discrimination cases. Collective bargaining was ordered in 236 cases involving charges against employers and in 15 cases against unions. In 233 cases, employers were ordered to withhold recognition or other assistance from unions found illegally assisted, and employer-dominated organizations for employees were ordered disestablished in 20 cases.

During the fiscal year, the board conducted 5,731 representation elections in which 899,848 employees were eligible to vote. This was an increase of only 1.5% in the number of elections, compared with fiscal 1949, but it was an increase of 48% over the 607,534 eligible to vote in 1949 elections. In 1950 elections, 83% of those voting cast ballots in favour of bargaining representation compared with 73% in 1949. Collective bargaining representatives were selected in 4,223 elections in 1950, or approximately 73% compared with 71% the preceding year. The

units choosing representation comprised 759,038 employees or about 84% of the employees in all units.

The agency conducted 5,591 union-shop authorization polls, and negotiation of union-shop contracts was authorized by the employees in 5,377 polls, or 96.2% of those conducted. A total of 1,072,917 employees were eligible to vote in these polls; units comprising 1,045,162 employees, or 97% of those eligible, authorized the union shop.

In connection with unfair labour practice cases, the agency petitioned U.S. courts for 30 injunctions during fiscal 1950 compared with 33 the preceding year. Of the 1950 injunction proceedings, 28 were against labour organizations and 2 against employers. Of those sought against labour organizations, all but 6 were sought under the mandatory provisions of the act. Of these, 11 were granted and 4 denied. The others were either settled or pending at the close of the fiscal year. Three of the four other injunctions sought against unions also were granted. One of the two injunctions sought against employers was granted and the other was settled.

During 1950, Pres. Harry S. Truman appointed Paul L. Styles as a member of the board to replace J. Copeland Gray. He reappointed Chairman Paul M. Herzog to a second five-year term. The other three members of the board, John M. Houston, James J. Reynolds, Jr. and Abe Murdock, also continued in office. The president accepted the resignation of Robert W. Denham as general counsel, replacing him with George J. Bott. (See also LABOUR UNIONS; LAW; STRIKES.) (P. M. HG.)

**National Mediation Board.** The year 1950 was the 16th year of administration of the Railway Labor act, as amended in 1934, and the 24th year since the act was originally enacted in 1926. The National Mediation board is the principal administrative agency under the act and is charged with the duties of assisting railroad and air-line carriers and their employees in effective peaceful settlement of labour disputes in the interest of avoiding interruption to essential transportation.

The work of the National Mediation board falls into two categories: (1) mediating disputes involving changes in rates of pay, rules and working conditions; and (2) certifying collective bargaining representatives in disputes concerning representation of employees.

During 1950 the more prominent disputes in the railroad industry were those arising from the efforts of the employee organizations to secure added manpower for operating diesel locomotives and the efforts of the employees in train and yard service to secure establishment of the 40-hr. work week. The 40-hr. work week was established for railroad nonoperating employees in 1949, and efforts to secure similar arrangements for road and yard train service employees precipitated a dispute which, in the closing days of 1950, threatened to paralyze the nation's railroad transportation system. This threat became apparent as employees in key terminals reported off duty on account of sickness in such large numbers that terminal operations were sharply curtailed.

Following intensive mediation efforts and an appeal by the president of the United States on Dec. 15, the employees returned to their jobs and the dispute was settled within a few days thereafter.

**National Parks and Monuments.** Approximately 32,782,000 visi-

tors were recorded during 1950 at the national park service areas of the United States. Five of the national parks, the Blue Ridge parkway, Lake Mead National Recreational area and the Lincoln memorial in the nation's capital, each had more than 1,000,000 visitors.

Among major improvement projects completed during the year were a water supply system for Mesa Verde National park and a cooling and distribution system for the thermal waters at Hot Springs National park. Considerable headway was made on pier and other construction work at Statue of Liberty National monument designed to facilitate visitor use of the area and to improve its general appearance.

The first accommodations for visitors to Katmai National monument, Alsk., were provided during the summer when Northern Consolidated Airlines, Inc., operated two camps there, in addition to aeroplane transportation from Anchorage.

The most historic group of buildings on the North American continent, the Independence hall group, was transferred from municipal to federal administration under an agreement consummated between the department of the interior and the city of Philadelphia. The city, however, retained actual ownership of the buildings. Administration of historic Carpenter's hall and Christ church was provided under similar agreements with the organizations owning them.

These historic buildings would be administered as part of the Independence National Historical park project, for which congress authorized the expenditure of \$4,435,000 for land acquisition. In addition, the commonwealth of Pennsylvania undertook the acquisition of lands lying north of Independence square for the creation of a mall. The state acquired the first unit of this proposed mall at a cost reported to be \$3,000,000.

Historic Castle Clinton in Battery park, New York city, was established as a national monument and was being restored to its original appearance.

Establishment of the George Washington Carver National monument near Diamond, Mo., to include the birthplace of the distinguished Negro scientist, moved a step nearer completion with the authorization by congress of an expenditure of up to \$150,000 to acquire lands and develop the area.

The acquisition late in 1950 of all remaining private lands in Everglades National park (a total of approximately 125,000 ac.) considerably lessened protection and administration problems in the park.

Similarly, the addition to Grand Teton National park of most of the land comprising the adjoining Jackson Hole National monument facilitated administration and protection problems. Included in the enlarged park were approximately 31,000 ac. of land donated to the federal government by John D. Rockefeller, Jr., late in 1949.

By acts of congress approved in Aug. 1950, upon recommendation of the department of the interior, two other national monuments—Wheeler and Holy Cross in Colorado—were abolished and their lands transferred to U.S. forest service jurisdiction.

During 1950, there were a number of demands for commercial utilization of natural resources of national park service areas. One such demand, calling for construction of dams in Dinosaur National monument, was discussed at a public hearing in Washington, D.C. Conservationists and national park service officials testified against the proposal, pointing out the irreparable damage of scenic canyon terrain which would result from construction of the dams. Bureau of reclamation officials and delegations from the states which would benefit from the water produced by the dams testified in favour of the proposal. After carefully reviewing all the testimony, the secretary of the interior decided in favour of the dams because of the special circumstances involved, but indicated he did not wish his decision

to provide a precedent for other park and monument areas. Final decision on the proposal, however, rested with congress.

(N. B. D.)

**Canada.**—The Fundy National park was formally opened on July 29, 1950. Situated on the Bay of Fundy between the Goose and Upper Salmon rivers, the park has an area of approximately 80 sq.mi.

More than 1,045,000 tourists visited the national parks between April 1 and July 31, the largest number ever recorded. This was an increase of 27,593 over the same period in 1949. (See also TOURIST TRAVEL.)

## National Production

**Authority.** This U.S government agency was established Sept. 11, 1950, by the secretary of commerce to assist him in carrying out his functions under the Defense Production Act of 1950. The functions of its administrator, William H. Harrison, who was sworn in on Sept. 11, 1950, were to insure that rearmament requirements for production materials and facilities were met on schedule; to insure that, after defense needs were met the remaining supply of critical materials and products was distributed equitably for nondefense uses; and to develop and promote measures for the expansion of productive capacity and of production and supply of materials and facilities necessary for the national defense and for maintaining a strong economy.

The administrator was given authority to require that producers give priority to defense contracts, and was authorized to allocate materials and facilities and to requisition any facilities or supplies needed for defense production.

NPA's first formal action was the promulgation of its regulation 1, limiting inventories of materials in short supply. Regulation 2 established a broad system of priorities assuring the right of way to defense orders with minimum disruption of civilian supplies.

NPA orders also specified rules for placing, accepting and scheduling defense orders to reduce disruption of distribution to nondefense users of materials by requiring advance notice for placement of rated orders and a limit to the percentage of a manufacturer's current production which need be used for defense.

Generally, NPA controls were applied "across the board" to raw materials rather than being aimed at specific "end items," though it was anticipated that NPA controls eventually would suspend production of nonessential consumer goods.

To facilitate correspondence with producers, a number of NPA field offices were set up in large cities from coast to coast. Its headquarters organization included three bureaus and six offices. The bureaus and their functions were: the Program bureau, to review and audit requirements for materials and

VOORTREKKER GIRLS standing guard before the statue of a pioneer mother at the base of the Boer monument in Pretoria, U. of S. Af. The monument was designed by the South African architect, Gerard Moerdijk

equipment for all production programs; the Industry Operations bureau, to analyze supply and demand for essential resources and materials and to recommend proposed allocations; the Facilities and Construction bureau, to examine applications for "necessity certificates" referred to it by the National Security Resources board, and applications for federal loans which are consummated by the Reconstruction Finance corporation and to conduct activities relating to production and distribution of building materials.

Its offices were: the industry advisory committee; small business; civilian requirements; labour requirements; analysis and reports; and field service.

Among the first controls imposed by NPA were those on rubber, steel and building materials. The rubber ruling imposed Oct. 20 reduced each manufacturer's use of the product to 63% of the amount used in an average month of the year ending the preceding June 30. A ban on the construction of new amusement or recreational buildings was issued Oct. 26. A 35% cut in the civilian use of aluminum was made effective Jan. 1, 1951.

On Nov. 29 the NPA issued an order cutting civilian use of copper 15% during Jan. and Feb. 1951, and 20% in March 1951. On Dec. 7 the NPA denied that any immediate imposition of wage and price curbs was anticipated. Curbs of nickel and zinc were also imposed upon nondefense producers during December.

## Navies of the World.

At the end of 1950 only two navies could be considered as first class, namely those of the United States and of Great Britain, the former being three or four times larger than the latter. The fleets of the U.S.S.R., France and Italy could be reckoned as second class, and those of Sweden, the Netherlands, Turkey, Spain, Australia, Canada, Argentina, Brazil and Chile as third class, while the smaller and not so well-balanced navies fell into categories below that. Several of the smaller countries continued to add to their naval strength by acquiring the older or surplus warships of the United States and Great Britain. The relative strengths in ships (of and above the escort vessel categories) of the navies of the world were as shown in the accompanying table, which includes the new navies of Indonesia and Israel, the expanded navy of Egypt and the partly resurrected navy of Japan.

The principal tendencies in the navies of the larger maritime powers in 1950 were the development of radar apparatus and sonar devices, the improvement of antisubmarine and anti-aircraft weapons, the reconstruction and conversion of aircraft carriers to operate larger and faster aircraft, the adaptation of large destroyers as fleet antisubmarine escorts, the conversion of smaller destroyer types into fast antisubmarine frigates or submarine killers, an increase in the speed and underwater endurance of submarines and experiments for the greater efficiency of mine sweepers.

Events in the far east provided an impetus toward rearmament for the first time since the end of World War II. In the United States a number of warships which had been in a state of preservation were brought back into commission. In Great Britain many reserve ships which had been laid up were brought forward for refit. In both countries new warships, especially smaller types such as antisubmarine escorts and mine sweepers were ordered or projected.

\*Battle Cruiser.

Other naval forces, not shown in the table because they comprise only minor war vessels, are those of Bulgaria, Ceylon, Finland, Haiti, Honduras, Hungary, Iceland, Iraq, Republic of Korea, Nicaragua, Panamá, Paraguay, Philippines and Uruguay.

Among the naval events of the year which shocked or stirred the world were the grounding of the U.S. battleship "Missouri" from Jan. 17 until Feb. 1, when she was refloated; the sinking of the British submarine "Truculent" after collision with the Swedish tanker "Divina" in the Thames estuary on Jan. 12, her subsequent salvage on March 14 by the former German special lifting vessels "Ausdauer" and "Engerie," followed by the admiralty announcement on April 5 that she would be scrapped; a series of a dozen or more malicious damage incidents and suspected sabotage attempts in British warships and naval shore establishments, including the Bedenham explosions in Portsmouth harbour on July 14; the loss of the French weather-observation frigate "Laplace" which exploded and sank off Cape Frehel after striking a magnetic mine on Sept. 16; and United Nations' naval support in the Korean campaign from midyear onward.

The outbreak of war in Korea quickly demonstrated that sea power was as important as ever. Sea-borne supplies soon became a potent factor. Aircraft carriers, naval guns, landing craft and transports were needed. British warships concerned in the Korean campaign included the aircraft carriers "Theseus," "Triumph," "Ocean" and "Warrior," the cruisers "Ceylon," "Bel-fast," "Jamaica" and "Kenya," the destroyers "Charity," "Cockade," "Comus," "Concord," "Consort," "Constance" and "Cosack," the aircraft maintenance ship "Unicorn" and the frigates "Alacrity," "Alert," "Black Swan," "Cardigan Bay," "Hart," "Mounts Bay," "Morecambe Bay," "St. Bride's Bay" and "Whitesand Bay." Australian warships which took part were the destroyers "Bataan" and "Warramunga" and the frigate "Shoal-haven"; Canadian warships, the destroyers "Athabaskan," "Cayuga" and "Sioux"; and New Zealand warships the frigates "Pukaki" and "Tutira." Many U.S. warships were active in the Korean theatre, but their names were not so readily revealed officially. The U.S. destroyers "Brush" and "Mansfield" struck floating mines off North Korea on Sept. 27 and 30 respectively, but although both ships sustained underwater damage they made port. The U.S. mine sweepers "Magpie," on Oct. 1, and "Pirate" and "Pledge," both on Oct. 12, struck floating mines and sank off the Korean east coast.

**United States Naval Strength.**—The aircraft carrier "Oriskany" (modified from the original "Essex" class design while under deferred construction), which had been expected to be ready at the end of 1949, was commissioned on Sept. 25, and was reported to be about 3,000 to 4,000 tons heavier than her 27,100-ton sisters, 12 of which, including the "Essex," "Kearsage," "Lake Champlain" and "Wasp," were scheduled to be converted on similar lines to enable them to operate heavier aircraft. Late in 1950 only one U.S. battleship remained in full commission, namely the "Missouri," which saw action in Korea. The U.S. navy comprised 28 fleet aircraft carriers, 9 light fleet carriers, 66 escort carriers, 15 battleships, 2 large cruisers, 25 heavy cruisers, 44 light cruisers, 351 destroyers, 244 escort destroyers, 187 submarines, 217 mine layers and mine sweepers, 176 patrol vessels, 945 amphibious craft, 553 fleet auxiliaries, 1,724 service craft and 74 dry docks, a total of 4,660 vessels, of which 2,150 were in service, the remainder being in reserve.

**British Naval Strength.**—Late in 1950 there were six fleet aircraft carriers, six light carriers and one escort carrier. The large fleet aircraft carrier "Eagle" was nearing completion, and her sister ship "Ark Royal" was launched on May 3. Little progress had been made with the light fleet carriers "Albion," "Bulwark" and "Centaur," and the remaining ships of the class, the "Hermes," had not been launched. The light carriers "Hercules," "Leviathan" and "Powerful" were still suspended. Of the five surviving battleships none was in operational commission at the end of the year, the "Vanguard" being a training ship and the four of the "King George V" class relegated to reserve,

U.N. COMMANDOS stranded on the beach and on their grounded landing ship north of Pohang, on the east coast of Korea, during a diversionary action in Sept. 1950 to draw enemy attention from projected landings at Inchon. The small force withstood constant enemy fire for four days before being rescued by another landing ship

two being laid up in a state of preservation. There were 25 cruisers including one being converted into a trials ship. No building progress was made with the cruisers "Blake," "Defence" and "Tiger." Destroyers numbered 106. Three more of the eight large destroyers of the "Daring" class were launched. There were 162 frigates, not including the "Relentless" and "Rocket," the conversion of which from destroyers was nearing completion. As a result of scrapping, submarines were reduced to 57, not including 4 "midgets." Other vessels included 3 fast mine layers, 2 aircraft maintenance ships, 2 monitors, 60 fleet mine sweepers and many coastal craft, miscellaneous ships and auxiliaries.

**Commonwealth.**—Australia had a compact fleet of 1 light carrier (with a sister ship under construction in Great Britain), 3 cruisers, 10 destroyers (including 2 "Battle" class units completed in 1950 and 5 permanently transferred from Great Britain in June 1950 which were scheduled for conversion to fast anti-submarine escorts), 3 submarines lent from Great Britain, 14 frigates, 32 fleet mine sweepers and a number of small craft and auxiliaries.

Canada also had a well-balanced fleet of 1 light carrier, 2 cruisers, 11 destroyers, a submarine lent from the royal navy, 6 frigates (with 3 more under construction and 4 projected), 9 fleet mine sweepers and numerous smaller craft.

**U.S.S.R.**—The construction of one to three battleships of a new powerful type was persistently reported. The total available naval strength at the end of 1950 was 3 battleships, 14 cruisers, 2 coast defense ships, 70 destroyers, approximately 360 submarines, 70 escort vessels and numerous mine layers, mine sweepers, patrol vessels, torpedo boats and auxiliaries. On Feb. 25, by decree of the soviet government, there was created a new independent ministry of the navy no longer dependent on the ministry of armed forces.

**France.**—The battleship "Jean Bart" was completed, but the construction of the cruiser "De Grasse" was still suspended for

financial reasons and pending the study of new anti-aircraft equipment. The fleet comprised 1 light carrier, 1 escort carrier, 2 battleships, 8 cruisers, 4 coast defense ships, 17 destroyers, 12 submarines, 25 frigates and escort vessels and numerous patrol vessels, miscellaneous ships and auxiliaries.

**Italy.**—The fleet remained at the strength of 2 battleships, 4 cruisers, 4 destroyers, 16 torpedo boats and 20 corvettes, with a number of escort types, mine sweepers and auxiliaries, all that was allowed under the peace treaty.

**Other European Countries.**—Sweden had 4 cruisers, 3 coast defense ships, 13 destroyers, 2 older destroyers being converted into antisubmarine frigates, 6 torpedo boats (smaller destroyer type), 24 submarines, 2 mine layers and numerous other vessels.

The Netherlands had a well-balanced fleet of 1 light carrier, 2 cruisers, 5 destroyers, 7 submarines, 7 frigates (including 6 destroyer escorts acquired from the United States in 1950), 2 large gunboats and a number of other warships.

Spain had 6 cruisers, 16 destroyers, 6 submarines, 12 sloops or gunboats, 6 mine layers and 7 fleet mine sweepers, as well as many minor warships and auxiliaries.

Turkey possessed 1 old battle cruiser, "Yavuz" the only warship of this category remaining in the world, 10 destroyers, 11 submarines (including 2 more acquired from the United States in 1950) and numerous other warships and auxiliaries.

**South America.**—Argentina had 2 old battleships, 3 cruisers, 1 coast defense ship, 11 destroyers, 3 submarines, 4 escort destroyers, 5 frigates, 2 patrol vessels, 11 mine sweepers, and other craft.

Brazil possessed 1 old battleship, 9 fleet destroyers, 4 submarines, 8 frigates (escort destroyers), 6 trawler type corvettes, 8 submarine-chasers and numerous smaller craft.

Chile had 1 old battleship, 2 coast defense ships (including an obsolete cruiser), 6 destroyers, 7 submarines, 6 frigates and a number of small craft, miscellaneous ships and auxiliaries.

**Modern Types of Warships.**—The principal types of modern warships in the navies of the world were as follows:

TUGBOAT ARMADA straining to free the battleship "Missouri" which ran aground on a mudbank in Chesapeake bay near Norfolk, Va., in Jan. 1950

**Fleet Aircraft Carriers.**—"Midway" (U.S.), 45,000 tons, fourteen 5-in. guns, 137 aircraft, 200,000 s.h.p., 33 knots; "Essex" (U.S.), 27,100 tons, ten 5-in. guns, 90 aircraft, 150,000 s.p.h., 33 knots; "Implacable" (British), 26,000 tons, 60 aircraft, sixteen 4.5-in. guns, 148,000 s.h.p., 32 knots.

**Light Fleet Aircraft Carriers.**—"Saipan" (U.S.), 14,500 tons, 50 aircraft, light guns, 120,000 s.h.p., 33 knots; "Theseus" (British), 13,350 tons, 40 aircraft, light guns, 40,000 s.h.p., 25 knots; "Belleau Wood" (U.S.), 11,000 tons, 45 aircraft, light guns, 100,000 s.h.p., 32 knots.

**Battleships.**—"Iowa" (U.S.), 45,000 tons, nine 16-in., twenty 5-in. guns, 200,000 s.h.p., 33 knots; "Vanguard" (British), 44,500 tons, eight 15-in., sixteen 5.25-in. guns, 130,000 s.h.p., 30 knots; "South Dakota" (U.S.), 35,000 tons, nine 16-in., twenty 5-in. guns, 130,000 s.h.p., 28 knots; "Jean Bart" (French), 35,000 tons, eight 15-in., nine 6-in. guns, 150,000 s.h.p., 30 knots; "King George V" (British), 35,000 tons, ten 14-in., sixteen 5.25-in. guns, 110,000 s.h.p., 28.5 knots.

**Large Cruisers.**—"Alaska" (U.S.), 27,500 tons, nine 12-in., twelve 5-in. guns, 150,000 s.h.p., 33 knots.

**Heavy Cruisers.**—"Des Moines" (U.S.), 17,000 tons, nine 8-in., twelve 5-in. guns, 120,000 s.h.p., 33 knots; "Oregon City" (U.S.), 13,700 tons, nine 8-in., twelve 5-in. guns, 120,000 s.h.p., 33 knots.

**Light Cruisers.**—"Worcester" (U.S.), 14,700 tons, twelve 6-in., twenty 3-in. guns, 120,000 s.h.p., 32 knots; "Fargo" (U.S.), 10,000 tons, twelve 6-in., twelve 5-in. guns, 100,000 s.h.p., 33 knots; "Superb" (British), 8,000 tons, nine 6-in., ten 4-in. guns, 72,500 s.h.p., 31.5 knots; "Tre Kronor" (Swedish), 7,400 tons, seven 6-in. guns, 100,000 s.h.p., 33 knots; "Juneau" (U.S.), 6,000 tons, twelve 5-in. guns, 75,000 s.h.p., 35 knots; "Diadem" (British), 5,900 tons, eight 5.25-in. guns, 62,000 s.h.p., 32 knots.

**Destroyers.**—"Gearing" (U.S.), 2,425 tons, six 5-in. guns, 60,000 s.h.p., 35 knots; "Jutland" (British), 2,400 tons, five 4.5-in. guns, 50,000 s.h.p., 34 knots; "Sumner" (U.S.), 2,200 tons, six 5-in. guns, 60,000 s.h.p., 34 knots; "Battleaxe" (British), 1,980 tons, four 4-in. guns, 40,000 s.h.p., 31 knots; "Öland" (Swedish), 1,880 tons, four 4.7-in. guns, 44,000 s.h.p., 35 knots.

**Submarines.**—"Tench" (U.S.), 1,570 tons, one 5-in. gun, ten 21-in. torpedo tubes, 6,500 h.p., 20 knots (surface); "Amphion" (British), 1,120 tons, one 4-in. gun, ten 21-in. torpedo tubes, 4,300 h.p., 18 knots (surface); "Créole" (French), 820 tons, one 3.5-in. gun, ten 21-in. torpedo tubes, 3,000 h.p., 17 knots (surface); "K-1" (Russian), 1,500 tons, two 4-in. guns, ten 21-in. torpedo tubes, 18 knots (surface).

**Frigates.**—"Mounts Bay" (British), 1,600 tons, four 4-in. guns, 5,500 i.h.p., 19 knots; "Rudderow" (U.S.), 1,450 tons, two 5-in. guns, 12,000 s.h.p., 24 knots; "Amethyst" (British), 1,490 tons, six 4-in. guns, 4,300 s.h.p., 18 knots; "Edsall" (U.S.), 1,200 tons, three 3-in. guns, 6,000 b.h.p., 21 knots; "Brecon" (British), 1,175 tons, six 4-in. guns, three 21-in. torpedo tubes, 19,000 s.h.p., 25 knots. (See MUNITIONS OF WAR.)

FILMS OF 1950.—*Fighting Lady's Family* (United World Films, Inc.). (R. V. B. B.)

**Navy, U.S. Department of:** see GOVERNMENT DEPARTMENTS AND BUREAUS.

**N.E.A.:** see SOCIETIES AND ASSOCIATIONS.

**Nebraska.** The "Cornhusker state" is located in the west north central portion of the U.S. It was granted a territorial governor as a result of the Kansas-Nebraska act of 1854, and was admitted to the union in 1867. Land area 76,653 sq.mi.; water area 584 sq.mi.; pop. (1950) 1,325,510 by the official census determination, a gain of 0.7% since 1940. Capital, Lincoln with pop. 97,423; largest city, Omaha with pop. 247,408 (1950 preliminary census figures).

**History.**—Newly elected state officers for the 1951-53 period included: governor, Val Peterson (Rep.); lieutenant governor, Charles J. Warner (Rep.); attorney general, Clarence Beck (Rep.); auditor, Ray C. Johnson (Rep.); treasurer, Frank B. Heintze (Rep.); secretary of state, Frank Marsh (Rep.); state superintendent of public instruction, Freeman Decker (non-partisan); chief justice, Robert G. Simmons (nonpartisan).

Employing the referendum, the voters rejected in 1950 two tax measures passed by the legislature in 1949. One had increased the gas tax from five to six cents a gallon, the other had increased the registration fees for motor vehicles. A proposed constitutional amendment to the state constitution for increasing the salaries of the legislators and extending their term from two to four years was also defeated by the voters.

During the 1949-51 period the legislative council completed investigations on the following subjects which would be recommended to the 1951 session for action; reorganization of the state government, changes in the state constitution, laws relating to children, unfair employment practices, desirability of selling school lands, regulation and taxation of oil and natural gas production and the enactment of a uniform eminent domain statute. The state civil defense advisory committee selected a director for civil defense and recommended appropriations for implementation of a civil defense program.

**Education.**—There were 6,272 elementary and 570 high school districts by the end of 1949. The sum of \$26,750 was appropriated for 1949-51 for district reorganization. Total enrolment for elementary and secondary schools during 1949 was 225,516 and the teaching staffs numbered 11,716. Total expenditures for education during the 1948-49 period were \$40,437,775.05. The direction of elementary and secondary education remained primarily in the hands of local school districts with limited authority by the state superintendent of public instruction. Higher education was directed by the University of Nebraska at Lincoln, the college of medicine at Omaha and four state colleges. There were 19 private institutions of higher education.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The state appropriation for public assistance for the 1949-51 period was \$37,982,400 of which \$19,622,600 was federal funds. There were 1,200 cases resulting in 2,371 persons receiving general relief in Oct. 1950. Each individual received an average of \$36.06. During this same period a total of 8,492 dependent children received an average of \$35.18 monthly aid; 711 blind persons received a monthly average of \$58.55 and there were 23,507 recipients of old-age assistance who received a monthly average of \$48.13.

The state maintained a total of 17 charitable, mental, reformatory and penal institutions of which 7 were for children. Total population as of July 1, 1950, was 8,511. These institutions were under the supervision of the board of control to which the legislature appropriated \$18,669,850 in 1950.

**Communications.**—The total road mileage of Nebraska for 1950 was 105,729 mi. The state maintained a total of 9,506 mi. of which 1,348 mi. were paved, 2,866 mi. were oiled and 5,292 mi. were gravel. State appropriations for highway purposes during 1950 amounted to \$18,007,000 with an additional \$6,385,000 of federal funds.

There were 265 airports in Nebraska in 1950. This included 4 state, 2 CAA and 1 federal airport in addition to 70 municipally owned, 67 commercial-private and 125 private. There were 6,326 mi. of railroad in 1950. Radio stations numbered 20 of which 2 were television transmitters. There were also 21 daily and 280 weekly and semiweekly newspapers.

**Banking and Finance.**—State banks numbered 287 with assets of \$379,771,197.31, and total deposits of \$352,452,505.79 as of June 30, 1950. As of June 30, 1950, building and loan associations totalled 41 with assets of \$102,441,882.88. There were 7 trust companies with total assets of \$19,863,647.97; 68 residential co-operative credit associations with total assets of \$9,442,641.52; 11 occupational credit unions with total assets of \$537,137.03; 50 credit unions with total assets of \$2,195,367.91. Nebraska's gross debt for 1950 was \$612,000.

**Agriculture.**—The total acreage harvested in 1950 was 19,082,000 compared with 18,924,000 in 1949. Excluding government payments for sugar beets, the total value of production for 1950 was estimated at \$681,911,000 as compared with \$531,971,000 in 1949.

**Manufacturing.**—Nebraska's industry depends largely upon the agricul-

#### Leading Agricultural Products of Nebraska

Crop	1950	1949	Average 1939-48
Corn, bu. . . . .	250,675,000	239,330,000	194,409,000
Winter wheat, bu. . . . .	84,128,000	53,316,000	60,717,000
Spring wheat, bu. . . . .	660,000	1,092,000	1,018,000
Oats, bu. . . . .	66,100,000	49,720,000	55,740,000
Barley, bu. . . . .	4,864,000	5,833,000	20,295,000
Rye, bu. . . . .	2,415,000	1,606,000	3,799,000
Potatoes, bu. . . . .	11,700,000	8,840,000	10,731,000
Sugar beets, tons. . . . .	814,000	559,000	740,000
Alfalfa hay, tons. . . . .	2,540,000	2,442,000	1,581,000
Wild hay, tons. . . . .	2,255,000	2,255,000	1,961,000
Sorghum grain, bu. . . . .	3,822,000	1,592,000	2,248,000
Beans, dry (100-lb. bags) . . . . .	990,000	1,312,000	755,000

tural raw materials produced within the state. More than 500 factories processed food or related products. There were 1,000 manufacturing and processing establishments employing approximately 50,400 persons during 1950. The total pay roll for 1950 was estimated at \$130,000,000.

**Mineral Production.**—Nebraska has large deposits of clay, gravel, sand and building stone, most of which is consumed locally. Deposits of potash, gypsum and salt were available but were not under development in 1950. Many new deposits of gas and oil were made. Proven gas reserves as of Oct. 1950 amounted to 101,000,000 cu.ft. (est.) daily. Oil production for 1950 was estimated at 6,000 bbl. per day.

(S. J. HE.)

**Necrology:** see OBITUARIES.

**Negroes, American.** The report of the President's Committee on Equality of Treatment and Opportunity in the Armed Services resulted in rapidly increased integration of Negroes in the various services. Segregated army units of long standing were still retained during 1950, but new units were organized on a basis of complete integration of both officer and rank and file personnel. The 4th infantry division at Fort Ord, Calif., spearheaded the new policy, which pertained for all specialized army education. Occupation forces in Europe and the far east were criticized for not reorganizing on the basis of the new policy. In South Korea, the 24th infantry, an old Negro unit, suffered heavy reverses at the outset of the campaign, but retrieved its reputation in later action. The navy was enlisting for all ratings and services, including its air corps, without discrimination, and the air force, after disbanding the all-Negro 332nd fighter wing, abolished "all racial quotas for enlistment and selection for service schools," and had at the close of the year about 80% of its 25,000 Negro personnel in integrated units.

**Legal and Political Developments.**—On June 5 the U.S. supreme court, in ruling on the Heman Sweatt case, required the University of Texas, Austin, to admit Sweatt to its law school, and in the G. W. McLaurin case decided that segregated class status at the University of Oklahoma, Norman, was a violation of constitutional rights. A similar decision against the University of Maryland, College Park, was rendered on Oct. 9. The court also ruled that discriminatory recreation practices in Miami, Fla., were unequal and therefore unconstitutional. The federal district court in Washington, D.C. ruled that financial penalties in restrictive covenants could not be enforced in the courts. The Interstate Commerce commission on Nov. 10 ordered all southern railroads to cease discriminatory separate dining car facilities in interstate travel.

The November elections raised the number of Negroes in state legislatures to 26. In Arkansas the Democratic state convention voted to open its primaries to Negro voters, and South Carolina abolished the poll tax. Mrs. Edith S. Sampson was appointed an alternate on the U.S. delegation to the United Nations. The Southern Regional council included in its new program policy full franchise for Negroes and "partnership in public life, including appointment to all policy-making groups that concern the public welfare through public services."

Fair employment practice legislation had been passed by 10 states, and an increasing number of municipalities had enacted similar statutes. New Jersey's new antidiscrimination legislation brought almost complete liquidation of segregated schools, substantial gains in employment and housing and recreation facilities as well as changes in public and private hospital accommodations, including medical staff and nurse assignments. The Metropolitan Life Insurance company revoked its ban on Negro tenants in Stuyvesant Town in New York city, and the Federal Housing administration ruled that its mortgage insurance would no longer be available to property covered by restrictive covenants.

**Educational and Cultural.**—The *Crisis* annual survey reported 59,543 Negro college students, with a number of colleges

NEGRO AND WHITE TROOPS receiving radar training together at Keesler air base in Mississippi. Negroes were flying in integrated units throughout the air force in 1950, and on Jan. 16 all army field commanders were ordered to assign qualified Negroes to combat units

not reporting. Of these, 8,018 were graduated with bachelor's degrees, 458 with master's degrees, 230 in the professions and 8 with Ph.D. degrees. A number of southern state universities, following the supreme court decisions, decided to admit Negro students, especially to professional training, and a few to undergraduate training as well; Kentucky closed its Municipal College for Negroes at Louisville. Colgate W. Darden, Jr., president of the University of Virginia, urged the admission of Negro students to the graduate schools of all southern state universities, since the expense of duplicating equal facilities was prohibitive.

Ralph J. Bunche, director of the trusteeship division of the United Nations, was awarded the 1950 Nobel peace prize for his successful mediation of the Arab-Israeli controversy. The 35th Spingarn medal was awarded posthumously to Charles H. Houston, a civil rights lawyer. Ulysses Kay, a music fellow of the American academy in Rome, was given the Alice Ditson grant of the National Institute of Arts and Letters. Following the admission of Negro nurses to the American Nurses' association, the National Association of Colored Graduate Nurses, founded in 1909, was formally disbanded. The American Association of University Women adopted national legislation preventing any chapter from denying membership on racial grounds.

The season in major league baseball saw nine Negro players as members of three teams, and Sam Jethroe of the Boston Braves was chosen the "rookie of the year" in the National league by the Baseball Writers' Association of America. The American Bowling congress dropped its colour restrictions, and Althea Gibson, Negro tennis star, became the first Negro to compete in the national tennis tournament at Forest Hills, L.I., N.Y. (See also EDUCATION; LAW.)

Foner, *Life and Writings of Frederick Douglass*, vol. I and II (1950).

(A. L. R. L.)

**Nehru, Jawaharlal** (1889— ), Indian prime minister, was born at Allahabad, United Prov-

inces, Nov. 14. (For his early career see *Encyclopædia Britannica*.) He was one of the leaders of the Indian independence movement, and on Aug. 15, 1947, when the Indian subcontinent was partitioned, he became prime minister of India. In April 1949 he took part in the Commonwealth conference which evolved a formula whereby India could become a republic and at the same time remain within the commonwealth. In Jan. 1950 he attended the first Commonwealth Foreign Ministers' conference at Colombo, Ceylon, and was given an honorary doctorate of laws by the University of Ceylon. The Indo-Pakistan minorities agreement was signed by Nehru and Liaquat Ali Khan (*q.v.*) on April 8. On May 5, following resignations over the minorities agreement, he reformed his cabinet. In May and July he took part in talks with Sir Owen Dixon, U.N. mediator for Kashmir; at a press conference in August, however, he put the blame "one hundred per cent on Pakistan" for the Kashmir trouble. He addressed the 11th conference of the Institute of Pacific Relations at Lucknow in October. On the outbreak of the Korean war in June he sent peace appeals to Joseph Stalin and Dean Acheson (*qq.v.*), and later urged that U.N. troops should not advance north of the 38th parallel and that Communist China should be admitted to discussions on Korea. Speaking in the Indian parliament at Delhi on Dec. 6, Nehru said that the matter should not be considered in the United Nations in the formal way of passing condemnation on one another: "... on the verge of a world war it does not help in the slightest for people to call one another names, unless they wish that war should come sooner rather than later. ... The atomic bomb has become the symbol of incarnate evil. If the force of circumstances compels the world to use the bomb, it will mean that the world has surrendered to evil." (See also INDIA; PAKISTAN.)

**Nepal.** An independent kingdom in the Himalayas, Nepal lies between India and Tibet. Area: *c.* 54,000 sq.mi. Pop. (1949 est.): 6,910,000. Aboriginal stock is Mongolian with important Indo-Aryan admixture. Religion: Buddhism mixed with Hinduism. Capital, Kathmandu (pop. *c.* 110,000). The ruling family are Hindu Rajputs. Rulers in 1950, Tribhuvana Bir Bikram Jung Bahadur and (from Nov. 7) Gyanendra Jung Bahadur; prime minister and supreme commander in chief, Sir Mohan Shumsher Jung Bahadur Rana.

**History.**—Relations between the exiled members of the ruling Rana family with the hereditary prime minister, who was also a member of that family, had been unfriendly and the formation of the Nepalese congress (which had actually taken place in India) was giving some anxiety to the prime minister. The situation resulted in a political explosion in Nepal in Nov. 1950.

On Nov. 6 the king of Nepal, whose office since 1846 has been that of a *roi fainéant*, sought refuge with his family in the Indian embassy at Kathmandu. This move was followed the next day by an emergency session of the Nepalese parliament which unanimously proclaimed the second son of the crown prince, a boy three years old, as the new king. The deposed king left by air for Delhi, where he arrived on Nov. 11 with his family. On Nov. 10, armed supporters of the Nepalese congress crossed the frontiers and occupied Birganj after a brief fight with the government troops. The leader of the insurgents was said to be Maj. Gen. Subarna Shumsher Jung Bahadur Rana, one of the exiled Ranas, and his action was interpreted as being in sympathy with the refugee king.

The president of India received the refugee king of Nepal on Nov. 13, and the next day announced that his government desired to respect the independence of and maintain friendly relations with Nepal and see its people achieve political and economic progress. The government of India also put a strong ban on movements of troops and arms across the frontiers. Toward the end of November it appeared that the prime minister had

asserted his authority and the rebellion was reported virtually to have collapsed. (E. Hd.)

**Nervous System.** In June 1950 Reynold A. Jensen reported that scientists were just beginning to understand how devastating parental anxieties, whatever their source, were to the child's peace of mind. He further declared that many factors could be responsible for this state of affairs, such as radio, magazines, newspapers and books on child rearing. The books were contributory to the parents' feeling of inadequacy. These ideas were often reinforced by the conflicting opinions of "experts" regarding child rearing. A study in a well-known baby clinic revealed that 52 mothers out of 57 had complaints regarding their babies. In three of the remaining five mothers, maternal anxieties were interfering with the emotional development of the child. These mothers carried over in their relationships with their children unresolved conflicts in their relationships with their own mothers. Mental health in the children was made much more adjustable to their ecology if the parental insecurity was early recognized and treated.

A clinical study was made in the early part of the year on melancholia and revealed 50 cases treated for various and sundry diseases and not for melancholia. The patients with this syndrome were treated from 3 to 36 months after the onset of the illness and before the diagnosis of melancholia was made. The failure to recognize the nature of the illness of these persons caused considerable difficulties in the home and business life of the patients and called for unnecessary expenditure of money. Further, this treatment exposed these persons to many attempts at self-destruction. The prime reason for this study was to call the attention of the medical practitioners to these problems so that this syndrome would be recognized early, as treatment of melancholia results in an almost 100% recovery. The following signs of melancholia were found in this group of patients: (1) psychomotor retardation (slowness in walking, talking and response to questions); (2) no clouding of consciousness; (3) staring expression with glassy eye appearance and masked facial expression. The symptoms were anorexia, loss in weight, sleeplessness, nervousness (tension, agitation and panic), ideas of self-depreciation and self-accusation and last, but not least, the patients' feeling better in the late afternoon and evening. The above signs and symptoms were found in no disease except melancholia. Of these 50 cases, 48 made a complete recovery. (See also PSYCHOSOMATIC MEDICINE.)

**BIBLIOGRAPHY.**—Reynold A. Jensen, "The Physician and Mental Health," *Wisconsin M. J.* 49:493-498 (June, 1950); Theodore T. Stone and B. Cullen Burris, "Melancholia: A Clinical Study of Fifty Selected Cases," *J.A.M.A.* 142:165-185 (Jan. 21, 1950). (T. T. S.)

**Netherlands.** A kingdom of northwestern Europe, the Netherlands is bounded on the north by the North sea, east by Germany and south by Belgium. Area: 12,868 sq.mi. (not including the waterways and sheets of water larger than 185 ac. and minor acquisitions along the German frontier). Pop. (mid-1949 est.): 9,955,000. Language: Dutch. Religions (1947): Roman Catholic 38.50%, Dutch Reformed 31.03%, Reformed Churches 7.93%, nonchurch members 17.04%. Chief towns (pop., 1949 est.): Amsterdam (cap., 832,583); Rotterdam (671,901); The Hague (555,339); Utrecht (191,811); Haarlem (161,380); Eindhoven (139,320). Ruler: Queen Juliana; prime minister: Willem Drees.

**History.**—The transfer of sovereignty to Indonesia at the end of 1949 had left the political status of western New Guinea to be settled by negotiation between the Netherlands and the new sovereign republic of Indonesia within a year. With Dutch sovereignty continuing in the meantime, S. L. J. van Waardenburg was appointed Netherlands governor of the area early in

Jan. 1950. New methods of administration were introduced at the same time: a legislative New Guinea council, a judicial council and a number of lesser advisory bodies were established in the island, the arrangements following the general lines of the former Netherlands-Indies constitution. (See also *INDONESIA*; *NETHERLANDS NEW GUINEA*.)

Participation in western defense was made formal on Jan. 27, 1950, by the signing in Washington, D.C., of the Mutual Defense Assistance agreement between the United States and the Netherlands.

On April 4 D. U. Stikker, who had combined his post of Netherlands minister of foreign affairs with the office of political conciliator of O.E.E.C. (Organization for European Economic Cooperation) in Paris since the first days of February, was elected to the chairmanship of the organization. To make up for the partial loss of his services, the foreign office was strengthened by the appointment of N. S. Blom as secretary of state serving as right-hand man of the minister.

The Netherlands took part in the Paris conference on the Schuman plan in June, but would not be committed to the carrying out of the plan as it stood without amendment, thereby assuming a position between that of Great Britain and full acceptance of the Schuman proposals. (See also *EUROPEAN UNION*.)

The destroyer "Jan Evertsen" was ordered to Korea on July 6 as part of the Netherlands contribution to the United Nations forces. The creation of three new divisions to increase the country's defensive strength was announced in the first week of August. Recruiting of volunteers for a Dutch contingent in Korea began a few days later and resulted in the embarkation on Oct. 26 of a detachment of 650 men. In the middle of August 4,000 men who had been released in March after six months' partial training were recalled to the colours to complete their training.

A further extension of the country's military effort was announced on Sept. 7 in the form of supplementary estimates amounting to 150,000,000 florins to be added to the original sum of 859,000,000 florins in the 1951 budget. At the same time the government fixed the figure of 12,500 as the target number of recruits for the national reserve to be ready by the spring of 1951. It was also decided to create a defense council, to consist of the secretaries of state for defense and the navy, the secretaries general of both departments, and the chiefs of staff of the army, the navy and the air force under the chairmanship of the minister of defense. On the occasion of the parliamentary debates on the new defense measures, the responsible minister, W. F. Schokking, came under criticism in the second chamber, in consequence of which he tendered his resignation a few weeks later and on Oct. 11 was succeeded by H. L. s'Jacob.

The provincial council elections in April left the main political parties in much the same situation as before. The Catholic People's party increased its poll slightly, from 31.42% of the votes cast to 31.57%; the Labour party poll declined, equally slightly, from 25.81% to 25.69%; some of the small parties registered individually insignificant gains, all at the cost of the Communists whose votes decreased even in their stronghold of Amsterdam from 31.50% to 24.60%.

Early in September the government approved an all-round increase of 5% in wages for both male and female workers above the age of 23; also for those under 23 if they were married or were the main support of their families. To counteract inflationary tendencies the bank rate was raised on Sept. 26 from 2½% to 3%, and this was followed early in November by certain restrictions upon the commercial banks' freedom to use treasury paper as cover for their advances to industrial concerns.

(See also *NETHERLANDS ANTILLES*; *SURINAM*.) (F. H. Aw.)

**Education.**—Schools (1948): elementary 7,044, pupils 1,164,762, teach-

ers 34,353; secondary 1,366, pupils 228,033, teachers 11,393; technical 831, pupils 219,173; agricultural (1947) 236, pupils 50,380; teachers' training colleges 89, students 7,246, teachers 1,006; universities and institutions of higher education 10, students 26,379, professors and lecturers 1,057.

**Finance and Banking.**—(Florins) ordinary budget: (1950 actual) revenue 3,899,000,000, expenditure 3,201,000,000; (1951 est.) revenue 3,678,000,000, expenditure 2,594,000,000. National debt (Dec. 1949): 23,316,000,000, excluding war damage compensation, which was 3,261,000,000 florins in Dec. 1948. Currency circulation (July 1950): 2,949,000,000 florins. Gold reserve and foreign exchange of Central bank (Aug. 1950) U.S. \$551,000,000. Bank deposits (July 1950) 4,189,000,000 florins. Monetary unit: florin or guilder with an exchange rate of 3.805 florins to the U.S. dollar.

**Foreign Trade.**—(1949): Imports 5,352,000,000 florins; exports 3,852,000,000 florins. Main sources of imports (1949): U.S. 16.5%; Belgium-Luxembourg 14.3%; U.K. 11%; Indonesia 7.7%; France 7%. Main destinations of exports: U.K. 16.2%; Belgium-Luxembourg 13.4%; Germany 10.8%; Indonesia 10.3%; France 7%. Main imports (1948): cereals, seeds, pulses and flour 10.4%; vehicles, parts, tires 6.3%; rolled iron and tin plate 5.4%; yarn, rope and fabrics 5.3%. Main exports (1948): yarn, rope and fabrics 11.6%; milk, dairy products and eggs 10.6%; electrotechnical machinery and apparatus 7.1%; fresh and preserved vegetables and fruit 2.8%.

**Transport and Communications.**—Railways (1948): 2,080 mi.; passenger-miles (1949) 4,019,000,000; freight net ton-miles (1949) 1,730,000,000; freight carried (1949) 19,860,000 tons. Roads (Jan. 1949): main 1,724 mi.; secondary 2,694 mi.; third class 3,257 mi. Licensed motor vehicles (Dec. 1949): cars 110,612; commercial 73,719. Shipping (July 1949): merchant vessels more than 100 gross tons 1,501; total tonnage 2,994,399. Air transport (1949): passenger-miles 377,000,000; cargo net ton-miles 14,000,000. Telephones (1947): subscribers 575,995. Radio receiving set licences (Sept. 1950) 1,439,202.

**Industry.**—Industrial establishments (1948): 115,580; persons employed 1,227,297. Fuel and power (1949): coal 11,700,000 metric tons; lignite 204,000 metric tons; manufactured gas 1,452,000,000 cu.m.; electricity 4,680,000,000 kw.hr.; crude oil 621,000 metric tons. Raw materials (metric tons, 1949): pig iron 434,000; salt 335,000; tin metal 19,600; slab zinc 15,600. Manufactured goods (metric tons, 1949): cotton yarn 55,200; rayon filament yarn 19,200; rayon staple fibre 10,100; cement 565,000; wool yarn 27,000; building bricks 1,084,000,000 bricks; leather boots and shoes (1948) 11,501,000 pairs. Number of cycles manufactured (1948) 370,000.

**Agriculture.**—Main crops (metric tons, 1949 except as noted): wheat (1950) 320,000; barley 189,000; oats 424,000; rye (1950) 450,000; potatoes 4,605,000; sugar, raw value (1950) 360,000; dry peas 67,000; broad beans 12,000; flax fibre 20,800; linseed 18,000; rapeseed 59,000. Livestock: cattle (Dec. 1949) 2,517,000; sheep (May 1948) 425,000; pigs (Dec. 1949) 1,158,000; horses (May 1949) 304,000. Meat production (1949): total 288,000 metric tons. Dairy production (metric tons, 1949): milk, delivered, 4,428,000; factory butter 84,000; cheese 128,000. Fisheries: total catch (1949) 235,800 metric tons.

**BIBLIOGRAPHY.**—Cicely Hamilton, *Holland To-day* (London, 1950).

**Netherlands Antilles.** The Netherlands Antilles consist of six islands in the West Indies, with a total area of 403 sq.mi. and a total pop. (est. 1950) of 165,000, of which more than one quarter are aliens. Three islands lie near Venezuela, Curaçao (210 sq.mi.), Bonaire (95 sq.mi.) and Aruba (69 sq.mi.). The other three islands, sparsely populated, lie 500 mi. to the northeast—the southern portion of St. Martin (17 sq.mi.), St. Eustatius (7 sq.mi.) and Saba (5 sq.mi.). The capital is Willemstad, on the island of Curaçao (pop. 47,000). The official language is Netherlandish, but a local patois of diverse origin is equally widespread. During 1950 the governor was L. A. H. Peters.

**History.**—At the end of Sept. 1950 the new constitution, provisional in character, was authorized by the Netherlands parliament after consideration over many months and lengthy debate. A considerable measure of responsibility for local government was delegated to the Antilles parliament, with veto power reserved to the governor only in issues affecting the sovereign rights of the crown. The fiscal and monetary powers of the colonial parliament, as in the case of Surinam, are extensive. The friction between Aruba and Curaçao, which had marked the life of the colonial legislature, continued throughout the discussion at The Hague of the new constitution, since Aruba was allotted only 8 seats to Curaçao's 12, the other islands retaining the same minimum representation they previously had.

Late in October the announcement was made at The Hague that in 1951 there would be a further review of the constitutional status of the islands. A few weeks later, the Netherlands government announced that the navy would henceforth have sole

responsibility for the defense of the Antilles, with marines replacing the army. By 1951 a maximum force of 500 marines was intended to be stationed there.

The Caribbean commission held a conference at Curaçao in December, devoted chiefly to the discussion of Caribbean agriculture. (C. Me.)

**Education.**—In 1950 there were 48 elementary schools with 15,926 pupils, 30 higher elementary schools with 11,501 pupils, and 2 secondary schools with 363 students.

**Finance.**—The monetary unit is the Netherlands Antilles guilder or florin, valued at \$0.530264 U.S. currency, official rate during 1950. The budget for the fiscal year 1950 estimated revenue at 57,289,635 f. and expenditure at 57,289,393 f. Actual revenue in 1949 was 61,172,216 f. The public debt on Jan. 1, 1951, was 9,016,000 f.; notes in circulation, 34,159,000 f.; gold reserve, 35,518,000 f.

**Trade and Communications.**—Exports in 1949 totalled 827,000,000 f.; imports were 963,000,000 f. More than 97% of the exports consisted of petroleum products and 80% of the imports consisted of crude petroleum from Venezuela. Total imports of crude petroleum in 1949 amounted to 37,800,000 metric tons (about 253,000,000 bbl.). The U.S. supplied about two-thirds of the nonpetroleum imports.

The highway mileages of the islands of the Netherlands Antilles in 1950 were as follows: Curaçao, 210; Aruba, 150; Bonaire, 32.5; St. Martin, 17; Saba, 4.5 and St. Eustatius, 2.5. On Jan. 1, 1950, 6,431 motor vehicles were in use on Curaçao and 4,012 on Aruba. Telephones (Jan. 1, 1950) totalled 3,114, of which 2,098 were on Curaçao.

**Agriculture.**—Farming was limited for the most part to subsistence crops, and much food had to be imported.

**Manufactures.**—The three refineries—Curaçaosche Petroleum Industrie Maatschappij, N.V. (Shell) on Curaçao and Lago Oil and Transport Co. (Standard Oil Company of New Jersey) and the Eagle Oil Co. (Shell) on Aruba—produced 34,210,000 metric tons of refined petroleum products in 1949, including 26,732 tons of heavy oils and 5,326,000 tons of gasoline.

**Mineral Production.**—Activity was limited to the exploitation of salt and phosphate deposits. The latter, located on Curaçao, produced for 1949 export 92,584 metric tons of rock phosphate and 200 tons of fine ground phosphate. (J. W. Mw.)

**Netherlands New Guinea.** The western part of New Guinea, second largest island of the world, with smaller adjacent islands, forms part of the territory of the kingdom of the Netherlands. Area: 151,789 sq.mi. Pop. (1949 est.): 1,000,000 of whom 275,000 were administered by the Dutch; of these 90,000 were Roman Catholic and 70,000 Protestant. The Papuans are the dominant stock in New Guinea, but there are also Melanesian and Negrito elements. Principal towns: Hollandia (cap.), Manokwari, Sorong and Merauke. Governor: S. L. J. van Waardenburg.

**History.**—The round-table conference in The Hague between the Netherlands and Indonesia in 1949, covering the transfer of sovereignty over the territory of the Netherlands Indies to the Republic of the United States of Indonesia, decided to maintain the *status quo* of New Guinea with the stipulation that within a year the question of the political status of this territory was to be determined through negotiations between the two countries.

To prepare a decision a joint commission was set up in March 1950, but the Indonesian and Dutch members arrived at diametrically opposed conclusions. The Indonesian standpoint was based mainly on the political argument that transfer of Irian (as New Guinea was called by them) was only a logical sequence of the transfer of sovereignty over the former Netherlands Indies of which it had formed an administrative part, and that no remaining "colony" of the Netherlands could be tolerated in the vicinity. The Dutch argument was that from the geographical, ethnological and social viewpoints New Guinea had no connections with Indonesia and the rest of Asia, but was to be considered as a part of the Pacific, in particular the Australian sphere.

The Indonesian claims were reinforced at home by violent agitation for its annexation of New Guinea, combined with the threat of reprisals against Dutch nationals and interests in Indonesia in case sovereignty was not transferred before Jan. 1, 1951; they found no active political support abroad, however, and clashed against the openly declared intention of the government of Australia not to allow any Indonesian territorial

encroachments on New Guinea. A conference between the Netherlands and Indonesian governments to deal with the issue was scheduled for Dec. 4 but was suspended on Dec. 15 for lack of a mutually acceptable basis.

As a last endeavour to prevent the apparent deadlock the Netherlands delegation proposed to transfer sovereignty over New Guinea to the Netherlands-Indonesia union and to establish a New Guinea council, in which the Netherlands and Indonesia would be represented on an equal footing; the council would issue the directives for the administration of the territory. The Indonesian delegation rejected the compromise proposal, the conference ended in deadlock on Dec. 27 and the Netherlands sovereignty and administration continued. (W. G. P.)

**Netherlands Overseas Territories:** see NETHERLANDS ANTILLES; NETHERLANDS NEW GUINEA; SURINAM.

**Neutrons:** see PHYSICS.

**Nevada.** A state of the mountain group of western states, Nevada was the 36th state to be admitted to the union, on Oct. 31, 1864; it is popularly called the "Sagebrush state." Land area 110,540 sq.mi.; water area 738 sq.mi. Pop. (1950 census): 160,083, a gain of 45.2% since 1940. The principal cities, with preliminary 1950 census figures are: Carson City, the capital, 3,069; Reno, 32,225; Las Vegas, 24,418; Sparks 8,172; Elko, 5,389; Ely, 3,500.

**History.**—The 1950 general election resulted in candidates from the Republican party winning the offices of governor and state controller. While Democratic registration outnumbered Republican registration in the state by approximately two to one, the Republican candidates won these two offices by substantial majorities.

Democrats won all the other offices of the state government, three of which were uncontested. A new justice of the supreme court and three new members of the board of regents of the University of Nevada, Reno, were also elected. In addition, the people approved three amendments to the constitution of the state of Nevada.

On Jan. 1, 1951, state officers were: governor, Charles H. Russell; lieutenant governor, Clifford Jones; secretary of state, John Koontz; state controller, Peter Meriardo; state treasurer, Dan W. Franks; surveyor general, Louis D. Ferrari; inspector of mines, Mervin J. Gallagher; superintendent of state printing, J. A. McCarthy; clerk of supreme court, Ned A. Turner; superintendent of public instruction, Glenn A. Duncan; attorney general, W. T. Mathews.

Unprecedented floods involving the Truckee and Carson rivers caused heavy damage in Reno and the Carson valley; the damage in the city of Reno was estimated at \$3,000,000.

**Education.**—In 1950 Nevada had 166 elementary schools with a total enrolment of 21,051; teachers numbered 846. High schools totalled 38 with an enrolment of 6,416 and were staffed by 365 teachers. Kindergarten enrolment was 2,023 in 15 kindergartens with 35 teachers. Total school population was 29,490. Average salaries paid to high school teachers was \$3,389, and to elementary teachers \$2,956.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the fiscal year ending June 30, 1950, \$504,408.21 was expended by the state health and welfare departments. The state institutions, including the state prison, the mental hospital, the orphans' home and the school of industry, along with programs for the aid and care of the deaf, dumb and blind, expended \$671,271.73. Old-age assistance benefits amount-

CHARLES H. RUSSELL, Republican, elected governor of Nevada, Nov. 7, 1950

ed to \$1,650,917. On June 30, 1950, the state prison had 298 men and 5 women inmates; total expenditures for the fiscal year ending June 30, 1950, were \$260,988.74. The Nevada school of industry had 26 boys and 1 girl under school control; total expenditures for the fiscal year ending June 30, 1950, were \$37,150.22. The state hospital for mental diseases had 367 patients in average daily residence during the fiscal year 1949-50; expenditures for that fiscal year were \$241,220.61. The state orphans' home had 52 boy and 43 girl residents during the fiscal year 1949-50, and the cost to the state for that fiscal year was \$81,611.90.

**Communications.**—During 1950, 211 mi. of paved highways were constructed or reconstructed, with 165 under construction at the end of the fiscal year, and the total disbursements for highways were \$8,305,523. There were 3,560 mi. of road in 1950 in the designated state highway system, of which 3,278 mi. were of dustless paved surface and 282 mi. improved state highways. Railroad mileage totalled 1,704. Motor vehicle registrations in 1950 totalled 80,022, of which 78,989 were privately owned and 1,033 were publicly owned. There were 384 registered aircraft and 70 established airports. During the year, the Bonanza Airlines established daily air service between Reno and Las Vegas and intermediate points. The famous Virginia and Truckee railroad, one of the last of the short lines in the west, abandoned operation and the rails were removed.

**Banking and Finance.**—On July 1, 1950, there were 26 individual banking institutions in the state, of which 19 were branches, 5 were national banks and 3 were state banks. The resources of Nevada banks totalled \$179,204,871, and deposits were listed as \$167,425,005. The 1950 assessment for tax purposes amounted to \$312,536,414.

The credits of the state for the fiscal year ending June 30, 1950, amounted to \$26,581,680, the debits to \$25,797,769. There was a treasury balance of \$5,587,310.

The state had bonds outstanding July 1, 1950, in the amount of \$785,000 for construction of office and institutional buildings. This amount was more than offset by bonds and securities held by the state, income from which was \$155,570.

Table I.—Leading Agricultural Products of Nevada

Crop	1950	1949	Average 1939-48
Barley, bu. . . . .	1,050,000	972,000	735,000
Potatoes, bu. . . . .	468,000	396,000	518,000
Wheat, bu. . . . .	471,000	769,000	492,000
Hay, tons . . . . .	662,000	688,000	606,000
Oats, bu. . . . .	360,000	360,000	312,000
Corn, bu. . . . .	105,000	90,000	89,000

**Agriculture.**—The 1949 agricultural production was slightly less than in 1948. Total cash receipts from crops marketed in Nevada were \$45,078,000 in 1948. Cash received in 1949 from marketing of livestock was estimated at \$39,449,000.

Table II.—Mineral Production in Nevada

	1946	1947	1948
Gold . . . . .	\$ 3,173,800	\$ 3,117,205	\$ 4,047,400
Silver . . . . .	1,010,526	1,246,709	1,671,626
Copper . . . . .	15,751,584	20,833,260	19,552,320
Lead . . . . .	1,564,150	2,062,368	3,318,000
Zinc . . . . .	5,526,356	4,106,740	5,660,480
	\$27,026,416	\$31,366,282	\$34,249,826

**Mineral Production.**—According to preliminary figures, the value of copper, zinc, gold, lead and silver produced in Nevada during 1949 was \$29,779,731, or about 13% less than the value of the 1948 production. Of the total in 1949, copper contributed 49% of the value, zinc 18%, gold 15%, lead 12% and silver 6%. (J. E. SPR.)

**New Brunswick.** Second largest of the four Atlantic provinces of Canada, New Brunswick entered the confederation in 1867. Area: 27,985 sq.mi. Pop.: (1941) 457,401; (1950 est.) 522,000.

**History.**—The second session of the 41st legislature enacted a record 172 bills. The most important new law was the Social Services and Education act, a sales tax of 4% levied on a wide range of goods at retail level, which in the June 1, 1950-Oct. 31, 1950, period returned \$2,000,000 to the treasury. Enabling legislation permitted the province to participate in the 1950 federal-provincial-municipal housing project, and allowed municipalities to create municipal-employee pension schemes. The 1949 devaluation of the pound sterling continued to cut into lumber production and made the Nov. 1949-May 1950 period one of high unemployment. The 80-sq.mi. Fundy national park was opened July 29, and the provincial handicrafts office announced the park would be a centre of art and cultural as well as recreational industry, which by 1950 took fourth place in the province's economy in terms of value.

**Education.**—The provincial program for the expansion of education in terms of more school buildings, modern teaching techniques, training of teachers in health work, and special technical education was pressed forward, and 20 of the planned 50 rural high schools were in operation during 1950. Provincially controlled schools had in 1947 (latest figures available in 1950): total enrolment, 96,435; average daily attendance, 78,129; teachers, 2,873; total revenue, \$4,660,146.

**Transportation.**—Construction of 200 mi. of new roads during 1950 brought the total of surfaced roads to 1,400 mi. Enabling legislation permitted the province to participate in the federal-provincial trans-Canada highway project.

**Finance.**—The 1950-51 provincial supply vote was \$28,803,319; forecast revenue was \$30,221,531; and some \$19,000,000 was provided in money bills for capital expenditures. At the end of the 1950 fiscal year, on Oct. 31, total provincial debt stood at the all-time high of \$107,969,637.

**Agriculture.**—Grain crops of 1950 were better than average; the department of agriculture started a comprehensive scientific soil conservation and analysis service, continued efforts to build up the dairy and poultry industry, urged an increase of acreages to feed grain and forage crops, and co-operated with the federal government in the reclamation of marshlands. Potatoes continued to be the largest single cash crop, and to assist farmers the government organized a New Brunswick potato marketing board with wide control powers.

**Fisheries.**—During 1950 the government's fish-consumption campaign continued; the Shediac lobster festival became a major tourist attraction; the sardine catch fell off; clams reached a near \$1,000,000 industry; mechanical oyster dredging replaced the 300-year-old tong-fishing method. During 1949 fisheries production totalled \$18,000,000.

**Forestry.**—Lumber exports to the U.S. during Jan.-April 1950 were 30% greater than during the similar 1949 period, but total 1950 lumber exports were down 15% for the same period, because of the loss of the pit prop market in the United Kingdom. Pulp and paper demands increased, resulting in larger operations, with cordwood running to \$17 per cord at railway cars. A new 125-ton daily capacity bleached sulphate mill began operation at Newcastle. Total 1949 forest products stood at \$113,000,000, with pulp and paper at \$68,000,000.

**Industry.**—Increased freight rates curtailed the market for woodworking industries; rigid inspection of all tourist hotels, camps, motels and restaurants raised the province's catering standards and boosted the tourist trade (1949: peak of 128,000 travellers' vehicle entry permits); the New Brunswick electric power commission assured industrial electricity by pushing forward the \$5,600,000, 20,000-h.p. plant on Tobique river, and the \$4,000,000 steam plant at Grand lake, completion of which made a total of 141,000 h.p. available (1940: 27,000 h.p.).

**Minerals.**—With mining the fourth ranking primary industry, provincial authorities and private capitalists prospected actively in 1950. For the first time commercial quantities of gold, lead, zinc, copper and silver were discovered (in Gloucester county). There was also continued search for oil, and the Stoney creek field was expanded. During the year, gypsum production was increased. In 1949, total mineral production was worth \$7,386,000, the highest in New Brunswick history. (C. CY.)

**New Caledonia:** see PACIFIC ISLANDS, FRENCH.

**Newfoundland and Labrador.** A province of Canada. Area: Newfoundland 42,734 sq.mi.; Labrador c. 110,000 sq.mi. Population: Newfoundland (1947 est.) 321,897; Labrador (1947 est.) 5,639. Capital: St. John's (pop. 1947, 57,849). Lieutenant governor: Sir Leonard Outerbridge.

**History.**—From the suspension in 1934 of the dominion status, established under the statute of Westminster in 1931, Newfoundland, until March 31, 1949, was administered by a commission of government under the chairmanship of the governor and consisting of six commissioners, three of whom were Newfoundlanders, the other three being from the United Kingdom. The commission of government was responsible to the government of the United Kingdom.

A national convention, elected in 1946, to consider the future form of government, ended their deliberations in Jan. 1948. They recommended to the government of the United Kingdom that two forms of government; viz., the continuation of commission of government, and the restoration of responsible government, should be submitted to the people of Newfoundland in a national referendum. The United Kingdom government did not accept this recommendation. Instead, it decided to place three options on the ballot paper in the national referendum. These were as follows: (1) commission of government for a period of five years; (2) confederation with Canada; (3) responsible government as it existed in 1933.

A referendum, held on June 3, 1948, resulted as follows: 23,311 votes for (1); 64,066 votes for (2); 69,400 votes for (3). As no one choice obtained an absolute majority over the other two combined, it was necessary, under the provisions of the Referendum act, to hold a second referendum.

A second referendum was held on July 22, to decide between (2) and (3). The result was 78,323 for (2) and 71,336 for (3),

a majority of 6,987 for confederation with Canada.

On Dec. 2, 1948, at Ottawa, the terms of union were signed by representatives of the Canadian government and by a Newfoundland delegation. The terms were subsequently approved by the parliament of Canada and the Newfoundland commission of government. Confederation was duly consummated on March 31, 1949. Newfoundland became the tenth province of Canada and was entitled to be represented at Ottawa by seven members of the house of commons and six members of the senate.

As a result of the first provincial election (May, 1949), a Liberal government came into power under the premiership of J. R. Smallwood, the chief architect of confederation.

**Education.**—(June 1950) Schools, 1,196; pupils, 78,613; teachers, 2,528.

**Transport and Communications.**—Main highways, 1,800 mi.; secondary roads, 600 mi.; local roads, 3,000 mi. Motor vehicles (licensed), 10,477 cars, 4,327 trucks, 316 motorcycles, 342 buses, 97 trailers, 267 other commercial vehicles. Railway, 750 mi. Gander airport, Newfoundland, and Goose Bay airport, Labrador, were important stages between Europe and America for air lines of several countries on both sides of the Atlantic.

**Finance.**—The budget for the financial year 1950-51 (in Canadian dollars) was as follows:

Current account	
Expenditure, per estimates . . . . .	\$26,588,500
Revenue, per estimates . . . . .	26,446,000
Deficit, current account . . . . .	\$ 142,500
Financial surplus account	
Expenditure, per estimates . . . . .	\$12,049,400
Less provisions included therein for discharge of liabilities as of date of union . . . . .	577,900
	\$11,471,500
Revenue, per estimates . . . . .	\$3,209,400
Less amounts included therein in respect of loans, advances, receivables, etc., as of date of union . . . . .	1,236,400
	\$1,973,000
	\$ 9,498,500
Deficit, current account . . . . .	\$ 142,500
Net expenditure for extension of public services . . . . .	9,498,500
Total: chargeable against financial surplus account . . . . .	\$ 9,641,000

**Agriculture.**—Area under cultivation, producing hay and vegetables (mostly potatoes, turnips and cabbage) 88,500 ac. Area of rough and wild pasture used as summer grazing grounds for sheep and cattle 35,000 ac. Livestock (1951): horses, 14,500; cattle, 23,500; sheep, 85,000; pigs, 12,000; goats, 11,500; poultry, 350,000. (A. M. F.)

**New Guinea:** see NETHERLANDS NEW GUINEA; TRUST TERRITORIES.

**New Hampshire.** One of the New England states of the United States and one of the original group of 13, New Hampshire is popularly known as the "Granite state." Area: 9,304 sq.mi., including 280 sq.mi. of inland water. Population (1950 census) was 533,242, representing a gain of 41,718 over the population for 1940, or 8.5%. In 1940, 57.6% of the population was urban and 42.4% rural and there were 490,989 whites, including 422,693 native and 68,296 foreign-born. Capital: Concord, with pop. (1950 prelim.) of 27,984. Other cities: Manchester, 82,581; Nashua, 34,666; Portsmouth, 18,793; Berlin, 16,545; Dover, 15,911, and Keene, 15,631.

**History.**—The legislature met in special session from April 25 to May 18, 1950, and enacted legislation providing for a teachers' pension program; reclassification of state employees with wage increases aggregating \$1,150,000 under a state personnel commission; and a \$1,000,000 bond issue for highway improvements. On April 1 a timber tax exemption law, passed at a previous session, became effective, designed to return abandoned woodlands to productive use.

In the general election of Nov. 7, Sherman Adams (Republican) was elected governor over Robert P. Bingham (Democrat) by a vote of 108,907 to 82,258. For United States senator the vote was, for Charles W. Tobey (Republican), 106,142; Emmet J. Kelley (Democrat), 72,473; and Wesley Powell (Independent), 11,958. Chester E. Merrow and Norris Cotton (both Republican) were elected to congress from the first and second dis-

tricts, respectively. The election for members of the general court (to convene in Jan. 1951) resulted in substantial Republican majorities in both the senate and house of representatives. Six women were elected to the senate and 40 women to the lower house. Two amendments to the state constitution were approved, one abolishing the office of commissary general, and another striking out the provision that where sums of money were mentioned in the constitution, the value thereof should be computed in silver at six shillings and eight pence per ounce.

Admiral Miles R. Browning, U.S.N. retired, was appointed civil defense chief for the state and the organization of a system of local defense groups was begun.

State officers in 1950 were: governor, Sherman Adams; secretary of state, Enoch D. Fuller; state treasurer, F. Gordon Kimball; commissary general and adjutant general, Charles F. Bowen; attorney general, William L. Phinney, succeeded in March by Gordon M. Tiffany; commissioner of education, Hilton C. Buley; commissioner of agriculture, Perley I. Fitts. U.S. senators were H. Styles Bridges and Charles W. Tobey, both Republicans.

**Education.**—In 1949-50 there were 54,491 pupils enrolled in the 469 public elementary schools of the state, with 2,029 teachers. There were 18,823 students enrolled in the 83 public secondary schools, with 1,021 teachers. Total payments covering expenditures of school districts for 1949-50 amounted to \$17,360,481.28. In 1947-48, Catholic parochial elementary schools had a total registration of 18,783, while other private elementary schools had a registration of 672. The total number of students enrolled in approved public academies, accredited secondary schools and other private secondary schools in 1947-48 was 6,357.

Other state educational institutions were the University of New Hampshire, at Durham; Keene Teachers college, at Keene; and Plymouth Teachers college, at Plymouth.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—As of Sept. 1950 recipients of old-age assistance numbered 7,482 for the month, with expenditures of \$365,160. There were 1,654 families, representing 4,171 children, involved in the program of aid to dependent children, with expenditures of \$168,331. There were 324 cases of needy blind receiving aid to the amount of \$17,098. With a decrease in the direct relief case load from 3,141 in August to 3,045 in September there was a decrease in expenditures from \$126,908 in August to \$126,169 in September. There were in September 1,021 families involving 2,299 children who received child welfare services. In 1949, \$4,208,000 was collected in contributions for unemployment insurance and \$10,659,000 paid in benefits under state laws. Funds available for benefits at the close of 1949 amounted to \$22,069,000.

The net appropriation by the legislature for the operation of the state prison at Concord for the fiscal year ending June 30, 1951, was \$236,736.50; and for the Industrial School for Committed Minors at Manchester, \$181,228.20.

**Communications.**—At the end of 1947 there were 12,522 mi. of rural roads in New Hampshire, including highways under state, local and federal control. Disbursements from state highway funds for the year 1948 amounted to \$13,893,000. In 1948 there were 938 mi. of steam railways owned within the state as compared with 1,002 mi. in 1940. At the close of 1948 there were 35,587 business and 104,053 residential telephones in operation.

**Banking and Finance.**—As of June 30, 1950, there were in New Hampshire 51 national banks with deposits of \$175,176,000 and resources of \$196,322,000, as compared with 51 banks with deposits and resources, respectively, on June 30, 1949, of \$168,099,000 and \$188,714,000. Fifty-eight state chartered banks had deposits of \$360,628,387 and resources of \$409,565,741 as compared with 58 institutions reporting deposits and resources, respectively, of \$356,009,406 and \$402,973,571, on June 30, 1949. There were 24 state chartered building and loan associations with assets of \$25,366,493.55 as compared with 25 institutions with assets of \$23,887,294.18 for the previous year. State chartered savings banks and savings departments of trust companies reported deposits of \$344,932,569.40 as of June 30, 1950, an amount \$4,106,750.01 more than the total for June 30, 1949, and an all-time high. The Lacombe Federal Savings and Loan association reported assets of \$3,144,491.56 on June 30, 1950, as compared with \$1,934,159 for the previous year, and the Manchester Federal Savings and Loan association reported assets of \$20,802,626.01, as compared with \$18,047,810.40 for the previous year. State savings institutions held \$185,314,429.25 in U.S. government securities on June 30, 1950, a reduction of \$3,326,921.67 as compared with the previous year.

Cash receipts of the state treasury department for the fiscal year ending June 30, 1950, were \$94,888,917; cash disbursements \$94,290,374.01. Cash balance, June 30, 1950, was \$4,021,271.18; cash balance, July 1, 1949, was \$3,422,728.19. Gross fixed bond and note debt, June 30, 1950, \$8,910,000; net bonded debt, \$5,662,947.96.

**Agriculture.**—The estimated acreage from which crops were harvested or hay cut, or which was planted in orchards, amounted to 383,000 in 1949. Cash receipts from farm marketings in 1949 amounted to \$63,413,000 with an additional \$399,000 received in government payments, as against \$67,717,000 in cash receipts and \$495,000 in government payments in 1948. Cash receipts from major items in 1949 were as follows: poultry, \$28,335,000; dairy products, \$17,056,000; hay, \$1,096,000; ap-

## Leading Agricultural Products of New Hampshire

Crop	1950	1949	Average 1939-48
Corn, bu. . . . .	630,000	528,000	538,000
Oats, bu. . . . .	210,000	185,000	243,000
Hay, tons . . . . .	410,000	391,000	428,000
Potatoes, bu. . . . .	980,000	968,000	1,108,000
Apples, bu. (commercial) . . . . .	1,100,000	1,056,000	732,000
Maple syrup, gal. . . . .	48,000	41,000	51,000
Maple sugar, lb. . . . .	15,000	11,000	18,000

ples, \$1,851,000; truck crops, \$1,578,000; cattle and calves \$3,999,000. Lumber production in 1947 amounted to 322,509,000 bd.ft., including 34,480,000 ft. of hardwood and 288,029,000 ft. of softwood.

**Manufacturing.**—There were 1,124 manufacturing establishments in New Hampshire in 1947, employing an average for the year of 74,752 persons. The value added by manufacture was \$306,932,000 as compared with \$104,453,000 for 1939. Total of salaries and wages paid in connection with manufactures was \$177,479,000 in 1947. It was estimated that in 1947 and 1948, 167 new industries manufacturing 49 different products were established in the state.

**Mineral Production.**—Principal mineral resources were feldspar, mica, building stone (chiefly granite), brick clays, and sand and gravel. Value of mineral products in 1948 was \$1,732,000. (W. E. Ss.)

**New Hebrides.** This group of about 30 islands, and many islets and rocks, in the western Pacific was from 1906 jointly administered as an Anglo-French condominium. Total area: 4,633 sq.mi. Pop: Melanesian with some admixture of Polynesian blood, (1949 est.) 49,000. Religion: mainly pagan. Capital: Vila. Resident commissioners: British, R. D. Blandy; French, P. Anthonioz. Both are subordinate to their respective superiors: Sir Leslie Brian Freeston, British high commissioner for the western Pacific, and Pierre Cournarie, French commissioner general for the Pacific ocean.

The islands continued during 1950 to experience an acute shortage of manpower resulting from ravages among the natives attributable to European colonization.

**Finance.**—British sterling and French francs are both legal tender. Common budget (1948): revenue £96,440; expenditure £83,691. These figures exclude entirely revenue and expenditure from the British and French national services.

**Foreign Trade.**—(pound sterling, 1948): Imports £520,000; exports £1,498,152.

**Agriculture.**—Main crops (1949, metric tons): copra 21,000; coffee 100; cacao 800. (C. A. J.)

**New Jersey.** New Jersey, the "garden state," is located along the middle Atlantic coast of the U.S. It was the third state to be admitted to the union. It has a total area of 8,204 sq.mi. The official 1950 census determination placed the population at 4,835,329, a gain of 16.2% since 1940. In 1940, 81.6% of the total population was urban, 16.7% was foreign-born white and 5.4% was Negro. Largest cities according to 1950 preliminary census include Trenton (capital), 127,867; Newark, 437,857; Jersey City, 300,447; Paterson, 139,423; Camden, 124,543 and Elizabeth, 112,675.

**History.**—The principal officers in 1950 included Alfred E. Driscoll, governor; Lloyd B. Marsh, secretary of state; Theodore Parsons, attorney general; Walter T. Margetts, Jr., state treasurer; and Arthur T. Vanderbilt, chief justice.

Governor Driscoll approved 344 bills passed by the 1950 legislature. Among the significant measures enacted were: greater maximum benefits for those covered by unemployment compensation or cash sickness insurance; standby rent control, in the event federal control ceased; new regulations and penalties for commercial vehicles; creation of a Delaware river port authority, contingent upon the concurrence of Pennsylvania; amendment of the public utility strike law to permit the governor to intercede in a public emergency and to take possession of a utility; and a series of acts pertaining to municipal reorganization which included optional charter plans, methods of election and the regulation of persons holding key positions in municipalities.

**Education.**—Pupil enrolment (1950): elementary 389,743; junior high 125,751; high 112,769; special schools 4,679. Day school teachers: 27,006. One-room schools numbered 129. Colleges numbered 9, junior

colleges 11, universities 4, total full time students 27,836; state teachers' colleges 6, enrolment 4,258; professional and technological schools 10, enrolment 6,005. The total cost for all day schools, exclusive of bonded indebtedness and capital outlay, for 1949-50, was \$149,940,105. The state commissioner of education was John H. Bosshart.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the fiscal year ending July 1950, the state's welfare system cared for 12,588 in hospitals for the mentally ill, 6,103 in institutions for the mentally deficient and epileptics, 2,633 in tuberculosis sanatoria, 222 in soldiers' homes, 4,226 in institutions for adult offenders and 696 in training schools for juvenile delinquents. Also under the care of the state were 22,518 dependent children. Recipients of old-age assistance, July 1950 numbered 24,533. The gross expenditure for old-age assistance for the fiscal year ending June 30, 1950, totalled \$12,480,000. Assistance to the blind for July 1950 averaged \$54.09, with 762 receiving aid. During the 1949-50 fiscal year ending July 1, 1950, 301,000 persons received unemployment compensation insurance payments, which totalled \$87,385,096.

State penal and correctional institutions numbered eight. These institutions contained 4,645 inmates and cost \$4,367,893 to maintain during the 1950 fiscal year.

**Communications.**—The 27,000-mi. highway system in New Jersey consisted in 1950 of 1,700 mi., state; 6,000 mi., county; and 19,300 mi., municipal roads. In 1949, there were 27 railroads with 6,132 mi. of trackage in the state, which was the most concentrated trackage per square mile in the United States. More than 100 active airports and 1,400,000 telephones were in service.

**Banking and Finance.**—Deposits in the 147 banks and savings banks totalled \$2,835,362,000 on June 30, 1950, an increase of \$143,784,000 from June 30, 1949. Government deposits increased \$24,489,000 during the period. Of 124 commercial banks, 74 with 75.4% of total deposits were members of the federal reserve system. Government securities made up 48.4% of the total assets (\$3,093,201,000) of all banks compared with 49.9% the year before. The total of banking plants and real estate in the commercial banks showed a ratio of 17.9% of total capital accounts as compared with 18.5% in June 1949. The comparable ratio for the savings banks showed 5.8% of surplus and reserve as against 6.2% a year before.

**Agriculture.**—In 1949, the total value of agricultural production was \$302,027,000. Cash income from crops amounted to \$112,983,000, from livestock \$179,437,000, and from government payments \$629,000.

Egg production, eggs . . . . .	1,580,000,000	1,493,000,000	—
Milk production, lb. . . . .	1,139,000,000	1,100,000,000	—

**Manufacturing.**—During July 1950, 708,200 persons were employed in 10,349 establishments engaged in manufacturing. Average weekly earnings in July 1950 for persons employed in manufacturing was \$60.74. The leading industries, according to the value added by manufacture, were chemicals, electrical machinery, food and kindred products, machinery (except electrical) and textile mill products.

**Mineral Production.**—The total value of mineral production in 1949 was \$59,380,000, an increase of \$8,200,000 over 1948. A potential source of a rare metal, germanium, was discovered in eastern Middlesex county. This metal is widely used in electronic equipment.

Clay, raw, short tons . . . . .	537,480	1,314,186

(A. J. Gs.)

**New Mexico.** Fourth largest state in the southwestern United States, popularly known as the "Sunshine state"; admitted to the union in 1912. Area: 121,666 sq.mi. (121,511 sq.mi. land, 155 sq.mi. water); pop.: (1940) 531,818; rural 355,417; urban 176,401; native white 477,065; Negro 4,672; foreign-born 15,247. The 1950 census showed a population of 681,187, an increase of 28.1% since 1940. Capital, Santa Fe (pop. 1950 census, prelim. fig., 27,547). Other cities: Albuquerque (97,012); Roswell (25,572); Carlsbad (17,915); Clovis (17,168); Hobbs (13,801); Las Cruces (12,280).

**History.**—The first Republican governor in 20 years took office in 1951. Otherwise the administration, legislature and congressional representation were Democratic. The chief officers

of the state elected in the 1950 elections were: governor, Edwin L. Mechem; lieutenant governor, Tibo J. Chavez; secretary of state, Beatrice Bassett Roach; auditor, Robert Donald "Bob" Castner; treasurer, R. R. Crissom; attorney general, Joe L. Martinez; superintendent of public instruction, Tom Wiley; commissioner of public lands, Guy Shepard.

The constitution was amended to provide for one state senator from each of the 31 counties and 55 representatives elected by districts. A permanent five-member bipartisan state highway commission was appointed for overlapping six-year terms, and a five-member bipartisan board of regents for institutions of higher education was appointed for overlapping six-year terms. A probate court of record was set up for each county.

**Education.**—For the school year 1949-50, 37,871 students in rural schools were taught by 1,358 teachers who received an average salary of \$2,861.79; over-all expenditures were \$9,236,486.61. There were 111,107 students in municipal and independent schools who were taught by 3,550 teachers who received an average annual salary of \$3,216.12; over-all expenditures were \$24,028,700.42 for municipal schools only.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the calendar year 1950, \$1,969,451 was paid out for civilian unemployment benefits; for unemployed veterans \$193,710; and for self-employed veterans \$7,585.

On June 30, 1950, \$1,138,128 had been spent for old-age and survivors insurance, and \$7,975,000 for public assistance.

The penitentiary appropriation was \$272,000 for 718 inmates (Sept. 1); insane asylum \$800,000, 1,069 inmates (December); Los Lunas Mental hospital \$85,000, 110 inmates; industrial school \$102,500, 142 inmates (December); Girls' Welfare home \$190,000, 122 inmates (December).

**Communications.**—New Mexico had an estimated 53,818 mi. of unsurfaced and 9,584 mi. of surfaced roads in 1950. The state highway department expended \$22,712,921. Steam railway companies operated 2,495 mi. of main track. There were 99 airports; 1,705 mi. of controlled civil airways; and four scheduled air carriers. There were about 112,609 telephones.

**Banking and Finance.**—On June 30, 1950, there were 26 national banks with deposits of \$245,066,000; loans \$80,819,000; investments \$99,587,000; and 25 state banks with deposits of \$87,060,000; loans \$32,768,000; investments \$35,722,000. Total resources of 11 building and loan associations in 1949 were \$10,994,334 and of 7 federal savings and loan associations \$16,444,801.

The total of all state receipts for the fiscal year ending June 20, 1950, was \$82,502,406.54. The total bonded debt \$19,991,000.

**Agriculture.**—The total value of agricultural production in 1950 was \$85,775,000 (est.); acreage harvested 1,405,000 (est.). Livestock was valued at \$169,593,000. Jan. 1, 1950.

Table I.—Leading Agricultural Products of New Mexico

**Mineral Production.**—Potash was New Mexico's chief mineral in 1950. For the year ending June 30, 1950, 44,769.603 bbl. of oil, valued at \$109,117,465 were produced. (F. D. R.)

EDWIN L. MECHEM, Republican  
elected governor of New Mexico, Nov.  
7, 1950

**Newspapers and Magazines.** **U.S. Newspapers.**—While the Korean war held the front pages of U.S. newspapers as a daily war story in 1950, the rest of the news budget was typically peacetime. The "ten biggest news stories of 1950," as selected by United Press editors, were: (1) war breaks out in Korea; U.N. and then Chinese Communists intervene; (2) Puerto Rican assassins try to kill Pres. Harry S. Truman at Blair House; (3) off-year elections unseat Democratic leadership in senate; (4) U.N. attempts to solve Korean crisis; (5) Brink's armoured car service robbed of more than \$1,000,000 in Boston, Mass., holdup; (6) congress starts drive against Communists in the U.S.; (7) western powers rearm against communism; (8) Alger Hiss tried and convicted of perjury; (9) pope proclaims Assumption dogma to climax Holy Year; (10) Hermann Sander, physician, tried and acquitted of "mercy killing" of woman cancer patient.

Acclaimed "the best reported war in history," the United Nations action in Korea recruited at least 320 reporters and photographers at the front, while 60 others covered the Pentagon in Washington, D.C. As newsmen worked close to action, at least 32 were killed, wounded, missing, captured or lost in plane accidents. Confusion over censorship in the early weeks led to a voluntary system like that of World War II. Slow communication over military radio via Tokyo caused complaint, but use of a press wireless mobile transmitter proved unfeasible. The intensive war coverage included a notable array of human interest stories.

Newspaper income reached an all-time high in 1950 but, for the fourth year, labour and paper costs rose faster, reducing profits. Circulation, after hitting a record peak of 52,845,551 daily copies in 1949, continued to rise, with afternoon papers leading. More than 1,500 dailies reached a five-cent copy price. After attaining an all-time high in 1949, advertising lineage continued to gain during every month in 1950, with August leading with a 9.4% increase. Exceeding the 1949 total of \$445,015,000 in national advertising, newspapers led all other media. Because of higher costs, advertising rates were increased generally.

Paper supply caused much concern as production threatened to fall behind increased consumption. Paper needs for the year exceeded 5,900,000 tons—an increase of 6.5% over 1949 and an all-time record. After falling behind in early months, Canadian mills later speeded output to 103% of rated capacity. The price of paper, which had averaged \$101 a ton base rate since World War II, rose in the fall; a threatened rise of \$10 was later reduced to \$6. The new southern pine mills at Coosa River, Ala., and Lufkin, Tex., produced 220,000 tons. Except for 950,000 tons from U.S. mills and 175,000 tons from Europe, all U.S. newsprint came from Canada.

Sale of the 116-year-old *New York Sun* to the Scripps-Howard *World-Telegram* on Jan. 3 led a series of at least 16 mergers and suspensions blamed on rising costs. Among them were: *Oakland Post-Enquirer* (Calif.) and *San Diego Journal* (Calif.) suspended; *Birmingham Post* and *Age-Herald* (Ala.) merged; *Ft. Wayne News-Sentinel* and *Journal-Gazette* (Ind.) merged plant operations; *Atlanta Journal* and *Constitution* (Ga.) combined operations; *Bloomington Herald* and *World-Telephone* (Ind.) merged. The *Portland Oregonian* (Ore.) was sold on Dec. 11 for \$5,250,000 to Samuel I. Newhouse, owner of ten eastern newspapers. New plants were opened by the *Washington Post* (D.C.), *Denver Post*, *New York Mirror* Brooklyn plant, *Hartford Courant* (Conn.), *Wilkes-Barre Record* and *Times-Leader-News* (Pa.), and WGN radio station of the *Chicago Tribune*.

The most notable newspaper strike was the 11-week suspension of the *New York World-Telegram and Sun* from June 12 to Aug. 28 because of American Newspaper guild picket lines. A strike of mailing employees shut all Pittsburgh, Pa., dailies for 47 days

from Oct. 2 to Nov. 17. Among some 47 daily newspapers that had resorted to photoengraving during printers' strikes were: *Meriden Record and Journal* (Conn.), *Lorain Journal* (O.), *Monroe World and News-Star* (La.), *Texarkana Gazette* (Ark.) and *Waukesha Freeman* (Wis.). About 250 United Press tele-typers struck in May. After celebrating its centennial on May 10, honouring Horace Greeley as its first president, the International Typographical union on July 15 re-elected Woodruff Randolph to his fourth two-year term as president. Most new union contracts raised wage scales, including a \$5 a week increase in New York city and \$4 in Philadelphia, Pa.

The leading newspaper lawsuit of 1950 was the prosecution of the *Lorain Journal* (O.) by the federal department of justice for violation of the Sherman Antitrust act in refusing advertisements of merchants who used a competing radio station. The trial resulted in October in an injunction forbidding rejection of advertising—the first verdict of its kind. An antitrust suit was also brought against two New Orleans dailies for a combination advertising rate. A local newspaper licensing tax was successfully contested by the *Turlock Journal* (Calif.). Detroit tried a "nuisance rule" to bar the Communist *Daily Worker* from newsstands. The U.S. supreme court overruled the Baltimore "gag rule" on criminal news. The Langer bill to ban liquor advertising died in the senate committee. A Los Angeles judge found that the Fair Labor Standards act minimum wage rules applied to weekly newspapers. A proposed international code of ethics for the press of the world was again debated in a United Nations subcommittee without agreement.

Convening in Madison, Wis., the three national groups of journalism teachers merged into one Association for Education in Journalism. A "content study" of the Associated Press report, made by the A.P. Managing Editors association, criticized "wordiness" but denied a charge of "bias." Research in mechanics, conducted by a laboratory endowed by the American Newspaper Publishers association, developed refinements in offset printing, stereotyping and photoengraving. The Pulitzer prizes in journalism were opened to weekly newspapers for the first time. The 11th annual Newspaper week in October enlisted newspapers to fight soviet propaganda. The American Newspaper guild considered a plan of launching daily newspapers. More than 200 editors from many countries gathered in New York city on Oct. 9 for an inter-American press conference, the first since 1926.

**U.S. Magazines.**—Magazines, reaching a record total of 7,000 titles, faced business problems like those of newspapers. Advertising increased as much as 14% to a record peak of \$475,000,000, and rates were generally raised. Paper grew scarcer, and prices rose 5% to 25%. The cost per page was above any year except 1949, with paper taking 25%. Gross income was the highest on record, but profits were smaller. Tabulations showed 1,747 na-

tional advertisers spending more than \$25,000 each in magazines early in 1950, as compared with 666 in 1939; during the same years magazine circulation rose 30%. At least 1,000 new magazines appeared late in the year, many of them picture books for wartime newsstand sale. Men's magazines—*Argosy*, *True*, *Esquire*—were decidedly up; women's magazines were slightly up; romance and movie magazines were down. More pocket-size magazines appeared, and teen-age books boomed. Negro magazines—*Ebony*, *Negro Digest*, *Tan Confessions*—greatly increased. Comics came back strongly after attack and promoted a "better schools" campaign. Sunday magazines of 122 newspapers passed a weekly circulation of 55,000,000. *Harper's* celebrated its centennial in October. *Fortune* started a pocket-size digest. *Quick* passed the 1,000,000 mark and led newsstand sales, but *Flair*, also a Cowles Magazines, Inc. venture, was suspended after 111 issues. *Liberty* was sold and revamped. (G. M. Hy.)

**Canada.**—Much interest centred on the activities of the American Newspaper guild (C.I.O. affiliate) in Canada during 1950. In January it was announced that 63% of the employees of the Canadian Press news service (owned co-operatively by 21 of Canada's 100 dailies) had signed up for guild membership and had applied to Ottawa for certification. The application was opposed by the Canadian Press, and the Canada Labour Relations board ruled that the provisions of the Industrial Relations and Disputes Investigations act applied.

Other newspaper developments included the following: the Roy Thomson chain of dailies expanded to 13 with the purchase of the *Port Arthur News-Chronicle*; price increases in newsprint were reflected by rises in the subscription rates of the *Vancouver Sun*, and the *Toronto Star Weekly* broke with a long-standing Canadian newspaper tradition by charging 10 cents per copy in Ontario and Quebec and 15 cents in all other parts of Canada; the *Midland Free Press-Herald* was voted the best Canadian weekly newspaper of 1950.

Number of Daily Newspapers in the World, 1949-50

## CONTEST WINNERS

Prize-winning photographs chosen at the eighth annual international "News Pictures of the Year" competition, sponsored jointly by the *Britannica Book of the Year* and the University of Missouri School of Journalism. With more than 90 additional "best-of-show" prints from the competition, these pictures were published in book form by Louis Mariano, Chicago. Filmstrips of the outstanding competition pictures were presented by the sponsors of the competition to major colleges and schools of journalism as study material for classes in photo-journalism

# "NEWS PICTURES OF THE YEAR"

Above: "Drummer Boy," by Alfred Eisenstaedt of *Life* magazine, part of a photo sequence taken at the Army-Michigan football game and included in his first-prize PORTFOLIO. Eisenstaedt was chosen "Photographer of the Year," making a *Life* photographer winner of the competition's highest award for the second consecutive year

Right: Dean D. Conger of the *Denver Post* won first prize in the SPORTS category with this picture of a collegiate rodeo rider taking a spill

Above: Tied for first place in the NEWS category was, left: "Big Ditch" by Don Ultang of the *Des Moines Register and Tribune*. Flying his own plane, Ultang photographed this Missouri valley farm with the dike plowed around it to protect barn and crops from floodwaters. Sharing first honours was, right: "Abdication Riots," taken by Mark Kauffman of *Life* magazine, showing Belgian police breaking up an anti-Leopold demonstration in Brussels

Below: "Welsh Coal Miners," by W. Eugene Smith of *Life* magazine, was awarded first prize in the FEATURE category

The 350,000-circulation *National Home Monthly* (founded 1936) went from tabloid to digest size and then suspended publication; the pocket-size Canadian-printed *Magazine Digest* was bought by the St. John Publishing company, New York city. (C. Cy.)

**Great Britain.**—At the beginning of 1950 newspapers were considered to have reached, if not passed, the peak of daily sales. As the year advanced, the newsprint position steadily worsened, until by December the dailies were back on a war-time tonnage ration and Great Britain had the smallest newspapers, in size, of any of the free countries of the world.

The equalized price of newsprint which at the start of the year was £33 5s. a ton had reached £41 a ton by October, chiefly because of the increased cost of Scandinavian pulp. The high price of newsprint became a major factor in production costs. Several newspapers advanced their advertising rates and it was feared that a movement to increase selling prices of newspapers might follow any further rise in newsprint prices.

The control of paper for periodicals and magazines which had been substantially relaxed during 1949 was entirely lifted from the beginning of March 1950. The restrictions on new publications were withdrawn at the same time. In effect, the periodicals were free to use as much paper as they could obtain from the limited supplies available, but these supplies fell a good deal short of needs. With the aid of intensive advertising campaigns the circulations of many popular periodicals soared, particularly those devoted to women's interests.

Two new publications for children, *Eagle*, a strip cartoon paper, and *School Friend*, for schoolgirls, both quickly attained huge sales. Casualties among periodicals included the *Strand Magazine*, a pioneer in monthly magazines, which suspended publication because of rising costs and problems of production.

**Commonwealth and Europe.**—Freedom of the press was the principal theme of the seventh Imperial Press conference which met in Canada during June with Col. J. J. Astor as president. The conference recommended the appointment of a standing telecommunications committee to collect up-to-date information on technical and scientific research which might lead to faster and cheaper transmission of news; it was also proposed that the committee should press for publication and distribution of newspapers by electronic or other means and urge the authorities to provide frequencies for such services. The colonial press laws also came up for discussion and it was recommended that the Empire Press union should offer its services to the colonial office whenever a question arose of alleged irresponsible publication.

In South Africa the Union government appointed a commission of inquiry into the press of South Africa under the chairmanship of Justice J. W. van Zyl. In Cyprus the editor and the printer of the weekly paper *Ephemeris* were sentenced to imprisonment and the newspaper was suspended for two years for publishing an article with intent to bring the government of the colony into hatred and contempt. A new press law gave the government of Singapore power to suspend publication of newspapers publishing matter "calculated to foment opposition to the prosecution to a successful issue of any warlike operation" on which British forces were engaged or committed by reason of a resolution of

ALFRED EISENSTAEDT of *Life* magazine, "Photographer of the Year" for 1950

the Security council of the United Nations.

In western Germany the British transferred control of *Die Welt* to German hands. *Die Welt* first appeared in 1946 and at one time had a circulation of nearly 1,000,000. At the time of transfer its circulation was 350,000. During August several of the Communist newspapers, including all seven in the British zone, were banned by the Allied High commission and their printing works closed for three months.

In Moscow R. Dalglish, assistant editor of the foreign office newspaper in Moscow, *British Ally*, resigned because of the alleged antisoviet attitude at the embassy. *British Ally*, which had been subjected by the soviet authorities to deliberate restrictions on its circulation, was forced to close down later in the year.

Cyril Ray became staff correspondent in Moscow for the *Sunday Times*. Reuters' representative in Poland, the sole remaining British correspondent there, was expelled because of "un-objective" reporting. The only two British correspondents remaining in Prague were the representatives of Reuters and the *Daily Worker*. The British sold the Vienna evening newspaper *Weltpresse* to the Austrian Socialist Publishing company which had been responsible for its printing and distribution under British control.

From Italy came the news of the appearance in Rome of a new daily newspaper with neofascist sympathies. It took the same name, *Popolo di Roma*, as one of Mussolini's newspapers. (See also ADVERTISING.) (D. HN.)

The University of Missouri school of journalism, in its 21st annual presentation, gave awards for distinguished service in journalism to the following during the university's journalism week, May 2-6, 1950: The *Nieuwe Rotterdamse Courant*; the *St. Louis Star-Times*; Oveta Culp Hobby, executive vice-president of the *Houston Post* (Tex.); Joe Alex Morris, reporter and news bureau manager; Arthur Hays Sulzberger, publisher of the *New York Times*; and James Todd, publisher of the *Moberly Monitor-Index* (Mo.).

FILMS OF 1950.—*Newspaper Story* (Encyclopædia Britannica Films Inc.); *Police Reporter* (Ohio State University, Bureau of Educational Research).

**New York.** New York, one of the original 13 states, has been known since 1784 as the "Empire state." It covers an area of 49,576 sq.mi., of which 1,647 are water. According to the 1950 U.S. census, the state retained its position as the most populous, with a population of 14,830,192, a 10% increase over that of 1940. The principal cities and their 1950 populations (preliminary census figures) were: New York 7,835,099; Buffalo 577,393; Rochester 331,252; Syracuse 220,067; Yonkers 152,533; Albany (State capital) 134,382; Utica 101,479; Schenectady 92,070; Niagara Falls 90,875; Binghamton 81,132.

**History.**—Of the 1,172 bills passed by the 1950 legislature, 825 received the approval of Gov. Thomas E. Dewey and became law. Among the most important measures enacted into law were the bill creating the New York State Thruway authority and the bill which resulted in the transfer of residential rent control from federal to state jurisdiction.

The Thruway authority was empowered to construct and operate a multiple-lane highway connecting New York city and Buffalo, with branches extending to New England, the largest physical development ever undertaken by the state. It was planned to finance the project by the sale of Thruway authority bonds to be repaid by licence fees charged for use of the highway.

In accordance with the rent control bill signed by the governor on March 29, control of residential rents in New York state was transferred to state authority. Under the new law, residential rents were frozen at levels actually paid on March 1, 1950. Increases for extra services might be permitted by the adminis-

trator after July 1, 1950. Increases for demonstrated out-of-pocket losses or gross inequities might be permitted after Dec. 1, 1950. In areas that had been decontrolled under the federal law, the administrator was empowered to impose reconrol if rents should become too burdensome to the community. The law exempted public housing, transient hotels (except as to permanent guests) and tourist homes. It did not apply to new housing completed after Feb. 1, 1947, and new housing created through remodelling after May 1, 1950.

Another measure, providing for the creation of a civil defense commission in the executive department, established a state body responsible for civil defense in the event of war.

Thomas E. Dewey was re-elected for a third term as governor on Nov. 7, 1950. Other state officials elected at that time were: Lieutenant Governor Frank C. Moore, Comptroller J. Raymond McGovern and Attorney General Nathaniel L. Goldstein.

**Education.**—At the close of the school year, June 1949, there were 5,159 elementary public schools with 1,316,940 school children, 137,833 pupils in 162 junior high schools and 831 public high schools with 489,903 students. There were also 1,110 private and parochial schools with 380,000 pupils in the elementary grades, and 83,104 students in 294 secondary schools. Enrollment at the 114 universities, colleges and institutions of higher learning in 1949 totalled 261,045, excluding 171,737 summer and extension students. Special state schools included 7 Indian schools; 6 agricultural and technical institutes; 135 schools for nursing, 3 institutes for the blind; and 6 institutes for the deaf.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The 1,186,000 persons given assistance, care or service at public expense in 1949 represented an increase of 126,000 persons over 1948. During 1949 expenditures for public assistance totalled \$376,745,216. Of this sum the federal government's share was \$66,699,611, the state's share \$146,666,829 and the local government's share \$163,378,776. An additional 2,407,000 persons were given assistance or care in New York state as private charges.

Between June 1, 1949, and Jan. 1950, the state paid approximately 942,897 unemployment insurance claims totalling \$249,621,789. At the end of 1949 the New York State Unemployment Insurance Trust fund had a balance on hand of \$877,033,127. The state department of correction administers 16 institutions. In 1949 the average yearly population of the state's correctional institutions was 17,256.

The state has seven maximum security prisons, a medium security prison and a prison for women; two reformatories for males and one for females; two institutions for male defective delinquents and one for females; and two hospitals for the criminal insane. During 1949 the average cost for the care and maintenance of institutional inmates was \$137.72 per person.

**Communications.**—New York state had 86,552 mi. of roads on Jan. 1, 1950, of which 14,300 were state highways (exclusive of through ways, parkways, city and village streets) and 72,252 mi. of county and town roads. Hardsurfaced roads totalled 66,013 mi. The 41 railroads in the state operated 7,639 mi. of tracks. The state maintains a system of more than 500 mi. of canals. Including the rivers and lakes which are part of the New York State Barge Canal system, the total length is more than 800 mi. New York state leads the nation in air passenger traffic, domestic air cargo and value of air-borne imports and exports. During 1949 the three major commercial airports of the New York metropolitan area (La Guardia, Newark and New York International) handled a combined volume of 4,341,000 passengers.

The state department of commerce reported 62 seaplane bases and 259 airports operating in the state during the year, including 49 municipal, 200 privately owned, 7 military, 2 CAA intermediate fields and 1 glider field. There were 4,472 civil aircraft and 26,040 licensed pilots registered as of Jan. 1, 1950.

**Banking and Finance.**—At the end of 1949 there were 773 banks with total resources of \$46,800,670.576.90 and deposits of \$41,919,595.235.87 operating in the state. In addition there were 237 savings and loan associations with \$1,274,428,000 of total assets and \$1,130,000,000 due private shareholders.

For the fiscal year ending March 31, 1950, the financial status of the state was as follows: general revenue \$857,354,503; expenditures \$886,438,840; total operating deficit \$9,085,337; state debt \$681,013,685. Capital Construction Fund (formerly Postwar Construction Fund) reserve for postwar construction and reconstruction, appropriations in force April 1, 1950, \$432,094,905.43. About 58% of general fund expenditures were for state aid to local governmental units. This totalled \$513,000,000, an increase of about \$100,000,000 over the previous fiscal year and largely accounted for by a \$67,000,000 increase in state aid to education.

Table I.—Leading Agricultural Products of New York

Crop	Production 1950	Production 1949	Average 1939-48
Corn, bu. . . . .	30,340,000	29,610,000	24,241,000

Apples, bu. . . . .	17,625,000	20,090,000	14,399,000
Peaches, bu. . . . .	1,023,000	1,428,000	1,330,000
Pears, bu. . . . .	1,066,000	1,195,000	841,000
Grapes, tons . . . . .	74,100	48,400	54,990

**Agriculture.**—Gross sales of agricultural products totaled \$841,561,000 in 1949. In addition, government payments to farmers were \$4,475,000 compared with payments of \$5,159,000 in 1948. The sale of milk and cream in 1949 amounted to \$348,032,000. The total harvested acreage in that year, excluding orchards and vineyards, was 6,396,000 ac. The value of livestock and poultry on farms, as of Jan. 1, 1950, was \$440,168,000. This included 2,226,000 head of cattle, 17,759,000 chickens, 145,000 horses, 2,000 mules, 212,000 hogs and 178,000 sheep. The number of turkeys raised in the state in 1950 was 890,000.

**Manufacturing and Industry.**—Approximately 67% of the country's total output of women's dresses, coats and blouses and 94% of women's furs are produced in New York state, as are 42% of men's and boys' tailored clothes. The state also leads all others in printing and publishing and the rug and carpet industry, and produces 66% of the photographic goods manufactured in the nation. In 1947 the state's manufacturing firms added \$9,666,588,000 in value to the raw and semifinished material they purchased for processing, according to the U.S. census of manufactures.

Table II.—Value Added by Manufacture and Number of Employees in Ten Leading Manufacturing Industries, New York State, 1947

Industry	Value added, (in millions)	Number employed
Apparel and related products . . . . .	\$2,009	382,486
Printing and publishing industries . . . . .	1,128	166,492
Food and kindred products . . . . .	977	135,296
Primary metal industries and fabricated metal products . . . . .	830	165,858
Machinery (except electrical) . . . . .	679	137,556
Chemicals and allied products . . . . .	596	69,066
Electrical machinery . . . . .	459	101,861
Textile mill products . . . . .	429	91,637
Transportation equipment . . . . .	408	89,803
Paper and allied products . . . . .	374	65,026

Source: U.S. bureau of the census.

In 1950 an all-time high total of 580,000 business firms in the state was reached. New incorporations in 1949 numbered 21,000. In 1949 there were 5,502,800 persons employed in the state exclusive of agricultural workers, proprietors, domestic workers and personnel of the armed forces. Average weekly factory earnings in 1949 were \$57.47. Construction in 1949 totalled \$1,536,614,000, about 34% more than in 1948. Retail sales in the state in 1949 were estimated at \$13,365,097,000.

**Mining.**—New York state in 1948 produced \$156,140,000 in mineral products. The amounts and values of minerals are given in Table III.

Table III.—Principal Mineral Products of New York

Mineral	Production	Value
Portland cement . . . . .	12,299,226 bbl.	\$26,071,417
Gypsum, crude . . . . .	1,228,358 short tons	3,294,973
Iron ore . . . . .		
crude . . . . .	7,865,937 long tons	
concentrates . . . . .	2,932,442 long tons	24,384,648
Lead . . . . .	1,231 short tons	440,698
Limestone . . . . .	11,140,000 short tons	14,367,974
Natural gas . . . . .	4,705,000 million cu. ft.	1,040,000
Petroleum . . . . .	4,621,000 bbl.	22,975,000
Salt . . . . .	3,065,831 short tons	13,056,542
Sand and gravel . . . . .	16,369,303 short tons	13,382,370

Talc . . . . .	119,716 short tons	2,671,935
Zinc . . . . .	34,566 short tons	9,194,556

**New York City.** The population of the city of New York, according to the 1950 census (preliminary figures), was 7,835,099. On Nov. 7, 1950, Vincent R. Impellitteri was elected the city's 101st mayor, to fill out the remaining three years of the unexpired term of William O'Dwyer, who resigned as chief executive on Sept. 1, 1950.

In the last six months of 1950 the city initiated preparations to meet the dangers of atomic war. Arthur W. Wallander, a former police commissioner, was appointed director of civil defense. It was expected that the civil defense organization, when it reached full strength, would command more than 400,000 trained municipal employees and volunteers.

Completion of two new hospitals in 1950 and the return of another from the federal government provided 900 additional hospital beds. The two new hospitals were the first built under the city's \$192,000,000 hospital construction program. They were the Francis Delafield Hospital for Cancer, which was affiliated with the Columbia-Presbyterian Medical centre, and the James Ewing hospital, also devoted to cancer patients and affiliated with the Memorial Cancer centre and the Sloan-Kettering Research institute.

The public housing construction program maintained a high level of achievement. During the first ten months of the year, 11,343 apartments were completed.

During the first six months of 1950, 11 school projects were completed, and before the end of the year the number was expected to reach 16.

NEW YORK CITY SKYLINE as it looked in 1950 with the addition of the United Nations secretariat building (right)

The Brooklyn Battery tunnel was opened in May 1950. It was the longest tunnel in the United States, constructed at a cost of \$80,000,000. A total of 7,841,023 cars passed through it in the first five months of operation.

The department of commerce of the city of New York, in a report issued Jan. 1, 1951, disclosed that the city had 235,000 business establishments, including 41,400 manufacturers. These concerns employed more than 3,000,000 persons and had a total annual pay roll of approximately \$11,000,000,000. The average annual production was valued at more than \$13,000,000,000. There were approximately 17,000 firms engaged in manufacturing wearing apparel, employing 370,000 persons and with a dollar volume of production of more than \$3,500,000,000. The city's consumer market was the largest in the world with an annual retail sales volume of about \$10,500,000,000.

About 4,500 New York firms are engaged in foreign trade. The annual dollar volume of exports exceeds \$5,000,000,000 while imports total \$3,000,000,000. The total annual water-borne commerce handled in the port of New York exceeds 125,000,000 tons. (See also MUNICIPAL GOVERNMENT.) (F. L. Do.)

**New Zealand.** A self-governing member of the Commonwealth of Nations, New Zealand consists of two large and several small islands in the South Pacific. Area: dominion proper, 103,416 sq.mi.; other islands, 523 sq.mi. Pop. dominion proper (1949 est.): 1,881,000, including c. 115,000 Maoris. Cook and other Pacific islands (pop., 1949 est.): 20,000. Western Samoa, a trusteeship, has an area of 1,133 sq.mi.; pop. (1949 est.): 73,000. Language: English. Religion: mainly Christian. Chief cities (April 1949 est.): Wellington (cap., 186,000); Auckland (289,000); Christchurch (164,000); Dunedin (88,800); Palmerston North (30,100). Governor general: Lieut. Gen. Sir Bernard Cyril Freyberg; prime minister: Sidney George Holland.

**History.**—The new administration began the year 1950 with a thorough inquiry into the finances of the country. While all the economic controls which had been instituted by the previous government as a result of its policy or because of wartime measures could not immediately be abolished, many controls were swept aside; in particular, land sales control on house

property and many price controls. The measure which caused the greatest discussion was the removal or reduction for the year of about £7,000,000 of government subsidies. This affected such items as butter, tea, bread, flour, eggs, milk and wool and the railways. To offset the rise in prices, cost-of-living bonuses were immediately granted.

Arrangements were furthered to establish compulsory military training for 18-year-olds after the national referendum of 1949. New Zealand joined Great Britain as the only country in the commonwealth to have a compulsory military training scheme.

New Zealand offered full co-operation to the Colombo plan for commonwealth aid to southeast Asia. The U.N. Trusteeship council accepted the New Zealand report on Western Samoa. The government called again for an early decision on the peace treaty with Japan and stressed the need for definite assurances that a military regime would not be allowed to dominate the Pacific. When the United Nations was challenged by Communist forces in Korea immediate aid was offered. Naval units and an artillery force made up entirely of volunteers were made available.

In the economic field the swiftly rising level of prices for raw wool created an element of boom prosperity. Wool reached all-time record prices. This factor, with the removal of subsidies, was reflected in rising prices. Adjustments to social security benefits, wages and salaries followed. With the market for raw materials generally buoyant throughout the world and with the improvement of the sterling area's dollar pool, New Zealand also found its dollar position considerably eased. To offset boom conditions and the inflationary effect of wool prices, one-third of the proceeds from the sale of wool was frozen in growers' bank accounts. This action, to be reviewed after a year, froze about £50,000,000 of the expected £150,000,000 wool receipts. This record sum was £90,000,000 more than in 1949.

The abolishing of import licences for many articles implemented the new free enterprise policy of the government and bids were also called for the purchase by private enterprise of the national airways. The sale of state houses, the restoration of capital punishment, the raising of a new internal loan of £20,000,000, the provision of secret ballots for unions on the issue of compulsory unionism and suspensory loans for home builders were features of the government's policy. Others were the removal of the power of direction of the reserve bank from the minister of finance to parliament, and the handing back of workers' compensation to private insurance companies. A notable constitutional feature was the abolition of the legislative council, New Zealand thus becoming the first member of the commonwealth to have a unicameral legislature.

A split was seen in organized trade unionism. The more militant unions, led by the waterside workers, broke away from the Federation of Labour to form the Transport Workers' federation. Disruption of water front labour by disputes continued to harass overseas shipping, notably in Auckland, and a royal commission to inquire into the water front industry was set up. (A. T. CL.)

**Education.**—(Dec. 1948) Primary schools 1,932, pupils 233,008, teachers 7,251; Maori village schools 160, pupils 13,254, teachers 399; secondary schools 47, pupils 21,373, teachers 1,036; district high schools 100, pupils 6,665, teachers 376; Maori district high schools 7, pupils 200, teachers 13; technical schools 28, pupils 12,136, teachers 755; private secondary schools 83, pupils 9,495, teachers 505; teachers' training colleges 5, students 1,847; agricultural colleges 2, students 1,461; University of New Zealand (four colleges), students 11,380.

**Finance and Banking.**—Budget (consolidated fund and social security fund, excluding war expenses account): (1949–50 actual) revenue £N.Z.168,800,000, expenditure £N.Z.167,100,000; (1950–51 est.) revenue £N.Z.181,800,000, expenditure £N.Z.180,200,000. Gross national debt (March 1950): £N.Z.670,000,000. Currency circulation (Sept. 1950): £N.Z.48,400,000. Gold and foreign exchange (Sept. 1950): U.S. \$153,400,000. Monetary unit: New Zealand pound with an exchange rate of £N.Z.0.362 to U.S. \$1.

**Foreign Trade.**—(1949) Imports £N.Z.119,800,000; exports £N.Z.146,-

\$800,000. Main sources of imports (nine months of 1949): U.K. 52%; U.S. 11%; Australia 11%. Main destinations of exports: U.K. 72%; France 6%; U.S. 3%.

**Transport and Communications.**—Railways (1949): 3,528 mi.; passenger journeys 26,000,000; freight net ton-miles 1,028,000,000; freight tons carried 10,000,000. Roads, main (1949): 12,708 mi., of which arterial roads 5,234 mi. Licensed motor vehicles (Dec. 1949): cars 230,664; commercial 75,938. Shipping (July 1949): number of merchant vessels over 100 gross tons 164, total tonnage 190,910. Air transport (1949): passenger-miles 78,000,000; cargo net ton-miles 1,650,000. Telephones (March 1949): subscribers 238,292. Radio receiving set licences (Sept. 1949) 442,506.

**Agriculture.**—Main crops (metric tons, 1949-50): wheat 128,000; barley 54,000; oats 59,000; potatoes 120,000; dry peas (1948-49) 33,000. Livestock: cattle (Jan. 1949) 4,723,000; sheep (April 1949) 32,845,000; pigs (Jan. 1949) 545,000; horses (Jan. 1949) 209,000. Meat production (1949-50) 524,000 metric tons. Dairy production (metric tons): factory butter (1949) 168,000; factory cheese (1949) 100,800; milk (1949-50) 4,535,000. Wool production, greasy basis (1949-50): 167,000 metric tons. Fisheries, total catch (1946): 32,047 metric tons.

**Industry.**—Industrial establishments (1948) 35,579; persons employed 438,480. Fuel and power (1949): coal 948,000 metric tons; lignite 1,908,000 metric tons; manufactured gas 157,000,000 cu.m.; electricity 2,565,000,000 kw.hr. Raw materials (metric tons, 1949): superphosphates 624,000; cement 253,000.

**Nicaragua.** A republic in Central America, Nicaragua is situated between Honduras on the north and Costa Rica on the south. Area: 57,145 sq.mi., of which 3,475 sq.mi. are water. Pop. (prelim. tabulation, 1950 census), 1,503,189, of whom 688,373 were rural residents. Capital: Managua (1948 pop. est.: 146,819). Other urban centres are Chinandega (26,112), Granada (39,643), Jinotega (41,065), León (53,277), Masaya (38,761) and Matagalpa (53,118). Language: Spanish; religion: predominantly Roman Catholic. Presidents in 1950: Víctor M. Román y Reyes and (from May) Gen. Anastasio Somoza.

**History.**—Political developments during 1950 centred on the presidential election and attempts at a reconciliation of party differences.

A mutual agreement between the National Liberal (administration) party and the "genuine" Conservative party was reached at Managua on March 29, when Gen. Anastasio Somoza, the minister of war, and Gen. Emiliano Chamorro, chief of the Conservative party, agreed that there would be no foreign supervision of the national elections, the Conservatives would participate in the elections and the defeated party would be guaranteed one-third of the seats in the new constituent assembly. The Independent Liberal party and the Civil Conservatives remained aloof from the compromise.

A new crisis developed when Pres. Víctor M. Román y Reyes, who had left the country in March for treatment in a U.S. hospital, died on May 6. General Somoza, who had been previously named as the presidential candidate of the National Liberal party, was designated by the congress on May 7 as acting president.

Opposing General Somoza in the presidential campaign was Emilio Chamorro Benard, representing the "genuine" Conservative party. The elections transpired peacefully on May 21, and on May 28 the national election council ruled that General Somoza had been elected over Chamorro Benard, 153,297 to 49,401.

The national constituent assembly was installed on June 4 with a National Liberal majority, and on Oct. 18 approved a new constitution. The main changes effected were provisions for women's suffrage, minority representation in congress, social security legislation and liberty of commerce.

In July the minister of foreign affairs informed the United Nations that Nicaragua would support the U.N. forces engaged in the Korean crisis. The aid offered included 5,000 volunteer troops, foodstuffs and raw materials. The failure of the U.S. senate to provide necessary funds for the building of the Managua-El Rama highway, as required by the 1939 revision of the Bryan-Chamorro treaty, caused a slight strain in the rela-

tions between Nicaragua and the United States during the latter part of the year.

**Education.**—During the 1948-49 school year there were 1,302 primary schools with 2,918 teachers and 89,991 students; 78 secondary schools with 556 teachers and 10,891 students; and two universities with 620 students. For the same year the national budget provided 7,764,390 córdobas for public education.

**Finance.**—The monetary unit is the córdoba, officially maintained at 20 cents U.S. The 1949-50 national budget provided for expenditures of 54,303,730.16 córdobas, a 14% reduction from the previous year. As of Dec. 31, 1949, the foreign debt amounted to approximately \$4,300,000; the internal debt, \$8,860,000. At the end of 1948 there were six banks with capital and reserves amounting to 9,963,000 córdobas and current deposits of 42,534,490.53 córdobas. Gold and foreign exchange holdings totalled \$366,499.84; bills in circulation, 50,601,000 córdobas.

**Trade and Resources.**—Exports during 1949 were valued at approximately \$23,700,000 (\$26,682,000 in 1948); imports, \$21,300,000 (\$24,134,000 in 1948). The U.S. supplied 85.5% of the imports and took 43.8% of the exports in 1948. The leading export commodity is coffee (346,136 bags of 132 lb. from the 1949-50 crop, valued at approximately \$14,000,000). Other exports (with 1948 volumes) include gold (182,964 troy ounces), bananas (678,598 stems) and sesame seed (26,565,633 lb.).

**Communications.**—In 1949 railroads measured 236.2 mi.; surfaced highways, 417.5 mi.; all-weather dirt roads 79.4 mi.; telegraph lines 3,183.8 mi.; and telephone lines (1946) 4,748 mi. There were 2,000 telephones, 26 radio broadcasting stations and about 8,000 receiving sets. On Jan. 1, 1949, there were 1,443 automobiles, 672 trucks and 151 buses registered in the country. As of Dec. 31, 1949, there were four ships totalling 8,000 tons in the national merchant marine.

\*Includes gross weight (not nickel content) of ore, matte, oxide and alloys.

**Canada.**—Production declined from 131,740 tons in 1948 to 128,328 tons in 1949 and 79,059 tons in the first eight months of 1950. (G. A. Ro.)

**Niger:** see FRENCH UNION; FRENCH WEST AFRICA.

**Nigeria:** see BRITISH WEST AFRICA.

**NLRB:** see NATIONAL LABOR RELATIONS BOARD.

**Nobel Prizes.** The Nobel prizes, for literature, physics, chemistry, medicine and peace, first awarded in 1901, were established by the Swedish industrialist, Alfred Bernhard Nobel (1833-1896). Each award consists of a gold medal and a sum of money which fluctuates with the income from the fund but was reported in 1950 to be about \$31,700. Bertrand Russell, British writer, philosopher and mathematician, received the 1950 literature prize. William Faulkner, Amer-

ican novelist, received the literature prize held over from 1949, at which time no candidate was agreed upon. The award for physics went to a British nuclear scientist, Cecil Frank Powell, for his development of photographic methods for studying nuclear processes and his discoveries concerning the meson, an elementary cosmic ray particle. The prize in chemistry was divided between Otto Diels and his former pupil, Kurt Alder, German organic chemists, for their discovery and development of diene synthesis, which enables scientists to study the structure of organic matter. The prize in medicine was awarded jointly to Philip S. Hench and Edward C. Kendall of the Mayo clinic, Rochester, Minn., and Tadeusz Reichstein of Basle, Switz., for their work with cortisone and other adrenal hormones. The peace prize was awarded to Ralph J. Bunche, U.S.A., director of the United Nations trusteeship division, for his work as United Nations mediator between Israel and the Arab states. (R. E. Bs.)

**Norfolk Island:** see COMMONWEALTH OF NATIONS.

**North Atlantic Community.** The North Atlantic community consists of the nations which concluded the North Atlantic treaty in Washington, D.C., in April 1949: Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and the United States. These nations constitute a cultural, geographical and strategic unit which has achieved a measure of political and economic organization through the Organization for European Economic Cooperation (O.E.E.C.), the Council of Europe<sup>1</sup>, and the North Atlantic treaty, as well as through membership and close co-operation in the United Nations.

The North Atlantic treaty grew out of the Brussels and Rio pacts of 1948 and 1947, and operates as a regional security arrangement of the United Nations under the provisions of article 51 of the U.N. charter. It is a mutual aid pact binding for ten years, and thereafter subject to renewal. The signatory powers agree, in the words of the treaty, "by means of continuous and effective self-help and mutual aid [to] maintain and develop their individual and collective capacity to resist armed attack." In the event of armed attack against any member, all members are pledged to assist the victim by all necessary measures, including the use of military force. To implement the treaty, the North Atlantic Treaty organization was established. It consists of the North Atlantic council, composed of the foreign ministers of participating nations; a defense committee, made up of the respective ministers of defense; the military committee of the respective chiefs of staff; a "Standing Group" on defense comprised of specially designated representatives of the United States, the United Kingdom and France; and five regional bodies for defense planning. Further to implement the treaty, a military defense assistance program, designed to make military equipment and materials available to Atlantic treaty countries in need of such aid, was introduced to the United States congress in July 1949 by the Harry S. Truman administration. The program, calling for approximately \$1,000,000,000 in aid, was passed by the congress and signed by the president on Oct. 6, 1949 (Mutual Defense Assistance act).

The congress stipulated that of the \$1,000,000,000 appropriation, \$900,000,000 should become available only after agreements had been concluded between the United States and countries availing themselves of the aid program, and after the president had approved the general defense plan prepared by the defense committee. During the latter part of 1949 the various agreements were negotiated, and by the beginning of 1950 the stage was set

for action under the Mutual Defense Assistance program.

On Jan. 27, 1950, President Truman signed the Mutual Defense Assistance agreements and approved the defense plan which previously had been approved on Jan. 6, 1950, by the North Atlantic council. Therefore, in accordance with the terms of the congressional appropriation, the full \$1,000,000,000 of allotted military aid was made available. The first shipment of military equipment was sent from the United States to France on March 13, and similar shipments continued throughout 1950. Specific information on the content of these shipments was not released, but it was known that B-29s were sent to Great Britain, and that in addition to aircraft furnished France and other countries, equipment provided included tanks, armoured cars, radar and signal devices, anti-tank guns, harbour defense guns, ammunition, submarines and light naval surface craft. It was anticipated that Marshall plan aid—including counterpart funds—would be made available for broad purposes of western European defense, including the development in France and elsewhere of industries which would produce military equipment or could, if necessary, be converted to war production.

Further steps were taken to strengthen the treaty organization at the fourth meeting of the North Atlantic council in May 1950. It was decided to appoint foreign ministers' deputies to a permanent North Atlantic council. The council of deputies, sitting in London, was to be particularly responsible for "the direction of common defense, the division of financial responsibilities, and the adaptation and development of the necessary forces." It was further agreed that, in order to avoid duplication of military and industrial effort, participating nations should "concentrate on the creation of balanced collective forces in the progressive build-up of the defense of the North Atlantic area." Accordingly, for example, Great Britain would concentrate its defense effort on certain weapons, such as jet tactical aircraft and naval vessels, while France would be more concerned with light artillery and infantry weapons. In this way an effective division of resources could be developed. In addition, the council indicated the need for examining military preparations and financial cost as one problem, emphasizing that as far as possible defense preparations should not impair economic and social progress.

After June 25, 1950, when the Communist invasion of South Korea intensified the need for speedy defense preparations, the program for North Atlantic defense entered a new phase demanding greater and more rapid defense efforts by the members of the North Atlantic community. Accordingly, President Truman, who on July 26 had given his approval to a \$1,000,000,000 grant comprising the Mutual Defense Assistance program appropriation for the fiscal year 1950-1951, recommended on Aug. 1 that an additional \$4,000,000,000 grant be allocated to the program. This recommendation accompanied proposals for increased United States defense expenditures over the next three years, and it was followed by a note from the United States to Atlantic treaty countries requesting information on their future defense plans. Within the week, British and French proposals for increased rearmament programs were announced. The British proposals called for a total defense expenditure of \$9,420,000,000 over the next three years, an increase of about 50% above the former rate of expenditure. The main portion of this increased defense budget was to be directed to "the production of defense equipment." The French plan called for a three-year expenditure of about \$5,500,000,000, an increase of about 30% over previous defense estimates, which would enable the French to continue their program for domestic manufacture of war materials, and, in addition, allow for the formation of 15 new, fully equipped divisions. These proposals, together with those made by the other Atlantic treaty nations, were forwarded to the council of deputies who

<sup>1</sup> The United States and Canada are, of course, not members of the Council of Europe. However, virtually all of the other signatories of the Atlantic pact are members, and the council has actively concerned itself with the organization of the defenses of western Europe.

announced on Aug. 11 that they were considering plans for integration of the increased defense efforts.

On Sept. 15, after the United States and Great Britain had agreed to increase their forces in Europe, the North Atlantic council met in New York to consider the deputies' report on the new integrated program for rearmament. In the first meetings of the North Atlantic council, agreement was reached on the proposals to create "in the shortest possible time an integrated military force adequate to defend Europe." This decision, perhaps the most important yet made by the council, meant, of course, a North Atlantic army stationed in Europe. There was some disagreement, however, on the composition of the proposed army. The United States plan for the inclusion of west German troops within the new force met stiff opposition from the French, who were supported by Norway and Belgium, and the council recessed in order to allow representatives to consult their home governments on the issue. On Sept. 26, the council reconvened, and although no final agreement was reached on German participation, it was announced that Germany would be allowed to "contribute" to the common defense. The final communiqué also stated that the North Atlantic army would be headed by a single supreme commander and an international general staff authorized to raise and train national contingents of troops. Strategic direction of the force was vested in the standing group of the military committee of the North Atlantic Treaty organization.

After the September meeting, the North Atlantic treaty nations worked out the practical implications of the momentous decisions made by the council. The committee of deputies began to study the contributions of financial credits and industrial production to be made by member countries. The military committee considered the structure of military command of the projected North Atlantic force, and the defense committee concerned itself with the problem of apportioning the various military responsibilities and forces. In October, French and United States officials reviewed the projected U.S. contribution to the implementation of the French rearmament program. The U.S. government agreed that the allotment to France of the anticipated Mutual Defense Assistance program appropriation of \$5,000,000,000 would be in excess of \$2,000,000,000. It also agreed to make immediately available to the French \$200,000,000 out of the \$1,000,000,000 Mutual Defense Assistance program appropriation previously approved by congress.

More definitive and extensive arrangements, however, were held up by the uncertainty regarding the role of the west German troops within the North Atlantic force. A step toward the resolution of this issue was taken when on Oct. 24 Premier René Pleven presented to the French national assembly a plan for the incorporation of German troops into a European army which, in its turn, would be made available to the North Atlantic forces. The Pleven plan, conceding the principle of German rearmament within the framework of European union, provided that "the contingents supplied by the participating countries would be incorporated within the European army in the smallest possible units." Under this arrangement, German troops would be merged with the troops of other nations on the company level; limitation of the size of German units, it was felt, would forestall the revival of a German military power capable of pursuing independent political objectives.

The Pleven plan was debated by the defense and military committees of the North Atlantic Treaty organization when they met in Washington, D.C., at the end of October. Apparently the Pleven proposal was rejected as militarily unfeasible in the immediate situation, but no alternative plan was announced. On Dec. 6, however, after long and tense negotiations and under the pressure of United Nations reverses in Korea, the French cabinet agreed to accept rearmament of German units of regi-

mental combat team strength within the North Atlantic force, but the possible formation of an integrated European army was left open for future decision. The German combat teams would be integrated into mixed divisions with not more than one German team in any one division.

The day after the decision of the French cabinet had been revealed, the council of deputies announced that it had reached agreement on a plan for the immediate formation of an integrated North Atlantic military force, to include west German troops. Despite this agreement, however, a good deal of uncertainty remained with respect to German participation in the defense of western Europe. As early as the September meeting of the North Atlantic council, the west Germans had indicated reluctance to rearm unless they were given full equality as a nation, which meant the termination of all occupation controls, and unless some guarantee of their territory was afforded. The strength of this German opposition to unconditional rearmament was revealed in November when the Social Democratic party, campaigning on its opposition to unconditional rearmament, made large electoral gains in Hesse, Württemberg-Baden and Bavaria. On Dec. 7, the French acceptance of the inclusion within the North Atlantic force of west German units of combat team strength was met by a statement from Chancellor Konrad Adenauer that the Germans could agree to rearmament only if they were allowed units of divisional strength.

The problem of German rearmament was still further complicated by the attitude of the Soviet Union. On Oct. 18, the soviet government warned the United States, Great Britain and France, in the most categorical terms, that it would "not tolerate" measures "aimed at reviving the German regular army in West Germany." Furthermore, on Dec. 16, the soviet foreign minister charged that the rearmament of western Germany would be a violation of the Franco-Soviet and British-Soviet treaties of alliance, and that France and Britain must bear "all responsibility for the situation which has arisen." Whether these two warnings were mere bluff or were solemn notice that German rearmament would be regarded by the U.S.S.R. as a possible *casus belli* was, of course, a matter of conjecture. But that these warnings could not be altogether ignored was made apparent by the grave concern they caused in France, and to a lesser extent in Great Britain, the Low Countries, and even the United States.

Nevertheless, on Dec. 18 and 19 the North Atlantic council, toward which the Russian warnings were obviously directed, met in Brussels, Belg., to consider the deputies' plan for an integrated North Atlantic force with German contingents. At the conclusion of its meetings, the council announced that it had "completed arrangements initiated in September . . . for the establishment of an integrated force under a centralized control and command." The council approved the appointment of Gen. Dwight D. Eisenhower as supreme commander. And, despite Russian warnings, the "Council reached unanimous agreement regarding the part which Germany *might* assume in the common defense." (Italics ours.) It was not quite clear to what degree this phraseology involved an element of caution. That there would be further delay was assured, for the council "invited the governments of France, the United Kingdom, and the United States to explore this matter with the Government of the German Federal Republic." In view of the announced attitude of Chancellor Adenauer, influenced by the stand of Kurt Schumacher, leader of the powerful Social Democratic opposition, negotiations with the Bonn government were unlikely to be expeditious. Hence, at the end of 1950, it appeared as if the effective defense of the North Atlantic community would depend principally upon the prompt mobilization of the military resources of Great Britain, France, Canada and the United States.

What was indisputably clear was the fact that continued Com-

munist pressure, including armed aggression in Korea, had led to a strengthening of the political and military organization of the North Atlantic community. There was recorded agreement that a North Atlantic force stationed in Europe was vital to the common security, and steps had been taken to establish the executive machinery for the force, and to apportion the respective contributions thereto of the participating nations. (Ed. M. E.; J. Kt.)

**North Borneo:** see BRITISH BORNEO.

**North Carolina.** A south Atlantic coast state, popularly known as the "Old North state" or the "Tar Heel state." North Carolina is one of the original 13 states of the union; area: 52,712 sq.mi. (49,142 sq.mi. land, 3,570 sq.mi. water); pop. (1940): 3,571,623, of which 974,175 (27.3%) were urban, 2,597,448 (72.7%) rural and 1,005,501 (28.2%) nonwhite. The official 1950 census determination gave the state a population of 4,061,929, an increase of 13.7% since 1940. Capital: Raleigh, with pop. (1950 preliminary) 65,123; other cities: Charlotte (133,219); Winston-Salem (86,816); Greensboro (73,703); Durham (70,307); Asheville (52,208).

**History.**—The most important political event in North Carolina in 1950 was the defeat of Frank P. Graham, liberal university president appointed by Gov. W. Kerr Scott in 1949 to the United States senate, by Willis Smith, conservative Raleigh attorney, for the Democratic nomination for the senate. The vote in the first primary, May 27, was: Graham, 303,605; Smith, 250,222; former Sen. Robert R. Reynolds, 58,752; and Olla Ray Boyd, 5,900—a record vote in a Democratic primary in the state. The heated second primary campaign between Graham and Smith involved state rights and the social, economic and civil rights policies of the Harry S. Truman administration. The Negro issue was of major importance for the first time since the white supremacy campaign of 1900. The vote in the second primary, June 24, was Smith 280,798 and Graham 262,123. In the November election Smith defeated his Republican opponent E. L. Gavin, 364,912 to 177,753.

In the November election five constitutional amendments were approved: raising the pay of legislators from \$10 to \$15 per day for a maximum session of 90 days; forbidding use of funds in the teachers' and state employees' retirement fund for any except retirement purposes; permitting persons represented by counsel to waive grand jury indictment in all but capital cases; permitting the election of more than one superior court judge within a judicial district; and transferring from the governor to the chief justice of the supreme court the authority to assign superior court judges.

Governor Scott's Go Forward program of rural road construction, rural electrification and telephone service, public education, and public health and welfare made great progress in 1950. By Oct. 1, with funds from the \$200,000,000 state bond issue approved in 1949, 4,658 mi. of rural roads had been paved (39% of the 12,000-mi. goal) and 6,826 mi. had been stabilized (20% of the 35,000-mi. goal). By July 1, 88.6% of the 287,412 farms in the state had electric service and 83,007 new telephones had increased the total number in the state to 526,749. The counties, aided by \$50,000,000 of state funds, were engaged in extensive construction and repair of schoolhouses. A hospital, four-year medical school, dental school and nursing school were under construction at Chapel Hill.

Principal state officers in 1950 were W. Kerr Scott, governor; H. P. Taylor, lieutenant governor; Thad Eure, secretary of state; Henry L. Bridges, auditor; Brandon P. Hodges, treasurer; Clyde A. Erwin, superintendent of public instruction;

Harry McMullan, attorney general; W. P. Stacy, chief justice.

**Education.**—In 1948-49 there were 2,970 public elementary schools with 20,392 teachers and principals and 694,003 enrolled pupils, and 965 public high schools with 7,287 teachers and principals and 170,151 enrolled pupils; these schools were operated at a cost of \$99,637,550, including \$10,889,514 of federal funds. About three-fourths of the operating cost, excluding federal funds, was contributed by the state government. The average daily attendance in the public schools was 769,405; the number of inhabitants of school age 1,071,220. Not including principals or vocational teachers, the average salary for elementary teachers was \$2,308 and for high school teachers \$2,348.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In Oct. 1950 public grants amounting to \$1,383,340 were made to 61,898 persons for old-age assistance; \$671,698 to 15,685 families for aid to dependent children; \$144,970 to 4,250 blind persons; and \$63,094 for general relief in 4,039 cases. During the year ending June 30, 1950, the total amount of public relief funds distributed was \$24,555.850 and during the first 11 months of 1950 unemployment benefits amounted to \$15,969,521. In 1950 the state maintained 12 charitable institutions with 11,550 inmates on Oct. 1; five correctional institutions with 751 inmates; and state highway prison camps with 9,014 prisoners.

**Communications.**—In 1950 the state highway and public works commission maintained 11,534 mi. of state highways, of which 10,836 mi. were hardsurfaced; and 52,887 mi. of county roads of which 7,039 mi. were hardsurfaced. There were 4,519 mi. of railroads, 870 mi. of city bus routes and 11,912 mi. of passenger bus routes in 1950. There were 526,749 telephones in use in the state on June 30, 1950.

**Banking and Finance.**—On June 30, 1950, there were 64 national banks and branches with assets of \$472,144,000 and 360 state banks and branches with deposits of \$1,174,305,697 and assets of \$1,295,872,715. On Jan. 1, 1950, there were 148 building and loan associations operating under state charters with 183,589 members and total assets of \$184,992,828 and 27 federal savings and loan associations with total assets of \$99,836,361. In 1949-50 state receipts were \$508,136,822; disbursements \$428,009,258. On June 30, 1950, the state gross bonded debt was \$200,959,500, less \$62,030,968 of bonds invested in sinking funds. The assessed value of property was \$4,104,215,804 in 1949. In the state general fund there was a cash surplus of \$14,516,611 at the end of 1950.

**Agriculture.**—North Carolina farmers in 1950 enjoyed another favourable year for the production of all crops except cotton.

Table I.—Leading Agricultural Products of North Carolina

Crop	1950	1949	Average 1939-48
Tobacco, lb. . . . .	857,150,000	731,530,000	696,707,000
Cotton, bales . . . . .	180,000	466,000	578,000
Corn, bu. . . . .	81,955,000	77,525,000	55,385,000
All hay, tons . . . . .	1,242,000	1,384,000	1,219,000
Peanuts, lb. . . . .	248,040,000	243,080,000	315,847,000
Wheat, bu. . . . .	5,438,000	5,421,000	6,809,000
Sweet potatoes, bu. . . . .	6,785,000	6,554,000	7,403,000
Irish potatoes, bu. . . . .	10,368,000	8,127,000	9,302,000
Oats, bu. . . . .	11,859,000	11,820,000	8,417,000
Soybeans, bu. . . . .	5,117,000	4,224,000	2,675,000
Lespedeza seed, lb. . . . .	26,400,000	46,200,000	32,480,000
Peaches, bu. . . . .	548,000	1,428,000	2,167,000
Apples, bu. . . . .	1,296,000	448,000	982,000
Pecans, lb. . . . .	2,047,000	2,924,000	2,483,000

The acreage of crops harvested was 6,750,000. The cash income of North Carolina farmers in 1949 was \$559,661,000 from crops; \$145,985,000 from livestock and livestock products; and \$7,557,000 from government payments. The value of the lands and buildings on the 287,412 farms in 1945, 42.6% of which were operated by tenants, was \$1,002,983,012.

**Manufacturing.**—In 1947 manufacturing establishments numbering 5,322 employed 350,207 wage earners at wages of \$641,966,000 and added value by manufacture of \$1,646,673,000. Value added by 939 establishments in textiles was \$846,280,000; by 69 establishments in tobacco \$257,986,000; and by 372 establishments in furniture and fixtures \$102,447,000. Estimated industrial production in 1948 was \$3,091,000,000 and electric power production was 9,353,600,000 kw.hr.

Table II.—Principal Mineral Products of North Carolina

Mineral	Value, 1948	Value, 1947	Value, 1946	Value, 1945
Stone . . . . .	\$7,713,859	\$7,561,167	\$6,835,448	\$3,044,135
Clay products . . . . .	10,615,000	8,314,976	6,241,000	3,471,219
Sand and gravel . . . . .	3,522,403	2,956,800	2,933,711	1,517,203
Feldspar . . . . .	1,116,825	1,081,514	1,200,638	863,740
Mica . . . . .	1,036,981	928,361	1,023,406	952,392
Talc and pyrophyllite . . . . .	1,455,691	1,186,463	—	—

**Mineral Production.**—The mineral production in 1948 was \$27,885,000, ranking North Carolina 36th among the states. (A. R. N.)

**North Dakota.** A west north central state of the United States, North Dakota was admitted to the Union Nov. 2, 1889. Popular name, "Flickertail state." Land area: 70,054 sq.mi.; water area: 611 sq.mi. Pop. (1950 census): 619,636, a loss of 3.5% since 1940. Capital, with preliminary 1950 census figures, Bismarck (18,544); chief cities: Fargo (37,981); Grand Forks (26,617); and Minot (21,924).

**History.**—State officers elected in 1950 with terms beginning Jan. 1, 1951 were: governor, Norman Brunsdale; lieutenant governor, Ray Schnell; secretary of state, Thomas

Hall; auditor, Berta Baker; treasurer, Albert Jacobson; attorney general, E. T. Christianson; commissioner of insurance, A. J. Jensen; commissioner of agriculture and labour, Math Dahl; public service commissioner, E. H. Brant; and state superintendent of public instruction, G. B. Nordrum. State tax commissioner John Gray continued in office.

The \$750,000 federal lignite research laboratory was completed at Grand Forks adjacent to the University of North Dakota campus, and research to improve the utilization of the 500,000,000 tons of available lignite in the state was under way. The Garrison dam reached the one-third mark of completion with \$30,969,000 being allocated by the federal government for the fiscal year ending June 30, 1951. Also completed during the year were the Heart Butte dam on the Heart river and the Dickinson dam. Theodore Roosevelt National Memorial park located in the Badlands opened for its first full year of operation.

**Education.**—School teaching positions for the year ending June 30, 1949, were 6,349; enrolment 112,917 (elementary, 86,370; high school 26,547); types of schools, one-room, 2,580; graded elementary 243; fully accredited 156; minor accredited 87; consolidated four-year high schools 105; three-year high schools 6; two-year high schools 42; one-year high schools 1. Schools in session 3,219. Total enrolment in ten institutions of higher learning and two junior colleges in Nov. 1950 was 7,507 full-time and part-time students; faculty, 516.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Public assistance in the year to June 30, 1950, was \$9,224,139; contributed by federal agencies 41.8%; state 33.9%; county 24.3%. Types of aid: old-age \$5,098,857, with an average of 8,883 persons aided per month; care of dependent and foster home children \$2,348,626, with 5,178 persons; blind \$73,367, with 117 persons; general assistance \$850,736, with 1,384 persons; welfare services \$167,963; and administrative expense \$684,590. Cost of operating four charitable and four correctional institutions, biennium to June 30, 1951, \$4,806,788. Number of patients as of June 30, 1950, was: feeble-minded 995; blind 40; deaf 90; tubercular 284; state mental hospital 2,121; penitentiary 237; training school 245 and state farm 24. Additional appropriations for improvements, repairs, new buildings and equipment, biennium ending June 30, 1951, \$1,523,120.

**Communications.**—Highway mileage: state 6,839; rural 107,593; hard-surfaced state 2,074, rural 33. Spent for construction of state highways, year ended June 30, 1950, was \$12,627,502 including \$6,416,620 of federal funds; spent for maintenance of state highways \$2,757,232, and for operation \$408,307. Additional amounts appropriated to counties were: motor fuel taxes \$1,218,372; and motor vehicle licence fees \$2,652,768. Six railroad companies operated 5,259 mi. of road.

**Banking and Finance.**—On June 30, 1950, the Bank of North Dakota and 108 other state banks had resources of \$322,799,175; deposits \$301,657,657. Resources of 41 national banks (4 with trust powers) \$256,264,700; deposits \$241,523,000. On Dec. 31, 1949, 56 state-chartered credit unions had resources of \$4,003,202 and share capital of \$3,790,888. State treasury collections, year to June 30, 1950, were \$65,045,183; payments \$88,378,862 and a bonded debt of \$42,358,250.

**Agriculture.**—The 1950 acreage in farm crops was 20,139,000. Gross farm income in 1950 was estimated at \$509,000,000, or 20% higher than the 1949 gross of \$425,000,000. Over-all production of corn, wheat, oats, barley and rye was 28% greater than in 1949 and 7% less than the ten-year average (1939-48).

Production of creamery butter totalled 43,372,000 lb. in 1949. The ten-year average (1938-47) was 55,414,000 lb.

**Manufacturing.**—The estimated number of employees in nonagricultural establishments in North Dakota as of June 30, 1950, was 114,400.

#### Leading Agricultural Products of North Dakota

Crop	1950	1949	Average 1939-48
Spring wheat (other than durum), bu..	89,418,000	78,897,000	102,415,000
Durum wheat, bu. . . . .	31,306,000	34,012,000	31,813,000
Corn, bu. . . . .	25,042,000	23,790,000	25,303,000
Oats, bu. . . . .	59,528,000	37,474,000	64,168,000
Barley, bu. . . . .	50,688,000	25,776,000	48,836,000
Rye, bu. . . . .	2,808,000	2,748,000	5,777,000
Flaxseed, bu. . . . .	16,102,000	13,522,000	8,617,000
Potatoes, bu. . . . .	22,230,000	21,645,000	18,665,000
Hay, tons. . . . .	3,440,000	3,002,000	3,018,000

a decrease of 12% from 1949. In manufacturing there were 6,080 employees, an increase of 1% since 1949. The estimated annual wage per

C. NORMAN BRUNSDALE, Republican, elected governor of North Dakota, Nov. 7, 1950

worker in manufacturing was \$2,730 in establishments of eight or more, an increase of 3%.

**Mineral Production.**—Production of lignite coal for the year ending June 30, 1950, was 3,212,534 tons; value \$7,875,800; employment 475 miners, 176 others; new mines 13; reopened 2; number of licensed mines in operation 104; natural gas from 28 wells to Nov. 30, 1950, was 544,896,000 cu.ft.; yield from 19 wells for 11 months in 1949 was 339,908,000 cu.ft. (L. R. MA.)

**Northern Ireland:** see IRELAND, NORTHERN.

**Northern Rhodesia:** see RHODESIA, NORTHERN.

**Northwest Territories.** The Northwest Territories comprise the mainland portion of Canada lying north of the 60th parallel of latitude between Hudson bay on the east and the Yukon territory on the west, together with the islands lying between the mainland of Canada and the north pole, including those in James bay, Hudson bay and Hudson strait. Area: 1,304,903 sq.mi.; pop. (1941 census): 12,028, including 2,284 whites, 4,334 Indians and 5,404 Eskimos; estimated pop. (June 1950): 16,000.

For purposes of organization and administration, the territories were divided, by order in council dated March 16, 1918, into the provisional districts of Mackenzie (527,490 sq.mi.), Keewatin (228,160 sq.mi.) and Franklin (549,253 sq.mi.). The Northwest Territories act, 1905, as amended, provides for the government of the territories by a commissioner (who is deputy minister of the department of resources and development) under instructions from time to time given by the governor in council or the minister of resources and development. A council of six (one of whom is deputy commissioner) aids the commissioner in the administration of the territories. The Northwest Territories council in 1950 was composed as follows: Maj. Gen. H. A. Young (commissioner, who succeeded H. L. Keenleyside in Oct. 1950), R. A. Gibson (deputy commissioner), L. C. Audette, H. B. Godwin, D. M. MacKay, J. G. McNiven and S. T. Wood; J. G. Wright was secretary of the council.

**Education.**—The education of white, native and half-breed children in the Northwest Territories was carried on during 1950 at residential and day schools operated by missions of the Church of England and of the Roman Catholic Church with financial assistance from the federal government, at territorial day schools operated by the Northwest Territories administration and at Indian day schools operated by the Indian affairs branch of the department of citizenship and immigration.

The only organized school district in the Northwest Territories was at Yellowknife, where a nine-room school was in operation. In conjunction with this school, a school of opportunity provided secondary education for promising students from the outlying parts of the Mackenzie district. In addition, the Northwest Territories administration made correspondence courses available free of charge to any child whose parents requested this service, and to adults who desired to enroll.

**Public Services and Welfare.**—During 1950 there were in operation eight mission hospitals, two company hospitals and one community hospital, with professional services provided by seven government medical officers, two company doctors and two private physicians. There were one private dental practitioner and one government dental surgeon continuously in the territories with additional medical and dental services on the supply ship in the eastern arctic. Medical teams conducting examinations, X-ray surveys and preventive inoculations reached each settlement. In 1950 there were also in operation eight nursing stations or health centres.

The duties of the Royal Canadian mounted police stationed throughout the Canadian arctic include not only law enforcement but the administration of public affairs—vital statistics, family allowances, relief, old-age allowances and any other governmental measures that are required to safeguard the welfare of the population.

**Transportation and Communication.**—The Mackenzie district and the western arctic are served by water and air transportation. The new all-weather Mackenzie highway from Grimshaw, Alta., to Hay River settlement on Great Slave lake, which was opened in 1948, was used extensively during 1950. Commercial passenger services by bus over the highway and between Hay River and Yellowknife by boat were established during the year. Regular mail, passenger and express services were maintained by air throughout the year to many points in the Mackenzie district.

Radio communication between important settlements and trading posts in the territories and outside points was maintained through government and private radio stations.

**Eastern Arctic Patrol.**—In 1950 the annual eastern arctic patrol, which carries replacement personnel as well as mail and supplies to Royal Canadian mounted police detachments and to medical centres, radio and weather stations, trading posts, missions and schools, was carried out by the new government vessel the "C. D. Howe" assisted by vessels belonging to the Hudson's Bay company and the missions. Officers of the administration also covered certain portions of the Canadian arctic by air.

investigating such matters as Eskimo economy, food and health conditions, trading, administration of family allowances, relief and old-age allowances, education and social conditions, vital statistics and other items of general administration.

The Canadian Handicrafts guild, assisted by a grant from the administration, was attempting to supplement the income of the natives by organizing a handicraft industry. In 1950 Eskimos produced for successful sales in Montreal, Que., carvings in soapstone, ivory and wood and articles made of various skins and furs.

**Agriculture and Fisheries.**—Limited agricultural and horticultural operations were carried on in 1950 at most of the settlements in the Mackenzie district. Experimental substations operated by the federal department of agriculture carried on field work during the year.

Commercial fishing on Great Slave lake, inaugurated in 1945, produced a catch of 3,722,783 lb. during the winter of 1949-50, principally whitefish and lake trout. The catch in the summer of 1950 amounted to 3,961,640 lb., all species.

**Fur Trade.**—Fur production in the territories during the year ended June 30, 1949 (latest complete figures available), was valued at \$1,535,461, with a total of 922,136 pelts taken during that period. Trapping continued to be the chief occupation of the native population, and was strictly controlled by regulation. Reindeer herding in the Mackenzie delta region was continued.

**Production and Industry.**—Mineral production in the Northwest Territories for the year 1949 was valued at \$6,801,729, of which gold accounted for \$6,389,748. The new hydroelectric power development on the Snare river, a federal government project 94 mi. N.W. of Yellowknife, which was officially opened in 1948, assisted in the development of the mining industry during 1950. Crude oil production was continued by Imperial Oil Limited at Norman Wells on the Mackenzie river. After being processed at the Norman Wells refinery the oil was shipped to Yellowknife and other points in the territories. (H. A. Y.)

**Norway.** A democratic monarchy of northern Europe, Norway is bounded north by the Arctic ocean, east by Finland, the U.S.S.R. and Sweden and west by the North sea. Area 125,182 sq.mi.; pop. (Dec. 3, 1946, census) 3,094,873; (1949 est.) 3,233,000. Capital, Oslo (1946: 285,844; 1948, after extension of city limits, about 420,000). Other principal cities with 1946 census figures are Bergen (107,293); Trondheim (56,522) and Stavanger (49,173). Religion, Lutheran Christian. Ruler in 1950: King Haakon VII. Prime minister: Einar Gerhardsen.

Spitsbergen (Svalbard), Norwegian since 1925, is an archipelago lying about midway between northern Norway and the north pole. Area 23,979 sq.mi. Population in 1949 was about 1,600 Norwegians and an estimated 2,350 Russians.

**History.**—Celebration, reconstruction and defense were the chief topics in Norway in 1950. Celebration centred in the 900th anniversary of the city of Oslo, and the official dedication of its new city hall. The massive two-towered structure had long been building on Oslo's waterfront; now its huge and colourful murals were opened to the public, the great clock was installed, and ceremony followed upon ceremony. It was a proud achievement of national architecture and crafts, and a veritable museum of modern Norwegian art. A few days after the main occasion Mrs. Franklin D. Roosevelt spoke to a crowd of 25,000 from the balcony, and on June 7 unveiled a statue of former President Roosevelt a short distance away.

Reconstruction was proceeding vigorously throughout the country. In the far north, only two miles from the border with the U.S.S.R., a grant of \$5,000,000 from the Economic Cooperation administration was helping to rebuild an iron mine. At Mo i Rana rapid progress was being made on the pig iron and steel plant which was to be operated almost wholly by electricity, and was scheduled to open in 1953. Both these were government projects. Norsk Hydro, partly government and partly private in ownership, the country's largest industrial concern, was producing nitrates and other materials worth more than \$30,000,000 per year, most of it for export. As of March 31, 1950, the total Marshall plan aid to Norway amounted to \$117,000,000, and had been a vital factor in enabling Norway to achieve more than 150% of its prewar industrial production.

Prices, however, could not be held down, and early in the year an eight-point rise in the cost-of-living index was frankly passed on to the consumer. The government determined that

DETAIL of the Town Hall dedicated at Oslo in May 1950, opening jubilee festivities on the 900th anniversary of the Norwegian capital

it could not increase its price-control subsidies beyond the current 600,000,000-kroner rate. It recognized that wage adjustments might have to be made, but emphasized the need of sacrifice and economy, and Prime Minister Gerhardsen pointed out that "it is no sacrifice to do what is necessary to safeguard peace and freedom."

Another disappointment in the drive toward economic rehabilitation was that the coal production of Spitsbergen (Svalbard) could not find sufficient markets, and had to be cut back to about 350,000 tons (from 400,000 tons in 1949 and a planned 500,000 tons).

Norway joined the European Payments union and hoped for freer and greater trade as a result. In January Norway joined in an agreement with Denmark, Sweden and Great Britain (Uniscan) which made easier international payments within that bloc. But a Scandinavian customs union was no nearer accomplishment. Internal labour peace was assured for the coming year by the decisive vote of the Federation of Trade Unions, in November, to accept a general adjustment of wages to meet cost-of-living increases.

Norway was vitally conscious of the problem of defense and, after the Korean war began, doubled its budget for military purposes. Norway was receiving 35,000 tons of arms and munitions from the U.S., chiefly cars, guns and material. It did not take offered planes and ships, because it preferred to continue use of British Mosquito type aircraft and British type destroyers, in order not to complicate the technical equipment with too much variety. A proposed revision of the penal code extended and modernized the definition of treason, aimed particularly at thwarting fifth-column activity.

King Haakon announced that he expected to abdicate in 1952, on reaching the age of 80, when Crown Prince Olav would succeed him.

(F. D. S.)

**Education.**—Government schools (1946-47): elementary 5,626, pupils 289,449, teachers 10,766; secondary 277, pupils 42,112, teachers 5,090. Technical schools: day 9, pupils 1,805, teachers 233; apprentice 84, pupils 8,481, teachers 940; workshop 144, pupils 2,810, teachers 330. Nongovernment schools (1946-47): elementary 42, pupils 1,510; secondary 11, pupils 2,244. Teachers' training colleges (1947-48) 10, students 1,555. Universities (1948) 2, students 9,115. Institutions of higher education (1948) 8, students 1,327.

**Foreign Trade.**—Imports (1949) kr. 4,218,000,000; exports kr. 2,138,000,000, expenditure 2,531,000,000; (1950-51 est.) balanced at 2,562,000,000. National debt (Dec. 1949) kr. 12,472,000,000, including foreign kr. 1,287,000,000. Currency circulation (Sept. 1950) kr. 2,136,000,000. Gold and foreign exchange (Sept. 1950) \$109,700,000. Deposit money (Aug. 1950) kr. 2,905,000,000. Monetary unit: krone (pl. kroner) with an exchange rate of kr. 7.15 to the U.S. dollar.

**Foreign Trade.**—Imports (1949) kr. 4,218,000,000; exports kr. 2,138,000,000.

**Transport and Communications.**—Roads (June 1949) 27,495 mi. Licensed motor vehicles (Dec. 1949): cars 60,700; trucks 51,300. Railways (1949): 2,484 mi.; passenger-miles (1948-49) 1,017,000,000; freight net ton-miles (1948-49) 782,000,000. Shipping (July 1949): number of merchant vessels of 100 gross tons and over 2,071; total tonnage 4,917,226. Air transport (1949): miles flown 4,100,000; passenger-miles 83,700,000; freight net ton-miles 2,100,000. Telephones (1948) 400,200. Radio receiving set licences (1949) 709,116.

**Agriculture and Fisheries.**—Main crops (metric tons, 1949): wheat 67,000; barley 86,000; oats 163,000; rye 2,000; potatoes 1,072,000. Live-stock (June 1949): cattle 1,222,000; sheep 1,808,000; pigs 419,000; horses 198,000; chickens 3,700,000. Food production (metric tons, 1949): milk 1,545,000; butter 10,700; cheese 20,900; meat 81,000. Fisheries (1949): total catch 1,165,700 metric tons worth kr. 332,000,000.

**Industry.**—Industrial establishments, excluding electrical plants, construction and building industries (1948): 5,911; persons employed: 32,273 salaried staff and 189,067 workers; gross value of production, kr. 6,399,400,000. Fuel and power (1949): coal 455,000 metric tons; manufactured gas, 43,500,000 cu.m.; electricity 15,183,000,000 kw.hr. Raw materials (metric tons, 1949): pig iron 230,000; pyrites 745,000; ferrosilicon, calculated 45% basis, 65,900; other ferroalloys 103,400; aluminum 35,000; copper 9,000; nickel 9,900; zinc 41,000; sulphur 81,200; woodpulp, wet basis, 623,000. Manufactured goods (metric tons, 1949): cellulose, dry basis, 429,000; cement 592,000. Merchant vessels of 100 gross tons and upward launched (1949) 47; total tonnage 59,213.

**Nose:** see EAR, NOSE AND THROAT, DISEASES OF.

**Nova Scotia.** Second smallest of the maritime provinces of Canada, Nova Scotia entered confederation in 1867; area: 21,068 sq.mi.; pop. (1941) 577,962, (1950 est.) 658,000; capital: Halifax, pop. (1943) 126,480.

**History.**—A 1950 by-election, won by the Progressive-Conservatives, increased their legislative representation to 8, and reduced the Liberals to 27. The Socialists held two seats. In a move unprecedented in Canada, the Nova Scotia legislature passed an act to give pensions to cabinet ministers after ten or more years of service and after reaching the age of 60, on a contributory basis (8% of salary). The government announced a large-scale public works program, including roads, bridges, rural high schools and additions to provincially-owned hospitals. Total government expenditures for 1950 ran to \$75,000,000 for current and capital account, the highest on record.

**Education.**—In 1950, educational expenses ran to \$10,000,000 per year, with the province sharing 51% of the cost (1932: 25%). Provincially controlled schools in 1947 (latest statistics available): total enrolment, 122,211; average daily attendance, 102,099; teachers 3,838; total revenues, \$7,697,408.

**Agriculture.**—The government undertook to expand the farming population, offering Dutch immigrants land at two-thirds cost and livestock at half cost. More than 17,000 ft. of new dyke was built and more than 25,000 ft. of old dyke was rebuilt to reclaim roughly 40,000 ac. of rich farm marshlands. In 1949 total cash and kind farm income came to \$51,000,000 with 71% of the cash from dairy products, cattle, sheep, hogs, poultry and eggs. The 1949 Annapolis valley apple crop totalled 1,250,000 bbl., of which 500,000 bbl. were shipped to the United Kingdom under federal government arrangement.

**Fisheries.**—A provincial bait freezing plant was put in operation in northern Cape Breton island during 1950. Fish processing and exporting plants totalled 334 by mid-1950.

**Forestry.**—In 1949 forest exports were valued at \$19,000,000, and 2,000,000 Christmas trees were shipped to the U.S. market.

**Industry.**—During 1950 the \$4,000,000 provincial loan fund, created in 1949 for establishing new industries and expanding old ones, was drawn upon, and knitted goods, cutlery, aircraft, electronic equipment, refrigerators, clothes lockers, margarine and concrete blocks were among the products made for the first time in Nova Scotia. The government tightened up its regulations respecting restaurants, which helped improve the tourist industry (1949: 20% more tourists than in 1948). In Sept. 1950 the employment index stood at 114.8 (June 1941: 100; Sept. 1949: 122.5) and weekly wages averaged \$37.43 (Sept. 1949: \$37.63).

**Minerals.**—In 1949, 6,196,000 tons of coal were mined (1948: 6,412,000 tons). Nova Scotia was Canada's main source of gypsum in 1949: 2,559,000 tons.

**Nursing:** see HOSPITALS.

**Nutmegs:** see SPICES.

**Nutrition, Experimental.** A new concept relating nutrition to disease, evolved on the basis of experimental nutrition, was called genetotrophism. A genetotrophic disease was defined in 1950 by Roger J. Williams, Ernest Beerstecher, Jr., and L. Joe Berry as one which occurs if a diet fails to provide a sufficient supply of one or more nutrients required at high levels because of the characteristic genetic pattern of the person concerned. This concept was believed to be the basis for many diseases, including alcoholism.

Alcoholism was studied in its relation to individuality in metabolism. The craving for alcohol was assumed to have a physical and genetic basis similar to that of other special appetites that are under physiologic control. Experiments with rats and mice demonstrated that consumption of alcohol by laboratory animals is a genetotrophic phenomenon. Ordinary laboratory animals subsisting on stock diets, given a choice between 10% alcohol and water, reacted variously as teetotalers, as moderate steady drinkers, as spasmodic drinkers or as drinkers with mounting appetites. The drinking patterns appeared on a constant diet to be wholly under genetic control, but experiment demonstrated that they could be shifted by nutritional means from one extreme to the other. On marginal diets all of the rats eventually consumed large amounts of alcohol; on abundantly adequate diets none of the animals consumed more than a small amount, even though a considerable appetite for alcohol had been developed previously. Different strains, highly inbred and otherwise, gave results in line with the genetic hypothesis. Unless a member of a highly inbred strain, each animal indicated possession of a distinctive metabolic pattern based presumably on its own partial genetic blocks and on consequent augmented requirements for specific vitamins, amino acids or minerals without which deficiencies developed. The urge on the part of the animals to consume alcohol was conditioned by the existence of nutritional deficiencies.

The relationship of serum cholesterol and arteriosclerosis in man has been poorly understood. Attempts to increase the cholesterol in blood serum have, in nearly all cases, failed or been difficult to interpret. William J. Messinger, Yetta Porosowska and J. Murray Steele reported an increase in the serum cholesterol of human subjects by feeding large amounts of egg-yolk powder, amounts far in excess of those eaten by the normal man, whereas feeding of cholesterol did not produce a change in serum levels. Fifteen men and 4 women from 46 to 69 years of age, known to have arteriosclerosis of considerable degree, consumed a hospital diet providing, on an average, 70 g. of fat daily. The concentration of cholesterol in blood serum was determined at weekly intervals during feeding experiments and control periods. In two experiments, a total of 18 subjects were given powdered egg yolk, 10 received 150 g. daily and 8 had 100

g. daily for 42 days. In each case the serum cholesterol was observed to increase with the ingestion of egg yolk powder. Each subject had a higher average concentration of cholesterol during feeding of powdered egg yolk than in the control period and there was reversion toward lower levels after discontinuance of the feeding. However, an analysis of variance should have been applied in evaluation of the data.

An attempt was made to ascertain the effect of cholesterol fed in different forms and quantities to five male subjects, 45 to 65 years of age. In a control period the subjects were fed the hospital diet containing 70 g. of fat. This was followed by the administration of 30 g. of crystalline cholesterol daily for 29 days. No important change in serum concentration of cholesterol occurred with this relatively large intake of cholesterol. In a third experimental period the diet was supplemented with 200 ml. of 40% cream daily for 20 days without producing a change in concentration of serum cholesterol. When, however, 30 g. of crystalline cholesterol were added to 200 ml. of cream and fed daily for 66 days, there was an increase in serum cholesterol levels in four of the five subjects. The greatest increase was 75 mg. per 100 ml. above serum values observed in earlier experiments. The cream and cholesterol feedings were discontinued and 150 g. of egg-yolk powder were given daily for 50 days. In all an increase in serum cholesterol exceeding that which occurred with the supplement of cream and cholesterol was demonstrated. The concentration of cholesterol in the serum of each subject decreased after the supplement of egg-yolk powder was discontinued. Values reverted to those observed in the initial control period. The egg-yolk powder contained 2.5% cholesterol. Therefore, the daily dietary intake provided 2.5 and 3.7 g. cholesterol when 100 and 150 g., respectively, of the powder were ingested. This would seem to be a relatively small dietary supplement. It was suggested, therefore, that egg-yolk powder was effective in producing an increase in serum cholesterol because it contained an as yet unidentified substance which alters the disposition of cholesterol.

An entirely new vista in experimental nutrition was opened by the discovery of rates in growth of animals far in excess of rates achieved on what had been considered as optimum natural rations, by the use of rations containing inexpensive plant proteins supplemented with vitamin B<sub>12</sub> and one or another antibiotic. E. L. R. Stokstad and T. H. Jukes observed growth-promoting effects for chicks by fermentation residues from *Streptomyces aureofaciens* (the organism used for the production of aureomycin). Supplements of dried whey or fish meal produced no such effects. The magnitude of the growth effect was shown by the following average weights of individual chicks after 25 days on the experimental ration (soybean meal base): basal ration plus vitamin B<sub>12</sub>, 281 g.; basal ration plus vitamin B<sub>12</sub> plus aureomycin residue, 360 g. Chemical fractionation of the "growth factor" in the aureomycin residue revealed it to have properties similar to those of aureomycin itself. Consequently, pure crystalline aureomycin was tested and found to produce growth responses of the same type, and of nearly the same magnitude, as those produced by the crude aureomycin residues. That the observations, made with chicks, may have general validity in animal nutrition was indicated by the result of collaborative work between T. H. Jukes, E. L. R. Stokstad and R. R. Taylor at Lederle laboratories, Pearl River, N.Y., and T. J. Cunha, H. M. Edwards and G. B. Meadows at the University of Florida, Gainesville. These workers showed that additions of crystalline aureomycin (100 mg. per kilogram of ration) to a vitamin B<sub>12</sub>-containing ration produced the same type of extra weight gains in pigs that had been observed in chicks. Mixtures of crystalline vitamin B<sub>12</sub> and crystalline aureomycin duplicated the growth-promoting effect of the crude aureomycin

residues in this animal. Again, the effect of aureomycin was not specific, for R. W. Luecke, W. N. McMillen, and F. Thorp, Jr., reported that with mixtures of pure vitamin B<sub>12</sub> and streptomycin the growth-promoting effect for pigs of the supplement derived from *Streptomyces aureofaciens* fermentation could be duplicated. As illustrative of the magnitude of the effect in pigs, the following figures, representing the average daily gain in pounds over a six-week period (six animals per group) were cited: basal ration (soybean oil meal as protein) alone, 0.88; basal ration plus vitamin B<sub>12</sub>, 0.98; basal ration plus vitamin B<sub>12</sub> plus streptomycin, 1.48; basal ration plus aureomycin residue, 1.43. (See also VITAMINS.)

**Nuts.** The estimated U.S. 1950 pecan crop of 112,503,000 lb. was less than the 128,174,000 lb. of 1949 and the ten-year average of 120,555,000 lb. and only two-thirds as much as the record 177,667,000-lb. 1948 crop. Production of improved varieties (a little less than one-half of the total) was slightly larger than in 1949. The leading states were Georgia (35,750,000 lb.), Texas (35,000,000 lb.) and Alabama (9,805,000 lb.).

Walnut production, in California and Oregon, was only 64,000 tons, compared with a record of 88,100 tons in 1949. The walnut crop of the Mediterranean basin was estimated at 65,900 tons, almost the same as in 1949.

California almond production was estimated at 36,600 tons, compared with a record crop of 43,300 tons in 1949 and only 23,310 tons as the ten-year average. Almond production of the Mediterranean basin and Iran in 1950 was forecast at 87,700 tons, compared with 60,300 tons in 1949. Italy, the leading producer, had a large crop, 45,000 tons.

Filbert production in Oregon and Washington was estimated at 6,120 tons, far below the record 11,140 tons of 1949. The Mediterranean basin crop was estimated at 91,600 tons, as compared with 148,200 tons in 1949.

Nut prices in 1950 to producers were 50% to 100% higher than in 1949, a result of the generally short crop and high consumer demand. (See also PEANUTS.) (J. K. R.)

FILMS OF 1950.—*Filbert Valleys* (Northwest Nut Growers).

**Nyasaland.** A British protectorate in central Africa. Area: 47,949 sq.mi. Pop.: (1949 est.) c. 2,182,000. Religion: Africans mostly pagan, a large minority Christian. Chief towns: Zomba (cap.), Blantyre, Limbe. Governor: Sir Geoffrey Colby.

**History.**—Nyasaland was to be represented at the conference on closer association with the Rhodesias in London early in 1951. It agreed in 1950 to take part in the Rhodesia-Nyasaland secretariat and interterritorial conference to replace the Central African council.

The Colonial Development corporation completed plans to plant 18,000 ac. of tung trees in northern Nyasaland. The first 1,000 ac. would be planted by 1952 and thereafter at the rate of 3,000 ac. a year. Full production was expected in 1961, when the annual output of oil was estimated at 6,250 tons. (See also RHODESIA, NORTHERN.)

**Finance and Trade.**—Budget (1950 est.): revenue £3,119,629; expenditure £3,235,677. Foreign trade (1949): imports £5,682,100; exports £4,681,733. Principal exports (1949 totals): tobacco £2,250,000, tea £1,171,000. (G. R. MN.)

**Nylon:** see RAYON AND OTHER SYNTHETIC FIBRES.

**Oats.** The U.S. oat crop of 1,465,134,000 bu. in 1950 was the fourth largest on record; production was 10% larger than in 1949 and 15% more than the pre-World War II average. Favourable weather prior to harvest resulted in a yield of 34.9 bu. per acre, compared with a 1939-48 average of 32.8 bu. As in most years, Iowa (264,737,000 bu.), Minnesota (188,737,000 bu.) Illinois (166,218,000 bu.) and Wisconsin (141,814,000 bu.) led in production, with more than half of the total.

U.S. Oat Crops

	1950	1949	1948	Average 1939-48
Total production (thousands of bushels)	1,465,134	1,329,473	1,493,304	1,274,474
Acres harvested (thousands)	42,027	40,440	40,198	38,762
Yields (bushels per acre)	34.9	32.9	37.1	32.8

Oat prices during 1950 averaged fully 15% higher than in 1949. Average prices to farmers rose from about 70 cents per bushel early in the year to about 81 cents in June, declined to about 71 cents with a moderate post-harvest movement, then, along with other feed grains, rose to a level above 80 cents per bushel. Average price for the crop was preliminarily estimated at 77.9 cents per bushel, compared with 66 cents for the previous year. The nonmandatory government price support loan averaged 71 cents per bushel at the farm, or 75% of the July 1, 1950, parity price, but was not greatly utilized because of higher market prices. On July 1 the carry-over from previous crops was only 218,000,000 bu., compared with a record 295,200,000 bu. in 1949.

The estimated 1950 world oat crop of 4,230,000,000 bu. was 5% higher than the 4,020,000,000 bu. crop of 1949, but somewhat below the prewar average. The Canadian crop of 420,328,000 bu. was almost one-third larger than the 317,916,000 bu. harvested in 1949, or the prewar average. The European and U.S.S.R. production was somewhat lower than in 1949. (J. K. R.)

**Obituaries.** The following is a selected list of prominent men and women, of the United States and other countries, who died during the year 1950.

**Albizzati, Carlo**, Italian archaeologist (b. Milan, It., Feb. 14, 1888—d. Milan, Oct. 14, 1950).

**Alessandri Palma, Arturo**, former president of Chile (b. Linares, Chile, Dec. 20, 1868—d. Santiago, Chile, Aug. 24, 1950), studied at the University of Chile and practised law. He was elected as a deputy from Curicó, and later re-elected five times. His public service also included terms as minister of industry and public works, minister of finance, minister of the interior and senator from Tarapacá.

His terms as chief executive (1920-25 and 1932-38) were marked by turbulence, but by economic progress as well. He was first elected president in the economic slump following World War I, when labour troubles had arisen after Chile's nitrate industry was adversely affected.

He lost support of his congress in 1924, and for a time ruled by fiat of a military junta, which eventually dissolved congress and ruled by decree. Alessandri resigned, but when the junta was overthrown in 1925 he returned, prepared a new constitution, which was adopted, and led in liberalizing the forms of government.

In his next term he again sponsored economic and social reforms. Chilean nazis and Communists became of increasing concern to the government, and Alessandri was granted extraordinary powers to cope with them.

**Alexander, Grover Cleveland**, U.S. baseball player (b. St. Paul, Neb., Feb. 26, 1887—d. St. Paul, Nov. 4, 1950), was the fourth pitcher voted into baseball's Hall of Fame at Cooperstown, N.Y., the others being Christy Mathewson, Walter Johnson and Denton T. (Cy) Young. After only a

brief stay in the minor leagues he went to the Philadelphia National league club in 1911, and in his first year with the Phillies he won 28 games. He set a record by winning 30 or more games during three successive years—31 in 1915, 33 in 1916 and 30 in 1917. For the Phillies, Chicago Cubs and St. Louis Cardinals he pitched 696 games, and won 373 of them. For six years he led the league in complete games pitched; scored 16 shutouts in 1916; shut out rival teams 90 times in his career; and set other pitching marks still unsurpassed.

He served overseas during World War I and returned to the Cubs in 1919, remaining with them until 1926 when, sent on waivers to the Cardinals, he made an amazing comeback. He won 12 out of 22 games, and became the hero of the 1926 world series by beating the New York Yankees in two successive games, then clinching the performance by halting a threatening Yankee rally in the seventh game. In 1927 he won 21 games, losing 10, for the Cardinals; he scored 16 victories in 1928, then in 1929 returned to the Phillies, from which he was released in 1930. He ended his professional career by pitching occasional exhibition games, appearing in sideshows and the like.

**Alexander, William Anderson**, U.S. football coach (b. Mud River, Ky., June 6, 1889—d. Atlanta, Ga., April 23, 1950).

**Aliyah**, queen mother of Iraq (b. Hejaz, 1912?—d. Baghdad, Iraq, Dec. 21, 1950).

**Allen, Frank G.**, U.S. industrialist and banker, former governor of Massachusetts (b. Lynn, Mass., Oct. 6, 1874—d. Boston, Mass., Oct. 9, 1950).

**Allen, Henry Justin**, former U.S. senator and governor of Kansas (b. Warren City, Pa., Sept. 11, 1868—d. Wichita, Kan., Jan. 17, 1950).

**Allgood, Sara**, Irish-born stage and screen actress (b. Dublin, Ire., Oct. 31, 1883—d. Hollywood, Calif., Sept. 13, 1950), began her stage career with the Abbey players in Ireland. For almost 30 years she appeared with that group before playing in her first motion picture in 1929. Among the pictures in which she appeared were *Blackmail*, the first British talking picture, made in 1929; *Jane Eyre*, *The Spiral Staircase*, *My Wild Irish Rose*, *Thai Hamilton Woman*, *How Green Was My Valley*, *Mother Wore Tights*, *Mourning Becomes Electra* and *Cheaper by the Dozen*.

**Ames, Oakes**, U.S. botanist (b. North Easton, Mass., Sept. 26, 1874—d. Ormond, Fla., April 28, 1950).

**Andross, Elmer E.**, U.S. Seventh-day Adventist leader (b. Ottawa, Minn., 1868?—d. Tacoma Park, Md., Aug. 22, 1950).

**Annand, Percy Nicol**, U.S. entomologist (b. Telluride, Colo., Nov. 16, 1898—d. Washington, D.C., March 29, 1950).

**Anzilotti, Dionisio**, Italian legal scholar, former president of the Permanent Court of International Justice (b. Pescia, It., Feb. 20, 1869—d. Pescia, Aug. 24, 1950).

**Arnold, Henry Hartley ("HAP")**, U. S. army officer (b. Gladwyne, Pa., June 25, 1886—d. Sonoma, Calif., Jan. 15, 1950), graduated from the U.S. Military academy at West Point in 1907. He reported early in 1911 to Wilbur and Orville Wright, who were operating a flying school near Dayton, O., and later that year became the 29th pilot to be licensed in the U.S.

When the U.S. entered World War I, he was on duty in Panamá, where he commanded the air defense before being sent overseas to serve during part of 1918. He graduated from the U.S. Army Industrial college in 1925 and from the Command and General Staff school at Fort Leavenworth, Kan., in 1929. He was serving as commanding officer of the first wing, G.H.Q. air force, on the west coast, when he was appointed in 1938 chief of the army air corps.

During World War II the air establishment he led grew from 22,000 officers and men, with 3,900 planes, to 2,500,000 officers and men, with planes eventually produced at the rate of 145,000 a year. In May 1941 he was made deputy chief of staff in charge of the air corps, advancing to the rank of permanent major general. In 1943 he was named a full general, and in Dec. 1944 was one of four army leaders named general of the army—a five-star rank.

General Arnold was noted for his foresighted warnings on the importance of strategic bombing, and he himself kept supervision of the B-29s of the 20th air force that bombed Japan in a full-scale execution of his strategic concepts. It was under his direction that the air force assumed coequal status with the army and navy in the postwar unification reorganization. He retired because of ill health in 1946.

**Arthur, Julia** (IDA LEWIS, MRS. BENJAMIN P. CHENEY), Canadian-born actress (b. Hamilton, Ont., Can., March 3, 1869—d. Boston, Mass., March 28, 1950).

**Ashby, George Franklin**, U.S. railway official (b. Mt. Airy, N.C., Sept. 3, 1885—d. Las Vegas, Nev., May 15, 1950).

**Attwood, Martha** (MRS. GEORGE R. BAKER), U.S. opera singer and teacher (b. Wellfleet, Mass., 1886?—d. Hyannis, Mass., April 6, 1950).

**Babcock, Howard Edward**, U.S. agricultural organizer and educator (b. Gilbertsville, N.Y., Feb. 23, 1889—d. New York, N.Y., July 12, 1950).

**Babkin, Boris Petrovitch**, Russian-born British physiologist (b. Koursk, Russia, Jan. 17, 1877—d. at sea, May 3, 1950).

**Bacheller, Irving Addison**, U.S. novelist (b. Pierpont, N.Y., Sept. 26, 1859—

1950 OBITUARIES: Henry H. Arnold, U.S. army officer; William Rose Benét, U.S. poet; Léon Blum, French statesman; Evangeline C. Booth, U.S. religious leader; Gustav V, Swedish monarch

- d. White Plains, N.Y., Feb. 24, 1950), was reared on a farm, worked as a telegraph operator and clerk, and attended St. Lawrence university in Canton, N.Y. In 1883 he began newspaper work in New York city, and in 1893, having earlier founded what he considered to be the first U.S. newspaper syndicate, he serialized *The Red Badge of Courage* and introduced its author, Stephen Crane, to fame. Bachelor in 1898 became an editor of the *New York World*, and two years later produced the novel *Eben Holden*, perhaps the best known of his works. His books also included *D'ri and I*, *Silas Strong*, *A Man for the Ages* and *The Light in the Clearing*.
- Bacigalupi, James Augustus**, U.S. banker (b. Santa Clara, Calif., Aug. 2, 1882—d. San Jose, Calif., July 27, 1950).
- Bagshawe, Sir Arthur William Garrard**, British authority on tropical medicine (b. St. Leonards-on-Sea, Sus., Eng., July 29, 1871—d. Cardiff, Glam., Wales, March 24, 1950).
- Baker, Frank M.**, U.S. clergyman and social service director (b. Providence, R.I., 1880?—d. Cleveland, O., April 5, 1950).
- Baker, Hugh Potter**, U.S. educator (b. St. Croix Falls, Wis., Jan. 20, 1878—d. Orlando, Fla., May 24, 1950).
- Bangor, Maxwell Richard Crosbie Ward**, 6TH VISCOUNT, speaker of the senate of Northern Ireland (b. May 4, 1868—d. Downpatrick, County Down, N. Ire., Nov. 17, 1950).
- Banks, Monty** (MARIO BIANCHI), Italian-born film producer and actor (b. Italy, 1897—d. Arona, It., Jan. 7, 1950).
- Bardoloi, Gopinath**, prime minister of Assam (b. 1890?—d. Gauhati, Assam, Aug. 6, 1950).
- Barker, Sir Herbert Atkinson**, British manipulative surgeon (b. Southport, Lancs., Eng., April 21, 1869—d. Lancaster, Lancs., July 21, 1950).
- Baylinson, A. S.**, Russian-born painter (b. Moscow, Russia, Jan. 6, 1882—d. New York, N.Y., May 6, 1950).
- Beall, Almon L.**, U.S. engineer (b. New York state, 1889?—d. Packanack Lake, N.J., June 17, 1950).
- Bechdolt, Frederick Ritchie**, U.S. novelist (b. Mercersburgh, Pa., July 27, 1874—d. Carmel, Calif., April 12, 1950).
- Beckmann, Max**, German-born expressionist painter (b. Leipzig, Ger., Feb. 12, 1884—d. New York, N.Y., Dec. 27, 1950).
- Beers, Norman Ritner**, U.S. meteorologist and editor (b. Trimble, Mo., Aug. 18, 1911—d. Brooklyn, N.Y., June 27, 1950).
- Bell, Aubrey FitzGerald**, British-born writer and scholar in Iberian literature (b. Aug. 20, 1881—d. Victoria, B. C., Can., May 7, 1950).
- Bell, William Brown**, U.S. chemical manufacturing executive (b. Stroudsburg, Pa., Feb. 16, 1879—d. Marrakesh, Fr. Morocco, Dec. 20, 1950).
- Benét, William Rose**, U.S. author, editor and poet (b. Fort Hamilton, New York harbour, Feb. 2, 1886—d. New York, N.Y., May 4, 1950), was graduated in 1904 from the Albany, N.Y., academy and in 1907 from the Sheffield scientific school at Yale university. He was a free-lance writer for some time, but went to work for the *Century* magazine in 1911, and from 1914 to 1918 was an assistant editor of that magazine. In 1919 and 1920 he was an assistant editor of the *Nation's Business*, and from 1920 to 1924 an associate editor of the *Literary Review* of the *New York Evening Post*. In 1924 he became an associate editor of the *Saturday Review of Literature*, and a contributing editor in 1929. For some years before his death he conducted the column "The Phoenix Nest" in the *Saturday Review of Literature*. He was a brother of the poet Stephen Vincent Benét (1898-1943), and like his brother, who won the Pulitzer prize in poetry in 1929, William Rose Benét won the Pulitzer poetry award in 1942 for his autobiographical poem, *The Dust Which Is God*. His volumes of poetry included *Merchants from Cathay*, *The Falconer of God*, *The Great White Wall*, *Day of Deliverance*, *Golden Fleece* and *The Stairway of Surprise*. With Norman Cousins he edited *The Poetry of Freedom* and in 1948 he edited *The Reader's Encyclopedia*, a survey of world literature and the arts.
- Bennett, Frederick Augustus**, BISHOP OF AOTEAROA, Anglican bishop of the Maori people in New Zealand (Aotearoa) (b. Ohinemutu, N.Z., 1872—d. Wellington, N.Z., Sept. 16, 1950).
- Berg, Albert Ashton**, U.S. surgeon and philanthropist (b. New York, N.Y., Aug. 10, 1872—d. New York, N.Y., July 2, 1950).
- Berners, Gerald Hugh Tyrwhitt-Wilson**, 9TH BARON, British author, painter and composer (b. Sept. 18, 1883—d. London, Eng., April 19, 1950).
- Bertner, Ernest William**, U.S. cancer specialist (b. Colorado, Tex., 1889—d. Houston, Tex., July 28, 1950).
- Bigelow, Harry Augustus**, U.S. law educator (b. Norwood, Mass., Sept. 22, 1874—d. Chicago, Ill., Jan. 8, 1950).
- Birge, Edward Asahel**, U.S. educator and limnologist (b. Troy, N.Y., Sept. 7, 1851—d. Madison, Wis., June 9, 1950).
- Birks, William Massey**, Canadian merchant and philanthropist (b. Montreal, Que., Can., Oct. 25, 1868—d. Mount Bruno, Que., July 5, 1950).
- Blackwell, Alice Stone**, U.S. woman-suffrage leader (b. East Orange, N.J., Sept. 14, 1857—d. Cambridge, Mass., March 15, 1950).
- Blum, Léon**, French statesman (b. Paris, Fr., April 9, 1872—d. Jouy-en-Josas, near Paris, March 30, 1950), after attending the Lycée Charlemagne, went on to the École Normale Supérieure and there came under the influence of Lucien Herr, librarian of the school and an ardent Socialist, by whom he was introduced in 1896 to Jean Jaurès. After graduating he preferred the civil service to teaching and joined the Conseil d'État. By 1914, as literary editor of the *Revue blanche* and dramatic critic of *Comœdia*, and author of two controversial books (*Du Mariage* and *Stendhal et le beylisme*), he had become a well-known social figure. Although a member of the Socialist party from 1899, he did not enter active politics before World War I.
- In 1919 he was made chairman of the executive committee of the Socialist party and elected to the chamber of deputies. In 1920 he opposed the affiliation of his party to the Comintern. In 1921 he took over *Le Populaire*, which he developed into an influential newspaper and edited until 1940. At the head of the Socialist parliamentary group he was an uncompromising leader of the opposition in four post-World War I legislatures. After the elections of 1936, on June 4, Blum became premier—the first Jew and the first Socialist to hold this position. His tenure of office was not an easy one as in the chamber of deputies he depended on Communist and in the senate on Radical (that is, middle-class) support. His popular front experiment failed and he was defeated in the senate on June 21, 1937. In 1938 he was again premier but only for a month. After the capitulation of 1940, on Sept. 15, he was arrested by the Vichy authorities. With other leaders, in February-March 1942, he was tried at Riom on charges of "betrayal of his duty" and warring. His defense was a defiant counterattack which virtually placed Marshal Henri Philippe Pétain and his men in the dock. No verdict was reached, and Blum's trial was never concluded. In prison, he wrote a book, *L'Échelle humaine* (translated into English under the title *For All Mankind*), in which he justified his democratic faith. In March 1943 he was delivered to the Germans who interned him at Buchenwald. In April 1945 he was transferred to the concentration camp of Dobbiacco, in Italian Tirol, and a month later was liberated by the U.S. army. Returning to France he took an active part in the life of his party. He opposed the tendency of "uniting" Socialists and Communists and on more than one occasion reminded his party of the necessity of collaboration with the Christian Democratic Mouvement Républicain Populaire. On Dec. 16, 1946, he formed a Socialist caretaker government and on Jan. 16, 1947, handed in his resignation.
- Bohlin, Torsten Bernhard**, Swedish Lutheran bishop (b. Uppsala, Swed., Dec. 2, 1889—d. Sweden, Aug., 1950).
- Booth, Evangeline Cory**, U.S. religious leader (b. London, Eng., Dec. 25, 1865—d. Hartsdale, N.Y., July 17, 1950), was the daughter of William Booth, founder of the Salvation Army, and eventually, at the age of 68, she succeeded to the post of general (i.e., international executive) of this organization. She made her debut as a public speaker at the age of 15, and commenced her evangelistic and charitable work in the London slums. She overcame both the lethargy and the outright opposition of residents in that area, and her first significant victory came when she took the issue of free speech before parliament and obtained the repeal of bylaws which had forbidden the Salvation Army to hold open-air meetings. She was assigned by her father to organize the Salvation Army's work in Canada, where she worked nine years. In 1904 she became commander of the organization in the U.S. Under her direction, it became one of the leading social service organizations in the country. In 1934 she was elected general of the international movement, retaining this position until her resignation in 1939. In addition to her notable speaking talent, she was the author of Salvation Army hymns and books.
- Bose, Sarat Chandra**, Indian political leader (b. Sripur, India, April 19, 1883—d. Calcutta, India, Feb. 20, 1950).
- Boswell, Peyton, Jr.**, U.S. author and editor (b. Chicago, Ill., Sept. 22, 1904—d. Malverne, L.I., N.Y., June 23, 1950), studied at Rutgers university, New Brunswick, N.J., and served (1927 to 1929) as a sports writer in Santa Fe, N.M., before returning to New York city to become assistant editor of his father's publication, *Art Digest*. In 1936, on his father's death, he succeeded him as editor and publisher of the magazine. His books included *Modern American Painting* (1939), which reputedly had the greatest circulation of any book on fine arts, and the biographies of the American artists Henry Varnum Poor (1941) and George Bellows (1942). He was a leader of the critical school that warned consistently against the influence of Communist thought on modern art.
- Bottomley, Albert Ernest**, British landscape painter (b. Leeds, Yorks., Eng., March 1, 1873—d. Reigate, Sus., Eng., Aug. 25, 1950).
- Bouchardon, Marie-Pierre-Gilbert**, French magistrate (b. Guéret, Fr., April 9, 1870—d. Paris, Fr., Nov. 11, 1950).
- Boucicault, Nina** (MRS. DONALD INNES-SMITH), British actress (b. London, Eng., Feb. 27, 1867—d. Ealing, Mdx., Eng., Aug. 2, 1950).
- Bowman, Isaiah**, U.S. geographer and educator (b. Waterloo, Ont., Dec. 26, 1878—d. Baltimore, Md., Jan. 6, 1950), was reared in Michigan, and studied and taught at the State Normal college, Ypsilanti, Mich., and Harvard and Yale universities. He remained at Yale more than ten years, and there received his doctoral degree. During this period he led or participated in three field expeditions to South America. He was appointed director of the American Geographical society in 1915. At the close of World War I he went to the Paris peace conference as chief territorial specialist and adviser to Pres. Woodrow Wilson and the other U.S. delegates in the negotiation of the treaty of Versailles. Bowman initiated and directed the development of the American Geographical society's map of Hispanic America on the scale of 1:1,000,000, which covers all the land area between the United States and Cape Horn. In 1935 he became president of Johns Hopkins university, Baltimore, Md.
- During World War II he was an adviser to the department of state, and he participated in the Dumbarton Oaks and San Francisco conferences which led to the organization of the United Nations in 1945. He was the author of 12 books and editor of 2, and former president of the Association of American Geographers, the International Geographical union and the American Association for the Advancement of Science. He retired as president of Johns Hopkins in 1948.
- Brady, William Aloysius**, U.S. theatrical producer (b. San Francisco, Calif., June 19, 1863—d. New York, N.Y., Jan. 6, 1950), appeared on the stage with virtually all the great actors of the late 19th and early 20th centuries and finally became a producer. One of his greatest money-makers was the melodrama *After Dark* which he produced in the 1890's and revived 40 years later. He was also manager for James J. Corbett, who became heavyweight boxing champion of the world, and later managed another champion, James Jeffries. Throughout his theatrical career he produced more than 250 plays,

- the most successful of which was *Way Down East* and the most famous, Elmer Rice's *Street Scene*, which won the Pulitzer prize for 1929. He was the husband of two stage stars, Marie Rene and Grace George, and father of the actress Alice Brady, who won the 1937 award of the Academy of Motion Picture Arts and Sciences for her supporting performance in *In Old Chicago*.
- Brannon, Melvin Amos**, U.S. educator (b. Lowell, Ind., Sept. 11, 1865—d. Gainesville, Fla., March 26, 1950).
- Breitfuss, Leonid Ludwig**, Russian-born polar explorer (b. St. Petersburg, Russia, Nov. 19, 1864—d. Bad Pyrmont, Ger., July 20, 1950).
- Brentano, Lowell**, U.S. editor and author (b. New York, N.Y., April 18, 1895—d. New York, N.Y., July 8, 1950).
- Brocard, Antonin**, French general and aviation pioneer (b. Biol, Fr., 1885?—d. Paris, Fr., May 29, 1950).
- Brown, Charles Reynolds**, U.S. educator, author and minister (b. Bethany, W.Va., Oct. 1, 1862—d. New Haven, Conn., Nov. 28, 1950).
- Brown, Percy**, U.S. radiologist (b. Cambridge, Mass., Nov. 24, 1875—d. Scituate, Mass., Oct. 8, 1950).
- Brumby, Frank Hardeman**, U.S. naval officer (b. Athens, Ga., Sept. 11, 1874—d. Portsmouth, Va., July 16, 1950).
- Bryan, Kirk**, U.S. geologist (b. Albuquerque, N.M., July 22, 1888—d. Cody, Wyo., Aug. 22, 1950).
- Buck, Frank**, U.S. wild animal authority and explorer (b. Gainesville, Tex., March 17, 1884—d. Houston, Tex., March 25, 1950), was educated in the Dallas, Tex., public schools, and later became a newspaper reporter and advertising agent in Chicago, Ill. He had been interested in wild animals since his youth, and he made his first overseas jungle expedition to South America in 1911. His subsequent expeditions took him to Malaya, India, Borneo, New Guinea and Africa. He was the author of many magazine articles on wild animals and on exploration, and author of several books on these subjects, some of which were also produced as motion pictures. Among the titles were *Bring 'Em Back Alive* (1931) and *Wild Cargo* (1932), both written with Edward Anthony; *Fang and Claw* (1935), *On Jungle Trails* (1937) and *All in a Lifetime*, an autobiography (1941), with F. L. Fraser; and *Animals Are Like That!* (1939), with Carol Weld.
- Buckley, Christopher Thomas Rede**, British journalist (b. May 22, 1905—d. in active service, Korea, Aug. 12, 1950).
- Burgoynne, Henry Bartlett**, Canadian newspaper publisher (b. St. Catharines, Ont., Can., Feb. 28, 1885—d. near Bobcaygeon, Ont., Aug. 3, 1950).
- Burke, George James**, U.S. lawyer, Nuernberg war crimes judge (b. Northfield township, Washtenaw county, Mich., Dec. 5, 1885—d. Ann Arbor, Mich., Oct. 3, 1950).
- Burlingame, C. Charles**, U.S. psychiatrist (b. Rockford, Ill., Oct. 27, 1885—d. Leicester, Leics., Eng., July 22, 1950).
- Burn, Sir Joseph**, British insurance executive (b. 1871?—d. Potters Bar, Mdx., Eng., Oct. 12, 1950).
- Burroughs, Edgar Rice**, U.S. fiction writer (b. Chicago, Ill., Sept. 1, 1875—d. Encino, Calif., March 19, 1950), attended private schools and later worked as clerk, accountant, salesman, railroad detective, cowboy, gold miner and advertising man. His first novel, *Under the Moon of Mars*, was sold under the pen name of Normal Bean. This pseudonym he assumed on the ground that his was the average mind which, he hoped, would attract an average audience. How well he succeeded was seen in the fantastic success of his "Tarzan" books. He produced about 50 of them and left 15 more uncompleted at his death. They sold a total of 35,000,000 copies. Ten Hollywood actors in succession portrayed "Tarzan," and each "Tarzan" film was seen by an estimated 140,000,000 persons. Two hundred newspapers used the syndicated Tarzan action strips, and his books were translated into 56 languages. Burroughs never set foot in Africa, the scene of these stories. After the Pearl Harbor attack that launched U.S. participation in World War II, he roamed the Pacific as a war correspondent until returned home for poor health. He was also a successful real-estate developer in the San Fernando valley of California.
- Burrow, Trigrant**, U.S. psychiatrist (b. Norfolk, Va., Sept. 7, 1875—d. Greens Farms, Conn., May 24, 1950).
- Busley, Jessie**, U.S. stage and screen actress (b. Albany, N.Y., March 10, 1869—d. New York, N.Y., April 20, 1950).
- Butts, Edmund L.**, U.S. army officer (b. St. Paul, Minn., Aug. 15, 1868—d. San Francisco, Calif., June 7, 1950).
- Byfield, Ernest Lessing**, U.S. hotel owner (b. Chicago, Ill., Nov. 3, 1889—d. Chicago, Feb. 10, 1950).
- Cakmak, Fevzi**, Turkish army officer (b. Istanbul, Turk., Jan. 12, 1876—d. Istanbul, April 10, 1950), was educated at the Kulili Military college and the general staff academy in Istanbul. A lieutenant in 1895, he was made lieutenant colonel and appointed chief of staff of an army corps in 1910. He fought in the Balkan Wars of 1912-13 as commander of a division, and in World War I as commander of an army corps and (in 1917-18) of an army. War minister in 1920, he resigned the commission and office granted him by the sultan and joined Kemal Atatürk's "rebellion" in Ankara. There he was made prime minister and minister of defense. Promoted to the rank of full general during the Greek invasion of Anatolia, he resigned his premiership in 1922 and became deputy to Ismet İnönü, then chief of staff. After the victorious conclusion of the War of Liberation, he was promoted as the new republic's first marshal and appointed chief of staff, holding this position for 20 years. With Kemal Atatürk as president of the republic (1923-38) and Ismet İnönü as prime minister and, later president, he was one of the three statesmen who created modern Turkey. In the 1946 elections he stood as an Independent and was elected with a great majority. In 1948 he accepted the honorary leadership of the Nation's (conservative) party.
- Campbell, Edmund Schureman**, U.S. professor of art and architecture (b. Freehold, N.J., Oct. 28, 1884—d. Washington, D.C., May 8, 1950).
- Capps, Edward**, U.S. archaeologist and classical scholar (b. Jacksonville, Ill., Dec. 21, 1866—d. Princeton, N.J., Aug. 21, 1950).
- Caraway, Hattie Wyatt**, former U.S. senator (b. Bakerville, Tenn., Feb. 1, 1878—d. Falls Church, Va., Dec. 21, 1950), was the first woman ever elected to the U.S. senate. Mrs. Caraway was educated in Hustburg, Tenn., then attended Dickson (Tenn.) Normal college. She was the wife of Sen. Thaddeus Caraway of Arkansas, and was appointed to succeed him when he died in 1931. She was subsequently victor in a special election to fill that seat for the remainder of the term, and was later re-elected for two full six-year terms, being defeated by J. William Fulbright in 1944. She was known as a loyal New Dealer, generally supporting the policies of Pres. Franklin D. Roosevelt. Because of her unique position, she was also widely known as a leader in affairs affecting women. She was the first woman to preside over a session of the U.S. senate, which she did in the absence of the vice-president and the senior senator in 1943. She was the mother of three sons, two West Point graduates who served in command of infantry forces during World War II, and a third who died in an accident while a West Point cadet.
- Carpenter, Edward Childs**, U.S. dramatist (b. Philadelphia, Pa., Dec. 13, 1872—d. Torrington, Conn., Oct. 7, 1950).
- Carr, Ralph L.**, U.S. lawyer and political figure (b. Rosita, Colo., Dec. 11, 1887—d. Denver, Colo., Sept. 22, 1950).
- Carter, Clifton Carroll**, U.S. army officer (b. Lexington, Ky., July 12, 1876—d. Washington, D.C., Sept. 20, 1950).
- Cavanaugh, Hobart**, U.S. stage and screen actor (b. Virginia City, Nev., Sept. 22, 1886—d. Hollywood, Calif., April 25, 1950).
- Chapple, Joseph Mitchell** (JOE CHAPPLE), U. S. editor and author (b. La Porte City, Ia., July 18, 1867—d. Miami, Fla., April 17, 1950).
- Charet, Charles**, French army officer and air pioneer (b. 1871?—d. Dijon, Fr., Sept. 14, 1950).
- Cherrington, Ernest Hurst**, U.S. editor and temperance leader (b. Hamden, O., Nov. 24, 1877—d. Columbus, O., March 13, 1950).
- Chetwode, Philip Walhouse Chetwode**, 1ST BARON, British field marshal (b. Sept. 21, 1869—d. London, Eng., July 6, 1950).
- Christensen, Halfdan**, Norwegian actor, poet and dramatist (b. 1873?—d. Oslo, Nor., Sept. 17, 1950).
- Church, Ralph Edwin**, U.S. congressman and lawyer (b. near Catlin, Ill., May 5, 1883—d. Washington, D.C., March 21, 1950).
- Clark, Alfred**, U.S.-born gramophone pioneer (b. New York, N.Y., 1873—d. Fulmer, Bucks., Eng., June 16, 1950).
- Clark, Allan**, U.S. sculptor (b. Missoula, Mont., June 8, 1896—d. Grand Junction, Colo., April 17, 1950).
- Clayton, Lou**, U.S. comedian (b. 1887?—d. Santa Monica, Calif., Sept. 12, 1950).
- Cloud, Henry Roe**, American Indian educator (b. 1884?—d. Siletz, Ore., Feb. 9, 1950).
- Coale, Griffith Bailly**, U.S. muralist (b. Baltimore, Md., 1890—d. Stonington, Conn., Aug. 20, 1950).
- Cohen, Max**, U.S. labour leader (b. Lipkon, Russia, May 15, 1889—d. Atlantic City, N.J., May 22, 1950).
- Coil, Everette Johnston**, U.S. economist (b. Mexico, Mo., Aug. 30, 1907—d. New York, N.Y., Oct. 12, 1950).
- Colby, Bainbridge**, U.S. lawyer and public official (b. St. Louis, Mo., Dec. 22, 1869—d. Bemus Point, N.Y., April 11, 1950), studied at Williams college, Williamstown, Mass., at the Columbia university law school and the New York Law school. He began practising law in 1892, and in 1901-02 served in the New York state assembly. He joined Theodore Roosevelt's "Bull Moose" bolt from the Republican party in 1912, and ran for the U.S. senate as a Progressive in 1914. He subsequently became identified with the Democrats under Woodrow Wilson, who appointed him vice-president of the U.S. Shipping board in 1917 and, in 1920, secretary of state. He initiated the U.S. policy of nonrecognition of the Soviet Union, declaring the soviet government was not representative of the "free will and purpose" of the Russian people. When President Wilson left office, he joined Colby in the practice of law. Colby initially supported Pres. Franklin D. Roosevelt, but later worked politically against him.
- Coleman, McAlister**, U.S. Socialist leader, editor and writer (b. New York, N.Y., 1889—d. New York, N.Y., May 18, 1950).
- Collingridge, Leonard Thomas**, British book publisher (b. London, Eng., Nov. 21, 1865—d. Isle of Mull, Argyll, Scot., Nov. 4, 1950).
- Collins, Frederick Lewis**, U.S. author and editor (b. Lawrence, Mass., March 23, 1882—d. Boston, Mass., July 25, 1950).
- Collins, Joseph**, U.S. neurologist, psychiatrist and psychologist (b. Brookfield, Conn., Sept. 22, 1866—d. New York, N.Y., June 11, 1950).
- Compton, Frank Elbert**, U.S. publisher (b. Wisconsin Rapids, Wis., Aug. 7, 1874—d. La Jolla, Calif., May 13, 1950).
- Conner, Martin Sennett**, U.S. lawyer and former governor of Mississippi (b. Hattiesburg, Miss., Aug. 31, 1891—d. Jackson, Miss., Sept. 16, 1950).
- Connor, Robert Digges Wimberly**, U.S. historian (b. Wilson, N.C., Sept. 26, 1878—d. Durham, N.C., Feb. 25, 1950).
- Contogeorge, Christopher**, primate of the Alexandrine Greek Orthodox Church in the U.S. (b. Smyrna, Turk., 1894?—d. New York, N.Y., Aug. 30, 1950).

**Cooper, Charles Phillips**, U.S. journalist (b. Hamilton, N.Y., Jan. 16, 1866—d. New York, N.Y., Nov. 9, 1950).

**Copley, John**, British lithographer (b. Manchester, Lancs., Eng., 1875—d. London, Eng., July 16, 1950).

**Cordovani, Mariano**, Italian Roman Catholic theologian (b. Serravalle Casentinese, It., Feb. 25, 1883—d. Rome, It., April 5, 1950).

**Cornish, Louis Craig**, U.S. clergyman and author (b. New Bedford, Mass., April 18, 1870—d. Winter Park, Fla., Jan. 7, 1950).

**Costello, Maurice (George Washington)**, U.S. actor (b. Pittsburgh, Pa., 1877?—d. Los Angeles, Calif., Oct. 29, 1950), was one of the outstanding stars in the early days of silent motion pictures. His theatrical career began when he was 19, and before it ended he had earned—and spent—an estimated \$1,000,000. He appeared in some early motion pictures filmed by Thomas A. Edison, and in 1908 joined the Vitagraph company in Brooklyn, N.Y., as an actor. He received special acclaim for his role as Sidney Carton in *A Tale of Two Cities*. Norma Talmadge appeared with him in that and other pictures. His career as a star was over by about 1920, but he later played many character roles in motion pictures.

**Coutard, Henri**, French radiologist (b. 1876—d. Le Mans, Fr., March 19, 1950).

**Cowl, Jane (JANE COWLES)**, U.S. actress (b. Boston, Mass., Dec. 14, 1884—d. Santa Monica, Calif., June 22, 1950), began her stage career while yet a child. She played her first starring role on the stage in 1912 in *Within the Law*. She was starring in her own play, *Lilac Time*, in the same year, 1917, that she made her first motion picture. This was *The Spreading Dawn*. She did not return to the films for more than 30 years. In the 1940s she appeared in *Once More, My Darling*, *No Man of Her Own* and *The Secret Fury*, and later with Bette Davis in *Payment on Demand*.

In addition to *Lilac Time*, she was the author or coauthor of eight other plays, six of which were produced successfully. These included *Smilin' Through*, *Daybreak and Information Please*. Other stage successes in which she appeared included *Pelleas and Melisande*, *Paolo and Francesca*, *First Lady*, *Easy Virtue* and *The First Mrs. Fraser*, besides numerous Shakespearean plays. At the peak of her career she was a noted beauty, at one time being voted by critics the most beautiful woman on the U.S. stage.

**Craske, Leonard**, English-born U.S. sculptor (b. London, Eng., 1882—d. Boston, Mass., Aug. 29, 1950).

**Cue, Pedro**, Cuban newspaper publisher (b. Santa Clara, Cuba, 1896?—d. Havana, Cuba, July 13, 1950).

**Cunard, Anthony Gordon**, British naval officer and shipping official (b. 1893—d. Pertenhall, Beds., Eng., March 6, 1950).

**Curtis-Bennett, Sir (Francis) Noel**, British welfare and recreation leader (b. London, Eng., May 14, 1882—d. London, Dec. 2, 1950).

**Cuyler, Hazen ("KIKI")**, U.S. baseball player (d. en route to Ann Arbor, Mich., Feb. 11, 1950), was one of the outstanding players of the National league for 16 years. His reputation came principally during his years of playing for the Pittsburgh Pirates and the Chicago Cubs. He paced the Pirates to the pennant in 1925 and in the decisive game of the world series that year starred as a fielder and also drove in the series-winning runs. He played in the 1929 and 1932 series with the Cubs. At bat, he hit over .350 four seasons and near .300 many other years. He was one of the outstanding base runners in the game's history. In one season he had a record of 40 stolen bases in 41 attempts. His active playing career ended in 1938, and afterward he managed teams in the Southern association and served as a coach, first for the Cubs and later for the Boston Red Sox.

**Cyril, Amba**, archbishop of Ethiopia (Coptic Christian) (b. Egypt, 1885?—d. Cairo, Egypt, Oct. 22, 1950).

**Damrosch, Walter Johannes**, U.S. pianist, conductor and composer (b. Breslau, Ger., Jan. 30, 1862—d. New York, N.Y., Dec. 22, 1950), was considered the dean of operatic and symphonic conductors in the United States. He began the study of harmony with his father, Leopold Damrosch, distinguished musician and conductor, at the age of 9. Such musicians as Richard Wagner, Franz Liszt, Hans von Bülow and Anton Rubinstein often gathered at the Damrosch home. The elder Damrosch moved to New York city and founded the Oratorio society of New York in 1873. Walter Damrosch continued his education there, and after his father's death in 1885 was named assistant director and conductor of the Metropolitan Opera company. The same year he became conductor of the New York Symphony Orchestra.

After works of Wagner received a cool reception at the Metropolitan, he formed his own operatic company in 1894, and it toured the U.S. for four years, performing chiefly Wagnerian operas. During World War I he founded a school for bandmasters in France. In 1924 he took the New York Symphony Orchestra for a tour of Europe, and in 1926 he retired as conductor of that orchestra. He was perhaps best known for his radio appearances, during which he explained the music he conducted. He especially devoted his attention to developing musical appreciation in children, and

believed that through radio a revolution had been effected in the public's musical tastes during his lifetime.

He was the composer of several operas, including *The Scarlet Letter*, *Cyrano de Bergerac* and *The Opera Cloak*. He held many awards, and was elected president of the American Academy of Arts and Letters in 1940. He was for many years music adviser to the National Broadcasting company, and he founded the NBC "Music Appreciation Hour."

**Dana, Henry Wadsworth Longfellow**, U.S. writer and lecturer (b. Boston, Mass., Jan. 26, 1881—d. Cambridge, Mass., April 27, 1950).

**Daniel, Sir Augustus Moore**, British art gallery executive (b. Preston, Lancs., Eng., Dec. 6, 1866—d. London, Eng., Nov. 7, 1950).

**Davidson, Lylal Ament**, U.S. naval officer (b. Muscatine, Ia., Dec. 2, 1886—d. Bethesda, Md., Dec. 29, 1950).

**Davis, Harry Lyman**, former governor of Ohio (b. Cleveland, O., Jan. 25, 1878—d. Shaker Heights, O., May 21, 1950).

**De Cordoba, Pedro**, U.S. stage and screen actor (b. New York, N.Y., Sept. 28, 1881—d. Hollywood, Calif., Sept. 17, 1950).

**Deeping, (George) Warwick**, British author (b. Southend, Ess., Eng., 1878—d. Weybridge, Sur., Eng., April 20, 1950), was one of the most prolific writers of the 20th century, having completed about 60 novels in his literary career. He was educated for medicine, having studied at Merchant Taylors' school, Trinity college, Cambridge, and Middlesex hospital, but after practising for a year he abandoned medicine for literature. He saw active duty in the Gallipoli campaign and in Egypt and France during World War I.

Perhaps his best-known work was *Sorrell and Son*, published in 1925. His other books included *Love among the Ruins*; *Martin Valliant*; *The Secret Sanctuary*; *Doomsday*; *Old Wine and New*; *No Hero—This*; *Corn in Egypt*; and *Reprieve*.

**De la Torre, Carlos**, Cuban scientist and politician (b. 1859?—d. Havana, Cuba, Feb. 19, 1950).

**De Luca, Giuseppe**, U.S. operatic star (b. Rome, It., Dec. 25, 1876—d. New York, N.Y., Aug. 26, 1950).

**De Mole, Lancelot Eldin**, Australian inventor (b. March 13, 1880—d. Sydney, Austr., May 6, 1950).

**Dempster, Arthur Jeffrey**, Canadian-born physicist (b. Toronto, Ont., Can., Aug. 14, 1886—d. Stuart, Fla., March 11, 1950).

**De Sylva, George Gard ("BUDDY")**, U.S. theatrical producer and song writer (b. New York, N.Y., Jan. 27, 1896—d. Hollywood, Calif., July 11, 1950), was the author of many popular song hits as well as producer of stage shows and motion pictures. He teamed with George Gershwin to write the musical comedy *La, La, Lucille*, which was produced in 1919. Together they also wrote the songs "Somebody Loves Me" and "Do It Again." De Sylva collaborated with Victor Herbert on the musical *Orange Blossoms*, which contained the well-known song "A Kiss in the Dark." He also wrote the books for such hit reviews as *Sally*, *Ziegfeld Follies of 1921*, *Greenwich Village Follies*, six editions of *George White's Scandals*, *Follow Through*, *Three Cheers*, *Good News* and others.

Many of the 500 popular songs with which he was identified were composed in collaboration with Ray Henderson and Lew Brown. One of these was "Sonny Boy," written for Al Jolson, of which more than 1,500,000 copies were sold. De Sylva produced five of Shirley Temple's pictures, including *The Little Colonel*, *The Littlest Rebel*, *Captain January*, *Poor Little Rich Girl* and *Stowaway*. He also produced *Bachelor Mother*, starring Ginger Rogers. He returned to New York as a stage producer in 1939, producing *Du Barry Was a Lady*, *Panama Hattie* and *Louisiana Purchase*. He was executive producer of the film *For Whom the Bell Tolls*.

**Devonshire, Edward William Spencer Cavendish**, 10TH DUKE OF, British peer and politician (b. May 6, 1895—d. Compton Place, near Eastbourne, Sus., Eng., Nov. 26, 1950).

**Dewey, James F.**, U.S. labour conciliator (b. Locust Dale, Pa., Feb. 12, 1887—d. Frackville, Pa., Aug. 1, 1950).

**Diomedes, Alexander**, Greek economist and statesman (b. Athens, Gr., 1875—d. Athens, Nov. 11, 1950), was educated in Greece, France and Germany. He joined Eleutherios Venizelos' Liberal government as minister of finance (1912-14). After World War I he retired from politics and in 1923 was elected governor of the National bank, at that time still the bank of issue, and negotiated important public loans, besides conducting negotiations which led to the creation of the Bank of Greece as the bank of issue (1928). Retiring from public life in 1930, he published in 1943 a two-volume work on the land policy of the Macedonian and Comnenian dynasties. Before World War II he was honorary president of the Supreme Economic council and from 1945 president of the Supreme Reconstruction board, and chairman of the board of the National bank. On Jan. 20, 1949, Diomedes joined the coalition government of Themistocles Sophoulis as a nonparty deputy premier, and on the death of Sophoulis succeeded him on June 30 as prime minister of a Populist-Liberal coalition cabinet. He resigned on Jan. 5, 1950.

**Doherty, Robert Ernest**, U.S. educator (b. Clay City, Ill., Jan. 22, 1885—d. Scotia, N.Y., Oct. 19, 1950).

**1950 OBITUARIES:** Walter Huston, Canadian-born actor; Al Jolson, U.S. comedian; William Lyon Mackenzie King, Canadian statesman; Harold J. Laski, British political scientist; Sir Harry Lauder, Scottish comedian

**Donovan, Leo**, U.S. army officer (b. Alabama, Dec. 6, 1895—d. Fort Belvoir, Va., May 21, 1950).

**Dore, (Samuel) Ernest**, British dermatologist (b. London, Eng., Sept. 16, 1872—d. London, June 27, 1950).

**Drew, Charles Richard**, U.S. surgeon (b. Washington, D.C., June 3, 1904—d. Burlington, N.C., April 1, 1950).

**Duggan, Stephen P.**, U.S. educator (b. New York, N.Y., Dec. 20, 1870—d. Stamford, Conn., Aug. 18, 1950).

**Duncan, Joseph Smith**, U.S. inventor and manufacturer (b. near Pittsburgh, Pa., April 5, 1858—d. Los Angeles, Calif., May 11, 1950).

**Duncan, Joseph Smith**, U.S. inventor and manufacturing executive (b. near Pittsburgh, Pa., April 5, 1858—d. Los Angeles, Calif., May 11, 1950).

**Dykstra, Clarence Addison**, U.S. educator and government official (b. Cleveland, O., Feb. 25, 1883—d. Laguna Beach, Calif., May 6, 1950), studied at the State University of Iowa, Iowa City, and began teaching at a private school in Pensacola, Fla. He next taught at Ohio State university, Columbus, 1907-09, and the University of Kansas, Lawrence, 1909-18. Between 1918 and 1930 he was secretary, respectively, of the Cleveland Civic league and the Chicago and Los Angeles City clubs. From 1930 to 1937 he was city manager of Cincinnati. He left that position to become president of the University of Wisconsin, Madison, which post he left in 1945 to become provost of the University of California at Los Angeles.

At intervals he took leaves from his regular duties, or assumed additional duties, in public life. Among these positions were: member of the President's Committee on Fiscal Relations between the Federal Government and the District of Columbia; member of the executive committee of the Tax Revision council; member of the Advisory Committee on Education, Recreation and Welfare to the army and navy; chairman of the National Defense Mediation board; and for one year (1940-41) national director of selective service.

**Edwards, George Wharton**, U.S. painter (b. Fair Haven, Conn., March 14, 1859—d. Greenwich, Conn., Jan. 18, 1950).

**Eliash, Mordecai**, Israeli diplomat (b. Uman, Ukraine, June 11, 1892—d. Hampstead, London, Eng., March 11, 1950).

**Eliot, Samuel Atkins**, U.S. clergyman (b. Cambridge, Mass., Aug. 24, 1862—d. Boston, Mass., Oct. 15, 1950).

**Ellerhusen, Florence Cooney** (MRS. ULRIC H. ELLERHUSEN), U.S. portrait painter and art instructor (b. Norwood, Ont., Can.—d. Morristown, N.J., April 20, 1950).

**Elliott, Gertrude** (LADY FORBES-ROBERTSON), U.S.-born actress (b. Rockland, Me., Dec. 14, 1874—d. Kent, Eng., Dec. 24, 1950).

**Ellis, Charles Calvert**, U.S. clergyman and educator (b. Washington, D.C., July 21, 1874—d. Philadelphia, Pa., July 27, 1950).

**Ellis, William Thomas**, U.S. writer (b. Allegheny, Pa., Oct. 25, 1873—d. near Lyndhurst, Ont., Can., Aug. 15, 1950).

**Embree, Edwin Roger**, U.S. sociologist (b. Osceola, Neb., July 31, 1883—d. New York, N.Y., Feb. 21, 1950).

**England, William Henry**, U.S. economist (b. Edinburgh, Ind., Dec. 21, 1876—d. Bethesda, Md., May 10, 1950).

**Enthoven, Augusta Gabrielle Eden** (MRS. C. H. ENTHOVEN), British dramatist (b. London, Eng., Jan. 12, 1868—d. London, Aug. 18, 1950).

**Enthoven, Henri Emile**, Dutch-born composer and historian (b. Amsterdam, Neth., Oct. 18, 1903—d. New York, N.Y., Dec. 26, 1950).

**Esdaile, Katherine Ada** (MRS. ARUNDELL ESDAILE), British author, authority on post-Reformation sculpture (b. April 28, 1881—d. England, Aug. 31, 1950).

**Espinosa, Edouard**, British ballet master (b. London, Eng., Feb. 2, 1872—d. Worthing, W.Sus., Eng., March 23, 1950).

**Evans, William**, English-born theologian (b. Liverpool, Eng., Jan. 1, 1870—d. Los Angeles, Calif., May 21, 1950).

**Fahey, John H.**, former chairman of the federal Home Loan Bank board (b. Manchester, N.H., Feb. 10, 1873—d. Washington, D.C., Nov. 19, 1950).

**Fairchild, Louis Edgar**, U.S. trade paper publisher (b. Flushing, L.I., N.Y., June 17, 1869—d. Port Jefferson, L.I., N.Y., July 25, 1950).

**Fairchild, Muir Stephen**, U.S. air force general (b. Bellingham, Wash., Sept. 2, 1894—d. Fort Myer, Va., March 17, 1950).

**Farnham, Dwight Thompson**, U.S. economist, consulting engineer and author (b. Candor, N.Y., Oct. 15, 1881—d. Norwalk, Conn., Sept. 20, 1950).

**Fels, Samuel S.**, U.S. industrialist and philanthropist (b. Yanceyville, N.C., Feb. 16, 1860—d. Philadelphia, Pa., June 23, 1950).

**Fernald, Merritt Lyndon**, U.S. botanist (b. Orono, Me., Oct. 5, 1873—d. Cambridge, Mass., Sept. 22, 1950).

**Fiala, Anthony**, U.S. explorer (b. Jersey City Heights, N.J., Sept. 19, 1869—d. Brooklyn, N.Y., April 8, 1950).

**Field, Sid** (SIDNEY ARTHUR FIELD), British comedian (b. Edgbaston, Birmingham, Eng., April 1, 1904—d. London, Eng., Feb. 3, 1950).

**Fisk, Charles Laird**, U.S. marine officer (b. March 13, 1902—d. Bryn Mawr, Pa., May 3, 1950).

**Fitzhugh, Percy Keese** (HUGH LLOYD), U.S. author of juvenile books (b. Brooklyn, N.Y., Sept. 7, 1876—d. Oradell, N.J., July 5, 1950).

**Flanagan, James Wainwright**, U.S. engineer (b. Henderson, Tex., Oct. 26, 1872—d. Houston, Tex., July 24, 1950).

**Fletcher, Arthur**, U.S. baseball player and coach (b. Collinsville, Ill., Jan. 5,

1885—d. Los Angeles, Calif., Feb. 6, 1950).

**Fletcher, John Gould**, U.S. poet (b. Little Rock, Ark., Jan. 3, 1886—d. near Little Rock, May 10, 1950), spent some time at Phillips academy, Andover, Mass., and at Harvard college, then travelled widely in Europe and the U.S. He was a familiar figure in literary circles of two continents, and was well acquainted with William Butler Yeats, D. H. Lawrence, Ezra Pound, Amy Lowell and other literary leaders. His *Life Is My Song*, published in 1937, was autobiographical. In 1939 he won the Pulitzer prize for poetry for his *Selected Poems*. He returned to Arkansas in later years, and his chief non-poetical work was *The Epic of Arkansas*. He was found drowned, presumably a suicide, at his country home near Little Rock.

**Flower, Sir Archibald Dennis**, high steward of the borough of Stratford-upon-Avon (b. Stratford-on-Avon, Eng., 1865—d. Stratford-on-Avon, Nov. 22, 1950).

**Ford Clara Bryant** (MRS. HENRY FORD), U.S. philanthropist, widow of Henry Ford (b. Redford township, Mich., April 11, 1867—d. Detroit, Mich., Sept. 29, 1950).

**Ford, Julia Ellsworth** (MRS. SIMEON FORD), U.S. author (b. New York, N.Y., April 6, 1859—d. New York, N.Y., Aug. 14, 1950).

**Foster, William Trufant**, U.S. educator and economist (b. Boston, Mass., Jan. 18, 1879—d. Jaffrey, N.H., Oct. 8, 1950).

**Fraser, Harry Wilson**, U.S. railway union official (b. Topeka, Kan., June 7, 1884—d. Chicago, Ill., May 13, 1950).

**Fraser, Peter**, New Zealand government official (b. Fearn, Ross and Crom., Scot., Aug. 28, 1884—d. Wellington, N.Z., Dec. 12, 1950), on leaving school became a local officer of the Liberal party in Scotland and in 1908 joined the Independent Labour party. He went to New Zealand two years later and was active in the labour movement. He was elected to the house of representatives for Wellington Central in 1918, and in 1935 was appointed minister of education, health, marine and police and in 1939 deputy prime minister. In his government's program of social services he was responsible for the national health scheme. On April 1, 1940, on the death of M. J. Savage, Fraser became prime minister. His party was defeated in the general election of Nov. 1949, and he resigned in December. From 1943 he had been also minister of external affairs and minister of island territories, and from Dec. 1946 native minister (renamed minister of Maori affairs in 1947). He also held the portfolio of employment during 1946. During World War II he attended meetings of the war cabinet in London, and in 1944, 1948 and 1949 attended the London meetings of the British Commonwealth prime ministers. In 1945 he attended the U.N. meetings at San Francisco, Calif., and in 1948 led the New Zealand delegation to the third U.N. general assembly, in Paris.

**Frisch, Daniel**, U.S. Zionist leader (b. Palestine, 1897?—d. New York, N.Y., March 7, 1950).

**Gabor, Arnold**, U.S. operatic baritone (b. Budapest, Hung., 1892—d. Los Angeles, Calif., July 15, 1950), studied music in Hungary, Germany and Italy and appeared in many European cities before going (1923) to the U.S., where he appeared for 18 successive years as a member of the Metropolitan Opera staff. He was especially remembered by opera-goers for his roles in the operas of Richard Wagner.

**Gamewell, Francis Dunlap**, U.S. missionary (b. Camden, S.C., Aug. 31, 1857—d. Clifton Springs, N.Y., Aug. 7, 1950).

**Gardella, Tess** ("AUNT JEMIMA"), U.S. actress (b. Wilkes-Barre, Pa., 1898?—d. New York, N.Y., Jan. 3, 1950).

**Gardiner, Henry Balfour**, British composer and concert promoter (b. London, Eng., Nov. 7, 1877—d. Salisbury, Wilts., Eng., June 28, 1950).

**Garfield, James Rudolph**, U.S. lawyer, former secretary of the interior (b. Hiram, O., Oct. 17, 1865—d. Cleveland, O., March 24, 1950).

**Garibaldi, Giuseppe** (PEPPINO), Italian army officer (b. Melbourne, Austr., July 29, 1879—d. Rome, It., May 19, 1950). A grandson of the Italian liberator and son of Gen. Ricciotti Garibaldi, he fought for freedom in many lands. In 1914, when his father formed a regiment of Italian volunteers to fight Germany in the ranks of the French Foreign Legion, Peppino joined with his five brothers. When in May 1915 Italy joined the Allies, France authorized the *garibaldini* to serve in the Italian army, and Peppino, made lieutenant colonel of the *alpini*, distinguished himself at the Col di Lana. After the war he first sympathized with Mussolini, but opposed him after the murder of Giacomo Matteotti. In 1924 he emigrated to the United States and returned to Italy only at the beginning of 1940. Arrested by the Germans in 1943, he was later liberated by the Allies. During the electoral campaign of 1948 he protested against the misuse of the name of Garibaldi by the Communist-sponsored Popular Democratic front. (See also *Encyclopedia Britannica*.)

**Gavrilo** (GAVRILO DOŽITCH), patriarch of the Serbian Orthodox Church (b. Morača, Montenegro, May 17, 1881—d. Belgrade, Yugos., May 7, 1950), was educated at Pizren, Yugos.; Athens, Gr.; and Istanbul, Turk. In 1910 he became bishop of Peć and in 1920 metropolitan of Crnagora and Primorje (Montenegro and the Littoral). Elected by 50 out of 59 votes in a secret ballot of bishops to the patriarchate of the Serbian Orthodox Church, vacant since the death of Patriarch Varnava (Petar Rošitch) on July 24, 1937, he was enthroned on Feb. 21, 1938. He was one of the instigators of the coup d'état of March 27, 1941. After Germany had invaded Yugoslavia he remained in his country but was arrested, interned at the monasteries of Rakovica and Vojlovica and in 1944 sent to the concentration camp at Dachau. Liberated on April 30, 1945, by the U.S. army, he lived for a time in Rome, returning to Belgrade in Nov. 1946. In Dec. 1946 he spoke at an all-Slav congress in Belgrade. A year later he called on the Orthodox clergy to co-operate with the government, but, nevertheless, later refused to recognize the League of Serbian Priests, sponsored by the Communist party. In July 1948, accompanied by Metropolitan Josip of Skopje, he was present at the congress of the Orthodox churches in Moscow, but refused to recognize the patriarch of Moscow and all-Russia as head of the Orthodox churches throughout the world.

**Ghose, Aurobindo**, Indian philosopher and poet (b. Koonagar, Western Bengal, India, Aug. 15, 1872—d. Pondicherry, French India, Dec. 5, 1950).

**Gibson, Harvey Dow**, U.S. financier and Red Cross official (b. North Conway, N.H., March 12, 1882—d. Boston, Mass., Sept. 11, 1950), received his A.B. degree from Bowdoin college, Brunswick, Me., in 1902. He worked for the American Express company, helped finance the purchase of a travel agency in New York city and then entered banking in 1912. He was president of the Liberty National bank of New York from 1917 to 1921, then president of the New York Trust company until 1931. He was president and chairman of the board of the Manufacturers Trust company of New York from 1931 to 1947 when he resigned the latter position. A renowned philanthropist, Gibson was a close friend of Helen Keller, serving as treasurer of the Helen Keller foundation. He served as Red Cross commissioner to France during World War I, and later directed all Red Cross operations throughout Europe. In World War II he became Red Cross commissioner in Great Britain and western Europe, and for this work received the president's medal of merit, highest civilian award in the U.S.

**Gill, Sir Frank**, British engineer (b. Castletown, Isle of Man, Eng., Oct. 4, 1866—d. Geneva, Switz., Oct. 25, 1950).

**Gillett, Horace Wadsworth**, U.S. metallurgist (b. Steuben county, N.Y., Dec. 12, 1883—d. Nicholasville, Ky., March 3, 1950).

**Gimbel, Ellis A.**, U.S. merchant (b. Vincennes, Ind., Nov. 9, 1865—d. Philadelphia, Pa., March 17, 1950), was the son of Adam Gimbel, who developed a chain of department stores from an initial small dry-goods store in Vincennes, Ind. Ellis Gimbel helped his father extend the Gimbel interests to Philadelphia, New York, Milwaukee, Chicago, Detroit, Pittsburgh, Beverly Hills, Miami Beach and Palm Beach, through stores bearing the name of Gimbel or Saks Fifth Avenue. He installed the first escalators; instituted the merchandise testing bureau idea; insisted on a one-price merchandising policy; and followed a scrupulous policy of truth in advertising. He instituted several awards for civic service and was a noted philanthropist, being especially interested in orphans and the blind. By 1946 he had been host to more than 250,000 children, whom he annually took to the circus. He was chairman of the board of all nine of the Gimbel Brothers, Inc., establishments, and president and director of Gimbel Brothers Bank and Trust company of Philadelphia.

**Giuliano, Salvatore**, Sicilian bandit (b. Montelepre, Sicily, It., 1922?—d. Castelvetrano, Sicily, July 5, 1950). Having served in World War II with the Italian air force, after the capitulation of 1943 Giuliano engaged in the food black market. His claim to be the head of a volunteer army fighting for the independence of Sicily was soon uncovered as a pretense and his gunmen—at one time numbering as many as 500—were in fact well paid assassins. From rich landowners he and his men extorted ransom in a total estimated amount that ran from \$200,000 to \$2,000,000, and they were reputed to have killed more than 100 policemen and several civilians. In 1949 Mario Scelba, minister of the interior, formed a special police force to capture Giuliano dead or alive, but a conspiracy of silence surrounding the brigand made the task especially difficult. Eventually, far away from his cave hide-out on Montelepre, he was ambushed and shot dead.

**Givens, William Robert**, Canadian publisher and journalist (b. Kingston, Ont., Can., 1868?—d. Kingston, Sept. 18, 1950).

**Glazier, Katharine Bruce** (MRS. BRUCE GLASIER), British labour leader (b. Sept. 25, 1867—d. Earby, Yorks., Eng., June 14, 1950).

**Glen, James Allison**, Canadian political leader and cabinet minister (b. Renton, Dumbartonshire, Scot., Dec. 18, 1877—d. Ottawa, Ont., Can., June 27, 1950).

**Glenn, John Mark**, U.S. social welfare director (b. Baltimore, Md., Oct. 28, 1858—d. New York, N.Y., April 20, 1950).

**Goldschmidt, Lazarus**, Hebrew scholar (b. Plungė, Lith., Dec. 17, 1871—d. London, Eng., April 18, 1950), had, at 21, already translated the book of Enoch from Ethiopic into Hebrew. His announcement in 1896 that he would undertake a complete German critical edition of the Babylonian Talmud was received with considerable scepticism, but the last of nine large volumes was completed in 1936, the whole being the first translation of the Talmud into a European language. He also translated both the Bible and the Koran into German.

**Gollomb, Joseph**, Russian-born author (b. St. Petersburg, Russia, Nov. 15, 1881—d. New York, N.Y., May 23, 1950).

**Golomshok, Eugene Alexandrovich**, Russian-born anthropologist (b. Samar, Russia, May 14, 1897—d. New York, N.Y., June 20, 1950).

**Gómez y Arias, Miguel Mariano**, former president of Cuba (b. Sancti Spiritus, province of Santa Clara, Cuba, Oct. 6, 1889—d. Havana, Cuba, Oct. 26, 1950), was the son of the second president of Cuba, José Miguel Gómez, who held that office from 1909 to 1913. He was educated in the U.S. and in Cuba, served several terms in the Cuban house of representatives, then in 1926 was elected mayor of Havana. He was a leader of the forces that joined to end the dictatorship of Pres. Gerardo Machado y Morales, and from May to Dec. 1936 he was himself president of the republic, but was impeached, primarily because of the power of Col. Fulgencio Batista y Zaldívar, a new military dictator who later became president.

**Goodrich, David Marvin**, U.S. industrialist (b. Akron, O., June 22, 1876—d. Mount Kisco, N.Y., May 17, 1950).

**Goshorn, Clarence Baker**, U.S. advertising executive (b. Saugatuck, Mich., May 12, 1893—d. Bimini, Bahamas, Dec. 10, 1950).

**Goss, Albert S.**, U.S. Grange leader (b. Rochester, N.Y., Oct. 14, 1882—d. New York, N.Y., Oct. 25, 1950).

**Gould, Barbara Ayrton** (MRS. GERALD GOULD), British political leader (d. London, Eng., Oct. 14, 1950).

**Grace, Joseph Peter**, U.S. steamship line official (b. Great Neck, L.I., N.Y., June 29, 1872—d. Great Neck, July 15, 1950), became president and chair-

man of the board of W. R. Grace & Co., steamship line founded by his father, which also owned extensive plantations and other holdings in Latin America. A graduate of Columbia university, he joined his father's company in 1894. Between 1909 and 1929, when he was its president, the company experienced its greatest expansion. He collaborated with the Pan American Airways, Inc., in establishing the first international air service—Pan American-Grace Airways, Inc.—down the west coast of South America, in 1929. In that year also he became chairman of the board of W. R. Grace & Co., holding that position until he retired in 1946.

**Grauman, Sidney Patrick**, U.S. theatrical producer and theatre owner (b. Indianapolis, Ind., March 17, 1879—d. Hollywood, Calif., March 5, 1950), got his theatrical start in Alaska, staging a benefit with his father. The two opened the Unique theatre in San Francisco, Calif., and other houses in nearby California cities, early emphasizing the neo-oriental luxury that came to mark the big-city "movie palace" throughout the U.S. It was in Los Angeles that he built his most famous theatres, including the Metropolitan (later the Paramount) and Rialto, the Egyptian and Grauman's Chinese theatres. He originated the gala *première*, with floodlights, visiting picture stars and ogling crowds. In the forecourt of the Chinese theatre he created a kind of motion-picture hall of fame by collecting the handprints, footprints and sometimes prints of other characteristics of stars (e.g., Jimmy Durante's nose, Betty Grable's legs) in concrete.

**Greene, Belle da Costa**, U.S. librarian (b. 1887?—d. New York, N.Y., May 10, 1950).

**Greene, James Sonnett**, U.S. physician, specialist in speech defects (b. New York, N.Y., Dec. 25, 1880—d. New York, N.Y., Sept. 17, 1950).

**Greenleaf, Ralph**, U.S. pocket-billiards champion (b. Monmouth, Ill., 1900—d. Philadelphia, Pa., March 15, 1950), began to compete in billiards at the age of 8, and won the Illinois championship when he was 12. In 1919 at the age of 20 he won the world's championship, and held that title interruptedly for 17 years.

**Greenly, Sir John Henry Maitland**, British industrialist (b. July 25, 1885—d. Calcot, near Reading, Berks., Eng., Dec. 31, 1950).

**Greenslade, John Wills**, U.S. naval officer (b. Bellevue, O., Jan. 11, 1880—d. Bellevue, O., Jan. 6, 1950).

**Grey, Katherine**, U.S. actress (b. San Francisco, Calif., Dec. 27, 1873—d. Orleans, Mass., March 21, 1950).

**Griswold, Glenn**, U.S. editor and publisher (b. Benton Harbor, Mich., June 19, 1886—d. New York, N.Y., May 15, 1950).

**Grossberg, Jacob Gedaliah**, U.S. attorney and first president of the American Jewish congress (b. Kovno, Russia [later Kaunas, Lith.], April 10, 1870—d. Madison, Wis., Jan. 29, 1950).

**Gunn, Baitiscombe George**, British Egyptologist (b. London, Eng., June 30, 1883—d. Oxford, Oxon., Eng., Feb. 27, 1950).

**Gustav V** (Oscar Gustav Adolf), KING OF SWEDEN (b. Drottningholm castle, near Stockholm, Swed., June 16, 1858—d. Drottningholm, Oct. 29, 1950), was the son of King Oscar II and Queen Sophia Wilhelmina of Nassau. On Sept. 20, 1881, he married Princess Victoria of Baden (1862–1930), granddaughter of Sophia, princess of Sweden; this marriage united the Bernadotte dynasty and the ancient Swedish royal house of Vasa. There were three sons, of whom the eldest was Crown Prince Gustav Adolf.

Gustav V succeeded his father Dec. 8, 1907, and took as his motto "With the people for the Fatherland." During World War I he was a firm believer in Scandinavian neutrality; in World War II his country was soon left as the one neutral in the north. On June 16, 1948, celebrations throughout the country marked the occasion of his 90th birthday. Until his illness in 1942, King Gustav was a keen tennis player and traveller. Suffering from bronchitis, he was carried to the *riksdag* on a stretcher when he opened the new parliamentary session on Jan. 11, 1949, but was able to walk to the throne supported by Crown Prince Gustav Adolf. He was 49 when he ascended the throne, yet his reign was the longest in Swedish history. (See also *Encyclopædia Britannica*.)

**Hailsham, Douglas McGarel Hogg**, 1ST VISCOUNT, OF HAILSHAM, IN THE COUNTY OF SUSSEX, British lawyer and politician (b. London, Eng., Feb. 28, 1872—d. Hailsham, Aug. 16, 1950).

**Haldane, Sir James Aylmer Lowthorpe**, British army officer (b. Nov. 17, 1862—d. London, Eng., April 19, 1950).

**Hale, Alan** (ALAN MACKAHN), U.S. motion-picture actor (b. Washington, D.C., Feb. 10, 1892—d. Hollywood, Calif., Jan. 22, 1950).

**Hammond, Thomas Stevens**, U.S. industrialist (b. Crown Point, N.Y., Oct. 29, 1883—d. Chicago, Ill., June 15, 1950).

**Hannay, James Owen** (pseudonym GEORGE A. BIRMINGHAM), British novelist (b. Belfast, Antrim, N.Ire., July 16, 1865—d. London, Eng., Feb. 2, 1950).

**Harbison, William Albert**, U.S. Protestant lay leader (b. Allegheny, Pa., Nov. 14, 1874—d. Hanover, N.H., Sept. 15, 1950).

**Harkness, Mary Stillman** (MRS. EDWARD STEPHEN HARKNESS), U.S. philanthropist (b. Brooklyn, N.Y., July 4, 1874—d. New York, N.Y., June 6, 1950), married the financier and philanthropist E. S. Harkness in 1904. After his death in 1940 she continued many of the benefactions in which he had interested himself, and to which he had given a total of \$100,000,000. Among these were the Metropolitan Museum of Art, Yale university, the United Hospital Fund of New York, the American Red Cross, the Young Women's Christian association, the Boy Scouts and the United Service Organizations. Among her larger donations were \$1,000,000 to the Mary Harkness Convalescent home in Port Chester, N.Y., and \$1,283,600 for the Edward Harkness Memorial hall at the Columbia-Presbyterian Medical center in New York city.

**Harmon, Austin Morris**, U.S. classical scholar and educator (b. Brockport, N.Y., Sept. 28, 1878—d. Chebeague Island, Me., June 29, 1950).

- Harper, Lathrop C.**, U.S. rare-book dealer (b. 1867?—d. New York, N.Y., Aug. 11, 1950).
- Hart, Charles**, U.S. steel manufacturer (b. Doylestown, Pa., Jan. 5, 1869—d. Bryn Mawr, Pa., May 23, 1950).
- Harwood, Sir Henry Harwood**, British admiral (b. Jan. 19, 1888—d. Goring-on-Thames, Oxon., Eng., June 9, 1950), joined the royal navy as a cadet in 1903. In Sept. 1936 he became commodore commanding South American division, with H.M.S. "Exeter" as his flagship. As a rear admiral he commanded the ships "Exeter," "Ajax" and "Achilles" in their successful action against the German pocket battleship "Admiral Graf Spee" off the mouth of the River Plate, Dec. 1939. He was commander in chief, Mediterranean, in 1942.
- Haworth, Sir (Walter) Norman**, British chemist (b. Chorley, Lancs., Eng., March 19, 1883—d. Birmingham, Eng., March 18, 1950), after holding posts at Imperial college, London, and at St. Andrews university, St. Andrews, Scot., became professor of chemistry at King's college, Newcastle-upon-Tyne in 1920. From 1925 to 1948 he was professor at Birmingham university, of which he was vice-principal in 1947-48. Haworth shared the Nobel prize in 1937 for his work on vitamin C and carbohydrates. He was also associated with the development of the atomic bomb, and was one of the signatories of the memorandum on the control of atomic energy submitted to the U.N. commission. He was knighted in 1947.
- Haycox, Ernest**, U.S. author (b. Portland, Ore., Oct. 1, 1899—d. Portland, Oct. 13, 1950).
- Helis, William G.**, Grecian-born oil executive, philanthropist and sportsman (b. Tropea, Gr., Oct. 17, 1886—d. Baltimore, Md., July 25, 1950).
- Hellman, Sam**, U.S. author and scenarist (b. San Francisco, Calif., July 4, 1885—d. Beverly Hills, Calif., Aug. 11, 1950), graduated from the University of California, Berkeley. He worked on various newspapers, but gave up newspaper work to go to Paris, where he wrote short stories that appeared regularly in national magazines of the U.S. In 1932 he returned to California to write motion-picture scripts. He wrote many of the vehicles that starred Shirley Temple, and some for Will Rogers. Among movies he wrote were *Poor Little Rich Girl*, *Captain January*, *Thirty-Day Princess*, *In Old Kentucky*, *Message to Garcia*, *The Bachelor and the Butler*, *Stanley and Livingston*, *The Return of Frank James*, *Shine On Harvest Moon*, *Frontier Marshal* and *The Horn Blows at Midnight*.
- Henderson of Ardwick, Joseph Henderson, 1ST BARON**, British railway union leader (b. 1884?—d. Carlisle, Cumb., Eng., Feb. 25, 1950).
- Herford, Robert Travers**, British theologian and author (b. Manchester, Eng., March 1860—d. near Chester, Ches., Eng., Nov. 10, 1950).
- Hermant, Abel**, French author and dramatist (b. Paris, Fr., Feb. 3, 1862—d. Chantilly, Fr., Sept. 22, 1950).
- Herne, (Katherine) Chrystal (MRS. HAROLD S. POLLARD)**, U.S. actress (b. Ashmont, Mass., June 16, 1883—d. Boston, Mass., Sept. 19, 1950).
- Herter, Albert**, U.S. portrait and mural painter (b. New York, N.Y., March 2, 1871—d. Santa Barbara, Calif., Feb. 15, 1950).
- Hibbard, Elisabeth Haseltine (MRS. FREDERICK C. HIBBARD)**, U.S. sculptor (b. Portland, Ore., Sept. 25, 1894—d. Chicago, Ill., Sept. 4, 1950).
- Hibbard, Frederick C.**, U.S. sculptor (b. Canton, Mo., June 15, 1881—d. Chicago, Ill., Dec. 12, 1950).
- Hichins, Robert Smythe**, English-born novelist (b. Speldhurst, Kent, Eng., Nov. 14, 1864—d. Zürich, Switz., July 20, 1950).
- Hild, Oscar F.**, U.S. musicians' union official (b. Cincinnati, O., Feb. 15, 1901—d. Cincinnati, O., April 24, 1950).
- Hinton, Charles Louis**, U.S. painter, sculptor and educator (b. Ithaca, N.Y., Oct. 18, 1869—d. Bronxville, N.Y., Oct. 12, 1950).
- Hodge, Sir Rowland Frederic William**, British shipbuilding executive (b. Sept. 15, 1859—d. Chipstead, Churt, Surrey, Eng., Sept. 21, 1950).
- Hogarth, Donald Macdonald**, Canadian industrialist and financier (b. Osecola, Ont., Can., June 15, 1878—d. Toronto, Ont., June 27, 1950).
- Holland, Ernest O.**, U.S. educator (b. Bennington, Ind., Feb. 4, 1874—d. Westover Field, Mass., May 30, 1950).
- Holmes, Edward Jackson**, U.S. art museum president (b. Boston, Mass., Jan. 3, 1873—d. Boston, May 29, 1950).
- Hopkins, Arthur Melancthon**, U.S. author, director and producer (b. Cleveland, O., Oct. 4, 1878—d. New York, N.Y., March 22, 1950).
- Horlick, Alexander James**, U.S. industrialist (b. Racine, Wis., Oct. 3, 1873—d. Racine, June 6, 1950).
- Houston, Charles Hamilton**, U.S. lawyer (b. Washington, D.C., Sept. 3, 1895—d. Washington, D.C., April 22, 1950).
- Hovgaard, William**, U.S. naval architect (b. Aarhus, Den., Nov. 28, 1857—d. Morristown, N.J., Jan. 5, 1950).
- Howard, Leland Ossian**, U.S. entomologist (b. Rockford, Ill., June 11, 1857—d. Bronxville, N.Y., May 1, 1950).
- Hubbard, Charles Joseph**, U.S. arctic explorer (b. Kansas City, Mo., June 25, 1902—d. Ellesmere Island, N.W. Terr., Can., July 31, 1950), went on his first trip of exploration at the age of 14, with the Sir Wilfred Grenfell mission to Labrador. On his return he studied at the Milton academy, Milton, Mass., and at Harvard university. He worked for a time as a civil engineer, but from 1930 to 1936 returned to the arctic as pilot for several exploratory expeditions. In 1936 and 1937 he sailed his own schooner for 20,000 mi., exploring from Labrador to the South Pacific, and including the Galapagos Islands. From 1937 to 1940 he spent much time as a free-lance writer and lecturer. During World War II he served both the U.S. army and navy as adviser on arctic activities. At the end of that war he entered the service of the U.S. weather bureau and helped set up arctic weather stations, manned the year around by joint U.S.-Canadian staffs. It was while supervising the parachuting of supplies to one of these stations that he died in the crash of his plane. The crash occurred near the spot where in 1948 Hubbard had found original documents left by Admiral R. E. Peary on his 1909 trip of discovery to the north pole.
- Hubertus Karl Wilhelm**, PRINCE OF PRUSSIA, grandson of Kaiser Wilhelm II (b. Marmor palace, near Potsdam, Ger., Sept. 30, 1909—d. Windhoek, South-West Africa, April 8, 1950).
- Huddleston, Sir Hubert Jervoise**, British army officer and former governor general of Anglo-Egyptian Sudan (b. 1880—d. London, Eng., Oct. 2, 1950).
- Hughes, Edwin Holt**, U.S. clergyman and educator (b. Moundsville, W.Va., Dec. 7, 1866—d. Washington, D.C., Feb. 12, 1950).
- Huhn, Bruno**, U.S. composer, pianist and conductor (b. London, Eng., Aug. 1, 1871—d. New York, N.Y., May 13, 1950), went to the U.S. as a young man and became a concert pianist. He later conducted choral groups and composed musical settings for many songs. His best-known work was the setting for "Invictus," which met a dubious reception initially, but, after it was included in a program by the baritone Francis Rogers in New York's Mendelssohn hall in 1910, met with lasting public acclaim. Among Huhn's other songs were "Seafarers," "Courage" and cantatas and song cycles.
- Hunkin, Joseph Wellington**, British clergyman, Anglican bishop of Truro (b. Truro, Corn., Eng., Sept. 25, 1887—d. England, Oct. 28, 1950).
- Hurd, Sir Percy Angier**, British journalist (b. Somerset, Eng., 1864—d. London, June 5, 1950).
- Huston (Houghton), Walter**, Canadian-born stage and screen actor (b. Toronto, Can., April 6, 1884—d. Beverly Hills, Calif., April 7, 1950), was the son of a contractor, and his early studies were in engineering. He followed that trade for a few years, but in 1908 gave up engineering in favour of acting. He was in vaudeville with his wife for many years, and in 1924 went to New York city at the instance of the producer Brock Pemberton to star in *Mr. Pitt*. In 1924 also he acted in Eugene O'Neill's *Desire under the Elms*. On both stage and screen he subsequently scored repeated successes. His best-known vehicles included *The Fountain*, *Elmer the Great*, *Love's Old Sweet Song*, *Knickerbocker Holiday*, *Dodsworth*, *Ann Vickers*, *The Shanghai Gesture*, *Dragon Seed*, *All That Money Can Buy*, *Mission to Moscow* and *The Outlaw*. He won the 1948 award of the Academy of Motion Picture Arts and Sciences for the best supporting performance for his role in *Treasure of Sierra Madre*, which was written and directed by his son, John.
- Hutchinson, Walter Victor**, British book publisher and sportsman (b. May 16, 1887—d. Winchester, Hants., Eng., April 30, 1950).
- Hutin, Marcel**, French editor (b. Wissembourg, Fr., June 22, 1869—d. Paris, Fr., Oct. 20, 1950).
- Ingram, Rex**, U.S. motion-picture director (b. Dublin, Ire., 1892—d. Hollywood, Calif., July 21, 1950), whose family name was Hitchcock, adopted his mother's surname of Ingram. He graduated from Trinity college in Dublin and went to the U.S. in 1911. He enrolled in the fine arts school at Yale university, and there became interested in motion pictures. He worked for several early companies, as writer, director and actor, and after serving with the royal flying corps in World War I, was a director, first for the Universal Jewel Pictures and then for Metro-Goldwyn. Many of his earlier productions starred the actress Alice Terry, whom he married in 1921. Reputedly the man who "discovered" Rudolph Valentino, Ingram won world acclaim as director of *The Four Horsemen of the Apocalypse*, adapted from the Vicente Blasco Ibáñez novel and starring Valentino. Others of his screen successes included *The Prisoner of Zenda*, *Where the Pavement Ends* and *Scaramouche*.
- James, Alan Gosset**, British landscape painter (b. Cheltenham, Glos., Eng., Aug. 15, 1875—d. Stow-on-the-Wold, Glos., Eng., Aug. 17, 1950).
- Jannings, Emil**, U.S.-born motion picture actor (b. Brooklyn, N.Y., July 26, 1886—d. Lake Wolfgang, Austria, Jan. 2, 1950), was taken to Europe as an infant and reared in Germany by his grandparents. An adventurous youth and a poor student, he once ran away to sea, and later left college to join a road show company. He travelled in the provinces for several years, then began appearing in stock. He played in classical roles at the Darmstadt Royal theatre in Berlin, where he also began his motion picture career. Jannings won the Academy of Motion Picture Arts and Sciences award in 1928 for his performance in *The Way of All Flesh*. Other productions in which he played, in Germany and later in the United States, included *Deception*, *Variety*, *The Street of Sin*, *The Last Command*, *The Sins of the Fathers* and *The Blue Angel*. He returned to Germany shortly after the introduction of talking pictures and there helped supervise the motion picture industry under the nazi propaganda minister Josef Goebbels.
- Jaques-Dalcroze, Emile**, Swiss composer (b. Vienna, Aus., July 6, 1865—d. announced in Geneva, Switz., July 2, 1950).
- Jarvis, Sir John**, British philanthropist, publisher and industrialist (b. March 25, 1876—d. Godalming, Sur., Eng., Oct. 2, 1950).
- Jeffries, Edward J.**, U.S. lawyer and civic official (b. Detroit, Mich., April 3, 1900—d. Miami Beach, Fla., April 2, 1950).
- Jen Pi-shih**, Chinese Communist leader (b. Hunan province, China, April 30, 1904?—d. Peking, China, Oct. 27, 1950).
- Jensen, Johannes Vilhelm**, Danish writer (b. Farsø, Den., Jan. 20, 1873—d. Copenhagen, Den., Nov. 25, 1950), abandoned his medical studies to take up writing, going to Spain in 1898 as correspondent of the Danish paper *Politiken*. In the same year he began to attract notice with the first of his "Himmerland stories," tales of his childhood home, the writing of which went on intermittently until 1926. In 1901 he published *The Fall of the King*, about King Christian II, regarded as one of the finest Danish historical novels. After travelling in the far west and America he published a collection of *Exotic Short Stories*. These and others of his stories revealed an

affinity with Rudyard Kipling whom he admired greatly and on whom he wrote a monograph. His *Madame d'Orléans*, *The Wheel* (1904-5) and *The Temptations of Dr. Renault* (1935) were all based on the Faust theme. His greatest work as a novelist was *The Long Journey* (1908-22), consisting of six separate novels. As a poet, Jensen was influenced by Heine and Walt Whitman and was considered one of the greatest of his country and age. In 1944 he received the Nobel prize for literature. (See also *Encyclopædia Britannica*.)

**Johnson, Arthur Charles**, U.S. editor and publisher (b. Ira, O., Oct. 10, 1874—d. Cleveland, O., Nov. 11, 1950).

**Johnson, Emory Richard**, U.S. economist (b. Waupun, Wis., March 22, 1864—d. Philadelphia, Pa., March 6, 1950).

**Johnston, Alva**, U.S. journalist and author (b. Sacramento, Calif., Aug. 1, 1888—d. Bronxville, N.Y., Nov. 23, 1950), worked for newspapers in California and New York city, and in 1922 won the Pulitzer prize for outstanding science reporting. By 1928 he had become almost exclusively a magazine writer, his work appearing especially in the *Saturday Evening Post* and in the "Profiles" department of the *New Yorker*. He was the author of three books: *The Great Goldwyn* (1937); *Wilson Mizner, the Legend of a Sport* (privately printed, 1943); and *The Case of Erle Stanley Gardner* (1947).

**Johnston, Cyril Frederick**, British bell founder (b. Croydon, Sur., Eng., May 9, 1884—d. London, March 30, 1950).

**Jolson, Al** (ASA YOELSON), U.S. singer, motion-picture and radio star (b. St. Petersburg, Russia?, May 26, 1886—d. San Francisco, Calif., Oct. 23, 1950), was the son of a Jewish cantor, but despite his father's wishes decided to devote his singing to the professional stage. He made his first stage appearances in Washington, D.C., then joined his brother and a friend in a vaudeville act, first appearing in blackface in Brooklyn, N.Y. In 1909 he joined Lew Dockstader's Minstrels, where he was seen and hired by J. J. Shubert. It was under Shubert, and principally at the New York Winter Garden, that he became by 1921 one of the nation's top entertainers.

His stage success made it inevitable that Hollywood should early consider him for talking pictures, and his movie *The Jazz Singer*, 1927, is generally conceded to have been the first important sound picture. In 1928 he appeared in the motion picture *The Singing Fool*, whose hit song, "Sonny Boy," became as permanently a part of U.S. theatrical history as had his earlier hit tunes, such as "April Showers," "Avalon" and "Mammy." His other movies included *The New Yorker*, *Hallelujah, I'm a Bum* and *Wonder Bar*. In 1940 and 1941 he appeared in a stage musical show, *Hold On to Your Hats*.

During World War II Jolson became famous for his tours to perform before U.S. fighting men, appearing in camps and at posts in every war theatre. In 1943 he suffered from pneumonia and malaria, then returned to Columbia Pictures in 1944. He became a supervising producer, and played himself in the movie *Rhapsody in Blue*, dealing with the life of George Gershwin. It was his autobiographical motion picture *The Jolson Story*, with himself singing the songs and Larry Parks playing the part of Jolson, that brought him to the top of the entertainment world for a third time. The picture grossed more than \$13,000,000 after its release in 1946, and its sequel, *Jolson Sings Again*, was also a hit. Jolson died of a heart ailment a short time after returning from a trip to entertain soldiers in Korea.

**Kampf, Arthur von**, German painter (b. Aachen, Ger., 1864?—d. Feb. 1950).

**Kelly, Edward Joseph**, U.S. politician (b. Chicago, Ill., May 1, 1876—d. Chicago, Oct. 20, 1950), was viewed by many as the prototype of the U.S. big-city political boss—and himself admitted that "to be a real mayor . . . you've got to be a boss." He left school after the seventh grade, but eventually by private study qualified as an assistant engineer in the Chicago sanitary district. He obtained his first political job at the age of 17, and was never off the public pay roll thereafter until he retired in 1947. As chief engineer of the sanitary district during the 1920s Kelly became a friend of Patrick Nash, sewer contractor, who eventually became the other half of what was widely known as Chicago's Kelly-Nash machine—the Democratic political organization of Cook county.

Kelly became mayor of Chicago in 1933 when the Chicago city council elected him to replace Mayor Anton Cermak, who had been assassinated by a bullet intended for President-Elect Franklin D. Roosevelt. He was elected almost without opposition in 1935, 1939 and in 1943, refusing to run again in 1947.

He played a leading role in the Democratic conventions that nominated Pres. Franklin D. Roosevelt for his second, third and fourth terms. Kelly reduced Chicago's debt by \$100,000,000 and left the city solvent.

**Kelsey, Albert**, U.S. architect (b. St. Louis, Mo., April 26, 1870—d. Philadelphia, Pa., May 6, 1950).

**Kennedy, Charles Rann**, British-born actor and dramatist (b. Derby, Derby., Eng., Feb. 14, 1871—d. Los Angeles, Calif., Feb. 16, 1950).

**Kenney, John Andrew**, U.S. Negro physician and surgeon (b. Albemarle county, Va., June 11, 1874—d. Montclair, N.J., Jan. 29, 1950), studied medicine and went to Tuskegee institute, Tuskegee Institute, Ala., as resident physician in 1902. There he was personal physician to Booker T. Washington and George Washington Carver. He was medical director and chief surgeon of the John A. Andrew Memorial hospital at Tuskegee until 1924, when he left the south after Ku Klux Klan members threatened his life for insisting on rights for Negro doctors in a Veterans' administration hospital which was being built at Tuskegee.

He went to New Jersey and in 1927 founded a private hospital in Newark, named the Kenney Memorial hospital in memory of his parents. It was renamed the Community hospital in 1934 when he gave it to the Booker T. Washington Hospital association, and he continued as its medical director and chief surgeon. He returned to Tuskegee in 1939 to head the Tuskegee Institute hospital. In 1944 he returned to New Jersey to resume practice of medicine. He was prominent in the National Medical association, an organization of Negro doctors, and wrote *The Negro in Medicine*, published in 1912.

In 1944 he was chosen by the Harmon foundation as one of the country's most prominent Negroes.

**Kiddy, Arthur William**, British newspaper editor (b. Belper, Derby., Eng., 1868—d. Barnet, Herts., Eng., Feb. 18, 1950).

**King, William Lyon Mackenzie**, Canadian statesman (b. Berlin [now Kitchener], Ont., Dec. 17, 1874—d. Kingsmere, near Ottawa, Ont., July 22, 1950), was educated at Toronto university, and later held a fellowship in political economy at The University of Chicago and one in political science at Harvard university. He was editor of the *Labour Gazette*, 1900-08, later combining with this post that of deputy minister of labour of Canada. In Sept. 1908 Mackenzie King resigned his civil service post to enter politics and was elected Liberal member of parliament for North Waterloo, Ont., a seat which he held until 1911. (He was later M.P. for various other Canadian constituencies continuously from 1919 to 1949.) During his first period in parliament he was a member of Sir Wilfrid Laurier's cabinet as minister of labour. In 1911, however, the Liberals were defeated in the "reciprocity election" and Mackenzie King became head of the Liberal party information service. In 1914 he went to the United States for four years as director of industrial research of the Rockefeller foundation. The results of his work with the foundation were embodied in *Industry and Humanity* (1918), which was reissued in 1935 and 1947. He was elected leader of the Canadian Liberal party in 1919, on the death of Laurier, and was leader of the opposition until 1921, when the collapse of the Union government put the Liberals back into office, although without a clear majority. From that year until 1930 (except for a short interval of Conservative government in the summer of 1926) and from 1935 to 1948 he was prime minister and president of the Canadian privy council. He also held the portfolio of external affairs from 1935 to 1946, during which period he was responsible for greatly increasing Canada's diplomatic representation abroad. Although emphasizing Canadian national unity, he constantly stressed the need for close association between the free nations of the British Commonwealth and pursued a policy of collaboration with the U.S. He retired from public life in 1948 because of ill health and was latterly engaged upon his memoirs, assisted by a staff at McGill university working by means of a grant from the Rockefeller foundation. (See also *Encyclopædia Britannica*.)

**Kittelle, Sumner Ely Wetmore**, U.S. naval officer (b. Peekskill, N.Y., June 14, 1867—d. Washington, D.C., Dec. 29, 1950).

**Klemin, Alexander**, British-born aeronautical consultant, editor and educator (b. London, Eng., May 15, 1888—d. Greenwich, Conn., March 13, 1950).

**Kocián, Jaroslav**, Czech violinist and composer (b. Wildenschwert, Bohemia, Feb. 22, 1884—d. Prague, Czech., March 8, 1950).

**Kokotnur, Vaman Ramachandra**, Indian-born chemist and inventor (b. Athani, India, Dec. 16, 1886—d. Queens, N.Y., April 14, 1950).

**Kolarov, Vasil Petrov**, Bulgarian government official (b. Shumen, Bulg., July 16, 1877—d. Sofia, Bulg., Jan. 23, 1950), a teacher by profession, joined the Bulgarian Social Democratic party in 1897 and six years later was one of the organizers of its "narrow" or revolutionary wing. In 1913 he was elected deputy to the Bulgarian *sobranje* (national assembly), and again in 1920. When in 1919 the "narrow" Social Democrats reorganized themselves as the Bulgarian Workers' (Communist) party, he became its secretary-general. He attended all the Comintern congresses from 1920, was elected a member of the executive committee and, later, became secretary-general. In Sept. 1923 he attempted, with Georgi Dimitrov, to organize a Kremlin-sponsored uprising which, however, failed; escaping to Moscow, he remained there for more than two decades, becoming a soviet citizen. He returned to Bulgaria in Sept. 1944. He was a member of both *sobranjes* elected in Nov. 1945 and Oct. 1946. As provisional president of the republic (Sept. 1946-Dec. 1947), in Nov. 1946 he appointed Dimitrov prime minister, and in Dec. 1947 assumed the duties of minister of foreign affairs in the second Dimitrov cabinet. When Dimitrov died on July 2, 1949, Kolarov was neither among the few prominent Communists who went to Moscow to bring the body back to Sofia nor did he attend the burial ceremonies in the Bulgarian capital. On July 20 the *sobranje* unanimously elected him prime minister and foreign minister but he was not present. On Aug. 6 the cabinet was reconstituted and Vladimir Poptomov succeeded Kolarov as foreign minister.

**Korzybski, Alfred Habbank**, Polish-born scientist, author and founder of the school of general semantics (b. Warsaw, Pol., July 3, 1879—d. Sharon, Conn., March 1, 1950), inherited the title of count and considerable land in Poland, and there attended the Warsaw Polytechnic institute. He taught mathematics, physics and languages in Warsaw before World War I. During that war he was twice wounded, and he served on the Russian general staff before being sent to the U.S. and Canada to recruit for a Polish-French army. In 1920 he served with the Polish commission to the League of Nations. He took up the study of semantics, which until then had been concerned chiefly with the overtones of meanings in words, and constructed a whole new system for the understanding of human behaviour. This was based on the concept that words reflected thinking habits which, in turn, were not themselves true reflections of existing facts. He especially condemned Aristotelian habits of thought, and contended that most human problems reflected misunderstandings among people as to the proper values and hidden meanings of words. He was consulted by many of the leading thinkers of his day, and was in turn the object of ridicule by many others.

**Krupp von Bohlen und Halbach, Gustav**, German armaments industrialist (b. The Hague, Neth., Aug. 7, 1870—d. Salzburg, Austria, Jan. 16, 1950), held diplomatic posts in Washington, Peking and elsewhere, 1899-1906, but resigned from the German diplomatic service to join the Krupp combine. After his marriage with Friedrich Alfred Krupp's daughter, Bertha, in 1906, he legally adopted the name Krupp, and later became head of the combine. He gave strong support to the Nazi regime, and after World War II was indicted for trial at Nuremberg but was found unfit to plead; in the last years of his life he was paralyzed and partly blind.

**Kvapil, Jaroslav**, Czech poet, dramatist and journalist (b. Chudenitz, Bohemia, Sept. 9, 1868—d. Prague, Czech., Jan. 10, 1950).

**Labensky, Boris P.**, Russian-born aviation engineer (b. Kiev, Russia, 1895?—d. Stratford, Conn., Oct. 25, 1950).

**Lamont, Daniel**, Scottish theologian (b. Bute, Buteshire, Scot., 1870?—d. Edinburgh, Scot., May 4, 1950).

**Laski, Harold Joseph**, British political scientist (b. Manchester, Eng., June 30, 1893—d. London, Eng., March 24, 1950). He was educated at Manchester Grammar school and at New college, Oxford. He was a lecturer in history at McGill university, Montreal, Que., Can., 1914-16, and at Harvard university, 1916-20. In 1920 he joined the staff of the London School of Economics and Political Science, at which he held the University of London professorship of political science from 1926. In 1934 he visited the U.S.S.R. and lectured in Moscow on parliamentary government. Laski was a member of the Fabian society executive, 1922-36, of the Labour party executive committee, 1936-49, and was party chairman, 1945-46. In July 1946 he headed a good-will mission to Moscow and had an interview with Joseph Stalin. Among his early writings were *The Problem of Sovereignty* (1917) and *Authority in the Modern State* (1919). In 1925 he published *A Grammar of Politics*, a complete statement of Socialist theory, and, in 1927, a small book on communism. His later works included *Parliamentary Government in England* (1938), *Reflections on the Revolution of Our Time* (1943) and *Faith, Reason and Civilisation* (1944), the latter two books reaffirming his faith in the development of the Soviet Union and the hope for the future of Great Britain in a planned society.

**Lathrop, Austin Eugene** ("CAP"), U.S. industrialist and publisher (b. Lapeer, Mich., Oct. 5, 1865—d. Suntrana, Alaska, July 26, 1950), first launched his own business in Seattle, Wash., in 1889, when he built an electric railroad, which failed in the panic of 1893. He leased an island off the Olympic peninsula, and there set up a modernized poultry ranch that became a well-known show place. He was identified with Alaska most of his life, earning the title of captain by piloting a schooner which took passengers to gold strikes in various sections of the territory. He became perhaps Alaska's best-known citizen, and was almost certainly its wealthiest. He owned theatres, radio stations, a newspaper in Fairbanks and controlling interest in the Healy River Coal corporation, which operated the territory's largest coal mine. A measure of his energetic life was that he died—at the age of 84—in an accident in which he slipped from a moving car at a coal mine he was inspecting.

**Lauder, Sir Harry** (HENRY MACLENNAN LAUDER), Scottish comedian and singer (b. Portobello, Edinburgh, Scot., Aug. 4, 1870—d. near Strathaven, Lanarkshire, Scot., Feb. 26, 1950), began his career as an amateur singer, while working in a mill and as a coal miner, before starting concert-party work professionally in 1896. He first appeared in London in 1900, as a stand-in at Gatti's music hall. The spontaneity and cheerful humour of his singing won him immediate success and he later made 22 tours in North America, 7 in Australasia and 2 world tours. For his services as an entertainer in World War I he was knighted in 1919. In World War II he again entertained servicemen and gave also several broadcasts. Lauder wrote his own songs and music; celebrated among many were "I Love a Lassie," "Stop Yer Tickling, Jock," "Roamin' in the Gloamin'" and "It's Nice to Get Up in the Morning." He published a Scottish comedy and books of memoirs.

**Lauterbach, Richard E(dward)**, U.S. editor, author and war correspondent (b. New York, N.Y., June 18, 1914—d. New York, N.Y., Sept. 20, 1950).

**Lavitrano, Luigi Cardinal**, Italian prefect of the Sacred Congregation for the Affairs of Religious (b. Forio, It., March 7, 1874—d. Marino, It., Aug. 2, 1950).

**Lawrance, Charles Lanier**, U.S. inventor (b. Lenox, Mass., Sept. 30, 1882—d. East Islip, L.I., N.Y., June 23, 1950).

**Lawrence, Joseph Stagg**, Hungarian-born economist and author (b. Budapest, Hung., Oct. 19, 1896—d. Lafayette, N.J., Aug. 25, 1950).

**Lazarus-Barlow, Walter Sydney**, British pathologist and cancer research worker (b. 1866?—d. Bexhill, Sus., Eng., Jan. 15, 1950).

**Learned, William Setchel**, U.S. educator (b. Alpena, Mich., June 5, 1876—d. New York, N.Y., Jan. 3, 1950).

**Lebrun, Albert-François**, French government official (b. Mercy-le-Haut, Fr., Aug. 29, 1871—d. Paris, Fr., March 6, 1950), graduated at the top of his class both at the École Polytechnique and later the École Nationale Supérieure des Mines, and followed at first the profession of a mining engineer. When only 27, however, he entered regional politics and in 1905 became chairman of his departmental *conseil général*, retaining this office until becoming head of the state in 1932. Meanwhile, in 1900, he had become a deputy from Meurthe-et-Moselle, and was re-elected until 1919. He was minister of colonies, 1911-13; of war, 1913; and again of colonies, 1913-14. In the latter part of World War I he was minister of blockade and of liberated regions. He was made senator in 1920, vice-president of the senate, 1925-29, and president, 1931-32. On May 10, 1932, the national assembly elected him president of the republic, and he was re-elected president for seven years on April 5, 1939. When, at Vichy, on July 10, 1940, the national assembly by 569 votes to 80, with 18 abstentions, accorded full powers to Marshal Henri Philippe Pétain, who on the following day, by a sort of coup d'état, proclaimed himself chief of the French state, Lebrun, without

resigning formally, and without protest, retired to Vizille, near Grenoble. In 1943 he was interned by the Germans at Itter, Tirol, but was released by them the following year.

**Lehr, Lew**, U.S. newsreel commentator and motion picture comedian (b. Philadelphia, Pa., May 14, 1895—d. Brookline, Mass., March 6, 1950), attended Bucknell college, and began his stage career before World War I. He served overseas in the U.S. artillery, became an entertainer at army camps, and at the end of the war entered vaudeville, touring the stage circuits with his wife as the team of Lehr and Belle. Lehr next became a gag writer, working for such stars as Texas Guinan, Bert Lahr, Beatrice Lillie and others. In 1932 he became editor of short subjects for Fox Movietone News, and it was as a commentator for comic newsreel sequences that he became best known.

**Lemke, William**, U.S. congressman and farm leader (b. Albany, Minn., Aug. 13, 1878—d. Fargo, N.D., May 30, 1950), studied at the University of North Dakota, Grand Forks, at Georgetown Law school and at Yale, and began the practice of law in Fargo. He became chairman of the Republican state committee of North Dakota in 1916. In 1917 he became a member of the national executive committee of the National Non-Partisan league. From 1921 to 1923 he was attorney general of North Dakota, and from 1933 to 1941, and again from 1945 to his death, U.S. representative as congressman-at-large from his state. During the depression years he sponsored the Frazier-Lemke farm mortgage moratorium bill. This brought him to national attention, and he was candidate for president on the ticket of the Union party, a conservative group, in 1936.

**Lesinski, John**, U.S. congressman (b. Erie, Pa., Jan. 3, 1885—d. Dearborn, Mich., May 27, 1950).

**Lewis, Sir Willmott Harsant**, British journalist (b. Cardiff, Wales, June 18, 1877—d. Washington, D.C., Jan. 4, 1950).

**Leys, Sir (William) Cecil**, New Zealand journalist and newspaper publisher (b. Auckland, N.Z., Feb. 27, 1877—d. Mackay, Austr., June 22, 1950).

**Lips, Julius Ernest**, German ethnologist (b. Saarbrücken, Ger., Sept. 8, 1895—d. Leipzig, Ger., Jan. 24, 1950).

**Lord, Pauline**, U.S. actress (b. Hanford, Calif., Aug. 8, 1890—d. Alamogordo, N.M., Oct. 11, 1950), began her stage career in 1903, toured the U.S. with a stock company and made repeated starring appearances on Broadway. Her best-remembered roles were in Eugene O'Neill's Pulitzer-prize play *Anna Christie*, as Amy in *They Knew What They Wanted*, as Abby in *The Late Christopher Bean* and as Zenobia in *Ethan Frome*. She also appeared in the motion picture *Mrs. Wiggs of the Cabbage Patch*.

**Lvovitch, David**, leader of the World Union of the Organization for Rehabilitation through Training (b. Russia, 1882?—d. Paris, Fr., Aug. 17, 1950).

**Lynch, Clyde Alvin**, U.S. college president (b. Harrisburg, Pa., Aug. 24, 1891—d. Annville, Pa., Aug. 6, 1950).

**Macalister, Robert Alexander Stewart**, Irish-born archaeologist (b. Dublin, Ire., July 8, 1870—d. Cambridge, Cambs., Eng., April 26, 1950).

**MacCormac, Henry**, British physician and dermatologist (b. 1879?—d. London, Eng., Dec. 12, 1950).

**McDonald, Andrew Joseph**, Roman Catholic archbishop of St. Andrews and Edinburgh (b. Fort William, Inverness, Scot., 1871—d. Edinburgh, Scot., May 22, 1950).

**McDonough, Frank Wheatley**, U.S. magazine editor (b. West Des Moines, Ia., Oct. 20, 1905—d. Des Moines, Ia., March 3, 1950).

**McDuffie, John**, U.S. judge (b. River Ridge, Ala., Sept. 25, 1883—d. Mobile, Ala., Nov. 1, 1950).

**McKenna, William J.**, U.S. song writer (b. Jersey City, N.J., 1880?—d. Jersey City, March 4, 1950).

**MacKnight, (William) Dodge**, U.S. water-colour painter (b. Providence, R.I., Oct. 1, 1860—d. East Sandwich, Mass., May 22, 1950).

**Maclean, John Bayne**, Canadian publisher (b. Crieff, Ont., Sept. 26, 1862—d. Toronto, Ont., Sept. 25, 1950).

**McNicholas, John T.**, U.S. Roman Catholic archbishop (b. Kiltimagh, Ire., Dec. 15, 1877—d. Cincinnati, O., April 22, 1950), studied in Philadelphia, Pa., at St. Rose's priory, Springfield, Ky., and in Somerset, O. He entered the Dominican order in 1894 and was ordained in 1901, after which he studied theology in Rome. He served at Dominican houses of studies in the U.S. until 1913 when he was made pastor of St. Catherine of Siena parish in New York city. Meantime, he had helped build national membership in the Holy Name society, an antiprofanity movement among men. He was consecrated bishop of Duluth, Minn., in 1918, and archbishop of Cincinnati in 1925. In the latter position he was one of the leading Roman Catholic spokesmen in the U.S. One of his most prominent activities was in the promotion of the Legion of Decency, aimed at blacklisting motion pictures considered immoral. After 1946 he was chairman of the administrative board of the National Catholic Welfare conference. He also was prominent in the 1949 revision of the Catholic catechism.

**McNinch, Frank R(amsay)**, U.S. lawyer and former government official (b.

1950 OBITUARIES: Heinrich Mann, German novelist; Edgar Lee Masters, U.S. poet; Edna St. Vincent Millay, U.S. poet; Vaslav Nijinsky, Russian dancer; John J. Raskob, U.S. industrialist

- Charlotte, N.C., April 27, 1873—d. Washington, D.C., April 20, 1950).
- Maharishi, Shri Ramana** (born VENKATARAMAN), Indian philosopher (b. Tiruchuli, India, 1879—d. Ashram, Tiruvannamalai, India, April 14, 1950).
- Maier, Walter Arthur**, U.S. Lutheran minister and college professor (b. Boston, Mass., Oct. 4, 1893—d. St. Louis, Mo., Jan. 11, 1950), attended Boston university, Concordia seminary at St. Louis, Mo., and Harvard university, where he received his Ph.D. degree. In 1922 he joined the faculty of Concordia seminary. His sermons on the "Lutheran Hour" radio program attracted a large following, and by the time of his death transcriptions of them were being made in 36 languages and broadcast on the international "Lutheran Hour" from 1,200 stations throughout the world. He also wrote a number of books on religious subjects.
- Malton, Paul Raymond**, U.S. newspaper columnist (b. Mattoon, Ill., Jan. 5, 1901—d. Alexandria, Va., July 30, 1950).
- Malone, Dudley Field**, U.S. lawyer (b. New York, N.Y., June 3, 1882—d. Culver City, Calif., Oct. 5, 1950).
- Mann, Heinrich Ludwig**, German novelist (b. Lübeck, Ger., March 27, 1871—d. Santa Monica, Calif., March 12, 1950). The elder brother of Thomas Mann, he studied at the Lübeck *Gymnasium* and the University of Berlin; from 1894 he lived at Florence and later at Munich. A writer in realistic and satirical vein, he was politically inclined to the left and was an admirer of French rationalism. After 1933 he fled Germany and in 1940 went to the United States. In Oct. 1949 he wrote to Wilhelm Pieck declaring his solidarity with the Eastern German republic. Foremost among his novels were *Die Götinnen* (1902-03), *Die kleine Stadt* (1908), *Der Untertan* (1911) and *Der Kopf* (1925).
- Markey, Lawrence Morris**, U.S. author (b. Alexandria, Va., Jan. 10, 1899—d. Halifax, Va., July 11, 1950).
- Markham, Edward Murphy**, U.S. army engineer (b. Troy, N.Y., July 6, 1877—d. Albany, N.Y., Sept. 14, 1950).
- Marlowe, Julia** (MRS. EDWARD HUGH SOTHERN), U.S. actress (b. Coldbeck, Cumb., Eng., Aug. 17, 1866—d. New York, N.Y., Nov. 12, 1950), was born Sarah Frances Frost. She was reputed to have appeared in Shakespearean drama more often and before a greater total audience than any other stage personality in history. She made her stage debut at the age of 12 in Vincennes, Ind., in a juvenile edition of *Pinafore*. By the age of 18 she had played 18 roles, and in 1887 she made her debut on the eastern stage, appearing in that year in New London, Conn., and in New York city. In 1894 she married a young actor, Robert Taber, from whom she was divorced in 1900. In 1904 she became costar with E. H. Sothern and the pair made their debut together in *Romeo and Juliet* at the Illinois theatre in Chicago, Ill. They toured the U.S. with a repertory company, and also toured England in 1907, achieving notable successes. On Aug. 17, 1911, they were married, and in 1915 Sothern announced his wife's retirement for reasons of health—though she did reappear with him on the stage later. She finally retired in 1924 and remained in virtual seclusion after Sothern's death in 1933.
- Marshall, M. Lee**, U.S. baking executive and food administrator (b. Marshall, Mo., June 17, 1884—d. New York, N.Y., Aug. 2, 1950).
- Masters, Edgar Lee**, U.S. poet (b. Garnett, Kan., Aug. 23, 1869—d. Melrose Park, Pa., March 5, 1950), attended Knox college in Galesburg, Ill., and was admitted to the bar. Meanwhile he wrote poetry, and his first volume, *A Book of Verses*, was published in 1898. He developed a lucrative law practice in Chicago, but continued to write poetry and political essays. In 1914 he began writing the verses of *Spoon River Anthology*, which were initially published in the *Mirror of St. Louis* under the pseudonym of Webster Ford. By 1940 this popular work of poetry had gone through 70 editions, though Masters himself considered it much inferior to some of his later works. These included *Songs and Satires*, *The Great Valley*, *Toward the Gulf*, *The Domesday Book*, *The New Spoon River* and several novels. His biographies included *Lincoln the Man*, which was criticized on the grounds that it presented Lincoln in an uncomplimentary light, and biographies of Vachel Lindsay and Walt Whitman, besides his autobiography, *Across Spoon River*.
- Matthiessen, Francis Otto**, U.S. literary scholar (b. Pasadena, Calif., Feb. 19, 1902—d. Boston, Mass., April 1, 1950).
- Maurice, Henry Gascoyen**, British government official and zoological expert (b. May 24, 1874—d. London, Eng., May 12, 1950).
- Mayer, Saly**, Swiss Joint Distribution committee director (b. 1883?—d. St. Moritz, Switz., July 31, 1950).
- Mendl, Lady** (ELISE DE WOLFE), U.S.-born international hostess and former actress (b. New York, N.Y., Dec. 20, 1865?—d. Versailles, Fr., July 12, 1950).
- Meninsky, David**, British painter (b. Russia, July 25, 1891—d. London, Eng., Feb. 12, 1950).
- Metaxa, Georges**, Rumanian-born actor and singer (b. Bucharest, Rum., 1899?—d. Monroe, La., Dec. 8, 1950).
- Meyer, Adolf**, Swiss-born psychiatrist and neurologist (b. Niederweningen, near Zürich, Switz., Sept. 13, 1866—d. Baltimore, Md., March 17, 1950).
- Meyer, Alfred**, U.S. physician (b. New York, N.Y., June 18, 1854—d. Ogunquit, Me., July 14, 1950).
- Michaëlis, Karin** (KATHARINA MARIE MICHAËLIS STANGELAND), Danish author (b. Randers, Den., March 20, 1872—d. Copenhagen, Den., Jan. 11, 1950), was well known for her novels, short stories and children's books, especially for the best-selling *Den farlige Alder* (*The Dangerous Age*) (1910), which was translated into 20 languages. She lectured extensively in the U.S., where she lived during World War II, and was active in the Free Danish movement.
- Milford Haven, Dowager Marchioness of** (PRINCESS VICTORIA ALBERTA ELIZABETH MATHILDE MARIE), British princess, granddaughter of Queen Victoria (b. Windsor castle, New Windsor, Berks., Eng., April 5, 1863—d. Kensington palace, London, Eng., Sept. 24, 1950).
- Mill, Hugh Robert**, Scottish-born geographer and weather expert (b. Thurso, Caithness, Scot., May 28, 1861—d. East Grinstead, E.Sus., Eng., April 5, 1950).
- Millay, Edna St. Vincent**, U.S. poet (b. Rockland, Me., Feb. 22, 1892—d. near Austerlitz, N.Y., Oct. 19, 1950), won the Pulitzer prize for poetry in 1922 and was regarded as one of the leading woman poets of her generation. She wrote poetry while still in her teens, beginning her first long poem, "Renascence," at the age of 18. She entered Vassar college, Poughkeepsie, N.Y., when she was 21 and, while there, continued to produce much romantic verse. On her graduation in 1917 she moved to Greenwich Village in New York city, where she attracted considerable attention because of her gayety, her firm views on feminism and her radical views on current events. Her associates of that period are a commentary on her thought—John Reed, Communist leader and war correspondent, and Inez Milholland, feminist leader to whom she penned the sonnet "The Pioneer," as well as various pacifist leaders. She was married in 1928 to Eugen Jan Boissevain, former husband of Inez Milholland. He died in 1949. Because her income from her poetry was insufficient, she wrote for magazines under a pseudonym, and also acted briefly. Her poems were produced in a number of volumes, among them those entitled *A Few Figs from Thistles*, *Second April*, and *The Harp-Weaver and Other Poems*. She also wrote the morality play *Two Slatterns and a King*, *The Lamp and the Bell* and *The King's Heuchman*, the book for an opera composed by Deems Taylor. Her later poetry included pleas against noninterventionism during World War II and a protest against the massacre of the residents of Lidice, Czech., by the nazis.
- Milne, (Edward) Arthur**, British mathematician (b. Hull, Yorks., Eng., Feb. 14, 1896—d. Dublin, Ire., Sept. 21, 1950), was a fellow of Trinity college, Cambridge, 1919-25, being assistant director of the solar physics observatory 1920-24, mathematical lecturer at Trinity 1924-25 and university lecturer in astrophysics 1922-25. He was Beyer professor of applied mathematics, Victoria University of Manchester, 1924-28, before his appointment to the Rouse Ball chair of mathematics and to a fellowship at Wadham college, Oxford, in 1928. Milne's earlier work was in mathematical astrophysics, for which he was awarded the Royal Astronomical society's gold medal in 1935. From 1932 he also worked on the problem of the "expanding universe" and in *Relativity, Gravitation, and World-Structure* (1935) proposed an alternative to Albert Einstein's general relativity theory. His later work, concerned with the interior structure of stars, aroused much controversy. Milne received the Royal society's royal medal in 1941, and was president of the Royal Astronomical society, 1943-45.
- Minot, George Richards**, U.S. physician and Nobel prize winner (b. Boston, Mass., Dec. 2, 1885—d. Brookline, Mass., Feb. 25, 1950), studied at Harvard university, receiving his medical degree in 1912. He served a year at the Massachusetts General hospital, Boston, then became resident and later a research fellow at Johns Hopkins medical school in Baltimore, Md. He returned to Massachusetts General hospital, where he served from 1915 to 1923, became associate in medicine at the Peter Bent Brigham hospital and in 1928 professor of medicine at Harvard medical school. He shared the 1934 Nobel prize in medicine with two other U.S. doctors, winning the recognition for his work in connection with the liver treatment for anaemia.
- Mitchell, Humphrey**, Canadian minister of labour (b. Old Shoreham, Sus., Eng., Sept. 9, 1894—d. Ottawa, Ont., Can., Aug. 1, 1950).
- Mitre, Luis**, Argentine publisher and editor (b. Buenos Aires, Arg., Oct. 28, 1869—d. Buenos Aires, Nov. 8, 1950).
- Mizzi, Enrico**, prime minister of Malta (b. Valletta, Malta, Sept. 20, 1882—d. Valletta, Dec. 20, 1950).
- Moeran, Ernest John**, British composer (b. Heston, Mdx., Eng., Dec. 31, 1894—d. County Kerry, Ire., Dec. 1950).
- Mongibeaux, Pierre Sylvain Paul**, French jurist (b. Excideuil, Fr., May 29, 1879—d. near Perigueux, Fr., Sept. 22, 1950).
- Moreau, Emile**, French banker (b. Poitiers, Fr., Sept. 20, 1868—d. Paris, Fr., Nov. 9, 1950).
- Morgan, Ephraim Franklin**, former U.S. governor (b. Marion county, W.Va., Jan. 16, 1869—d. Bethesda, Md., Jan. 15, 1950).
- Morgan, (John) Harcourt Alexander**, U.S. entomologist (b. Strathroy, Ont., Can., Aug. 31, 1867—d. Belfast, Tenn., Aug. 25, 1950), studied agriculture at the University of Toronto and at Cornell university, Ithaca, N.Y., then served in agriculture posts in Louisiana. He sought to combine social reform with agricultural progress, feeling that farming made for stronger individuals. He advocated, for example, that industrial workers in large cities live on outlying farms and partially support themselves by farming. He was one of the leaders in the fight against the boll weevil and cattle tick, two major enemies of southern farming, and experimented in city planning in Kingsport, Tenn. Morgan was president of the University of Tennessee, 1919-33. He was one of the original three board members appointed to administer the Tennessee Valley authority when it was created in 1933, and was chairman of the TVA from 1938 until his resignation in 1941. He was president of the Association of Land-Grant Colleges and Universities in 1927, and won many awards for public service in agriculture.
- Morrison, Ian Ernest Macleavy**, British journalist (b. Peking, China, May 31, 1913—d. in active service, Korea, Aug. 12, 1950).
- Mueser, William**, U.S. civil engineer, pioneer in steel reinforced concrete (b. Barmen, Ger., 1872?—d. Mount Kisco, N.Y., Aug. 4, 1950).
- Murphy, James B (umgardner)**, U.S. pathologist, cancer specialist (b. Morganton, N.C., Aug. 4, 1884—d. Bar Harbor, Me., Aug. 24, 1950).
- Murrie, William F. R.**, U.S. candy manufacturing executive (b. Bedford, Pa., March 25, 1873—d. Plainfield, N.J., Sept. 7, 1950).
- Myers, Sir Michael**, New Zealand jurist (b. Motucka, N.Z., Sept. 7, 1873—d. Wellington, N.Z., April 8, 1950).
- Nomeikin, Sergei**, Russian oil chemist (b. 1876—d. Moscow, U.S.S.R., Aug. 4, 1950).

**Ngata, Sir Apirana Turupa**, New Zealand government official (b. Kawakawa, Te Araroa, N.Z., July 3, 1874—d. Gisborne, N.Z., July 14, 1950).

**Nichols, George**, U.S. racing yachtsman (b. Boston, Mass., 1878—d. Cold Spring Harbor, L.I., N.Y., Aug. 14, 1950).

**Nichols, Spencer Baird**, U.S. portrait and mural painter (b. Washington, D.C., Feb. 13, 1875—d. Kent, Conn., Aug. 27, 1950).

**Nijinsky, Vaslav (Waclaw)**, dancer and choreographer (b. Kiev, Russia, Feb. 28, 1890—d. London, Eng., April 8, 1950), was a pupil under Nicholas Legat at the Imperial School of Dancing, St. Petersburg. He made his first appearance at the Marinsky theatre in 1907, being at once noted for his dramatic and mimetic power, and for his agility and *élevation*. He appeared with Sergei Diaghilev's company in Paris in 1909 and 1910, and, after his suspension from the Russian Imperial Ballet for wearing a costume officially judged to be improper, joined Diaghilev's permanent touring company in 1911. He danced with notable success in *Le Spectre de la rose* and *Petrushka*, and, as choreographer, created the then sensational *L'A près-midi d'un faune* and *Le Sacre du printemps*. In 1913, after quarrelling with Diaghilev, Nijinsky left the company, but rejoined it in 1916. In that year he began to show signs of a disturbed mind which virtually brought his career to an end in 1918. After wanderings in Europe and a long stay in a Swiss sanatorium and later in Hungary, he went to England in 1947.

**Nolf, John T(homas)**, U.S. cartoonist and painter (b. Allentown, Pa., July 23, 1872—d. Dixon, Ill., May 28, 1950).

**Norman, Montagu Collet Norman**, 1ST BARON, OF ST. CLERE, IN THE COUNTY OF KENT, British banker (b. Moor Place, Much Hadham, Herts, Eng., Sept. 6, 1871—d. London, Eng., Feb. 4, 1950), was educated at Eton and Cambridge. He joined an old established firm of merchant bankers at the age of 19 and spent the early years of his career in London and New York city in ultraconservative circles. In 1907 he was elected a director of the Bank of England, in 1918 deputy governor, and in 1920 governor. He held office for the unprecedented term of 24 years, a period which witnessed the inflationary aftermath of World War I, the efforts at economic reconstruction, the restoration (May 13, 1925) and abandonment (Sept. 19, 1931) of the gold standard and the outbreak of World War II.

**Oddie, Tasker Lowndes**, former U.S. governor and senator (b. Brooklyn, N.Y., Oct. 24, 1870—d. San Francisco, Calif., Feb. 17, 1950).

**Olds, Ransom Eli**, U.S. automobile manufacturer (b. Geneva, O., June 3, 1864—d. Lansing, Mich., Aug. 26, 1950), gave his name to two popular U.S. automobiles, the Oldsmobile and the Reo—the latter incorporating in its name his own initials. He first began working on a horseless carriage in 1885 in his father's machine shop. His first vehicle was a three-wheeled, steam-propelled carriage, built in 1886 and later sold to a London firm in what has been termed the first commercial automobile transaction.

His first gasoline-operated automobile appeared in 1895. The next year he launched production of his own automobiles in the factory of the Olds Motor Vehicle company. His "curved dash" Oldsmobile went into volume production in 1902, and inspired the song "In My Merry Oldsmobile." In 1904, after about 12,000 of these vehicles had been built, he sold his interest in this company and organized the Reo Motor Car company. He later headed the Ideal Power Lawn Mower company, the Reolds Farms company and the First Bond and Mortgage company, all of Lansing. On his 85th birthday in 1949 he aroused national attention by declaring the public was eager to buy a car stripped of "gadgets" that would sell for less than \$1,000.

**O'Neal, Charles Thomas**, U.S. railway official (b. Brandywine Springs, Del., Dec. 29, 1873—d. Rochester, N.Y., April 15, 1950).

**O'Neill, Eugene Gladstone, Jr.**, U.S. classical scholar (b. 1910?—d. Woodstock, N.Y., Sept. 25, 1950).

**Orwell, George (ERIC ARTHUR BLAIR)**, British writer (b. Motihari, India, 1903—d. London, Eng., Jan. 20, 1950), was a King's scholar at Eton, and served with the Indian imperial police in Burma, 1922-27. A period of poverty in Paris and of living in English casual wards gave him the material for his first book, *Down and Out in Paris and London*, published in 1933. In *The Road to Wigan Pier* (1937) he described the lives of those on unemployment pay or public assistance. Orwell served on the Republican side in Spain, 1936-37, with the syndicalist Catalan party militia. During this period his left-wing convictions underwent the change which was reflected in *Homage to Catalonia* (1938) and later in *Animal Farm* (1945), a satire on totalitarian society, and *Nineteen Eighty-Four* (1949), a "prophecy" of Britain in a wholly totalitarian world.

**Osuna, Juan José**, Puerto Rican-born educator (b. Puerto Rico, June 24, 1884—d. Arlington, Va., June 18, 1950).

**Parkinson, Hargreaves**, British editor (b. Lancashire, Eng., June 3, 1896—d. London, Eng., May 23, 1950).

**Patel, Vallabhbhai Jhaverbhai**, Indian statesman (b. Karamsad, India, Oct. 31, 1875—d. Bombay, India, Dec. 15, 1950), came of a *patidar* (land sharing) family and was educated at Nadiad High school. He later went to London and was called to the bar by the Middle Temple, later returning to practise at Ahmedabad, where he was also president of the municipality for four years. In 1916 he threw in his lot with Mohandas K. Gandhi and was subsequently imprisoned for his part in the civil disobedience movement. Patel was president of the Indian National Congress in 1931 and chairman of the parliamentary committee 1935-42; when Congress governments were set up in seven (later eight) of the provinces it was he who controlled the ministries from behind the scenes, and his reputation as the "strong arm" of Indian politics grew. He was imprisoned three times during World War II, including a term from 1942 to 1945. On his release he took a leading part in the negotiations with the British that led to the setting up of the Indian interim government in Aug. 1946, in which he became member for home affairs, information and broadcasting. When complete Indian independence was realized in 1947, Patel was made deputy prime minister.

**Patigian, Haig**, Armenian-born sculptor (b. Van, Turkish Armenia, Jan. 22, 1876—d. San Francisco, Calif., Sept. 19, 1950).

**Pattee, Fred Lewis**, U.S. author, educator and anthologist (b. Bristol, N.H., March 22, 1863—d. Winter Park, Fla., May 6, 1950).

**Peker, Recep**, Turkish government official (b. Istanbul, Turk., 1888—d. Istanbul, April 2, 1950), was educated at the military college in Istanbul. He fought in the Balkan Wars (1912-13), in World War I and, as staff major, in the Turkish War of Independence (1919-22). Elected deputy for Kutahya to the grand national assembly in 1923, he became in the same year secretary-general of the Republican People's party (R.P.P.) and editor of the daily newspaper *Ulus*. In 1924 he was appointed minister of the interior, the next year minister of defense and in 1928 minister of public works. From 1931 to 1937 he was again secretary-general of the R.P.P. and in 1942-43 again minister of the interior. From Aug. 6, 1946, to Sept. 10, 1947, he was prime minister. He was considered to be the leader of the die-hard section of the R.P.P.

**Pell, Stephen H. P.**, U.S. museum director (b. Flushing, N.Y., 1873?—d. Ticonderoga, N.Y., June 22, 1950).

**Pemberton, Brock**, U.S. theatrical producer (b. Leavenworth, Kan., Dec. 14, 1885—d. New York, N.Y., March 11, 1950), attended the College of Emporia, Emporia, Kan., and the University of Kansas, Lawrence, Kan., and began his writing career on William Allen White's *Emporia Gazette*. He shortly moved to New York, where he served as drama critic for several papers, including the *New York Times*, from which he resigned in 1917 to become assistant to the producer Arthur Hopkins. In 1920 he produced his own first show, *Enter, Madame*, and in the same year Zona Gale's *Miss Lulu Bett*, which that year won the Pulitzer prize. His other productions included *Six Characters in Search of an Author* in 1923, *Strictly Dishonorable* in 1929, *Personal Appearance* in 1934, *Ceiling Zero* in 1935, *Kiss the Boys Goodbye* in 1938 and *Harvey*, which also won a Pulitzer prize, in 1944.

**Pemberton, Sir Max**, British novelist and dramatist (b. Birmingham, Warwick, Eng., June 19, 1863—d. London, Eng., Feb. 22, 1950).

**Pendleton, Moses**, U.S. textile manufacturing executive (b. Stonington, Conn., May 6, 1884—d. Stonington, April 23, 1950).

**Penland, Theodore A.**, last commander in chief of the Grand Army of the Republic (b. Goshen, Ind., Jan. 23, 1849—d. Vancouver, Wash., Sept. 13, 1950).

**Petersen, William Ferdinand**, U.S. physician and author (b. Chicago, Ill., March 25, 1887—d. Chicago, Aug. 20, 1950).

**Pettingill, William LeRoy**, U.S. clergyman, Bible lecturer, editor and author (b. Central Square, Oswego county, N.Y., Aug. 27, 1866—d. New York, N.Y., Sept. 15, 1950).

**Peyton-Griffin, R. T.**, British editor of only foreign newspaper in Shanghai, China (b. 1890?—d. Shanghai?, Dec. 21, 1950).

**Phillips, Frank**, U.S. oil company executive (b. Greeley county, Neb., Nov. 28, 1873—d. Atlantic City, N.J., Aug. 23, 1950), left school at an early age. He worked as a barber in Creston, Ia., and later in a bank. In 1903 he went to the Indian territory (now Oklahoma) to open a bank of his own. Through financing various developments of the petroleum boom in Oklahoma, he eventually entered the oil business. With his brother he founded in 1917 the Phillips Petroleum company, heading it until 1938 when he became chairman of the board. He relinquished that position in 1949.

**Pillsbury, Alfred Fiske**, U.S. milling company executive (b. Minneapolis, Minn., Oct. 20, 1869—d. Minneapolis, March 12, 1950), was the son of John Sargent Pillsbury, cofounder of the milling company and one-time governor of Minnesota. The younger Pillsbury graduated from the University of Minnesota college of law, Minneapolis, in 1894. In 1901, on his father's death, he became administrator of the family estate, and from 1908 was secretary and treasurer of Pillsbury Flour Mills company, resigning as secretary in 1921 but continuing as treasurer until 1939. He was a member of the firm's board of directors from 1933. He was also a director of numerous civic and financial institutions in Minnesota. He owned a notable collection of Chinese art, principally bronzes, jades and porcelains.

**Pim, William Paul**, U.S. cartoonist (b. near Freeport, Pa., Dec. 1, 1885—d. Birmingham, Ala., July 25, 1950).

**Player, John D.**, British tobacco company executive (b. 1864?—d. Nottingham, Notts., Eng., April 6, 1950).

**Polack, William Gustave**, Lutheran Church historian and authority on Christian hymnody (b. Wausau, Wis., Dec. 7, 1890—d. St. Louis, Mo., June 5, 1950).

**Polignac, Melchior de**, French industrialist and sportsman (b. Joigny, Fr., Sept. 27, 1880—d. Paris, Fr., Dec. 20, 1950).

**Ponzi, Andrew**, U.S. former world pocket billiard champion (b. 1902?—d. Philadelphia, Pa., April 11, 1950).

**Poole, Ernest**, U.S. author and journalist (b. Chicago, Ill., Jan. 23, 1880—d. New York, N.Y., Jan. 10, 1950).

**Preysing-Lichtenegg-Moos, Count Konrad von**, German cardinal (b. Kronwinkel, Ger., 1880—d. Berlin, Ger., Dec. 21, 1950), whose family was closely related to the Bavarian royal house, followed a diplomatic career for a time, but resigned and was ordained priest in 1912. He was consecrated bishop of Eichstätt in 1932, and of Berlin in 1935. He was elevated to the Sacred College of Cardinals in 1946. Cardinal von Preysing was actively opposed to the nazi regime before and during World War II and was equally outspoken in his opposition to Communist activities in Berlin and eastern Germany after the war.

**Proctor, A(lexander) Phimister**, U.S. sculptor (b. Bozanquit, Ont., Can., Sept. 27, 1862—d. Palo Alto, Calif., Sept. 4, 1950).

**Prosser, David Lewis**, retired archbishop of Wales (b. 1868—d. Abergwili, Carmarthenshire, Wales, Feb. 28, 1950).

**Pugh, William Barrow**, U.S. Presbyterian church leader (b. Utica, N.Y., Jan. 20, 1889—d. near Thermopolis, Wyo., Sept. 14, 1950).

**Purington, Florence**, U.S. educator (b. Burnt Hills, N.Y., Aug. 12, 1862—d. South Hadley, Mass., May 22, 1950).

**Putnam, George Palmer**, U.S. publisher, author and explorer (b. Rye, N.Y., Sept. 7, 1887—d. Trona, Calif., Jan. 4, 1950), studied at Harvard university and the University of California, Berkeley. He entered newspaper work in Bend, Ore., in 1910, and, after serving as a lieutenant of field artillery in World War I, joined his father's publishing firm of G. P. Putnam's Sons, serving as its treasurer until 1930. Between 1930 and 1932 he was vice-president of the publishing firm of Brewer, Warren and Putnam, and from 1932 to 1935 chairman of the editorial board of Paramount Productions.

He led exploratory expeditions to Greenland in 1926 and to Baffin Island in 1927. He was the husband of Amelia Earhart, first woman to fly the Atlantic, who once held women's speed and distance flight records. She was lost in the mid-Pacific on one leg of a flight around the world in 1937, and he wrote a biography of her, *Soaring Wings*. His 12 books also included his autobiography, *Wide Margins*, and three volumes on Death valley.

**Putnam, Samuel**, U.S. author, translator and critic (b. Rossville, Ill., Oct. 10, 1892—d. Lambertville, N.J., Jan. 15, 1950).

**Puzak, Kazimierz**, Polish politician (b. Tarnopol, in then Austrian Poland, Aug. 26, 1883—d. in prison in western Poland, May, 1950). After studying law at the University of Lwow he joined the Polish Socialist party (P.P.S.) in 1904 and a year later moved to the Russian part of Poland where he worked in the underground revolutionary movement. He was arrested in 1911 by the *Okhrana* (tsarist political police) and sentenced to eight years' hard labour. The Russian Revolution of 1917 restored his freedom and in Aug. 1918 he began to reorganize the P.P.S. in Warsaw. On Poland's recovery of independence he represented Dabrowa in the constituent assembly and later was thrice returned to the *sejm* as deputy for Czechochowa. From 1921 to 1945 he was secretary-general of the central executive committee of the P.P.S. During World War II he was prominent in the Warsaw underground resistance, in 1944 being elected chairman of the Council of National Unity (R.J.N.), the parliament of the underground state. In March 1945, with 15 other resistance leaders, Puzak was arrested by the soviet state security police and tried on charges of organizing terrorism and sabotage. He denied the right of a soviet tribunal to judge a Polish patriot for his activity in Poland and, refusing to testify, was condemned on June 21, 1945, to 18 months' imprisonment, being released, however, in November. Once more in Poland, he was rearrested in June 1947 on a charge of espionage, and again denied the right of a soviet-controlled government to sit in judgment. On Nov. 19, 1948, he was sentenced to ten years' imprisonment.

**Quijano, Manuel de Jesus**, Panaman diplomat and author (b. Colombia, Dec. 12, 1884—d. Panamá, Pan., April 18, 1950).

**Quinones y Molina, Alfonso**, former president of El Salvador (b. 1873—d. San Salvador, El Salvador, May 22, 1950).

**Radin, Max**, Polish-born legal authority and educator (b. Kempen, Pol., March 29, 1880—d. Oakland, Calif., June 22, 1950).

**Ranney, Leo**, U.S. mining engineer (b. New Hartford, Ia., Aug. 26, 1884—d. Morro Bay, Calif., Sept. 15, 1950).

**Rappoport, Angelo Senior Salomon**, Ukrainian-born author, editor and historian (b. Baturin, Ukraine, Sept. 5, 1872—d. Paris, Fr., June 2, 1950).

**Raskob, John J.**, U.S. industrialist and political leader (b. Lockport, N.Y., March 19, 1879—d. near Centerville, Md., Oct. 14, 1950), left high school on the death of his father and began working as a stenographer. In 1902 he became secretary to Pierre S. du Pont. Later Raskob was made du Pont's assistant, and he eventually became treasurer, director and vice-president of E. I. du Pont de Nemours and company in Wilmington, Del., the huge chemical and explosives manufacturers.

Raskob and Pierre du Pont purchased 3,000 shares of General Motors Corp. stock, the number forming a "balance of power" between two factions of stockholders. Du Pont became chairman of the board of directors of General Motors and Raskob a director. Subsequently, during World War I, Raskob persuaded the du Pont company to invest a reputed \$50,000,000 in General Motors, until the du Pont interests controlled nearly 50% of the company's stock. Raskob then became vice-president and chairman of the finance committee of the company. He resigned the finance post in 1928, the vice-presidency in 1929 and the directorship in 1946. In the latter year he also resigned as a director and vice-president of the du Pont company to make way, as he said, for "younger blood."

In 1928 he had been selected as Democratic national chairman by Gov. Alfred E. Smith of New York to conduct Smith's campaign for the presidency. Raskob applied business principles to politics, and though Smith lost he continued in his assaults on the Republican administration throughout Pres. Herbert Hoover's term, and his organization was credited by many with helping turn public opinion against Hoover and toward Franklin D. Roosevelt in the 1932 campaign. Raskob turned against the Roosevelt New Deal, however, as early as 1934.

**Recouly, Raymond**, French journalist, historian and biographer (b. Saint-Pons-de-Mauchamps, Fr., June 14, 1876—d. Montpellier, Fr., Sept. 12, 1950).

**Reed, Howard Sprague**, U.S. plant physiologist (b. North East, Pa., Aug. 6, 1876—d. Berkeley, Calif., May 12, 1950).

**Rembaugh, Bertha**, U.S. jurist (b. Philadelphia, Pa., June 5, 1876—d. Northport, L.I., N.Y., Jan. 31, 1950).

**Renner, Karl**, Austrian statesman (b. Unter-Tannowitz [Dolní-Dunajovice after 1918], Moravia, Dec. 14, 1870—d. Vienna, Aus., Dec. 31, 1950), studied law at the University of Vienna. He soon established himself as a propagandist in the Austrian Social Democratic party, where he advocated the transformation of the Habsburg empire into a federal democratic commonwealth based on equal political and cultural rights for all nationalities. He was elected deputy in 1907 and, after the breakup of the empire, he became, in 1918, the first chancellor of the Austrian republic. He then supported the idea of a union of Austria with a democratic federal Germany. He led the Austrian peace delegation to Paris and on Sept. 10, 1919, signed the peace treaty, by which Austro-German union was prohibited. He resigned the premiership in June 1920, but remained foreign minister until

October. When in 1930 the Social Democrats became the strongest party, Renner was elected president of the *nationalrat* (lower chamber); he resigned in 1933. After the annexation of Austria to Germany, Renner remained unmolested. After the liberation of Vienna by the Red army, Renner obtained approval from the soviet high command for the formation of an Austrian democratic government and in April 1945 became chancellor of the first government of the second Austrian republic. In Dec. 1945 the newly elected *nationalrat* nominated him president of the republic. Renner was the author of many political books and juridical treatises. (See also *Encyclopædia Britannica*.)

**Repplier, Agnes**, U.S. essayist (b. Philadelphia, Pa., April 1, 1855—d. Philadelphia, Dec. 15, 1950), had been an essayist since the 1880s, her first writing in this form having appeared in the *Atlantic Monthly*. She attended a convent school near Philadelphia. When she began her literary career it was in the field of fiction, but she later turned to writing essays. Her books included collections of her essays; *Eight Decades* (1937), containing an autobiographical essay; and biographies of *Père Marquette*, *Priest*, *Pioneer*, and *Adventurer*; *Mère Marie of the Ursulines*; and *Junípero Serra, Pioneer Colonist of California*. She received in 1911 the University of Notre Dame's Laetare medal as an outstanding Catholic lay person, and in 1935 received the gold medal of the American Academy of Arts and Letters.

**Richards, George Franklin**, U.S. Mormon Church leader (b. Farmington, Utah, Feb. 23, 1861—d. Salt Lake City, Utah, Aug. 8, 1950), studied at the University of Deseret (later the University of Utah) and from 1883 to 1906 operated a farm near Tooele, Utah. He also headed an implement and machinery company and later was a director of an insurance firm. From 1916 to 1919 he was president of the European mission of the Church of Jesus Christ of Latter-Day Saints, with headquarters in Liverpool, Eng. From 1921 to 1937, on his return to Utah, he served as president of the Salt Lake Latter-Day Saints temple. After 1945 he was president of the Council of Twelve Apostles, the ruling organization of the Mormon Church.

**Ringling, Robert Edward**, U.S. opera singer and circus impresario (b. Baraboo, Wis., Aug. 16, 1897—d. Sarasota, Fla., Jan. 2, 1950), was a member of the family that founded the Ringling Brothers circus. He studied music, graduating from the Evanston (Ill.) Academy of Fine Arts in 1914. He later left Northwestern university, Evanston, to devote himself to opera, and sang operatic roles for 17 years. In 1934 he joined his uncle, John Ringling, in the management of the circus, control of which had passed into the hands of creditors. In 1937 he was elected vice-president and director, and in 1943 president, of the Ringling Brothers and Barnum & Bailey Combined Shows, Inc., and at the time of his death was chairman of its board of directors.

**Robinson, Gilbert Wooding**, Welsh agricultural chemistry expert (b. Nov. 7, 1888—d. Bangor, Caernarvon, Wales, May 6, 1950).

**Robinson, Howard Perley**, Canadian publisher and industrialist (b. Elgin, N.B., Can., March 2, 1874—d. St. Andrews, N.B., Aug. 23, 1950).

**Román, Desiderio**, Nicaraguan-born surgeon (b. Nicaragua, 1871—d. Philadelphia, Pa., Sept. 7, 1950).

**Romanones, Alvaro de Figueroa y Torres-Mendieta**, COUNT DE, Spanish statesman (b. Madrid, Spain, Aug. 9, 1863—d. Madrid, Sept. 11, 1950), was president of the chamber of deputies, 1911, before becoming prime minister in 1912, after the assassination of José Canalejas y Mendez. Later, as leader of the opposition, he approved the government policy of neutrality in World War I and pursued this policy in his second term as prime minister, 1915-17; in the latter year, however, he fell from power as a result of a German-inspired press campaign, also resigning his leadership of the Liberals. Romanones was minister of justice in Antonio Montaner Maura's government in 1918, becoming foreign minister under the marquis de Alhucemas in October and prime minister in December of the same year. In April 1919 he was again deposed—by military *junta*—returning to office in 1922-23 as minister of justice, again under Alhucemas. After the dictatorship of Miguel Primo de Rivera, 1923-30, during which he remained loyal, notably as speaker of the senate, to the throne and constitutional principles, he became foreign minister for a short time. To the end, although he often criticized the king, he pleaded for the preservation of the monarchy. Arrested by the republicans during the Civil War, he was later released and given safe conduct to France, thenceforward devoting himself to literary activity. Among his books was *Las Responsabilidades Políticas del Antiguo Régimen de 1875 a 1922* (1924).

**Román y Reyes, Víctor Manuel**, president of Nicaragua (b. Jinotepé, Nic., Oct. 1872—d. Philadelphia, Pa., May 6, 1950).

**Root, Robert Kilburn**, U.S. educator (b. Brooklyn, N.Y., April 7, 1877—d. St. Louis, Mo., Nov. 20, 1950).

**Rosen, Charles**, U.S. landscape painter (b. Westmoreland county, Pa., April 28, 1878—d. Kingston, N.Y., June 21, 1950).

**Ross, Charles Griffith**, U.S. journalist (b. Independence, Mo., Nov. 9, 1885—d. Washington, D.C., Dec. 5, 1950), was the press secretary of Pres. Harry S. Truman, with whom he had attended school. He studied at the University of Missouri, Columbia, and worked for a time for the *Columbia Herald*, then for the *Victor* (Colo.) *Record*, joining the *St. Louis* (Mo.) *Republic* in 1907. Next year he returned to the University of Missouri as a faculty member in the school of journalism, and there he remained for ten years, except for a sabbatical year spent as a subeditor of the *Melbourne* (Austr.) *Herald*. His textbook, *The Writing of News* (1911), was the product of those years.

He moved to the *St. Louis Post-Dispatch* in 1918, and served as its chief Washington correspondent until 1934. He won the 1931 Pulitzer prize for a study of the depression. From 1934 to 1939 he edited the editorial page of the *Post-Dispatch*, then returned to Washington as a contributing editor. He became the presidential press secretary in 1945, being sworn in on May 15. He was one of the president's close advisers, generally handling details of White House press conferences and often acting as presidential spokesman.

**Rothenberg, Morris**, Estonian-born lawyer, judge and Zionist leader (b. Dorpat, now Tartu, Est., June 15, 1884—d. New York, N.Y., Sept. 17, 1950).

**Roy, Pierre**, French surrealist painter (b. Nantes, Fr., Aug. 10, 1880—d. Milan, It., Sept. 26, 1950).

**Rzymowski, Wincenty**, Polish journalist and politician (b. Warsaw, Pol., July 19, 1883—d. Warsaw, April 30, 1950).

**Saarinén, Eliel**, Finnish-born U.S. architect (b. Helsingfors, Fin., Aug. 20, 1873—d. Bloomfield Hills, Mich., July 1, 1950), was a well-known architect in Finland before he went to the United States about 1923. In his native country he had designed banks, estates and such civic structures as the Helsinki railroad station. He won international prizes in competitions for plans for cities in the Baltic states and in Australia. From 1925 he was associated with the Cranbrook foundation, a Michigan civic development institution, as head of its architectural department. Among his better-known structures in the U.S. were the Kleinhans Music hall in Buffalo, N.Y., and the Berkshire Music centre structures in Stockbridge, Mass.

**Sabatini, Rafael**, Italian-born author and dramatist (b. Jesi, It., April 29, 1875—d. Adelboden, Switz., Feb. 13, 1950), was one of the most widely read authors of the 20th century, and many of his best-known books were also produced as motion pictures. He was a master of the historical novel, and his works were always remarkable for their pageantry and colour. Among his best-remembered titles were *Bardelys the Magnificent*; *Anthony Wilding*; *Torquemada and the Spanish Inquisition* (a history); *The Sea Hawk*; *Scaramouche*; *Captain Blood*; and *The Stalking Horse*.

**Sallee, Harry (SLIM)**, former U.S. major league baseball pitcher (b. Higginsport, O., 1884?—d. Higginsport, March 22, 1950).

**Sams, Earl Corder**, U.S. department store official (b. Simpson, Kan., April 3, 1884—d. New Rochelle, N.Y., July 23, 1950).

**Sangnier, Marc**, French politician (b. Paris, Fr., April 3, 1873—d. Paris, May 28, 1950).

**Saw Ba U Gyi**, Burmese rebel political leader (b. 1905?—d. Takawato, Burma, Aug. 12, 1950).

**Schoonmaker, Leon Monroe**, U.S. fencing champion and construction engineer (b. Little Falls, N.J., 1881?—d. Forest Hills, Queens, N.Y., May 30, 1950).

**Schumpeter, Joseph Alois**, Austrian-born economist (b. Triesch, then Moravia, now Czechoslovakia, Feb. 8, 1883—d. Taconic, Conn., Jan. 8, 1950), received his bachelor's degree from the Theresianum in Vienna, Austria, in 1901, a doctorate in law from the University of Vienna in 1906 and a Ph.D. from Columbia university, New York city, in 1913. He had gone to Columbia as an exchange professor from his post as professor of economics at Graz. He was professor of economics at the University of Bonn from 1925 until 1932, when he assumed a similar post at Harvard university. He was at one time minister of finance in the Austrian government. In 1942 he wrote the book *Capitalism, Socialism and Democracy*, contending that socialism would emerge from an inevitable collapse of capitalism, and in a second edition of this work in 1947 contended that this thesis was being sustained in fact. He was an authority on business cycles, and was president of the American Economic association in 1948 and of the Econometric society from 1939 to 1941.

**Schutze, Martin**, German-born educator and author (b. Mecklenburg, Ger., Dec. 21, 1866—d. Woodstock, N.Y., July 19, 1950).

**Schuyler, William M.**, U.S. editor (b. Three Mile Bay, N.Y., 1877?—d. Brooklyn, N.Y., April 21, 1950).

**Schwarzschild, Leopold**, German-born economist, editor and author (b. 1891—d. Margherita, It., reported Oct. 1, 1950).

**Scott, Franklin William**, U.S. textbook editor and educator (b. Centralia, Ill., Nov. 12, 1877—d. Urbana, Ill., Jan. 10, 1950).

**Scott, Sir Leslie (Frederic)**, British jurist (b. Oct. 29, 1869—d. Oxford, Oxon., Eng., May 19, 1950).

**Seabrooke, Elliott**, British landscape painter (b. Upton Park, Ess., Eng., 1886—d. Nice, Fr., March 1950).

**Sears, Charles Brown**, U.S. judge (b. Brooklyn, N.Y., Oct. 16, 1870—d. Buffalo, N.Y., Dec. 17, 1950).

**Sears, Taber**, U.S. mural painter (b. Boston, Mass., 1870—d. New York, N.Y., Oct. 18, 1950).

**Sedgwick, Hubert M.**, U.S. sports writer (b. Blachertown, Mass., 1867?—d. New Haven, Conn., Nov. 11, 1950).

**Seitz, Karl**, Austrian government official (b. Vienna, Aus., Sept. 4, 1869—d. Vienna, Feb. 3, 1950), was educated at St. Pölten Teachers' college. He joined the Social Democratic party in 1888, was elected to the Austrian *reichsrat* in 1901 and was afterward repeatedly re-elected. After the breakup of the Austro-Hungarian empire he presided over the German-Austrian national assembly which, on Nov. 12, 1918, proclaimed Austria a "democratic republic" and "a component part of the German republic." He was also elected speaker of the constituent assembly (March 1919-Oct. 1920) and until Nov. 1920 was acting president of the republic. As burgomaster of Vienna, from 1923 to 1934, he was responsible for co-ordinating a vigorous and revolutionary program for the rapid extension of the social services and the municipal housing schemes. After the Socialist rising of Feb. 1934 he was removed from office and arrested by the Engelbert Dollfuß government, but was released in December. He lived in Vienna unmolested until July 1944 when he was sent by the nazis to Ravensbrück concentration camp. Liberated by the Allied victory, he was made honorary chairman of the Austrian Socialist party.

**Shaw, George Bernard**, British dramatist, novelist and critic (b. Dublin, Ire., July 26, 1856—d. Ayot St. Lawrence, Herts., Eng., Nov. 2, 1950), was the son of George Carr Shaw, a corn broker, and his wife Lucinda Elizabeth. In addition to his formal education at the Wesleyan Connexion school, Dublin, and three other schools, he learned an appreciation of music from his mother. He worked for about five years in a Dublin land agent's office and for a few months with the Edison Telephone company, and then settled down to writing novels. Four of the five books that he produced in

1879-83 were used as "fillers" in obscure "progressive" magazines but were turned down by London and New York publishers.

In 1879 Shaw struck up what was to be a lasting friendship with Sidney Webb; in 1882 he "discovered" socialism at a meeting addressed by the U.S. Socialist pioneer Henry George. In 1884 he and Webb joined the newly formed Fabian society.

Meanwhile, through the good offices of William Archer, translator of Henrik Ibsen, he began his journalistic career in earnest. He first became book reviewer to the *Pall Mall Gazette*, 1885-88, then art critic to the *World*, 1886-89, music critic (as "Corno di Bassetto") to the *Star*, 1888-90, and to the *World*, 1890-94. In 1895-98 he undertook his most important period of critical journalism as theatre critic to the *Saturday Review*.

In 1898 he was married to Charlotte Frances Payne-Townshend, who died in 1943.

In 1892 Shaw's first play, *Widowers' Houses* (on slum landlordism), was performed in London and was bitterly attacked in the press. In the following year *The Philanderer*, a play on Ibsenism and the "new woman," was written but not produced; *Mrs. Warren's Profession*, an exposition of prostitution, was published but was refused a licence by the lord chamberlain. But Shaw had now deliberately adopted the profession of playwright. *Arms and the Man* was a departure from the social evangelism of Shaw's first plays and was successfully presented in London and New York city in 1894. *Candida* was produced in 1895, *The Devil's Disciple* in 1897 and *Man of Destiny* in the same year.

Shaw finished *Caesar and Cleopatra* in 1899. In 1901 *The Admirable Bashville* was published, and in 1902 he wrote *Man and Superman* which in 1908 enjoyed a prodigious success in New York. It was *John Bull's Other Island* (1904), however, which established Shaw as a leading playwright in London. There followed *Major Barbara*, *The Doctor's Dilemma*, *Pygmalion* and *Androcles and the Lion*.

During World War I Shaw became unpopular through his comments on the conflict (*Common Sense about the War* [1914] among them). After the war, however, his popularity returned with *Heartbreak House* (published 1919), *Back to Methuselah* (completed 1920) and *Saint Joan* (written 1923), and in 1925 he received the Nobel prize for literature. In 1928 the Shaw festival at Malvern was founded by Sir Barry Jackson and was opened with *The Apple Cart*. In that year also was published *The Intelligent Woman's Guide to Socialism and Capitalism*.

In 1931-36, despite world-wide lecture tours, he found time to write a number of lesser-known plays and other works. In 1949 he published the autobiographical *Sixteen Self Sketches*; but his last plays, *Buoyant Billions* (1949) and *Far-Fletched Fables* (1950), added little or nothing to his reputation.

Shaw accepted few public honours. The first Labour government would have made him a peer and given him the Order of Merit, but Shaw said, "I do not wish to sit in the House of Lords and I have already conferred the O.M. on myself." (See also *Encyclopædia Britannica*.)

**Shaw, Herman**, British physicist and aeronautics authority (b. Oct. 14, 1891—d. London, Eng., May 4, 1950).

**Sidky Pasha, Ismail**, Egyptian government official (b. Alexandria, Egy., 1875—d. Paris, Fr., July 9, 1950), gained his diploma at the Collège des Frères and won honours at the Khedivial Law school. He joined the public prosecutor's office but in 1899 became administrative secretary of the Alexandria municipal commission. In 1914 he was appointed minister of agriculture and then of *wagfs* (religious institutions). In 1915, however, he joined the Waft (nationalist) movement and was later deported with Saad Zaghlul Pasha and others to Malta. After World War I he deserted the Waft, in 1921 and 1922 was minister of finance and in 1922 and 1924-25 minister of the interior. He retired from politics for five years but returned eventually as premier and, from June 1930 to Sept. 1933, ruled with an iron hand to curb the Waft's influence. He joined an all-party delegation to negotiate the Anglo-Egyptian treaty of 1936, but in 1938 again retired from politics after a period of service as minister of finance. He returned to power in Feb. 1946 as premier and advocated the revision of the 1936 treaty. In October he flew to London but failed in his efforts to "achieve unity between Egypt and the Sudan under the Egyptian crown." He resigned on Dec. 8, 1946.

**Silverman, Sidney Louis ("Sid")**, U.S. theatrical publisher (b. New York, N.Y., Dec. 11, 1898—d. Harrison, N.Y., March 10, 1950).

**Simons, Algje Martin**, U.S. economist and author (b. North Freedom, Wis., Oct. 9, 1870—d. New Martinsville, W.Va., March 11, 1950).

**Slade, William Adams**, U.S. librarian (b. Fall River, Mass., Sept. 27, 1874—d. Washington, D.C., May 16, 1950).

**Smedley, Agnes**, U.S. journalist (b. northern Missouri, 1894—d. Oxford, Oxon., Eng., May 6, 1950).

**Smith, John Lawrence**, German-born chemist and business executive (b. Germany, Feb. 10, 1889—d. Brooklyn, N.Y., July 10, 1950).

**Smith, Joseph Lindon**, U.S. artist and archaeologist (b. Pawtucket, R.I., Oct. 11, 1863—d. Dublin N.H., Oct. 18, 1950).

**Smith, Mary Chapin (MRS. CHETWOOD SMITH)**, U.S. novelist (b. 1871?—d. Worcester, Mass., April 30, 1950).

**Smith, Robert Holbrook (DOCTOR BOB)**, one of the founders of Alcoholics Anonymous (b. St. Johnsbury, Vt., 1879—d. Akron, O., Nov. 16, 1950).

**Smuts, Jan Christiaan**, South African statesman, soldier and philosopher (b. near Riebeeck West, Cape Colony, U. of S.Af., May 24, 1870—d. Irene, near Pretoria, Transvaal, U. of S.Af., Sept. 11, 1950), was educated at Cambridge university, England, and was admitted to the Capetown bar in 1895. During the Boer War, Smuts joined the Boer army in 1900, eventually becoming chief of the Boer commandos in Cape Colony.

After the restoration of peace, he actively campaigned to smooth over political and racial differences. Upon the outbreak of World War I in 1914, Smuts became commander of South African armies preparing for battle with the Germans in South-West Africa. That same year, Louis Botha, with Smuts's co-operation, put down the Dutch rebellion. Smuts was a

member of the peace conference at Versailles and in 1918 wrote his celebrated memorandum on the League of Nations, which was endorsed by David Lloyd George and Woodrow Wilson; in substance, it became the League covenant.

Smuts was prime minister of South Africa from 1919 to 1924. Inactive in South African politics after 1924, he re-entered the political arena as war with the axis threatened. Britain's declaration of war against Germany on Sept. 3, 1939, brought him back as prime minister. Smuts formed a war cabinet, and on Sept. 6 the Union proclaimed a state of war with Germany. He was made a field marshal in 1941.

Smuts played a prominent part in the formation of the United Nations in 1945, and was the author of the preamble to the charter of that organization. At home, he had to deal with the dispute with India over the Indians living in South Africa, and also with the problem of the former mandated territory of South-West Africa, which he wished to incorporate into the Union. In the parliamentary elections of May 1948, his government was defeated, and Smuts became leader of the opposition. The following year he was removed from his post as commander in chief of the Union defense force. He was acknowledged even by his political enemies as South Africa's greatest son. (See also *Encyclopædia Britannica*.)

**Spaulding, Francis Trow**, U.S. college president (b. Ware, Mass., Nov. 23, 1896—d. near Center Harbor, N.H., March 25, 1950).

**Spear, Lawrence York**, U.S. marine engineer and submarine expert (b. Warren, O., Oct. 23, 1870—d. New London, Conn., Sept. 26, 1950), graduated from the U.S. Naval academy at Annapolis, Md., in 1890, served in the navy until 1902, then, becoming interested in the design of submarines, left the navy and joined the Electric Boat company, of which he was chairman of the board at the time of his death. This company became the nation's largest manufacturer of submarines, building 88 in World War I and 74 in World War II, in addition to 398 patrol torpedo boats and electrical gear for naval ships and ordnance. In 1949 Rear Admiral James Fife, submarine commander in the U.S. Atlantic fleet, declared that Spear had contributed more than any single individual to the development of the modern submarine.

**Speck, Frank Gouldsmith**, U.S. anthropologist (b. Brooklyn, N.Y., Nov. 8, 1881—d. Philadelphia, Pa., Feb. 6, 1950).

**Spurr, Josiah Edward**, U.S. geologist and mining engineer (b. Gloucester, Mass., Oct. 1, 1870—d. Winter Park, Fla., Jan. 12, 1950).

**Stahl, John Malcolm**, U.S. motion-picture director and producer (b. New York, N.Y., Jan. 21, 1886—d. Hollywood, Calif., Jan. 12, 1950).

**Stanley, Oliver Frederick George**, British politician (b. May 4, 1896—d. Sulhamstead, Berks., Eng., Dec. 10, 1950), was the second son of the 17th earl of Derby. He was educated at Eton, and served in the royal field artillery in World War I, receiving the military cross and the *Croix de guerre*. He was called to the bar in 1919 and later became a stockbroker.

In 1923 Stanley unsuccessfully contested Edgell, Liverpool, but from 1924 to 1945 sat for Westmorland. From 1945 until his death he represented West Bristol. He became undersecretary to the home office in 1931 and two years later was appointed minister of transport. He was given cabinet rank in June 1934 as minister of labour, but in June 1935 was transferred to the board of education. In 1937 he was appointed president of the board of trade, and in Jan. 1940 he succeeded Leslie Hore-Belisha as secretary of state for war. Stanley rejoined the royal field artillery in 1940 but returned to politics in Nov. 1942 as secretary of state for the colonies, remaining in this office until the general election of 1945. In Sept. 1948 he succeeded his father as chancellor of Liverpool university.

**Stannard, William J.**, U.S. army band leader (b. Guilford, Conn., Aug. 14, 1883—d. Washington, D.C., July 12, 1950).

**Stapledon, (William) Olaf**, British writer (b. Wirral, Cheshire, Eng., May 10, 1886—d. West Kirby, Cheshire, Sept. 6, 1950), was best known for his scientific fantasies, which included *Last and First Men* (1931), *Last Men in London* (1932), *Odd John* (1936), *Sirius* (1944) and *Death into Life* (1946). His first book, however, was a philosophical work, *A Modern Theory of Ethics* (1929), and *New Hope for Britain* (1939) was an exposition of his liberal-humanist and scientific attitude. In *Philosophy and Living* (1939) his not uncritical sympathy with communism was particularly apparent. Latterly, Stapledon had participated in a number of Communist-sponsored international conferences.

**Steinberg, Milton**, U.S. clergyman, author and lecturer (b. Rochester, N.Y., Nov. 25, 1903—d. New York, N.Y., March 20, 1950).

**Steinhardt, Laurence A.**, U.S. lawyer, economist and diplomat (b. New York, N.Y., Oct. 6, 1892—d. Ramsayville, Ont., Can., March 28, 1950), obtained his law degree from Columbia university, New York city, and began the practice of law in 1916. He entered the diplomatic service and was U.S. ambassador to Peru, 1937-39; to the U.S.S.R., 1939-41; to Turkey, 1942-45; to Czechoslovakia, 1945-48; and to Canada from Aug. 1948 until he died in the crash of an aeroplane. Steinhardt was an early supporter of Pres. Franklin D. Roosevelt, and was a member of the executive finance committee of the Democratic national committee.

**Stephens, James**, Irish writer and poet (b. Dublin, Ire., Feb. 1882—d. Dublin, Dec. 26, 1950), was a struggling solicitor's clerk when he met the Irish writer George Russell ("Æ"), who encouraged him to develop his literary abilities. In 1912 he published *The Crock of Gold*, which brought him public recognition and won him the Polignac prize. His work was grounded on Celtic folklore and fantasy, and Irish idiom; the enriched simplicity of his language evoked a world in which reality and dream seemed to interfuse. His poetry included *Songs from the Clay* and *The Adventures of Seumas Beg* (1915), and *Kings and the Moon* (1938); his *Collected Poems* was published in 1926. Among his prose works were *The Charwoman's Daughter* (1912); *Deirdre* (1923); and *Elched in Moonlight* (short stories, 1928). He also wrote various critical works and a play, *Julia Elizabeth* (1929). Stephens was an ardent Sinn Féiner.

**Stimson, Henry Lewis**, former U.S. secretary of war (b. New York, N.Y., Sept. 21, 1867—d. Huntington, L.I., N.Y., Oct. 20, 1950), was one of the elder statesmen of U.S. political life, having served as secretary of war to Pres. William H. Taft (1911-13), secretary of state to Pres. Herbert Hoover (1929-33) and secretary of war in the cabinets of both Pres. Franklin D. Roosevelt and Pres. Harry S. Truman, 1940 to 1945.

A graduate of Yale in 1888, he attended the Harvard university law school and was admitted to the bar in New York in 1891, becoming a protégé of Elihu Root. In 1906 Pres. Theodore Roosevelt appointed him U.S. attorney for the southern district of New York. He ran unsuccessfully on the Republican ticket for governor of New York in 1910, and next year was named Taft's secretary of war. Though 49 years old, he served in the army in World War I and saw action in France.
